A subscriber, Collinwood, O., asks: 1. Why is the pin of the link not put in the center of the block? A.—Because putting it back of the center helps to provide the means of equalizing the cut-off of the valve. This question has been answered a great many times and more particulars given. 2. Why will a lubricator sometimes nearly empty itself when left standing? A.—A common mistake is made in asking this question. Sufficient information is not given to enable us to judge what the defect might be. In the first place, the kind of lubricator ought to be mentioned, and then particulars as to how the instrument acts.

W. G. B., Ashland, Ky., writes: We use Ohio river water and Bellfield and Monitor injectors. Why when weather gets warm does water waste through overflow while injector is working a great annoyance? And no one have I found who can remedy or tell me the cause. A.—When the water gets too warm it does not condense all the steam, which generally causes the injector to break. A heavy fall in steam pressure will cause injector to waste at overflow. Try shutting off part of the water supply on giving the instrument more steam.

I. A. M., Des Moines, Ia., says: 1. I have been reading books about the steam engine, and have met with the expression "coal per horse-power." I am puzzled to know how long the horse-power is to be used. Is it a minute, an hour or a day? A.—An hour. 2. What is considered the amount of coal required to produce a horse-power? A.—It varies from 2 pounds in good engines to 10 pounds in poor ones. Some Corliss compound engines are reported to be producing a horse-power on as low as  $1\frac{1}{2}$  pounds of coal.

E. S., Brookline, Mass., asks: I want to know whether in England or on the Continent there is in use any brake that will apply its power to every wheel in the train, or, if there is not, please explain the kind of brake in common use? A.—Passenger trains in Europe are generally equipped with automatic air-brakes or automatic vacuum-brakes, there being much more of the latter than the former in use. Freight trains are not so equipped.

W. R., Washington, D. C., asks: Will you kindly tell me, through the columns of your paper, what causes the peculiar groaning noise the air-pump makes when first started, and a remedy? A.—Groaning is usually caused by water in the cylinder; dry or cut seats or cylinder walls. Drain the cylinder before starting, start slowly, lubricate carefully; if cutting has taken place to any extent it can only be cured in the shop.

L. G., Cleveland, O., asks: Will you kindly inform me what is the matter with air pump governor. It will stop the pump at 30 pounds in spite of how much it is screwed down; governor and pipes are perfectly free from dirt or gum and look O. K. every other way? A.—We don't know. This is an individual case, the cause probably being local.

J. D. B., Santa Fe, N. Mex., asks: Why will an eight-wheeler slip easier than a ten-wheeler, both same size cylinders? A.—The ten-wheeler probably has more weight on the drivers and has some more friction, in its extra parts, to overcome.

# WOMAN'S DEPARTMENT.

EDITED BY IDA A. HARPER, INDIANAPOLIS, IND.

## THE WORLD'S CONGRESS OF REPRESENTATIVE WOMEN.

One of the drawbacks to magazine writing lies in the fact that it is a long time after anything is written before it reaches the readers ; and yet I believe that two months from now there will still exist a vital interest in the Woman's Congress of the World's Fair, which has just closed. It was an event whose influence will be felt in the next century, through the effect it will have upon the status of women. This Congress was the largest and most important gathering of women the world has ever seen, and it will be many years, not in the lifetime of the present generation, perhaps, before an occasion will present itself for a similar assemblage. Two or three times each day, for seven days, the Art Institute was filled to its utmost capacity with a crowd of earnest, interested women, apparently from all conditions of life, except the lowest. When it is known that the Institute holds from ten to fifteen thousand, and that, at every meeting, hundreds went away unable to gain admittance, some idea of the great interest that was felt in the Congress may be obtained. Every woman who listened to the eloquent and forcible addresses on all the great questions which are of such vital interest to humanity, went away strengthened in her convictions and determined to do something and be something greater and better than her life had known before.

A brief sketch of the origin of the Congress may be of interest. In order that the Columbian Exposition might not be an exhibit of material things only, it was decided to hold a series of Congresses which should illustrate the mental and spiritual growth of the nations. Mr. Charles C. Bonney was made President of this Congress Auxiliary, Mrs. Potter Palmer, President of the Woman's Branch, and Mrs. Charles Henrotin, Vice President. These Congresses are to last during the entire six months of the Exposition and to be held as follows :

### MAY.

- |                                     |                   |
|-------------------------------------|-------------------|
| I. Woman's Progress . . . . .       | Commencing May 15 |
| II. The Public Press . . . . .      | Commencing May 22 |
| III. Medicine and Surgery . . . . . | Commencing May 29 |

### JUNE.

- |                                      |                    |
|--------------------------------------|--------------------|
| IV. Temperance . . . . .             | Commencing June 5  |
| V. Moral and Social Reform . . . . . | Commencing June 12 |
| VI. Commerce and Finance . . . . .   | Commencing June 19 |

## JULY.

- VII. Music . . . . . Commencing July 3  
 VIII. Literature . . . . . Commencing July 10  
 IX. Education . . . . . Commencing July 17

## AUGUST.

- X. Engineering . . . . . Commencing July 31  
 XI. Art, Architecture, etc. . . . . Commencing July 31  
 XII. Government, Law Reform, Political Science,  
     etc. . . . . Commencing August 7  
 XIII. General Department . . . . . Commencing August 14  
 XIV. Science and Philosophy . . . . . Commencing August 21

## SEPTEMBER.

- XV. Labor . . . . . Commencing August 28  
 XVI. Religion, Missions, and Church Societies . Commencing September 4  
 XVII. Sunday Rest . . . . . Commencing September 28

## OCTOBER.

- XVIII. Public Health . . . . . Commencing October 10  
 XIX. Agriculture . . . . . Commencing October 16

The women did not want to hold their Congress first, as the Institute was still unfinished, comparatively few people were in attendance at the Fair, and there was no precedent to guide them in regard to methods, management, etc.; but, as the first Congress was considered the least desirable, it was given to the women. They accepted it and they made of it such a success, they set such a standard, as no succeeding Congress will be able to approach, according to the general opinion.

At the National Council of Women held in Washington, in 1888, an International Council was formed, of the prominent women in this country and Europe, which was to meet every five years. The first meeting was to be held in London, in 1893, but, upon the earnest invitation of Mrs. Palmer and Mrs. Henrotin, it was decided to hold it in Chicago. When Mrs. May Wright Sewall, of Indianapolis, President of the National Council, went to Chicago to consult with President Bonney, he proposed to her to merge the International Council of Women into this Woman's Congress. She agreed, and he appointed her chairman of the committee on arrangements and placed the responsibility of the immense amount of necessary preparation in her hands. The unparalleled success of the Congress is due principally to her remarkable executive ability and power of organization. Last summer she went to Europe and held a number of public meetings in the interest of the Congress. She was granted an extended audience with the Empress Frederick, of Germany, and held a meeting in Paris under the auspices of Madame Carnot. She addressed these meetings in German and French, her efforts met with cordial recognition, and arrangements were made by the different countries to send delegates.

It was well-named the Congress of Representative Women. Upon its platform sat the women of the United States who are most distinguished in philanthropy, religion, temperance, politics, education

and all of the different lines of work in which women are engaged. Upon this platform also were noted women from every country in Europe, except benighted Turkey. The addresses of welcome were responded to in every language that is spoken in Great Britain and on the continent. This was a spectacle never before seen, and it did more than was ever accomplished to promote the fellowship between nations and to create a common bond of sympathy and affection. But this circumstance, wonderful as it was, was not so remarkable as the fact that upon the same platform, in the most fraternal spirit, sat women ministers of many denominations, Protestant and Catholic, Jew and Gentile, white and colored, Mrs. Ballington Booth and others of the Salvation Army, and the most famous actresses of the present day, Helena Modjeska, Clara Morris, Julia Marlowe and Georgia Cayvan. Women are often charged with being narrow and prejudiced, but it will be admitted that no such fellowship was ever seen at a convention or gathering of men.

Another point is worthy of notice right here. In this great assemblage of women, working together for seven days and nights, collected from all parts of the globe, interested in the most widely diversified objects, there was not a discordant note; no quarreling, no wrangling as to place or precedence, all harmonious, dignified and peaceful. This scarcely could be said of any similar convention of men. There was still another important feature of the Congress. Its discussions included forty great questions of the day and age. Each was ably treated by one or more women who are leaders in the organized work that is being done along these lines. There is not one of these organizations that is not laboring for the good of all humanity, not one which is carrying on its work for selfish reasons. They represent not less than a million and a half women who are directly connected with these organizations, and an infinitely larger number who are in sympathy with their purposes. It is not possible to estimate the good that is being promoted through the combined efforts of this large army of earnest, energetic and devoted women; nor can one comprehend the loss it would be to every community, were it deprived of the religious, educational and philanthropic services of its women. Does it not seem a self-evident conclusion that these women should be given every opportunity and clothed with every power to enable them to carry on their great work under the best possible conditions? Another characteristic which challenged attention was the personnel of the Congress. Here was this great body of more than four hundred speakers and not one woman on the platform whose name had ever been connected with a scandal or whose character bore even so much as a scar to tarnish its purity. In the face of this unimpeachable testimony, will people go on saying that public life will be ruinous to the reputation of women, and that, if women are invested with political power, the bad women will come to the front and control things? They have plenty of chance already to do this, but they do not show any disposition to take advantage of it.

From its inception, there was a determination not to make this a "woman-suffrage" Congress. It was the intention to treat all national organizations exactly alike, therefore one session was set apart for temperance, one for education, one for clubs, one for suffrage, etc., but, from the beginning, the suffrage sentiment dominated everything. If one went into a meeting of any description, he heard the demand for suffrage. It was the key note of every discussion. Even at the ministers' meeting, and there were thirty ordained women ministers present, the suffrage question came to the front, and it was declared that only through this power could women wield their greatest influence for the regeneration of the world. Day after day was it found necessary to hold overflow meetings in order to give the people the gospel of suffrage which they demanded.

The heroine of the congress, the woman who was most eagerly listened to and most constantly called for, was Susan B. Anthony. Her appearance upon the platform was the signal for outbursts of applause, and every sentence was cheered. Next to her in popular favor, was Lucy Stone. A generation ago these two women were egged and stoned for advocating these same principles which now were received with cries of approval. Rev. Anna Shaw, one of the ablest of the suffrage speakers, was obliged to go from one hall to another, daily, to satisfy the demand for her speeches. Repeatedly these three women had to call on policemen to enable them to get through the crowds which thronged about them in admiration. Let it be remembered that these audiences were almost wholly composed of women, who, at the rate of from ten to fifteen thousand, crowded the building twice or thrice, daily, for a week. It was they who demanded the suffrage speeches and applauded the suffrage sentiment. And yet, doubtless, there are men in Chicago, to-day, who will argue that women do not want suffrage. The majority of the sentiment, however, as heard on street corners and lobbies and clubs, was to the effect that woman suffrage was sure to be granted and that the time for it was near at hand. What women always have lacked has been organized effort, and that now is about to be made.

An amusing and at the same time lamentable feature was the desperate attempts of the newspapers to get something sensational out of the congress. They could not bear the idea of this great convocation of women holding a week's meeting and disbanding without a row or a scandal. The dress reform session offered a small opportunity, which they made the most of. This meeting was held in one of the minor rooms of the Institute, at which half a dozen ladies donned the costumes that had been designed for rainy day wear, the Syrian, the gymnastic, etc., in order to let the other ladies present see the different styles. The dresses were more modest than the fashion of the sheath or tight fitting dress skirts that have prevailed for several years. These costumes were shown for about two hours, one morning, and that was all, but to read the papers one would judge that the wearers paraded the streets in them the whole seven days. All of the beautiful costumes that were worn by these same ladies,

some of them imported from Paris, were entirely lost sight of in the desire of the newspapers to produce something sensational. Another case in point was the attempt to make out that a certain speaker was crowded off the platform through envy and malice, and that President Bonney was going to take the matter in hand and see that she be permitted to speak. The newspapers devoted columns to this affair, spoke of a "scrap" and a "hair pulling match" between her and Mrs. Sewall, etc. The facts of the matter were simply that one woman came to Chicago, expecting to speak, and she was informed that her name was not on the program and that there would be no departure from the program. Mrs. Sewall did not exchange one sentence with her and had not seen her for several years. This is all there was of that story; but such things tend to make one suspicious of the sensational reports published in the newspapers, which should always be read with considerable skepticism. They think they give the public what it demands, and perhaps they do.

The World's Congress of Representative Women was a remarkable gathering, highly creditable to all who were connected with it. Its influence cannot be measured by time or space, but the future will show the great advancement in all things pertaining to women, which will date from this Columbian year.

---

## THE HOUSEKEEPERS' ASSOCIATION.

---

Considerable anxiety has been expressed from time to time lest women should become so engrossed by the new occupations which have been opened to them as to neglect that of housekeeping. There does not seem to be any adequate ground for this fear. The Chicago papers called attention to the fact that at the session of the congress devoted to the National Columbian Household Economic Association, the crowd of women was, if possible, greater than at any other. Domestic service in all its phases, was ably discussed, and co-operative housekeeping received especial attention. Practical lessons in bread making were given by Professor Emma P. Ewing, who has been often mentioned in this department. It is expected that she will give similar lessons every day in June at the World's Fair, under the auspices of this Housekeeper's Association. This organization, which is composed of a number of prominent women, is formed for the purpose of making a scientific study of the problems of the household, and nowhere is science more needed. This will include a study of the sanitation and hygiene of the home, improved apparatus for cooking, the most economical methods to produce the best results, the nutritious value of different kinds of food, and kindred questions. It has established an Emergency Bureau to supply help of all kinds, and will work in many different lines.

Dr. Gunsaulus, president of Armour Institute, has asked for the co-operation of this association in giving instruction and illustrations in all the work of the home, cooking, laundry, dining room, sewing, etc. Much interest is being shown in all parts of the country in domestic science. New York will have an exhibit of cooking schools at the World's Fair under the management of Miss Juliet Corson. Exhibits will be made of the various kinds of ovens and kitchens, the amount of fuel used, the time consumed, etc. In the Woman's Building there will be a "model kitchen," complete in furnishing and arrangement. Girls can not graduate from the public school of Boston unless they have taken the course in cooking. Many schools and colleges are adding a domestic department to their course of study. Cooking classes and clubs are becoming popular in all parts of the country. This is not a fashionable fad but a serious intention to place housekeeping on a scientific basis. As a general thing, it is and always has been conducted in a hap-hazard fashion. If a girl's mother were a good housekeeper she stood a fair chance of becoming a good one, but, on the other hand, there are generations of poor housekeepers in many families.

At best it has been a sort of imitative work, a woman doing things a certain way because her mother and grandmother did them so, and not because she understands the reasons for it. Women perform their duties in a most laborious fashion, without any idea of time or labor saving. Their bread and cakes and pies are accidents, sometimes a success and sometimes a failure. They do not comprehend any of the chemical processes through which food passes, or why it should not be left in tin cans where the air can reach it, or why certain articles should not be cooked in glazed ware or others in copper. Housekeepers grope their way along, picking up a little information here and there, managing things in an unsystematic manner, violating the laws of hygiene without knowing it, and showing in every department the want of skilled training. The paid domestics are even more lamentably ignorant, and the problem of securing competent service in the household is one of the most serious which confronts us. Housekeeping needs to be reduced to a science, and those who engage in it to be classified under the head of skilled and unskilled laborers and recognized accordingly. Gas is gradually taking the place of coal and wood, and there is no doubt the heat of the future will be produced by electricity. This in itself will lift the kitchen out of its present unavoidable condition of dirt and disorder and make cooking a much more desirable occupation. The domestic with a certificate of graduation from a reputable training school, is a certainty of the future. The coming young woman will exhibit her diploma from the school of domestic economy with the same pride as she does her parchment from college or high school. We shall have a race of wives and mothers as much superior to their ancestors in the art of housekeeping, as they are in other branches of intellectual culture.

## CURRENT TALK.

---

The reports of the last census, as nearly as can be ascertained show that, outside of domestic service America had in 1890, 2,700,000 bread-winning women and girls working outside of their own homes. There were 110 lawyers, 165 ministers, 320 authors, 588 journalists, 2,061 artists, 2,136 architects, chemists, pharmacists, 2,106 stock-raisers and ranchers, 5,135 government clerks, 2,438 physicians and surgeons, 13,182 professional musicians, 56,800 farmers and planters, 21,071 clerks and bookkeepers, 14,465 heads of commercial houses, 155,000 public school-teachers (based on the census of 1880.) Here is an army of women depending upon themselves for support and probably taking care of others. Any talk of relegating these women to a life of dependence is mere foolishness. The question to consider is how best to adapt this new factor to existing conditions; or how to shape the conditions to the best interests of these wage-earners and the commonwealth?

---

An exchange declares that "the woman who knows it all, who has well grounded opinions and logical processes of reasoning, gets herself disliked by the average man." This is rather discouraging, especially when a woman reflects that she has been told for a good many years that she must not expect to stand on an equality with man because there was some deficiency in the gray matter of her brain which prevented her from being logical or having any reasoning faculties. Now she is gravely informed that if she uses logic or reason the average man will dislike her. The question arises whether the woman shall try to get along without the logic and reason or without the average man?

---

The Working Women's Society of New York has been collecting some statistics in regard to the salaries of the women in that city. Cash girls get from \$1 to \$2.50 a week. Saleswomen get from \$2 to \$18 a week, the latter cases being very few. All receiving over \$7 a week are fined 30 cents if one minute late. There must be some reason for these meagre salaries besides competition. There is great competition among men, and yet we do not find them working for such wages as these. It cannot be wholly due to inefficiency, for the lowest grade of unskilled labor among men receives better wages than these. What is the matter?

---

Machines have been invented to furnish electricity for cooking purposes. Enough power is furnished to cook ninety meals for a family of ordinary size at a cost of \$6.57. A house can be heated a month for about the same price. Speed the day when this blessing shall be within the reach of all.

---

Some benevolent and well-meaning individuals in Boston have established a "Penitent Females' Refuge, where females (presumably women) may find shelter. The *Transcript*, of that city, wants to know why a Refuge for Penitent Males is not also established? It might be because the number of penitent males is not large enough to demand a refuge; and it might be because males do not usually find it so difficult to secure food and lodging as to render it necessary to make a public avowal of their shame in order to get them. These good Boston people mean well, but they might, at least, put their sign over the back door, so as to make it a little less humiliating for the penitent females to get in.

The girls in Packer Collegiate Institute, Brooklyn, are studying the subject of street cleaning, and the president says the men of that city are too busy to attend to public affairs and the time is coming when the women will have to see that the streets are properly cleaned. The men do not seem to be too busy to hold all the public offices; but let us hope that, if the time does come when the women have to look after the street cleaning, the men will not continue to draw the salaries for not doing this work, while the women keep on contributing to the taxes which pay these salaries.

The newspapers are still endeavoring to create the belief that cigarette smoking is common among women. That there is here and there a rare case of this kind may be true—young girls who think it is "cute," or another class who would better remain unmentioned—but nobody will believe that it is a common custom. Possibly it might serve as a check upon men, if they found the women of their family adopting this expensive and unwholesome practice, but it would be entirely too costly a method of bringing about their reformation. It is hardly worth the while to sacrifice the woman, in order to save the man.

Women have entered upon a new occupation in New York and are now filling very acceptably the position of usher in the theatres. This is a nice easy position, with some pleasant features connected with it, and there does not seem to be any good reason why it should not be filled by a woman. The argument may be made that she is robbing some man of this place, but how do we know but all these years the man has been usurping this position which rightfully belongs to a woman? There is no law on the subject, and no proof that, at the creation, it was intended that men only should be ushers in theatres.

The Wellesley college girls put in a good deal of time previous to the last election in studying politics, making speeches and advocating the claims of their various candidates. It is said they were pretty mad on election morning when the college coachman cracked his whip and informed them that he was worth the whole lot of them on that day. They recognized the truth of the statement.

At the reception given by Mrs. Palmer, to the Woman's Congress, the wives of the vice-President of the United States and of the Governor of Illinois, sat side by side on the platform. They were both voters by the law of Illinois, which gives school suffrage to women, but there was nothing to distinguish them, on this account, from the prominent women of other states who are still denied this privilege.

---

### AUXILIARIES.

---

About auxiliaries. Hurry up, boys! Hurry up. What is the matter that there is not an auxiliary in every town where there is a B. of L. F. lodge? Whose fault is it; yours or your wives', mothers', sisters', or daughters'. Do you try to encourage them to organize lodges or do you laugh at the idea? If you make light of it you do not know what a help an auxiliary is. If you try to encourage them and it is their fault that they do not organize, they do not realize what a pleasure it is to work for the interest of their loved ones. I have belonged to Heart and Hand Lodge nearly two years and have never missed a meeting. We only have twelve members, where we might have thirty; but they have the same falling that they have in other places. They have not found out what an auxiliary is and won't until they read the constitution, and—ride the goat. But that is the trouble,—they are afraid of the royal bumper! Only twelve of us, but just think what twelve of us can do. Easter Monday we gave a ball; it was as nice a ball as was ever given in Delphos; was a grand success in every way. Only twelve, but we all work together and that is why every thing we have ever given has been a success. If you have thirty or forty members and one pulls back, you are not going to make a success of your society. And if your president enforces the constitution you are bound to work together, because the constitution is very strict. One member must not always expect to have her own way, but when she is out ruled in anything she must fall right in with the rest and do her part and make everything a success. When the directory came out in February we were surprised to see so few lodges, but hope when it is printed again we will see any amount of new lodges. Let us have encouragement instead of discouragement.

*Cora Slagle.*

DELPHOS, O.

[The Woman's Department heartily endorses this article. Every lodge should have it Ladies' Auxiliary because it is not good for man to be alone, even in his lodge life. This department will be glad to do anything that is desired to assist in the movement toward establishing these auxiliaries.—Ed.]

---

### WHEN I GO HOME.

---

I only wait in this far off place,  
And count the hours that I must stay,  
I dream of home, of each loved face,  
And long and wish for the far off day,  
When I go home.

Days seem weeks, and the sands of time  
Flow far too slow, when I'm away  
From those at home, and dear ones mine;  
So I look and wait for the coming day,  
When I go home.

BLOOMINGTON, WIS.

My home will ring with sweetest airs  
Of welcome, when I homeward stray,  
And words of love and tender cares  
Will wait for me on the happy day,  
When I go home.

Though humble, lowly, meek and old,  
It has for me what this ne'er had—  
The name of home, and purer gold  
Ne'er sparkled than the hearts so glad,  
When I go home.

*Nora Bull.*

## ADrift ON THE WORLD.

It was a cold, damp, dreary day in November. A woman came slowly, aimlessly, down the street; fully two score were her years. She wore a faded calico dress which was almost in tatters; a sunbonnet covered her head, a pair of shoes, much worse for wear, were on her feet. Every now and then she glanced nervously from one side of the street to the other like a hunted criminal, as if she knew not where to go or what to do. But her face! I will never forget that face to my dying day. It was a face from which all hope had fled, a face utterly devoid of God's blessed sunshine.

A troop of merry, innocent, happy-hearted children passed, their childish prattle and care-free, happy laughter filling all the air. At the sound the woman started, as if memories long ago dead had been resurrected. Once she was as gay and happy as they; once her parents loved her just as fondly; once life was one bright dream of the future, but now, at forty, her hopes are as dead as the leaves on the trees in November.

What is the secret of this woman's life?

Ah, 'tis a simple story; one being daily enacted. She married a drunkard to reform him; she was cast aside by parents, and now, when she is ready for the grave, what is she?

A widow with a house full of children who constantly cry for bread, when she has none to give. She is a stranger alone in a strange land, her husband drank himself to death before he reformed, and when her strength is gone, when she is no longer capable of performing hard physical labor, there is but one alternative left for this woman, to beg or sell her soul. Heaven forbid! She realizes at last, but too late, that life for her has been one great mistake. I ask again, what is this woman to-day? Simply a living example for all girls to profit by.

MAKANDA, ILLS.

Mrs. Jessie Hamon.

## HOME.

What better subject can be discussed than that of Home? I listened to a very interesting sermon preached by the pastor of our church a few weeks ago and his subject was home. He spoke of our earthly home and our Heavenly home. Webster defines home as a "dwelling place," but it admits of a broader meaning. There are brilliant and elegant homes. Some are wise and careful and others are warm and genial, by whose glowing hearths any one, at any time may find enough and to spare. There are bright and gloomy homes. An ideal home must first have a government, but love must be the dictator. All members should unite to make home happy. It matters not whether home is clothed in blue and purple, if it is only brimful of love, smiles and gladness. No matter how humble the abode, if it is only garnished with grace and sweetened with kindness and smiles, the heart will turn lovingly toward it from all the tumult of the world, it will be the dearest spot beneath the sun. Toward the cheerful home children gather "as clouds and as doves to their windows;" while from the home which is the abode of discontent and strife and trouble, they fly forth as vultures to rend their prey. A great many homes are like the frame of a harp that stands without strings. In form and outline they suggest music, but no melody rises from the empty spaces; and thus it happens that home is unattractive, dreary and dull. Holmes says he would rather eat his dinner off the head of a barrel, or sit on a block all his life than consume all his self before he got a home and take so much pains with the outside that the inside would look as hollow as an empty nut.

Du Bois, PA.

Mamie Wise.

## THE HUSBAND AND WIFE AS COMPANIONS.

It is a pleasure (at least to myself) to sometimes lay aside the cares and duties of life, and to spend a while in writing. I have been thinking very seriously for some time of writing to the FIREMEN'S MAGAZINE, of which I have been a reader for the past three years.

I think the Woman's department *very* interesting indeed. During the short time that I have been acquainted with the MAGAZINE, I have read and thought over many of the articles, particularly those which have touched upon the subject of man and wife. Men differ greatly in their mode of living and in their ways of doing. For instance; there are some who are never contented unless in outside company; their pleasure is never in making their families happy, nor are their interests in the home. Men can find so many different ways in which to spend their evenings and all their spare time. I think the majority of men seek the company of others than those belonging to them. I can (I am so happy to say) hold up my own husband as a model to all men, married or single. He is a sober, steady, kind hearted, hard working man; one who works from the beginning to the end of the year. We have a snug, comfortable, little home that my husband has made by hard work, and when night comes we are ready and glad to sit down and enjoy it. We prefer each other's company to any other. One reason for that is, I suppose, that one makes the acquaintance of such undesirable people when going from place to place; for that is the way a railroad man is required to do. Their place of living is here to-day and somewhere else to-morrow, as the saying is; some would call our life a lonely one, but, to us it is not. We have a daughter now, two-and-a-half years old, and she is such company for us. She does not allow the house to become too quiet, but rather makes things very lively at times. I really think the reason that so many married people are not contented is, that they do not try to be companionable. The husband should do his very best to make home what it should be and the wife should do her share cheerfully and with a willing heart. Some men think there is nothing for a woman to do, but just to wash a few dishes, sweep the floor, &c., but let them take our place for a week, and at the expiration of that time they would gladly give it up and go back to their own work. In my opinion a woman that does all her work, and does it in the proper manner, is doing her share; and then, if there are little ones around there is always something to do for them. I think the duty of a true wife is to administer, as far as possible to her husband's wants; and they are certainly not a few. Men like to be waited on; they like to know they are fully appreciated, and certainly they ought to be. For instance, a man wants to find his meals ready when coming home from a hard day's work. A railroad man is always hungry, and he wants good things to eat and plenty of them. I know of a lady who used to say, "If you want a man to come in good naturedly, have a few onions frying in the pan and the table cloth spread on the table and he will then know supper is on its way." But how about those men who do not care for that vegetable? How many wives do we all know of, that go out every day and leave the poor tired men to manage somehow and get their own meals. There are to be seen, a great many husbands who are not what they should be to their wives, a protector and comforter. But let me ask, "Do the wives do all in their power to make them what they should be?" Every man, especially a railroader, should have the best of influence around him in his home, and who can attend to that more than a wife? What a man won't do for his wife, he won't do for any living person. We find so many who have no regard whatever for the Sabbath. They say, "What is the difference to me, we have to work just the same on Sunday as on a week day," but that is not a good excuse. It is our duty to hold the Sabbath as sacredly as possible in our thoughts, if not in any other way permitted to do it. I can thank God for the good influence I always had around me in my parents' home. I can never remember anything but a peaceful, quiet Sabbath. My parents are both living; but if I do outlive them I shall never forget the lessons I learned in my childhood. Certainly it is no more than my

duty, but it is a very pleasant one. I would like to see more Christian feeling and influence among the railroad people. I shall at least try and do my share toward having it in my own home, and I sincerely hope that our little daughter may always prefer the right and only way in thought and action, and that my husband and myself may go hand in hand, as a man and wife should go, so that when death parts us we can say with all sincerity, it will only be a little while before we clasp hands in another and a better land.

[This is a very good, helpful article and we shall be glad to hear from the writer again.—ED.]

### WOMAN'S LOVE FOR WOMAN.

My unfortunate letter in the January number of the MAGAZINE having received so unfavorable a comment I was afraid to write again; but "nothing venture, nothing win," and plucking up courage, here I am again, seeking admittance to your interesting department. Mrs. Anderson, I will admit, is right in regard to my having had no experience in raising children. I have three dear, little nephews who have spent the major part of their lives with me, and having studied a great deal on the subject, I ventured to offer my humble opinion, with no idea of its being so unfavorably received.

I think Mrs. Anderson is an exceptional mother, and congratulate her in possessing so much judgment and common sense in managing her children. In the majority of cases I have noticed, very few mothers know just where to draw the line; they either allow their children to rule them, thus leading a miserable existence with them, or keep them so cowed down with whipping, that the children have no spirit in them. Though I have not changed my ideas regarding corporal punishment, I cannot refrain from expressing my admiration when such rare cases as that of Mrs. Anderson are brought to vision.

There is one subject I have never seen written of or heard discussed at any length, and that is woman's love for woman. Almost every paper one picks up contains an article on the love of a mother for her child, a sister for her brother, or a wife for her husband, but never the love I have mentioned. I do not mean school girl attachments, though they are sometimes enduring, but the deep true love of one intelligent, thinking woman for another. Men laugh at such love and say women only love each other to their own interest, that they exchange kisses and endearments when nothing but dislike or hate fills the heart of each, but I do not believe it. Really, I do not think any true woman would be capable of such an action. I am very earnest on this subject, and would like to have the opinion of some of the readers on it. I believe it possible that two women may love so well that they will give up their homes to live with and for each other. I have read of such cases.

[Thank you for kind word.—ED.]

### AS WE SOW.

And what if all our lives were filled  
With gentle words and kindly deeds?  
And what if all our lives were spent  
In culturing fair flowers, not weeds,—  
Would any recompense be ours,  
Or would reward prove scentless flowers?

And what if all our lives we toiled  
The long days thro' with little rest,  
(The long nights sleepless passed in prayer.)

In aid of weakling and oppressed,  
Oh, think you, that a grateful sense  
They'd cherish for benevolence?

What matter though our toll be classed  
As merely duty—it is well.  
We do not work for outward show,  
We do not hope for ring of bell.  
We know that fruits of scattered seeds  
Will be according to our deeds.

COMO, COL.

*Mrs. William Dunning.*

## HOME RULE.

I commenced reading the MAGAZINE a few months since and take the greatest pleasure and interest in perusing each page of the different departments so well versed in information on all subjects. So often we find our own thoughts and experiences fully portrayed by others, who are possessed of more courage or ability to express their inmost feelings, then again, occasionally, we meet some whose opinions are like the proverbial Polly, borrowed or repeated from others over and over again. Don't you think it about time to rest a bit on one particular subject, so long under discussion, viz: "How to manage a husband, or wife?" Pray tell us what managing is really necessary and why—isn't the husband of a responsible age, or has not the wife sufficient tact and energy to conduct a home? If two people *really* and *truly* love each other when they marry, life is too sweet and blissful to need a manager, they are equal in all things, confide in each other, and the affairs of one are rightfully shared by the other partner.

That the *home* needs good managing, is a well known truth, but let both husband and wife govern it as "one;" both possess the same love of home and home comforts, else they would not have married, so they should have equal rights in all things, carrying on their management on the order of "We, Us & Co." The only *real* management is under the guise of kindly care, when the husband is solicitous of his wife's comforts, and the wife considerate and thoughtful of her husband's wishes.

With fullest confidence and trust in each, there need be no misunderstanding one another, and no shirking duties, and every task is a great pleasure to undertake. Again, let their smiles be as cheery and frequent as in the courting days, it is no great effort to smile, it costs nothing, and a pleasant countenance is as necessary if not more so, after marriage, than before; kind and affectionate words are a great comfort and solace to the wife, and a few of them now and then, don't harm the husband either. It is something he looks for and expects. Now, when you learn that I have been married but a short time, doubtless you will think I possess neither the knowledge nor experience to form an opinion on the management of any one, but I do a good deal of serious thinking at times and a studied observation of married people in general, leads me to believe that I am correct in my assertions.

I am sure every fireman, who is fortunate enough to possess a wife like "Pansy," of Roundhouse, Ill., is cheered on by the thought that a loving wife's daily prayer goes after him on his dangerous journey.

HOUSTON, TEX.

Mrs. T. J. Lyons.

[Our correspondent advises the Woman's Department to drop a certain subject and then devotes her entire letter to this same subject. We will be glad to hear from her on "The Customs of Texas."—Ed.]

## MY SHIPS.

Ah! long ago, when the years were bright  
And the birds sang sweet in the summer air,  
When the sun, with a glorious, golden light  
Made all the visage of nature fair,  
I launched my shallops upon the shore,  
My ships, that never were seen of men,  
The years are many, the waiting sore,  
They never returned to me again.

With care I builded each dainty shell,  
To bravely buffet the stormy sea:  
And a summer breeze did the white sails swell,  
The day that I sent them away from me.

And never since, through the dim years' flight,  
Though the tides are fair and the breezes blow,  
Have I heard of my vessels, staunch and light,  
My dainty shallops of long ago.

Perhaps, some day, in the years to be—  
Though the winds be wild, and the billows roar—  
My ships shall sail o'er the angry sea,  
And my weary waiting shall be no more.  
Then all life's shadows shall roll away;  
The days of waiting, and grief, and pain,  
They all shall vanish, that happy day,  
When my fair dream vessels come home again.

Frank G. Heaton.

## THE RIDE OF PAUL REVERE.

Having visited Copp's Hill cemetery and the Old North, or Paul Revere church, it may be of interest to know something of the history and appearance of each.

Copp's Hill was so called from William Copp who owned a house and lot there and with his family is now resting beneath its sod. The tombstones of the latter can still be seen half sunken in the earth but his has long since disappeared from view. It is not known when it took this name—having been known by others—but about 1644.

This is one of the three hills from which Boston was named, but, like the others, has not retained its original form, having about seven feet taken from its highest point. It rises gradually from Hudson's Point—so called from the ferryman—where Annie Pollard jumped overboard and waded ashore that she might be the first white woman who landed in Boston; also, from where the British opened a tremendous fire on the Americans in the battle of Bunker Hill and afterward carried their wounded. The appearance of Copp's Hill at that time would have been vastly different from that of to-day, so thickly studded with tombstones, most of which are of slate and ornamented with carvings of skulls, heads, etc.—even the heads of women with bangs, as the sexton tells us nearly every style of the hair at the present day can be found here. As this is the second oldest place of interment in the city many curious inscriptions are found—upon the oldest stone, the following:

"David, son to David Copp and Obedience, his wife, aged 2 weeks," making the wife two weeks old instead of the child. Another—

"Stop here, my friend, and cast an eye,  
As you are now so once was I:  
As I am now so you must be,  
Prepare for death and follow me."

Someone had added in chalk:—

"To follow you I'm not content  
Unless I know which way you went."

The most interesting stone to me is that bearing the name of Robert Newman, (died 1806) who hung the lanterns in the Old North church as a signal light for Paul Revere on April 18, 1775. This church (built 1723) is one of the oldest buildings in Boston and very interesting to visit. The Bible (printed in 1717), the prayer books, containing prayers especially for the king's family, and the communion silver were the gift of George II. in 1738. At the left of the pulpit stands the first bust ever made of Washington. Back of the straight high-backed pews are small places hollowed out of the wall where sat two men with long poles with a spike in the end to punch up and keep awake anyone who might be asleep—a capital idea and one which ought still to be practised. The chime of eight bells (brought from England in 1744) is the oldest in America and formerly eight men besides a leader were employed in ringing them.

The diary of Paul Revere proved this to be the identical church steeple where the lanterns were hung, as he speaks of a second story window and no other at that time had such a window. The idea of hanging them there originated with him, but for the act we are indebted to Robert Newman, the young sexton, who must have had courage and nerve to have averted all suspicion of the British officers quartered with him, listening at the same time for the arrival of a friend to tell him of the movements of the enemy, for: "If the British march by land or sea from the town to-night, hang a lantern aloft," etc. "One if by land and two if by sea," but they suspected nothing when he left them a few minutes and passing out, took down the church keys, met his friend, heard the news and went—

"Up the wooden stairs  
To the highest window in the wall"

swung the lights, came down, jumped out a window, entered his house without

being seen and went to bed where he was found and arrested. He was thrown into jail but nothing could be proved and he was released. You know of the ride of that other brave man and the good result of his warning.

May this lodge be as courageous and successful, as quick to act for the right and keep one another from harm as the "midnight message of Paul Revere."

*Mrs. W. H. Bigelow.*

CHARLESTOWN, MASS.

---

### CASTING SHADOWS.

---

There are two ways in which we might cast a shadow, one to hurt and one to heal. Let me ask the readers, do we ever stop and think how many shadows we are casting daily?

For instance, our husbands quit their labor tired and discouraged, everything apparently having gone wrong with them on the road. Being so thoroughly discouraged they come home in the same mood. We try to talk to them but soon see they do not care to be bothered or do not want to listen to us while telling them what has transpired at home during their absence. No doubt more than once we have thought to ourselves, "I won't bother him but will let him sit there until he gets over it." We try to do so but not with an easy mind. Let me ask the wives of the firemen and all other wives, are we doing right?

I think not. I think there is a chance for us to cast a shadow that would heal. Although all this time they have been casting a shadow upon us that hurt. Still we can forgive them for love's sake. Surely they would appreciate it to have us come to them and let them know that we sympathize with them, and we try to help roll that cloud away; for life cannot be all sunshine, neither can it all be rain. We should bear in mind that the life of a fireman is not an easy one and that he has a great deal to contend with when on duty. Still we hope some day to be able to say that our husband claims the right side of a locomotive. It is to our interest to help them along and make their home life as pleasant as possible.

I do not mean to say that I am a model wife, but I try to do as near right in everything as I can. I am a member of the church, but my husband is not; but I hope soon to see him join the church that we may both work for that home in heaven. We feel now that we have something calling us there and so we have.

We have been married about four years and in that time have had our share of trouble and sadness, as many other young couples do who start out with bright prospects for their future. The beginning of our trouble was after the birth of our first child, since which time my health has been very poor. Our little boy was spared to us nine months and then Jesus took him home to dwell with him. It seemed very hard to bear, but I felt it my duty to try to make the best of it and think that I still had my husband to live for and make home pleasant for him. About a year after the death of our first baby a second one entered our home—a sweet little girl—and how delighted we were. About seven months after that our joy was turned to sorrow, for our little Ruth was called to join the angels and we were left alone again. It is about three months since she died and we are still very lonely. But God has taken them for a wise and good purpose. Some might say that God had cast a shadow upon us to hurt, but, even so, He has the power of casting one to heal and I feel that He has already done so.

There are many other ways in which we might cast shadows, but I will not mention any more in this article.

*Mrs. H. C. Moore.*

JERSEY CITY, N. J.

## PARENTAL RESPONSIBILITY.

Parents should teach their children more of the duties of marriage or rather the responsibilities of wedded life. How few girls realize the responsibility of becoming a mother. How very few are really qualified to assume the grave and arduous duties of a mother. How very few even give a thought to the awfulness of starting a human on the road to life; calling into existence a being of flesh and spirit, so constituted that in this world it may be immeasurably happy or suffer an agony that no pen can portray. And when we remember that humanity suffers both in the flesh and the spirit, both mental and physical torture while living; and when we consider that this spirit shall live on and on with a capacity of being happy or miserable, is it not time that girls be taught to think seriously of motherhood before lightly assuming a position of such magnitude and far reaching results?

But this responsibility rests not alone on the mother. Let the boys be taught the duties of fatherhood, with all its responsibilities. Let them be instructed in the duties parents owe to unborn children.

The rights of unborn children should be held sacred because they are powerless. They are sinned against before they have life. Their rights are trampled upon before they exist.

How dare any instructed, conscientious man or woman who is diseased become a father or mother? We quarantine against cholera and yellow fever, hang out red flags for smallpox and diphtheria, but for the unborn generation there is no quarantine, no laws to protect them.

Any filthy, diseased person may contaminate and poison the blood of the next generation. Any loathesome drunkard may impart a hereditary taint to his offspring. This generation may curse the next with all the evils that flesh and spirit are heir to; no protest is made, and if anyone takes up the pen in defense of the unborn and advocates restricted marriage, what a howl goes up from the human wolves. How my heart aches day after day as I pass children clothed in rags and dirt, pale faced, hungry, diseased, vice-tainted children that should never have been launched on the sea of life. Oh, fathers and mothers, remember the first great right of the child is to be well born or not at all.

*Mrs. M. Orrell, (Pebble).*

## WHERE IS FATHER?

Mother's love, with its pure and holy devotion, has been extolled from time immemorial, as well it may be; but the love of a father is seldom mentioned. That he has love is doubtless true, and a love just as tender, just as intense, and just as lasting as that of any mother. His step is now slow and faltering, but that is the step that was once firm and elastic. His eyes are dim and faded, but those are the eyes that gazed on you in almost adoration, when he presented you, his first born, to the world, with that same proud, father-like introduction, "He's the finest boy in town." Have you ever paused, my young man, and thought of the time when that loving father was once young, manly and ambitious; when, as he fondled you in his strong and noble arms, he centered all his proud ambition on you his oldest son? It was during those years of your youth and dependence that he broke down that stately form as he labored early and late to support and educate you that you might be able in future life to fill the position as an honorable citizen and a dutiful son. And how, my boy,

have you repaid him for his devotion? Some of you, doubtless, are with him to-day as his staff, supporting his drooping body with your young, manly arms as the strong oak supports the frail ivy. Others, ah! where are you? Some of you, no doubt, have left that home with its holy influences, left the dear father to his grief and disappointment, to mingle with the dissipated and defiled, and far from under his protecting arm, have fallen;

"Like snow flakes from Heaven to Hell;  
Fell to be trampled as dith in the street.  
Fell to be scoffed at, to be spit on and beat."

Yes, it is time you should pause and murmur,

"Merciful God have I fallen so low?  
And once I was pure as the beautiful snow."

But it is not yet too late. Go home to that dear one, who awaits you with extended arms to bless and caress you in evidence of his eternal love. Do not be ashamed to take that wrinkled brow to your bosom and caress it, my boy, for it never was ashamed to light up with mingled pride and joy whenever your name was mentioned. No matter who child you he always took your part. Yes, it is the brow with its sorrows and cares that ever stays with you in all adversity, with a love as tender as any mother's and takes your part before all the world. If you do this, my boy, when you in time, become aged and feeble, it will be the happiest recollection of your life to look back and say, "I never was ashamed to love, embrace, and honor my father before the whole world."

KEOKUK, I.

Maxie Byron.

---

### THE NOM DE PLUME.

---

To me it seems hardly fair to say that any one using a nom de plume is unwilling to admit the authorship of her own productions; and I will, with Mrs. Harper's consent, state a few of the reasons why I think so.

In the first place there are so many of us who must work, who have so little time for the pleasanter duties and inclinations of life and if we have time we have not the means, perhaps, to indulge our tastes. If every one could step at a bound over the long apprenticeship that is required of every beginner before becoming a paid journalist there might be a difference. But if one's productions create any notice at all they are likely to be at once overwhelmed with calls, invitations and gifts from generous hearted admirers. If these are returned they often incur an expense that we can ill afford; if, on the other hand, they are unnoticed, unaccepted and unreturned, we are called ill-bred and parsimonious. Whereas if writers are not known individually, they may go on the even tenor of their way, secure in the attentions of friends that do know them; and unmolested by those who do not.

Not long since a gentleman wrote to me asking for the name of a certain contributor to the MAGAZINE and also to the Fort Worth *Advance*. In reply to my request for instructions in the case she said: "I can not consent to become known by my own name. I am a widow and a hard working woman and have no time to spare. I know the gentleman of whom you speak and have a high regard for him, but he has much more leisure time than I and dearly loves to talk. I can not be hindered."

Another young lady contributor is talented and accomplished and is fast lessening the distance between herself and fame, but a knowledge of her real name in the town where she lives now would no doubt be very disastrous to her business, since her daily avocation takes her into many homes.

As for myself my own *nom de plume* is copyrighted, and is far better known than my own name. I have received letters directed to "Irene" from almost

every state in the union, while poor, little me, like the prophet, is not without honor save in his own country. Yet I bow to the will of the Editor, as I hope you all will do, and sign myself,

*Mrs. M. W. Harpold.*

FORT WORTH, TEX.

[There are arguments of weight on both sides of this question. It is like taking a plunge into icy water for a writer to sign his name for the first time to his publications, but he soon becomes accustomed to it and he will do better work where he is obliged to assume the entire responsibility.—ED.]

---

### A WORD TO BACHELORS.

I have been a reader of the MAGAZINE for the past year and in glancing over the March number I noticed Mr. M. Crowley's letter telling us why we have so many bachelors in our midst. He ventures to say that the women are the cause of wages being so low that a man cannot support a wife. I am justified in saying these women he speaks of are intelligent women and earning an honest respectable living and if they are the cause of wages being so low, I suggest that these bachelors marry these women and then they can have no excuse for not making a living. A man can easily support a woman with the money he pays out for his expenses, and there would be a much better class of people.

Take our firemen on any road and nine out of every ten would lead a much different life from what they do if they had a home to go to when they came in from their tiresome runs, instead of swallowing a hasty meal at their boarding house, and then going down town and spending their evenings in the saloons or at the gambling hall. If they would marry and have some one to use her influence over them, to leave these places of vice, there would be a much better class of men than there are to-day.

I hope to hear through the MAGAZINE of some bachelors who have come to the same decision.

*Mrs. William Rugg.*

ELLENSBURG, WASH.

---

### WOMEN ARE INTERESTED IN BUSINESS LIFE.

The time has come when women as well as men have a practical interest in business life. They have almost monopolized the work of teaching, and are doing so with clerking, besides establishing various kinds of business houses, and entering the learned professions. It is pleasant to observe how well women succeed in these new undertakings. Woman has a God given mission to execute as a public speaker in Christian America. Every interest of society must undergo a change through discussion on the platform, in the pulpit and through the press, and in the defence of the right, Providence is summoning our mothers, wives and daughters. Two fields, especially, urgently call for woman's hand and heart, one is for thoroughly educated physicians, and the other for trained nurses. Both of these should have great attention from earnest young women. They are means of usefulness in a life of the highest order, they are especially adapted for woman's nature and faculties, and they are well paid. Medical colleges for women have been or are being formed in cities. Medical women, equally well educated, are not only as good as medical men for professional attendance on women and children, but much more suitable, and as trained nurses they are in nine out of ten cases of illness altogether preferable. Schools for training professional women nurses are fast multiply-

ing in connection with large hospitals in order to supply those institutions and patients in private families. All avocations are now open to educate women.

They may undertake what work they please, be respected in it much more than in idleness, sacrifice no delicacy of sex, lay aside no womanly modesty, but move right forward in a self-supporting career and for a lifetime be independent of the woollings of the sterner sex.

But our homes must be maintained and some for pure love's sake must labor there. Possibly you, gentle reader, may be of that number; if so,

You may guide the little footsteps  
In the way they ought to walk.  
You can drop a word for Jesus,  
In the midst of your household talk.  
Living your life for love's sake,  
Till the homely cares grow sweet,  
And sacred the self denial  
That is laid at the Master's feet.

GALION, O.

*Eva McClure.*

### SMALL BEGINNINGS.

'Twas an acorn that fell by the wayside,  
Dropped there by a careless hand;  
For many a day it was hidden from sight,  
In the rich and fertile land;  
But at length there came forth in its beauty—  
Uncovered to the light of the sun,  
A little tree that bade fair to be  
As large as the largest one.

A childish hand once scattered  
Some seeds on a hillside bare,  
As time rolled on, those tiny seeds  
Brought forth sweet flowers there,  
That bloomed in beauteous splendor—  
In sweet luxuriance wild,  
Transformed was that desolate hillside,  
By the hand of a little child.

A learned divine addressed a crowd,  
Words of knowledge to impart,  
They took effect they saved a soul,  
They changed a sinful heart;  
And he who had a scoffer been—  
The laws of God outraged,

WEST OAKLAND, CAL.,

A curse to all his fellow-men,  
A few chance words had saved.

It was only a kind word spoken,  
To a heart made sad with pain,  
Yet 'twas treasured in the heart's recesses,  
And there it would ever remain;  
And a life that had been greatly embittered—  
That through wrongs from its depths had  
been stirred;  
Seemed to cast off its cares and burdens,  
By a kindly spoken word.

It is thus through life as we journey,  
That small beginnings give large yield;  
And though humble be our sphere in life,  
Our influence for good we should wield;  
'Tis the brooklets that broaden the river—  
'Tis the dew drops that moisten the lea—  
'Tis the small streams that help swell the  
ocean,  
As onward they flow to the sea.

*Mrs. Nellie Bloom.*

TO MAKE a man happy, a woman must be his comrade, his true and staunch friend. If she can make herself this she has scored immensely, and will have a boundless influence over his actions, unless, of course, he is utterly worthless (a class of men I am not speaking of at all). She must endeavor to fathom his nature, which is as different from her own as the proverbial chalk from cheese, though, perhaps, none the worse for that. She must remember that love made up of alternate kisses and tears, of sunshine and showers, is poor stuff to live on, and after a time (a very short time) becomes a bore. Till she grasps this interesting fact she is only on the surface of things matrimonial, for the truest metal lies below. Romance is, no doubt, very charming while it lasts, but it won't stand wear and tear; on the other hand, intelligent love will last a lifetime, though waves of trouble may beat against it, and the heavy rain of failure, disappointment, and ill health may at times descend upon it in torrents. If they trust each other entirely, and are real friends, they will emerge from all these storms, if not into the fierce sunshine of early days, at least into the peaceful moonlight of sympathy and contentment, which is much more to be desired.

## THE CHICAGO & NORTHWESTERN R. R. AND THE TELEGRAPHERS.

In a recent issue of *The Railroad Telegrapher* we find an explanation of the disasters which lately befell the Order of Railroad Telegraphers on the Chicago & Northwestern R. R., which reminds us of the conspiracy entered into on that system to down switchmen. The trouble with the explanation is, that it doesn't explain, but on the contrary, adds mystery to an exceedingly muddy muddle, with forty and one unhappy loop-holes through which surmises peep and grin, with twirling fingers on the end of their noses. As it was never our fortune, good or bad, to read such an explanation of a disaster, we are disposed to let the readers of the MAGAZINE see it and meditate upon the mysterious revelations. In the conspiracy on the C. & N. W., two years ago some four hundred switchmen were struck down, and now the telegraphers on the same system become the victims. Manifestly the C. & N. W. know a good thing when they see it, and if the job requires tools, the C. & N. W. also knows the right tool when it sees him. But here is the *Telegrapher's* explanation of the slaughter of the members of the O. R. T.:

Owing to the fact that it was necessary that our Grand Chief leave for Toronto, it was agreed between him and Superintendent Thayer that the matter should remain in abeyance until his return from the grand division, when further negotiations would be taken up in due season. On his arrival at Toronto numerous telegrams were received from members located at different points on the system saying that a large number of members had been discharged on account of their membership in the order, and that in some cases offices were closed, and requesting that our Grand Chief Telegrapher come immediately and endeavor to adjust the matter. It was, however, impossible for him to leave until after the close of the grand division. He instructed

them to have a committee of employees appointed to wait upon the officials of the company, commencing at the lowest and going to the highest, as provided by the laws of the order. This was done and the committee reported that it was impossible to secure recognition from the company.

Brother Ramsey arrived in Chicago on May 21st and on May 22d the committee waited upon General Superintendent Sanborn, but was unable to secure any concessions from him except that it was not the purpose of the company to discriminate as aforesaid. The General Superintendent claimed that the committee was not a representative one as it consisted of discharged employees, or men who had resigned from the service of the company with but one exception, and refused to recognize them as employees. The Committee claimed, however, that they had ceased to become employees on account of this opposition to the order, and that their removal was a matter of discrimination against the organization, and further presented for the consideration of the General Superintendent a demand for increase of pay. The General Superintendent informed them that he was unable to treat with them further in reference to this matter, but that he would gladly refer it to the General Manager, and secure an interview for the committee the following day.

Undoubtedly most of our readers have become aware through the daily press that serious trouble is occurring on the C. & N. W. railway system.

The facts of the case are as follows: For some time previous the members of the order employed on that system have been preparing a schedule and arranging for its presentation to the management of the company. The superintendent of telegraph, undoubtedly having heard of this fact, went over the line and interviewed each of the employees personally, asking if he was a member of the order or not, at the same time informing him that it was not his purpose to make any opposition, but merely to acquire knowledge as to who were members and who were not. Our members generally admitted their membership, and it was found that nearly ninety-five per cent. of their employees of the system were members of the order.

About the 1st of May reports came in to our grand chief that members of the order were discriminated against and discharged on account of their membership, and on May 2d he called upon General Manager Whitman, who received him very courteously and granted him a further interview on the following day. He informed Brother Ramsey that it was not the purpose of the company to discriminate against any organization to which their employees might belong, and that it made no difference to the company whether they were members of the order. He requested that Brother Ramsey call upon Superintendent of Telegraph Thayer, at the same time assuring him that as long as the order was conducted in a conservative manner and no rash action taken upon the part of organization, we need not fear opposition on the part of the company. That they would be glad to receive a committee composed of the employees at that time, and discuss with them the matter of schedule, or any other subject that might tend to the mutual betterment of all concerned. In accordance with the wish expressed by Mr. Whitman, our grand chief called upon Superintendent of Telegraph Thayer, May 11th, and virtually received the same assurance from him.

With the understanding that the matter should be brought before the General Manager and that the committee should be received on the 23d, the committee withdrew.

The night of May 22d a bogus telegram was sent over the entire system ordering a strike. This telegram purported to be signed by the Grand Chief, and in accordance therewith about seventy-five per cent. of the men quit work. Brother Ramsey's attention was not called to the matter until the following morning. He immediately notified the company that no such telegram had been sent by him; and that whoever had sent the telegram had forged his name. He offered to forward a bulletin to our members on the system advising them to go back to work, and informing them of the fact that the telegram was a forgery. He further re-

quested of the Superintendent of Telegraph that he be allowed to send such a bulletin over the lines of the company. In reply to this request the Superintendent of Telegraph informed him that this would be in violation of a contract with the Western Union Telegraph Company, and that they had no authority to send such a bulletin. This is something unprecedented, and would tend to show that the company did not want the strike declared off.

However, the General Manager still persisted in his statement that it was not the intention of the company to discriminate against the members, and that no employee should be discharged on account of his membership. Further, that they were willing to treat with their employees when a representative committee should be sent in. With this understanding Brother Ramsay wired all members that they should resume work at once, telling them that the telegram was not authentic.

Mr. Whitman seemed very much aggrieved that the men should have acted so hastily, but it was understood that they were to be reinstated. It is believed had the men not have responded to this telegram and quit the service of the company at this time, that a very amicable adjustment might have been secured at once. As it is it becomes necessary first to get the road into working shape again. We cannot disregard our own laws and adopt mob tactics and expect to win. If the order is ever to succeed it must succeed by being conservative, and by a consistent conformance to the laws of the order. There is no question but that the railway officials are better posted in reference to our laws than are some of our membership, and the Grand Officers are held to strict accountability for their actions.

While the members of the order employed upon the C. & N. W. Railroad undoubtedly evinced their loyalty to the organization by quitting the service of the company on receipt of the bogus telegram, yet at the same time there is no question but that they have imperiled the interest of the organization on that system, and have impeded the progress which might have been made had they conformed to our laws and the instructions previously given.

The foregoing, analyzed, presents to the critical reader results about as follows:

Constituent parts . . . . .	100
General Manager Whitney . . . . .	C. & N. W. 50
Supt. Telegraph Thayer . . . . .	
Bogus Telegram . . . . .	50
Telegraphers . . . . .	000
Grand Chief Ramsay . . . . .	000

Taking the foregoing as the result of the analysis it will be observed that the parties to the conspiracy were two officers of the C. & N. W. and the bogus telegram, and about the only mystery in the matter relates to the author of the bogus order for the telegraphers to strike, *contrary* to the law of the order.

Whoever wrote that order was confident that it would be obeyed; and why, it may be asked, did such confidence exist? Simply because Bro. Ramsay had earned special distinction for being too previous in issuing commands, leading the membership into hot water and keeping them there until they were well blistered. As Napoleon once said, "I am the empire," Bro. Ramsay indicated that he was the "order," hence, the obedience when the bogus (?) order found its way to the buncoed telegraphers on the system.

We are informed that 95 per cent. of the telegraphers on the C. & N. W. were brotherhood men, a formidable array of an organ-

ized force, one that it would not do to attack openly, and hence the strategies of the C. & N. W. First, to know every brotherhood telegrapher, name and location; this done, then began the work of dismissal. Every plan was perfected, and the brotherhood men began to go all along the line. The grand chief at this critical time was away—but was talking to the men over the wires—when the bogus order to quit came, purporting to come from the grand chief, and the men unhesitatingly obeyed the order, fell into the trap and were squelched. Having quit, and their places having been filled and the order on the system being utterly demoralized, the order to quit is found to be a forgery. The man who wrote it had doubtless received his price, and being *incoy* could easily protest that under the circumstances the men should be returned to their places, but the C. & N. W. does not enter into conspiracies to win and then make restitution. It did not do that when the conspiracy to crush the switchmen was successful. It does not hire conspirators to down labor organizations and then recant, and say it is sorry. It plants its corporation heel on the prostrate organization and rejoices to know that its money is stronger than the integrity of conspirators.

The bogus message will never be explained, no more than the secrets of the conspiracy which slaughtered the switchmen, will be made public.

It appears from an editorial article in the *Telegrapher*, published twice, so that the rank and file may catch on, that the O. R. T. "is a business organization." It certainly seems to be, and the conspiracy to down the telegraphers on the C. & N. W., has all the ear marks of a *business transaction*, just as the conspiracy to down the switchmen on that system was a business transaction, and the editorial in question further informs the order as follows:

We have been informed by our Grand Chief Telegrapher that hereafter no strikes will be authorized until the general grievance committee have approved of the same, as required by the laws of the organization, and furthermore a vote taken of the members as to whether they desire to strike or not, and unless at least two-thirds of the members shall vote for the same no strike shall be declared.

If this means anything it means that strikes have been authorized by the Grand Chief regardless of the laws of the order, and this having been the case, the buncoed telegraphers on the Santa Fe and the C. & N. W. could easily be made the victims of a bogus order to strike. It is interesting to note how securely the order has locked and barred the stable door after the horses had been stolen, as, for instance, the following:

We exhort every member of our organization from this time on to thoroughly familiarize himself

with the laws of the order and to strictly comply with the law in all its requirements. Under the present prospects of federation it is altogether probable that the chief executives of the other organizations will, in the majority of cases, be called in before a strike can be authorized and our members are cautioned, under penalty of the law, to pay no attention to any message which may be sent over the line authorizing a strike unless they are fully advised in the premises beforehand; we mean by this if a message of this kind has been received and all the requirements of the law have not been complied with, including the polling of the road, that the message should be entirely disregarded.

We should surmise that telegraphers would fight shy of telegraphic orders in the future, particularly orders bearing the name of Grand Chief Ramsay, since there seems to be no way under heaven to determine whether they are genuine or bogus. In all of the history of conspiracies, we remember nothing so adroit as the bogus order to strike, and remembering that 95 per cent. of the telegraphers on the C. & N. W. are brotherhood men, the terrific slaughter of the innocents and the reduction of the power of the order on the system from 95 per cent. to no per cent., demonstrates how perfect was the conspiracy machinery, when it was set in operation. The conspiracy on the C. & N. W., by which the poor switchmen were reduced to idleness, was an exhibition of malice and cupidity combined, but it must be said that the bogus order for the telegraphers to quit their buttons, takes the cake, and if anything further is required to show prostration and humility, the following fills the bill:

It is understood that the company are not reinstating the men who went out on account of the bogus message, and that the minor officials are still discriminating against our membership. If these tactics are to be pursued by the company it is perfectly fair for our members to apply for a withdrawal card, and we will be only too glad to furnish it and they may still retain their membership in the order, the object being to protect our loyal members. It would be folly for us to endeavor to carry on an organized warfare against the C. & N. W. road under the circumstances, for it would be impossible for us to succeed owing to the present demoralized condition on account of the bogus message.

In the foregoing there is a recommendation for men, by a trick, by jugglery to be in and out of the order at the same time, to take withdrawal cards which do not withdraw, in a word, to adopt for the protection of telegraphers, *bogus* methods, entirely in keeping with the bogus order which worked their ruin.

Then, again, it may be asked if an organization having 95 per cent. of the men on a system organized is incapable of protecting its members, what hope is there for protection when the remaining 5 per cent. are secured and the order is *solidly* organized? And why does not the federation recently established at Cedar Rapids come to the rescue of the outraged telegraphers?

According to the statement of the *Telegrapher* the members of the O. R. T. have been most foully dealt with, they have been

dismissed simply for belonging to the O. R. T. and the order with 95 per cent. of them organized confesses itself utterly powerless to reinstate a single one of them. Even those who, loyal to the order, left their keys, are now out of a situation, and for consolation they are given a lecture on obedience to law. Our sympathies are with the locked out telegraphers, and we would reinstate them to their positions if the combined efforts of all the organizations on the continent were required to do it.

#### MRS. IDA A. HARPER.

The editor of the Woman's Department of the MAGAZINE, Mrs. Ida A. Harper, a lady of rare intellectual gifts and a writer of acknowledged merit, as versatile as she is accomplished in mental endowments, was recently in Chicago where she read a paper on "Woman in Municipal Affairs," before the Woman's Congress, and a paper on "The Evolution of the Newspaper Woman," before the Press Congress, both of which received hearty commendation by the press and by the congresses before which Mrs. Harper appeared. The readers of the MAGAZINE, particularly those who are interested in its Woman's department, will be gratified to know that Mrs. Harper's literary attainments are admired and appreciated by writers of distinctive and national reputation, and that she is winning fresh laurels in her chosen field of endeavor and will join us in wishing her still greater triumphs.

THE eighth annual convention of the Order of Railroad Telegraphers met in the city of Toronto, Canada, May 14, 1893, and proceeded to business. The election of officers resulted as follows: D. G. Ramsay, G. C. T.; D. H. Gearhart, Asst. G. C. T.; L. Weatherbee, G. Sec. and Treas.; A. D. Thurston, Grand Editor and Manager.; J. A. LaCanda, G. S. T.; J. Williamson, G. J. T.; T. M. Pierson, G. I. S.; T. J. Flynn, G. O. S.; Executive Committee, W. E. Gillen, F. T. Roche and A. L. Taylor. The next convention will be held in Denver in 1894.

THE convention of the Order of Railway Conductors was held in the city of Toledo commencing May 9, 1893. The old officers of the order were re-elected, viz: E. E. Clark, Grand Chief; Wm. P. Daniels, Grand Secretary and Treasurer; Chas. H. Wilkins, Assistant Grand Chief; and Grand Senior Conductor, A. B. Garretson.

Some time since Brother Daniels was elected mayor of Cedar Rapids, and the position of editor of the *Conductor* now devolves upon Mr. E. E. Clark, Grand Chief of the order.

## PAST GRAND MASTER LEACH.

It will be remembered that at the last biennial convention of the brotherhood, held in Cincinnati, an appropriation of \$2,000 was made, to purchase for Past Grand Master J. A. Leach a home in which to spend his declining years.

Brother Leach was the first Grand Master of the brotherhood. He it was who laid its foundations and helped with all the vigor of his young manhood to rear a superstructure that would withstand adversity, and the brotherhood recognizing the value of his good work generously appropriated the money necessary to supply him with a home. The work of constructing the home was assigned to a committee of brotherhood men, as follows: C. W. Maier, Fred Keeler and Samuel Bowser, who promptly went to work to meet the responsibilities of the trust imposed upon them, and they have accomplished the work in a way to meet the highest commendation. A lot of ground was purchased in Sedalia, Mo., and the cottage home has been completed in a way that has met with unequivocal approval, and the building, completed in every detail, the key was recently placed in the hands of Bro. Leach.

The gift, which symbolizes the good will and generosity of the brotherhood, rescues Bro. Leach from the tyranny of rent, and gives him a home for himself and wife, where the wish is that the couple, as they advance in years to old age and the infirmities inseparable from it, may spend their declining years as free from care as Providence ever bestows upon weary pilgrims. The MAGAZINE congratulates Bro. Leach upon his good fortune and wishes him and Mrs. Leach many prosperous and happy years.

## THE ROBINSON FUND.

The Robinson monument fund has increased to nearly \$1,000, but at least \$2,000 should be secured to build a monument to the grand old man. Robinson was one of nature's noblemen. He it was who founded the great order of locomotive engineers, built it up until it was strong and influential, gave willingly to its interests, his time, talents and strength, and died poor. He was the pioneer in the organization of railroad employes, the pathfinder to the elevations which they have secured. He could have made money out of the order for he was loved and trusted, he could have died rich if he had bartered his integrity for money. But he lived and died an honest man, and the demand is to build a monument to his memory, worthy of his virtues and splendid example. Railroad employes can do this without any sacrifice. Let the contributions flow in until \$2,000 are secured.

Our highly esteemed friend, Dan B. Honin, is too much in love with Omaha and its people, to accept an invitation to take up his abode in the far and fair famed city of Denver, Colorado. He says:

For the past six months we have been considering the advisability of accepting a flattering offer to remove this journal to the city of Denver. The fact that such an offer has been made is proof that our standing as a railway journal is recognized by the wide awake people of the west. After mature deliberation, however, we have concluded to remain with our paper in this city, and to do as we have done for eight years—print the best weekly paper ever published in Omaha or anywhere else.

There is an adage, that "rolling stones gather no moss," and Sam Jones, the angelic evangelist, says he "likes stickability," and as Dan has concluded to stick to Omaha, we shall hope that his *News-Reporter* will continue to accumulate gold and silver and greenbacks, which, combined, make superb newspaper adornments, and which may be exchanged in the market for such luxuries as make the inner man believe that life is worth the living, and the outer man, as frisky as a young colt. We heartily indorse Dan's estimate of the *News-Reporter*.

We have received a copy of the revised edition of J. W. Sullivan's celebrated treatise on "Direct Legislation by the Citizenship through the Initiative and Referendum," a work that should be read by every workingman in the country. The new edition is a pamphlet of 120 pages of clear print and is a magnificent exposition of the principles and methods of the Initiative and Referendum, a subject that just now is commanding the serious attention of thinkers and students in the affairs of government. Mr. Sullivan is a reasoner of exceptional force, clear and persuasive in style and logical and conclusive in effect, and his work on Direct Legislation is a masterpiece that will have a permanent place in political literature. The price of the book is 25 cents and may be obtained by addressing the author, J. W. Sullivan, Box 1216, New York City.

## OUR GRAND OFFICERS.

The Brotherhood of Locomotive Firemen has reasons for felicitation for having elected Frank W. Arnold to the responsible position of secretary and treasurer of the order. Brother Arnold is a hard worker, methodical, painstaking and affable, and it is gratifying to know that the relations existing between him, Grand Master Sargent and Vice-Grand Master Hannahan are of the most harmonious character. They are all hard workers, all on the alert to promote the welfare of the brotherhood. Brother Arnold in the office and Brothers Sargent and Hannahan on the road, the rank and file may be assured that every interest is faithfully watched and guarded.

## WM. D. ROBINSON MONUMENT FUND.

Wm. D. Robinson, who died at Washington, Ind., on November 7th, 1890, was the founder of the Brotherhood of Locomotive Engineers, and in doing this great work, he as certainly laid the foundation of the Brotherhood of Locomotive Firemen and all other organizations of railway employes.

In closing our obituary notice in the December, 1890, issue of the MAGAZINE, we said:

In this hour, when Locomotive Engineers and Firemen stand uncovered at the tomb of Wm. D. Robinson, the question arises, What can be done to perpetuate the name, the fame, the memory of a man who gave the best years of his life for their benefit? Is not the answer, We will build him a monument worthy of his deeds, of his labors and sacrifices? We will believe that such is the response.

If it is, let the good work begin, and let it be carried forward until a granite or a marble shaft shall mark the spot where his dust reposes.

"What hallows ground  
where heroes sleep?  
'Tis not the sculptured  
piles you heap!  
In dews that heavens far  
distant weep  
Their turf may bloom.  
Or genil twine beneath  
the deep  
Their coral tomb.

"What's hallow'd ground?  
'Tis what gives birth  
To sacred thoughts in  
souls of worth!  
Peace! Independence!  
Truth go forth  
Earth's compass round  
And your high priesthood  
shall make earth  
All hallowed ground."

The poet's idea is correct. Where Wm. D. Robinson sleeps his last sleep is hallowed ground, and monumental marble could add nothing to its sacredness. But it is all of that without reference to the living. What can the living do to bear testimony that the last resting place of Wm. D. Robinson is hallowed ground?

We do not believe the name of Wm. D. Robinson is soon to perish and be forgotten. We believe the brotherhood he founded will be his imperishable monument, and that his name in connection with that great order is to increase in lustre as the years flow on. But that does not cancel the debt of gratitude the two great brotherhoods of the locomotive owe his memory, which if not met, will, in the judgment of mankind, cover the living with obloquy.

We believe the Brotherhood of Locomotive Firemen will respond in a way that will bear eloquent testimony of their appreciation of the life work of the man that made their organization fruitful above measure of blessings to locomotive firemen. Alone and unaided, our order, for the small sum of 25 cents each, could do the work. But we prefer doing it in conjunction with the Brotherhood of Engineers; nor would we confine subscriptions to the two orders, but would invite all the brotherhoods engaged in the train service of railroads to join in the great work of gratitude.

In discussing the propriety of erecting a monument to perpetuate the memory of the

dead philanthropist, we said in the April issue of 1891:

The idea of building a monument to perpetuate the name and fame of Wm. D. Robinson, originated with the FIREMEN'S MAGAZINE. The time has come for action. Contributions should be made. We have said that 25 cents each from members of the B. of L. F. would build the monument. But we surmise that other orders would want a place in the splendid work proposed, and we have opened in the Grand Lodge office of the B. of L. F.,

## A ROBINSON MONUMENT FUND.

Every contribution, however small or large, will be acknowledged in the columns of the MAGAZINE under an appropriate head, and when the contributions approximate a sum which gives assurance of success to the enterprise, a commission made up of the members of the various brotherhoods will be constituted to take charge of the fund and prepare for work.

Members of the various orders subscribing should designate their calling, and if they will give their address, it will be regarded as a favor.

Now, let the good work proceed. Wm. D. Robinson, when alive, was the friend of the workman. He wrote and spoke and toiled to establish a brotherhood and to teach men the power of organized labor. Railroad trainmen had no more ardent and unselfish friend. Let a monument bear testimony that death did not sever the tie that bound him to the living.

If ever a man deserved the grateful homage of his fellows that man was Wm. D. Robinson. He devoted the best years of his life to the great work of organizing railroad men for their moral and material advancement. He toiled without recompense, he endured privations and made sacrifices, the half of which will never be told. He lived and died

WM. D. ROBINSON.

in poverty, that others might fare better than was his lot. Every man, woman and child who has been, is now, or ever will be the beneficiary of any of the brotherhoods of railway employes, owes Wm. D. Robinson a debt of gratitude that can never be paid. Such a man deserves a monument to bear testimony of the love and gratitude of those for whom he accepted poverty, persecution and all their attendant ills, and every member of every organization of railroad employes should cheerfully contribute his mite, small as it may be, to such a noble purpose. Contributions may be directed to the LOCOMOTIVE FIREMEN'S MAGAZINE, Terre Haute, Indiana, all of which will be acknowledged in its columns.

## AMONG OUR CONTEMPORARIES.

*The Union Pacific Employees' Magazine* for May contains a brief history of the strike on the Union Pacific Railway. It says:

During the month of April a labor strike was inaugurated on the Union Pacific Railway system. What is rarely seen in event of strikes, a powerful labor organization on the same system did not only not assist, but opposed it. For that there must be a reason to offer, for such a step would scarcely be expected to come by chance, and it is the purpose of this article to give the reason, and state it so plainly that the least versed in the ethics of the labor movement can understand.

The same old story. It scarcely matters about the "reason," the simple fact stands out, that labor divided must prepare itself for defeat and to witness the triumphs of its foes. The reason is: "divided we fall."

The *Station Agent*, the "official organ" of the International Association of Ticket Agents, the Railway Agents' Association, the American Railroad Clerks' Association and the New England Railroad Agents' Association, published at Cleveland, Ohio, outlines its "platform" in which it says:

The *Station Agent*, therefore, will at all times seek to advance the interests of its clientele, and the railroad interests in general, by strictly adhering to this policy. While extending the right hand of fellowship to all other classes of employees in the railroad service, yet the *Station Agent* maintains that the position of the agents is not such as to warrant or require their affiliation at the present time with their fellow workers in other branches of the railroad service, and we shall at all times oppose the adoption of such a policy.

The *Station Agent* sees success in "going it alone," but "will ever be ready to fight for their (the agents') rights." The S. A. is for peace but not at any price. But in going it alone, however much disinclined, it will accept peace at any price the other side may offer.

The *Railway Conductor* for May reviews with marked ability the decision of Judge Speer, requiring the Receiver to sign a contract with the engineers of the Georgia Central Railroad. Judge Speer decided that the Receiver should make a contract with the engineers, and this fact is heralded with no little flourish of trumpets as a victory of the engineers. One or two more such decisions will leave the great Brotherhood of Locomotive Engineers utterly powerless to protect its members under any conceivable conditions.

The decision of Judge Speer is couched in exceedingly proper words, but they are, nevertheless, pointed. He orders the Receiver to make a contract with the Brotherhood engineers, and all other engineers. The Judge not only knocked out the engineer's boycott regulation but makes them the subordinate officers of the court with the Receiver as their boss. The Judge intimates that an engineer on the Georgia Central may quit, but it must be in such a way as to in-

fluct no injury upon the business of the road, and any wholesale exodus will be treated as contempt. The *Conductor* says:

If such decisions shall be sustained, then there is crying need for legislation, and legislation that will be equally binding upon both parties; let us have legislation recognizing the organizations, and that shall compel them and their members to fulfill contracts made, and if they or their organizations for them, contract with a railway company to do certain things, give the courts power to compel the members to fulfill agreements made for them by their duly authorized representatives; let us at the same time provide for the fulfillment of contracts by the employers, and that will prohibit them from endangering the lives and property of employees as well as passengers, by employing incompetent and unreliable men for position in train service, but let it never be said that the free American people submitted, without protest, to such slavery as these decisions will enforce.

The *United Mine Workers' Journal* in a recent issue deplores the fact that men selected to champion the cause of labor are set upon by carping critics until their lives are made wretched and their influence for good destroyed. It says:

Just look where this carping, growling spirit lands us. We need men of the highest intelligence to guard and champion our interests. We train such men, or give them the opportunity of training themselves; we give them a little tenure of office and at once they become the target of every chronic dyspeptic from one end of the country to the other. Intelligent criticism is not always the weapon used, nor legitimate rebuke to retard, impede and harass them in their very onerous work, but vile misrepresentation, and malignant and contorted interpretation of their almost every act is resorted to by men who either envy or hate them. Their antecedents are ransacked and in some specious way attempted to be made to dovetail into some jaundiced imaginary blunder or criminal malfeasance and, to explain it. In fact from many quarters these men's lives are made, or sought to be made, so burdensome and unpleasant as to finally disgust or oust them.

But, generally speaking, defamation recoils upon those who engage in it. It is the battle that makes the soldier, and the storm that makes the sailor and the men who stride forward in high and honest endeavor, in a great majority of cases, are sustained.

The *Machinery Molders' Journal* comments upon the position taken by the New York *Herald* relating to the unemployed surplus of labor. The *Journal* says:

The New York *Herald* claims there is but one remedy. It says: "Skilled labor is nearly always in demand. A first-class workman is seldom out of a job. It is necessary, therefore, for the new generation to cease dawdling, to give up being jack-of-all-trades, to give themselves vehemently to some special department and to become masters of that. There never yet was a time when it was not easier to earn \$4.00 a day, because you are worth it, than to earn \$1.00 a day at work which 1,000,000 others can do as well as you."

How an increase in the number of skilled workers would better the condition of said workers we are puzzled to know. The keen competition which already exists in this department would become more fierce and cause a downward tendency rather than a leveling up of the lower grades of labor. By the introduction of improved machinery there are hundreds of skilled mechanics thrown out of work every year, and how a large increase of skilled workmen would benefit the unemployed is a co-

nundrum which we would like the *Herald* to explain.

In the foregoing both the *Herald* and the *Journal* say that which ought to attract attention. It is doubtless true, that skilled workmen are, as compared with unskilled, so few, that we hear less of them in the ranks of the unemployed, though, as the *Journal* says: "hundreds of them are usually thrown out of employment." To increase the number of skilled workmen, however desirable that might be, would not advance their wages. On the contrary, as their number increased, wages would go down, and in any event the army of unskilled labor would not be benefited. In solving the labor problem, unskilled labor must be taken into account, else no progress will be made. The tendency is to ignore the unskilled laborer, not only by employers, but by labor leaders and writers as well. The unskilled laborers are not regarded as either a factor or a force in the march of progress—a fatal mistake—but, fortunately a mistake which the unskilled are seeking to correct by organization, and as a result we hear of the organization of hod carriers, of shovelers, of teamsters, of stablemen, of hack drivers, etc., and it is found that when they make demands for better conditions and better wages and strike to enforce their demands, inconveniences occur quite as disastrous, as when organizations of skilled labor decide to quit work to enforce their demands. As a consequence, committees are beginning to understand that common, or unskilled workmen, play a most important part in our boasted progress. It is one of the most cheering of the many signs of the times. It is a leveling up process, evincing intelligence and courage and a comprehension of the labor problem which men who talk and write of labor, would do well to take into account.

The *Street Railway Employees' Gazette*, published at Detroit, Mich., has an article in its May issue on "Labor laws," in which it seeks to show its readers that after all, labor laws are of little benefit to labor, owing to the fact that employers by the aid of the courts practically abrogate such laws.

A law was recently passed by the legislature intended to give every workman one day off in a week. But the street car companies know a trick worth two of that. They simply present each employe with an agreement waiving his rights under the law, and the one who does not sign is out of a job in a few days. And no law can be passed denying the right of private contract. The signing of the agreement is a private contract, and to pass a law forbidding the workmen to make contracts voluntarily would indeed be going back to feudalism. There may be some benefit to the working class in using their political power, but it must be used in curtailing the power of the law makers and the state, giving greater freedom to the individual workman to organize and better his conditions by co-operating with his fellows. Even under present conditions the laboring class can do more by their unions than by their ballots. The shortening of the day's

work in the various trades and occupations has resulted by united action in trades unions. The street car employes in a number of cities have experienced practical results from organization which they failed to accomplish by law or by appealing to the legislatures. The best kind of labor legislation is that which takes place in the trades union meetings.

There is some truth in the foregoing, but to abandon the ballot as a force in remedying evils of which labor justly complains, would be a mistake. Many and substantial victories for labor have been won by the ballot, and more and greater victories are in store for labor, when united, its ballot is cast for honest men as legislators.

The *Railway Carmen's Journal*, for May, under the editorial control of Bro. Kellher, fully maintains its well won prestige in the discussion of topics in which railroad employes have an interest. Referring to the decision of Messrs. Taft and Ricks, in the Ann Arbor case, the *Journal* says:

Without attempting to discuss the decision on its merits or to decide whether the facts of the case were sufficient to uphold the charge of conspiracy, which in cases of this kind is only another name for the boycott, we call attention to the fact that the whole decision hinges upon the power of congress to regulate and control the operations of railroads operating in two or more states. When Judge Taft declares that the federal courts may enjoin Chief Arthur from exerting on railway employes a wrongful influence which, if exerted, would be liable to cause injury to the railroads, he must have in mind an act of congress, not any provision of the common law, for that deals with acts, not influences.

If, then, these decisions be supportable on ethical and statutory grounds, though not at common law, it certainly follows that the next step should be the assumption of the entire control of the railroads by the United States government. Such an assumption would do away with the necessity of any injunction to prevent wrongful influence which would be or become detrimental to the interests of the railroads and the people, for the railroad employes would be government employes, and as readily controlled as postal clerks or employes of the internal revenue department.

Little by little the railroad problem in the United States works out toward the only possible solution—governmental control. Obviously a combination among employes will result in a counter-combination among employers, and when this occurs, as it certainly will—that is, when all the great railroads of the United States have pooled or syndicated their issues—public safety and necessity will dictate a transfer of the power and authority to the people in their corporate capacity—that is, to the United States government.

The May number of the *Switchmen's Journal*, No. 1, Vol. 8, came to us with new departures in make up, well calculated to elicit approval from those who are on the alert for improvements in labor journalism, as, for instance, the double column style for editorial articles has disappeared. And in all regards the *Journal*, from cover to cover, shows careful attention and an appreciation of the beautiful in the "art preservative." In an article—"Learn from Your Enemies," the *Journal* refers to the recent federation entered into at Grand Rapids, and says:

At a meeting held early this month the matter was discussed again, and over the signatures of the

grand lodge officers a circular has been sent to all lodges of the organizations represented at the meeting. The plan leaves it entirely optional with members on each system whether they see fit to co-operate or not. There is nothing in the articles which makes this movement obligatory or binds the men in any way to carry out the functions of the federation. We would take it for granted that any such federation can be dispensed with at any time, and that it is operative only when the committees of the various organizations are acting or working under its rules. When the matter that they have under consideration is disposed of, it ends there until the committee is called upon to consider another case. This being the first time that this kind of federation or co-operation is tried, the result will be watched with great interest by all concerned. It must be understood, however, that no strike can be inaugurated on any system without the sanction of five chief executives of the organizations that are a party to this plan of federation.

We have on our table the initial number of the *Trades Assembly*, published at Pueblo, Col. Concerning "aims and objects," the editor, Mr. Will C. Hyden, says:

The Pueblo Trades Assembly, and the twenty-eight affiliated trades unions, representing the grand army of union labor of Pueblo, recognizing the need of a reliable, fair and favorable medium for the publication of matters of especial interest to themselves and their fellow laborers, and one that can be relied upon to place their cause in a true light before the public, one in which they may show to all that they claim only what is just and right, and wherein they may discuss any and all questions that affect labor and its relation to public affairs, appear before the public in the *Trades Assembly*.

The *Trades Assembly* starts out under favorable auspices and the MAGAZINE wishes it a prosperous career.

The *Express Gazette* quotes the *Denver Times*, in which that paper "points proudly to Colorado's morals," as shown by the "Integrity of Expressmen." It appears that during a period of thirteen years, the Denver & Rio Grande Express Company handled \$400,000,000, of which only \$500 was lost through breach of trust. Says the *Gazette*, "The young men who served as custodians of the transported wealth were not selected because of their being Sunday-school graduates. Business qualifications and general good standing were the sole credentials demanded of them." "Sunday-school graduates," unless otherwise endorsed, does not express very expressly, qualifications for handling money by express.

The *Eight Hour Herald* complains that its articles are appropriated by a contemporary without credit. The contemporary in question may be under the impression that it is inaugurating a *New Era* in journalism, but it labors under a mistake. There may be something new, now and then, in journalism, but this thing of stealing and appropriating articles is not one of them. The only consolation we can offer the *Eight Hour Herald* is, "That big fleas have little fleas on their backs to bite 'em."

## MARTIN & DELANY.

This firm of clothiers doing business at Scranton, Pa., were unjustly included in the list of clothiers who patronized the Rochester combine as published in the August issue of the MAGAZINE. The boycott against the combine has been abandoned, a settlement of the difficulty having been reached, but we feel it a duty to make special mention of the firm of Martin & Delany, as the evidence before us shows that from the first they responded to the call of organized labor and that in all their business affairs they are fair and square dealing gentlemen.

SEND your contribution to the *Robinson Monument Fund*. The memory of the grand old man who is the father of all the railroad brotherhoods must be perpetuated in a way befitting his noble life work.

## AN IDEAL PLATFORM.

MR. EDITOR:—The following planks from the Knights of Labor platform, are good enough for all to stand upon:

4. That the land, including all the natural sources of wealth, is the heritage of all the people, and should not be subject to speculative traffic. Occupancy and use should be the only title to the possession of land. Taxes upon land should be levied upon its full value for use, exclusive of improvements, and should be sufficient to take for the community, all unearned increment.

13. That a graduated income tax be levied.

14. The establishment of a national monetary system, in which a circulating medium in necessary quantity shall issue directly to the people, without the intervention of banks; that all the national issue shall be full legal tender in payment of all debts, public and private; and that the government shall not guarantee or recognize any private banks or create any banking corporations.

15. That interest-bearing bonds, bills of credit or notes shall never be issued by the government, but that, when need arises, the emergency shall be met by issue of legal tender, non-interest-bearing money.

17. That, in connection with the postoffice, the government shall organize financial exchanges, safe deposits and facilities for deposits of savings of the people in small sums.

18. That the government shall obtain possession, by purchase, under the right of eminent domain, of all telegraphs, telephones and railroads; and that hereafter no charter or license be issued to any corporation for construction or operation of any means of transporting intelligence, passengers or freight.

19. That all laws shall originate with the people and be voted on and approved by them before being finally passed upon by congress and legislatures.

Happening to come across a copy of the Knights of Labor platform, and reading it carefully, (not for the first time, however,) I was interested to find that the several planks I herein above submit, form an almost ideal platform, of themselves, upon which a political party might solicit the votes of the people.

It is not so much to call attention to that fact, however, that I send this to the MAGAZINE as to call the attention of my single tax

critics to the fact that the land plank, herewith submitted, is in exact accord with what seems to me to be an idea of perfect justice.

It provides not for a *single* tax upon land values, but for a tax upon land values sufficient to take for the people all the unearned increment which, (non-occupying landlordism being abolished, and with it, monopolistic rent) would be natural or purely economic rent, in a state of freedom.

The platform abolishes the specie basis, making all money issued, full legal tender and none of it redeemable in the other. It provides for government banks, a graduated income tax, governmental ownership of railroads, telegraphs and telephones and the establishment of the initiative and referendum.

KANSAS CITY, MO.

#### FIREMEN'S RIGHTS.

MR. EDITOR:—It seems that my article in the March MAGAZINE has stirred up the ire of Brother Charles W. Arnold, of Nickerson, Kansas, who, I presume from his talk, is an old time engineer. He has taken it for granted that my article was written especially to slur the engineers, and to boast of the independence of the firemen.

Now if Brother Arnold will read my article again, and will give it a little thought, I think he will see his mistake.

In the first place, my article was written more for the purpose of answering "Main Track's" article, which appeared in last December's MAGAZINE, than for any other; I wanted to show "Main Track" that if firemen had no rights where he is employed such was not the case here. Brother Arnold starts out by saying that "if the fireman don't suit, the engineer can come pretty near getting him pulled off, only his complaint must be made in writing." That only goes to confirm my statement of the case; that the engineer can't have it all his own way, but must give ample proof for his objections. As far as having respect for our engineers is concerned, all laboring men should respect one another, and no one more than engineers and firemen. As to members leaving the B. L. F., as soon as they become engineers, Brother Arnold has certainly allowed his imagination to wander a little, as there is nothing in my article that would lead him to believe I advocated such a policy. I want to see all good members retained in our order be they engineers or firemen, but I did say that I was not in favor of engineers, as a rule, acting on our boards of adjustment. Brothers Scott and Smith are exceptions; I agree with Brother Arnold that Brother J. R. Scott is one of the best men to be found for the business, and too much credit cannot be given him for his labors.

It was really too bad about that young

man who was turned out in the cold by his father just because he was twenty-one years old. He should have thanked his father for not sending him away sooner. I feel very sorry for all poor boys who are treated in that manner. Brother Arnold concludes his remarks with the hope that they will be taken in the spirit in which they are given; that of peace, harmony and good will. Most assuredly they will be considered in that light, and as he seems to be true blue, with grey hairs thrown in, we shall be pleased to hear from him again through the columns of the MAGAZINE.

*O. N. Carpenter.*

WELLINGTON, KANSAS.

#### AID THE MONUMENT FUND.

When a toiler from life has departed forever,  
It seems that his works from our mem'ry we sever.  
The grasses may grow, and the weeds may encumber  
The place where we laid him to take his last slumber.

Though life had been spent in untiring devotion  
To better mankind in his daily commotion,  
We cease to remember the good which he done us,  
Or favors bestowed by his wisdom upon us.

Long moons waxed and waned since the effort was taken

A feeling of gratefulness here to awaken  
For him who is dead, who in life laid the union,  
Which thousands of toilers now tie in communion.  
Appeals were put forth, both in song and in story,  
To build up a shaft to his honor and glory;  
A tardy response is a poor recognition  
Of services meant for our better condition.

Now Robinson lies 'mongst the weeds and the grasses,  
His grave is obscured from each person that passes;  
While thousands less worthy in marble and granite  
Are fondly remembered since leaving this planet.  
Are we to be ingrates, in selfishness living,  
And not the poor pittance of gratitude giving  
To him from whose brain emanated the science  
Of brotherhood methods to win self-reliance?

Come, boys with a will, make a rally together,  
And build up a shaft o'er the grave of our father  
Be proud of your manhood don't stand monthly eging,  
From those who despise such continual begging.  
We owe it to him who has passed o'er death's river.  
Remember his work. Let each one be a giver,  
And soon we shall see, pointing upward to glory,  
A monument telling our brotherhood's story.

*Shandy Maguire.*

#### A MEDICAL HOME FOR RAILROAD EMPLOYEES.

The famous World's Medical Dispensary of Buffalo, N. Y., Dr. E. N. Pierce, President, has taken space in our Magazine beginning with this number for advertising their Erupture and Hernia treatment and the special advantages they offer to Brotherhood men for treatment at their Invalid's Hotel. In testimony they publish a statement from Brother F. S. Auchenbaugh, B. L. E., with his portrait attached. His statement is unqualifiedly a good one. In referring to their little treatise before us (the same as advertised) we find endorsements therein from some of the most eminent men in the country; the late President Garfield being among them. This little book is replete with information concerning this and kindred afflictions and will be sent to any address upon receipt of ten cents by addressing World's Dispensary Medical Association, Buffalo, N. Y.

## BENEFICIARY STATEMENT.

OFFICE OF GRAND SECRETARY AND TREASURER,  
TERRE HAUTE, IND., June 1, 1893.

To Subordinate Lodges:

SIRS AND BROTHERS:—The following is a statement of the Beneficiary Fund for the month of May, 1893:

### HON. JNO. J. INGALLS ON THE SITUATION.

---

Ex- U. S. Senator Jno. J. Ingalls is engaged in writing a series of articles for the St. Louis *Globe-Democrat*, in which he occasionally introduces topics which are of special interest to the labor world. In a recent article we have brief dissertations on money, the distribution of wealth, social maladies, centralization, nationalism, single tax, and some other things of like character.

Mr. Ingalls, while representing Kansas in the U. S. Senate, easily gained a national reputation by his skill in debate. Epigrammatic, keen as a razor and quick as a flash, he taught his associates the value of discretion when contemplating an attack upon him. His *repertoire* had immense range, and with *fixed* ammunition in exhaustless quantities, he exploded fire crackers or bombs as occasion required. Since his retirement from the senate, he has tried the lecture field and is now engaged in demonstrating that his pen is sharper than his tongue and mightier than a sword.

In the article before us, he starts out by giving his idea of money, and avers that "there is no form of power so tangible, so substantial and palpable, so positive and so readily apprehended as that which accompanies and results from the possession of money. The desire for money is the most constant and universal passion among men; not always—seldom, perhaps—for its own sake, but for its consequences, its effects, what it commands and what it brings." This estimate of money will be accepted, we think, as approximately correct. There are men who desire money for its own sake. They are the mentally deformed humans known as misers, whose money does them no good and is of no service to society. They make no boast of their hoardings, deriving all their satisfaction in the knowledge of possession. Others, as Mr. Ingalls says, desire money because of its power to influence conditions, and in this power find their supreme enjoyment. Wedded to their money and worshipping it

with more than pagan idolatry, they nurse their greed and pile up their fortunes regardless of ways and means; they grow rich upon the woes and misfortunes of others, and are damned before they die, but dead or alive they are the targets for the shafts of scorn hurled at them by men capable of distinguishing between decency and depravity.

In the course of his article Mr. Ingalls says that "less than a century ago the social condition in the United States was one of practical equality. In our first census period there was neither a millionaire, nor a pauper, nor a tramp in the country. The first American to pass the million-dollar goal was the original Astor, about 1806, who had migrated from Germany not many years before, the son of a butcher, with a pack of pelts as the foundation of his fortune." What has transpired in the United States during the period between the first and the tenth census? Millionaires have multiplied, and in a far greater ratio paupers and tramps, in the march of progress and poverty, have lined the track with their monuments, until at last we have the Columbian exhibition that excites wonder and admiration on the one hand, and on the other hand, poverty and squalid wretchedness and degradation, equally amazing. Why this astounding change in a hundred years? Why practical equality without a tramp one hundred years ago, with practical equality a delusion now and armies of tramps and paupers on every hand in A. D. 1893? Labor has never been idle in all of these years. The history of our national development reads like a fairy tale. The imagination is scarcely able to grasp the facts, and yet the victims of poverty have multiplied as the nation has grown richer, and men are forever asking the reason why? They find it, but when a remedy is sought to be applied, the possessors of money apply its power and a victory is won for wealth. It debauches legislatures and congresses, it issues its decrees and soldiers with shotted guns do its bidding, it enters the temples of justice and judges fall prostrate before it. Mr. Ingalls paints a picture of poverty as follows:

"Old age and poverty," says Shakspeare, "are an ill-matched pair," and at any stage nothing is so melancholy, so wretched and depressing, as hopeless and helpless poverty. The man whose daily bread for himself and his family depends upon wages that an employer may give or withhold at pleasure, is not free. The alternative between starvation and submission to a schedule is slavery. Liberty is something more than a name. He who depends upon the will of another for shelter, clothing and food cannot be a free man in the broad, full meaning of that word. Freedom does not consist in definitions. The declaration that life, liberty and the pursuit of happiness are the inalienable rights of every human being makes no man independent. The right to liberty is an empty mockery and delusion, unless the power to be free exists also. Freedom is not merely the removal of legal restraints, the permission to come or go. Added to these must be the capacity and the opportunity, which only exemption from the necessity of incessant daily labor can bring. To paraphrase Shakspeare, poverty and liberty are an ill-matched pair. Freedom and dependence are incompatible. The abolition of poverty has been the dream of visionaries and the hope of philanthropists from the dawn of time. The inequality of fortunes and the obvious injustice of the unequal distribution of wealth among men have been the perplexity of philosophers. It is the un-

solved enigma of political economy. Civilization has no paradox so mysterious as the existence of hunger when there is an excess of food—of want in the midst of superfluity. That one man should have possessions beyond the capacity of extravagance to squander and another, able and willing to work, should perish for want of embers, rags and a crust, renders society unintelligible. It makes the charter of human rights a logograph. So long as such conditions continue, the key to the cipher in which destiny is written is not revealed—the brotherhood of man is a phrase, justice is a formula and the divine code is illegible.

Is there anything in the foregoing to make a man love either his fellow man, his country, or his God? It is Ingalls in one of his daring presentations of conditions of the people in "the land of the free and the home of the brave." In reading Ingalls on the situation, who so bold as to deny his allegations? There they stand, every line as vivid as if written in lightning upon the bosom of a storm cloud. As we read, we are led to ask, is liberty, equality, justice and independence only Sodom apples, only

Dead sea fruit that tempts the eye  
And turns to ashes on the lips.

Mr. Ingalls informs his readers that "the exasperation of the poor at the insolent ostentation of the rich has overthrown empires," that "the relief of the needy has been the object of statutes human and divine. The complaints of the wretched are the burden of history." It is seen that Mr. Ingalls points out that a hundred years ago we had in this country "practical equality," and that tramps and paupers were unknown. In all of these years the country has been under the guidance of a government of the people, constitutions and laws of their own making, and yet Mr. Ingalls intimates that liberty, justice, and all things of good report are, in the United States, the merest shams, having no real existence; that workingmen who toil for stipulated wages are slaves, and so on for quantity and quality as we have shown by extracts from his remarkable paper. Mr. Ingalls tells his reader that "at the time of Cæsar 2,000 plutocrats practically owned the Roman empire, and more than 300,000 heads of families were mendicants, supported by donations from the public treasury. The same struggle has continued through the middle ages into the nineteenth century. There is no remedy prescribed to-day that has not been ineffectually administered to innumerable patients before; no experiment in finance and political economy proposed that has not been repeatedly tried, with no result but individual disaster and national ruin." In this, Mr. Ingalls expands to the fullest proportions of a pessimist. So far everything has grown from bad to worse, and in the march of progress and civilization nothing has been proposed different or better than in the days of ancient Rome, and still further back as far as the records go. After such asseverations, Mr. Ingalls changes front and intimates some confidence in the justice of God, and that since the days of Rome's sway things have changed, and that new forces, which Rome never dreamed of, have been put into operation. He says:

To admit that the ignorance, wretchedness, disease, want, poverty and deg-

radation of society are inevitable and irremediable. is to impeach God. To repeat the vain and paltry expedients which the experience of centuries has rejected as frivolous chimeras and vagaries, is to acknowledge that civilization is a failure and that man's only refuge from the infirmities and obstacles of his nature is in barbarism, the equality of the savage, where all fortunes and stations and conditions are reduced to the level of the lowest by the irresistible gravitation of its basest appetites and the inertia of its most groveling instincts.

At last, after much random groping and many bloody and desperate combats with kings and dynasties, privilege, caste and prerogative, old abuses, formidably entrenched orders, titles and classes, the ultimate ideal of government has here been realized, and the people are supreme. The poor, the toilers, the laborers are the rulers. They make the laws, they form the institutions. Louis XIV. said: "I am the state." Here the wage-workers, the farmers, the blacksmiths, the fishermen, the artisans, say: "We are the state." Confiscation and pillage and the enrichment of royal favorites are unknown. Every man, whatever may be his nativity, his faculty, education or morality, has an equal chance with every other in the race of life. Legislation, whether good or bad, is enacted by the majority, and bears equally upon all. The means of education are as widely diffused as the desire to know, and the opportunities for happiness are commensurate with the capacity to enjoy.

It is easy to see that in the foregoing Mr. Ingalls, with remarkable success, swallows himself most effectually. There has been a grand march of knowledge and of civilization, and the present is not as in the days of Rome, but "the poor, the toilers, the laborers are the rulers, they make the laws, they form the institutions," and "we are the state," and "every man has an equal chance." If this is so, then to work upon "schedule" wages is not "slavery," and liberty is in fact something more than a name, and the right to liberty is no longer an "empty mockery and delusion."

Mr. Ingalls revels in contradictions. He avers that "the condition of the masses is immeasurably bettered with the advance of civilization. The poorest artisan to-day has free enjoyment of comforts and conveniences that monarchs with their treasures could not purchase five centuries ago." And yet, says Mr. Ingalls, "universal suffrage has not proved a panacea for the evils of society. Poverty is not abolished. Though wealth has accumulated beyond the dreams of avarice, the inequality of distribution is as great as in the time of Job and Solon and Agis." It would be difficult, even for Mr. Ingalls, to formulate more diametrical contradictions. First he declares that the poorest artisan of the present, in comforts, out-rides monarchs of five centuries ago, and yet, he avers that the distribution of wealth is as unequal as in the days of Job. If so, how comes it that artisans now are more than the equal of kings only five centuries ago? In what countries are artisans the equal of kings five centuries ago? Only in the United States, since only in the United States is the citizen a sovereign in his own right, made so by universal suffrage, which, while not a panacea for all the ills of society, can be made a remedy for all the ills which flow from unjust laws.

Mr. Ingalls admits that under the present *régime* the "wants and desires of workingmen are multiplied more rapidly than the means of gratification. Education, daily newspapers, travel, libraries,

parks, galleries and shop windows have widened the horizon of workingmen and women, increased their capacity for enjoyment, familiarized them with luxuries and the advantages of wealth. Political instruction has taught them the equality of man and made them acquainted with the power of the ballot." Admit this for all it is worth, the question is, what of it? It simply indicates that workingmen and women, animated by worthy ambitions, are putting in operation forces of which the ancients were ignorant, and are achieving triumphs which presage conditions which Mr. Ingalls sees but dimly, if at all. Mr. Ingalls, as if determined to light bonfires and then extinguish them as was done when the palace of the king of the Lilliputians was on fire, affirms that "false teachers have convinced them that all wealth is created by labor, and that every man who has more than he can earn with his hands by daily wages is a thief, that the capitalist is a foe, and the millionaire a public enemy who should be outlawed and shot at sight."

If Mr. Ingalls denies that all wealth is created by labor, he does himself rank injustice by not stating what besides labor does create wealth. It is not true that workingmen, as Mr. Ingalls intimates, as a whole believe a man is a thief who has more than he can earn with his hands by daily wages, or that the capitalist is necessarily a foe, and that the millionaire is a public enemy to be outlawed and shot at sight. There may be, indeed there are, anarchists, who wear the badge of labor, who come within the indictment, but to charge such things upon workingmen is as false as it is vicious, and demonstrates that ex-Senator Ingalls, in the discussion of topics relating to labor, intended from the start to make workingmen odious, regardless of his own reputation for honesty. And the closing paragraph of his article demonstrates very conclusively that after all of his seeming sympathy for labor, he is probably the paid advocate of those whose purpose it is to bind still greater burdens upon the backs of workingmen.

---

## THE CHICAGO ANARCHISTS.

---

On the night of May 4th, 1886, there was a meeting held in Haymarket Square, Chicago. The attendance was estimated at about one thousand persons, who were denounced as anarchists.

Americans, being in favor of law, order and a stable government, anarchists, who oppose such conditions, are necessarily unpopular in the United States. The meeting in Haymarket Square, it seems, was called to publicly discuss numerous outrages perpetrated upon workingmen in Chicago by the police and Pinkerton thugs.

Governor Altgeld, in his masterly message, extending pardon to

three Anarchists, makes the following statement showing the underlying causes of the Haymarket meeting:

"Again it is shown that the bomb was in all probability thrown by some one seeking personal revenge; that a course had been pursued by the authorities which would naturally cause this; that for a number of years prior to the Haymarket affair there had been labor troubles, and in several cases a number of laboring people guilty of no offense had been shot down in cold blood by Pinkerton men and none of the murderers were brought to justice. The evidence taken at coroners' inquests shows that in at least two cases men were fired on and killed when they were running away and there was consequently no occasion to shoot, yet nobody was punished; that in Chicago there had been a number of strikes in which some of the police not only took sides against the men, but without any authority of law invaded and broke up peaceable meetings, and in scores of cases brutally clubbed people who were guilty of no offense whatever."

In this, the Governor arraigns the government of Chicago and states facts which would make anarchists of Quakers. People shot down in cold blood, who were guilty of no offense, by Pinkerton thugs, and never brought to justice, and a brutal police clubbing people who were guilty of no offense whatever, and never punished for their infamous outrages, would, anywhere under heaven create anarchists. It should be borne in mind that it is the Governor of Illinois who arraigns Chicago for the perpetration of murders as black as that caused by the Haymarket bomb, for he says the Pinkertons, employed by Chicago, had in cold blood shot down a number of laboring people, guilty of no offense, and that none of the murderers were brought to justice. What more natural than that such murders should create excitement and result in fiery denunciation?

But we write for the purpose of getting before our readers the views of Governor Altgeld, as expressed in his message pardoning three of the convicted anarchists—Michael Schwab, Samuel Fielden and Oscar Neebe. Besides the three anarchists named, there were five others indicted for murder, viz: Albert R. Parsons, Louis Lingg, George Engle, Adolph Fischer and August Spies. Louis Lingg committed suicide, while Parsons, Fischer, Engle and Spies were hanged.

Governor Altgeld makes the declaration that the convicted anarchists not only did not have a fair trial, but on the contrary, the purpose of the trial was to convict regardless of proof, and that conviction was obtained by methods the most scandalous and infamous that ever blackened the records of Anglo Saxon jurisprudence. A miscreant, by the name of Henry L. Rice, was made special bailiff to summon men to act as jurors, who, it is shown, had openly and repeatedly expressed opinions relating to the guilt of the accused, and boasted that the indicted men would hang as certain as death, and Governor Altgeld shows that the trial Judge outraged justice and fair dealing by using his position to secure conviction.

No one attempts any defense of the man who threw the murderous bomb, but the man who threw the bomb could not be discovered. All efforts to find him utterly failed. He was the one and the only one guilty of murder, and in this connection Governor Altgeld says:

The prosecution could not discover who had thrown the bomb and could not

bring the really guilty man to justice, and, as some of the men indicted were not at the Haymarket meeting and had nothing to do with it, the prosecution was forced to proceed on the theory that the men indicted were guilty of murder because it was claimed they had at various times in the past uttered and printed incendiary and seditious language, practically advising the killing of policemen, of Pinkerton men and others acting in that capacity, and they were, therefore, responsible for the murder of Mathias Degan. The public was greatly excited, and after a prolonged trial, all of the defendants were found guilty; Oscar Neebe was sentenced to fifteen years' imprisonment and all of the other defendants were sentenced to be hanged.

It will be observed that the men tried and convicted, five of whom were sentenced to be hanged, two imprisoned for life and one for fifteen years, were not tried for committing the crime of murder, but for "uttering and printing seditious language, practically advising the killing of policemen and Pinkertons and others acting in that capacity."

Governor Altgeld, in issuing his pardon sets forth the fact that petitions for executive clemency, and letters have poured in upon him, setting forth the reasons why the Governor should act. These petitions assert as follows:

"1. That the jury which tried the case was a packed jury selected to convict.

"2. That according to the law as laid down by the Supreme Court both prior to and again since the trial of this case, the jurors, according to their own answers, were not competent jurors, and the trial, therefore, was not a legal trial.

"3. That the defendants were not proven to be guilty of the crime charged in the indictment.

"4. That as to the defendant, Neebe, the state's attorney had declared at the close of the evidence that there was no case against him, and yet he has been kept in prison all these years.

"5. That the trial Judge was either so prejudiced against the defendants, or else so determined to win the applause of a certain class in the community that he could not, and did not grant a fair trial.

In commenting upon the foregoing, the Governor leaves nothing in the dark, but shows most conclusively that the jury was packed and selected to convict—that the trial was throughout illegal, and that while the dead had passed beyond the reach of the clemency which justice and mercy demands, the survivors could be and ought to be pardoned. The Governor fortifies his act of clemency by reciting, in detail, the questions propounded to men selected by Rice for jurors and their answers, and in reading them now, after passion has subsided and reason has resumed its sway, the infamy of the proceedings to convict in defiance of law, justice and all things decent, sends a thrill of horror through every fibre of the hearts of honest men. Judge Lynch, at the head of a mob, was never more cruel. It was an exhibition of civilized savagery without a parallel in all of the centuries.

It is of special importance for those who would have any clear conception of the farce trial, or a trial to convict, to know how Rice and the trial Judge proceeded to secure a jury to convict. We give the official records of a case or two which illustrates the infamy of the proceedings:

"H. N. Smith, hardware merchant, stated among other things that he was prejudiced and had quite a decided opinion as to the guilt or innocence of the defendants, that he had expressed his opinion and still entertained it, and candidly stated he was afraid he would listen a little more attentively to the testimony which concurred with his opinion than the testimony on the other side; that some of the policemen injured were personal friends of his. He was asked these questions:

Q. That is, you would be willing to have your opinion strengthened and hate very much to have it dissolved?

A. I would.

Q. Under these circumstances do you think that you could render a fair and impartial verdict?

A. I don't think I could.

Q. You think you would be prejudiced?

A. I think I would be, because my feelings are very bitter.

Q. Would your prejudice in any way influence you in coming at an opinion, in arriving at a verdict?

A. I think it would.

"H. D. Bogardus, flour merchant, stated that he had read and talked about the Haymarket trouble; had formed and expressed an opinion; still held it as to the guilt or innocence of the defendants; that he was prejudiced; that this prejudice would certainly influence his verdict, if selected as a juror. *I don't believe that I could give them a fair trial upon the proof, for it would require very strong proof to overcome my prejudice. I hardly think that you could bring proof enough to change my opinion.*

The foregoing is in keeping with others who, though challenged for having formed an opinion and being prejudiced against the defendants, but were, nevertheless, forced upon the jury to try men impartially, whose life and liberty trembled in the balance. Every allegation set forth by the petitioners Governor Altgeld held to be absolutely true. First, the jury was packed to convict. Second, the law was ruthlessly bludgeoned out of court. Third, the defendants were not proven guilty. Fourth, Neebe was absolutely innocent, and fifth, the Judge showed himself to be a monster. The trial was a crime and the execution of the men judicial murder.

What of it all? The trial was a monstrous perversion of justice—a disgrace to our civilization, a murderous stab at free speech and if such infamous court proceedings could be made the rule in the United States the difference between Russia and America would not be perceptible. The three men rescued from prison is something in the line of redeeming the country from this odium of the trial, and Governor Altgeld deserves a monument for the moral courage he has displayed in breaking the fetters forged by a judicial crime, and thereby setting three unfortunate men, who were not legally convicted, free.

---

THE Chicago Sunday Post is authority for saying that Chicago has 232 millionaires. The men standing at the head of the list, are Marshall Field and Phillip D. Armour, both of whom are credited with fortunes amounting to \$40,000,000.

## CONTRIBUTED.

---

### A CITYLESS AND COUNTRYLESS WORLD.

---

BY MARIE LOUISE.

---

Under this caption, Mr. Henry Olerich, of Holstein, Iowa, writes a 447 page book on "Practical Coöperative Individualism." Like all speculative philosophers, the author believes in the forceful action of the allegoric style on the minds of intelligent men and women. To that effect, he introduces to us a Mr. Midith, who was born on the planet Mars and had undertaken to visit our earth by means of a "projectile." The missile reached our planet, not on solid ground, but in the waves of the Pacific, about a mile from the western shores of the United States. But "being a Marsite, and consequently a good swimmer," he had no difficulty in reaching the shores.

The story opens ten years after this adventurous landing. At that time, Mr. Midith had mastered the English language and was engaged "in canvassing Herbert Spencer's Synthetic Philosophy." "In the pleasant little village of Dozen," he knocked at the door of a Mr. Nivins and solicited an order for his book. Mr. Nivins being a man of literary abilities, the name of Herbert Spencer struck a sympathetic chord in his breast, and, as at that time it rained heavily, he invited the agent under his sheltering roof. Mrs. Nivins, a woman of culture and intellect, greeted the stranger and her children surrounded him, evidently attracted by a peculiarity in his features. The rain continuing to fall in torrents, Mr. Nivins invited the stranger to remain over the night and "make himself at home." Greatly impressed by the kind and intelligent faces of his hosts, Mr. Midith accepted the invitation, and, while the rain furiously beat against the windows, he commenced relating to his new friends the story of his journey from the planet Mars to our Earth. The astonished and interested family prevailed on him to remain with them a few days and tell them all about the people on Mars.

The narrative of Mr. Midith relates to the social, industrial and economic conditions of the inhabitants of his native world. Their planet being older than our own, the inference is the higher degree of their intelligence and the greater perfection of their social status.

Mr. Olerich, transformed into Mr. Midith, ably discourses on astronomy, geology and the law of gravitation. "There is a point somewhere," he says, "between them" (the earth and Mars) "where a body would be equally attracted by both, would neither fall to the earth nor to Mars. But if moved a little towards either one from

the point of equilibrium, it would fall the whole distance towards that body with a continually increasing velocity.

Mr. Midith makes a strong plea in favor of the theory of evolutionary development in the universe, and against the hypothesis of "special creation." But his main effort is, by the aid of illustrations to raise the curtain of the future and let us behold a condition of society wherein plutocracy, monopoly, financial gambling and industrial corruption have dug their own grave and fallen into it; where man has learned how to be *free and happy by building his own happiness on that of his fellow men.*

This prophecy may be but a dream, a utopian anticipation, but Mr. Olerich, moved by the spirit of the time, is led on to dream and to tell us of his dream.

It cannot be denied, (and it were unwise to overlook the fact), that in our present society, a feeling of irrepressible unrest prevails. Modern thinkers and writers, as moved by a common impulse, dissent on social and economic questions. From the professor in his chair of philosophy to the clergyman in his pulpit, and even the Pope in his Encyclical letters, down to the writers of romance and those of trashy fictions, one and all, strike a common chord and utter a similar cry: "Society is out of equilibrium! Wreckers are ahead!"

Heretofore, all speculations on the line of a perfectly equitable adjustment of social relations, have been based on altruism and constructed on the assumption that *the interests of the individual member must be subservient to those of the collectivity.* Plato's "Model Republic;" Sir Thomas More's "Utopia;" St. Simon's and Charles Fourier's "Communities;" the schemes of Robert Owen, Josiah Warren, and the modern attempts at establishing colonies are all more or less, conceived and erected on altruistic theories.

But in his work "A Cityless and Countryless World," Mr. Olerich discards the time-honored doctrine of altruism, and boldly constructs his model commonwealth on a base of egoism, that is to say, on the assumption that *the interests of the community must be subjected to the interests of the individual unit.*

Clearly, he has undertaken to reconcile two theories formerly regarded as antagonistic. The adherents of altruism deprecate individualism because of the idea of isolated action it suggests to them. The votaries of individualism, on the other hand, shrink from altruistic theories of organization, because these appear to batter on all the corners of personal liberty and threaten to stunt man's best activity.

The great perfection attained in labor-saving machinery and the large demand for commodities, leave no doubt as to the necessity for a system of industrial coöperation. Were individualists to ignore this fact (as collectivists assure us they do), their speculations would have to collapse from want of adaptability to meet modern requirements. On the other hand, were collectivists to insist on maintaining that industrial coöperation necessitates the subjection of indi-

vidual liberty to associational interests, then, the practicalization of their scheme would meet with early jarring and rebellion would shatter its structure ere the experimental phase had concluded; for the love of liberty is a burning, consuming flame in the breast of man!

Reasoning *a priori*, Mr. Olerich takes for premiss that "all sentient beings of which we have knowledge, are in pursuit of the greatest happiness—happiness is the aim and end of *all*."

The question: what is happiness? at once suggests itself.

Happiness is the absence of pain, and pain, invariably results from a transgression of the laws of nature to which all organisms are subject. Hence pain is the result of sin.

This admitted, it follows logically that happiness, the antonym of pain, is the result of virtue, the antonym of sin.

"What is virtue," the dogmatist will ask, "is it not purity, chastity and integrity?"

"Virtue," answers Plato, "is *phrenosis*, i. e. wisdom, a practical insight."

"Virtue," answers Socrates, "is knowledge."

"Imperial heaven," says Confucius, "will assist only virtue."

"Vice is folly!" exclaims the wise Solomon.

"I myself, am heaven and hell," declares Omah Cayah, the great Persian pessimist of antiquity.

On these testimonies of the ancient philosophers which are engraven on the rock of ages, Mr. Olerich has evidently grounded the ethics of his model commonwealth. It is necessary for man to secure happiness, and, failing to do so, he must exist in a state of disturbing perplexity which has a reflex action on his fellow beings.

To be happy, man needs to be virtuous—to be virtuous is for him to understand the laws of his own being and their relation to the order of things in the universe. To acquire that knowledge, his individual liberty must needs be unfettered, and in proportion that it is free from shackles, will the individual attain happiness through knowledge.

The diversity of idiosyncracies among human animals, forbids a prescribed line of ethics and physical operations. According to Mr. Olerich, the discovery of truth, or of what is *absolutely* right, depends on the relation of our mental status to the altitude in which truth is located. "A *high* sea level," he says, "makes a low mountain, a *low* sea level makes a high mountain." Men quarrel and wrangle about truths their minds have not been able to comprehend; on discovered truths, they always agree. Social harmony, therefore depends on the numbers of individuals who have acquired the knowledge of what *is*, and have discarded the childish notions of speculating on what *might* or *ought* to be.

These are the fundamental principles on which Mr. Olerich has based the practical plans of his social organization and industrial coöperation. Whether, or not, he has succeeded in contriving means by which personal liberty may remain integral in the bosom

of associational reciprocity and ostensible self-surrender, is a question the readers of "A Cityless and Countryless World" will have the opportunity to answer for themselves.

To follow the chain of reasoning of the author, is certainly as interesting as it is instructive. Not content with marshalling in order numerous axiomatic truths, he sustains the force of his position by a profuse number of illustrations.

Alexander the Great, history tells us—introducing himself to Diogenes the Cynic said: "I am Alexander the Great." "And I am Diogenes the Cynic,"—the other replied unmoved.

Alexander, surprised at the philosopher's cool behavior, asked him in which way he could serve him.

"You can stand out of the sunshine," was the abrupt reply.

This curt answer was a true expression of Cynic philosophy. The underlying idea of that system of thought being that man is an unwelcome guest at the overcrowded banquet of nature, Alexander had no right to enjoy the sunshine in common with Diogenes. From that spirit of cynicism, has sprung asceticism and self-mortification within the church. Man was judged unworthy of enjoying the scanty gifts of nature. What little was allowed to him, he received as a favor which he did not merit.

In the end of the last century, Rev. Malthus, moved by the malignant spirit of cynicism, and too much blinded to distinguish cause from effect attributed the deplorable condition of the masses to the fact that only a select number of human beings may be sustained by the possible production of the earth, and that, consequently, the increase of population must be checked by the destruction of embryonic life and other devices of his morbid imagination.

Philosophic cynicism, pious asceticism and sickly Malthusianism, have in the past, battered man's dignity and stunted his best energies. The masterpiece of creation has been degraded to the level of a hopeless beggar, a humble and humiliated recipient of favors, instead of presiding over all things as the master-mind, the noble lord of earth. The religious, philosophic, industrial and economic Malthuses endeavor to adjust population to the means of sustenance their pessimistic minds believe the earth capable of producing. In their bloated conceit, they have donned the almighty right of dispensing permits to live and injunctions to die.

But, from the remotest time, down to our own, thinkers have appeared now, and again, whose love of mankind impelled them to question the soundness of the theories of woe, and to them, the truth became evident. Not the capacity of the *production* of the earth is faulty, but the *distribution* of the produced wealth. Between the wealth produced and that necessary for our present population, there exists a surplus which is destroyed by becoming waste. To prevent that waste and preserve the wealth produced in its integrity, is the aim and object of all genuine philanthropists and intelligent men and women of our day.

Thinkers who dig below the surface of things, have also discovered

that the earth, manipulated with intelligence, can produce, not only sufficiently to sustain our present population, but even an increase of many millions, and this, with but a few hours daily of productive labor by each individual.

Mr. Henry Olerich is one of those earnest investigators who have arrived at that conclusion. In his book, he reveals to us his faith in, and hope for mankind. Some persons may differ from him on his conclusions; some may accept part of them and reject the rest, but all persons unbiased by preconceived notions, will give him credit for knowledge and sincerity. They may pause before features apparently objectionable, but the fascination imparted by his vivid pictures, will win them to resume reading on.

The hypothetical inhabitants of Mars are described as living in dwellings capable of accommodating, at least, one thousand persons. This structure is about eight stories high; the main building measures 150x600 feet, and three wings on each side for private apartments, measure 60x300 feet. These immense dwellings are scattered from distance to distance over the land and are called "big houses." They are built about half a mile apart all round rectangular fields twenty-four miles long and six miles wide. There are double tracked electric motor lines running all round these large divisions of land, so that every "big house" is built on a motor line. Electricity is used for lighting and heating purposes, for cooking, washing and drying. It runs all the agricultural and industrial machinery; propels railway trains at the speed of over one hundred miles an hour and ships on the sea with corresponding rapidity. Electricity distributes letters and forwards them to their ultimate destination, viz: to a box attached at the door of the private apartment of each individual in the community.

Manual labor is almost eliminated and, with the help of the powerful machinery, *two* hours of daily productive labor are sufficient to produce all the necessaries and luxuries a person may wish.

The "big houses" are elegantly and profusely furnished with all things necessary for comfort and education. Electric cars convey their inmates from their doors to any part of the surroundings, and land them and their baggages at railway stations.

Every man, woman and child, has a private apartment which no one presumes to enter except by special invitation of the owner.

Two artificial lakes for bathing and swimming purposes, one for adults and one for children, are conveniently situated. Avenues, or promenades, 100 feet wide; a conservatory 500 feet wide; a garden 1,000 feet wide; an orchard of the same dimensions; fields reaching far away; green houses 500 feet wide; outdoor nurseries for children, etc., etc., stretch out from the "big houses."

"We have no oxen, no horses, no draught animals"—relates Mr. Midith,—“the farming is all done by electric power. A locomotive which builds and takes up its own track, does all the ploughing, sowing, harvesting, etc. Instead of fencing each little patch of land and turning our weak, tired teams before all these fences, destroying

in the act of turning the very crop we endeavor to raise, as you do here" (on earth), "we hitch up a powerful land locomotive to a set of gang plows and plow a furrow which is from three to twenty-four miles, as the case may be. Our fifty foot header propelled by an electric engine, cuts the heads of the grain and elevates them into a large wagon rack. This wagon, when full, is taken by an engine to the warehouses."

The narrator then draws a very striking comparison between these means and those we employ for agricultural work, and emphasises the large amount of *waste* resulting from the use of draught animals, from the numerous divisions of land, and from the deterioration of the idle machinery in the hands of small farmers. The benefit of coöperative labor is skillfully demonstrated.

Were we to figure up seriously the cost which the use of draught animals imposes on our society, we would stand amazed! The land and the labor required to keep and feed them; the immense number of men who drive them and whose labor is unproductive, since natural forces could be substituted,—the waste of physical energy, material wealth and intellectual possibilities in men—these and many other items, form a tremendous factor in the general *wastefulness* of our social and economic system. That waste redeemed, and the community is enriched by the whole amount.

The greatest liberty, explains Mr. Midith, is secured to each individual on the planet Mars. A man, a woman or a child, for two hours' labor, receives a check of ten dollars. Women, during their period of gestation and lactation, receive the same daily salary, besides a grant to defray the expenses attending their children's babyhood. "When a baby is born," says our Marsian narrator, "it always has a home waiting for it in which it can live all its lifetime."

Women being financially independent, enjoy the same liberty and have the same opportunities as men. This social feature, of course, generates a mode of marriage relation differing somewhat from our own. Those who are interested in that question will find in Mr. Olerich's book, a great deal of thought matter. The rationalist will enjoy the study; the conventionalist will, no doubt, curl his lip in disdain; both instances are desirable; out of the conflicting criticism, truth will spring.

In industry and agriculture, each Marsian community produces the articles for which it is best adapted, and exchanges its products with the other communities. Their currency is based on *labor notes* and, necessarily, represents actual wealth. Currency and national wealth increase and decrease simultaneously; *water* finds no room in it. Rent, usury, profit, interest and taxation, are entirely obliterated from the system; industrial and commercial waste is removed.

The education of children forms a very interesting feature of the book. Based on individual liberty, the training of the young bears a great contrast with our own method. Lovers of, and believers in mankind, will find in the expressions of Mr. Olerich, a ringing echo of their own thoughts and hopes. The dogmatist will sneer, but

this may be regarded as a tribute to the excellence of the theory under investigation.

The Marsian narrator concludes by the explanation of the process by which the inhabitants of Mars effected the transition from a social state similar to our own, to one so modified that political and judicial legislation have become obsolete and have made room for an industrial organization which secures plenty and happiness to all; where the security of communism is blended with the invigorating effect of ownership and competition.

## SHORT STUDIES IN POLITICAL ECONOMY.

---

BY WILFRED P. BORLAND.

No. 8.

We have seen that the Roman idea of property led to the dispossession of her small farmers, the growth of a latifundia, agrarian agitations, and, finally, decay and dissolution. In studying the political economy of the Romans there is one fact that should always be borne in mind. Her economic arrangements were not comprehensive, as ours are intended to be; the economic agitations which mark her history were carried on over the heads of the great mass of her population. The basic institution of Roman society was chattel slavery. The theory was that of a state whose economic arrangements were for the benefit of a small number of Roman citizens, who exploited the masses precisely as if they were dumb brutes. Under Roman law the slave was an article of property, like anything else. "Cato, the elder," says Plutarch, "sold his old serfs much as if they were dumb beasts." The Aquilian law made no distinction between an injury done to a domestic animal and that done to a slave. In both cases only the depreciation in value, which resulted, was taken into account. The servile class was recruited chiefly by war; the prisoners of war, especially the barbarians, were treated like wild beasts, captured and sent, often by thousands, to the markets and amphitheatres. When conquering Rome overflowed Italy, merchandise in slaves was plentiful, and sold at a low price. After the conquest of Corinth until the time of Septimus Severus (from 144 B. C. to 235 A. D.) it was calculated that there were three slaves for every free man. After the conquest of Sardinia there was a saying, "Dirt cheap as a Sardinian." Marius made himself master of 90,000 Teutons and 60,000 Cimbri. Lucullus carried off so many men in Pontus that the price of a slave then went down as low as four drachmae (about 75 cents). Cæsar made a million captives in Gaul. At last the slave markets were regularly supplied by Græco-

L F M 2 Aug 98

Latin and Semetic piracy. The Isle of Delos was the great commercial centre for Mediterranean slaves. There was a daily ingress and egress of several thousand slaves at its port. The Roman law of debt was probably the most savage and inhuman that has ever been enacted. Here is the text of the code of the Twelve Tables:

"Let the rich answer for the rich; for the poor, whoever will. The debt acknowledged, the affair adjudicated, let there be thirty days' delay. Then hands may be laid upon him and he may be taken before the Judge. At sunset the tribunal closes. If he do not satisfy the judgment, or if no one answers for him, the creditor shall take him away and attach him with cords or with chains, which shall weigh fifteen pounds—less than fifteen if the creditor so like. Let the prisoner live on his own means. If he has none he is to have a pound of flour or more at the will of the creditor."

"If he does not arrange, detain him in custody for sixty days. However, he is to be brought into court three market days, and there the amount of his debt shall be proclaimed. On the third market day, if there are many creditors, they may cut him in pieces. Should they cut more or less they are not responsible. If they wish they may sell him to strangers beyond the Tiber."

The sequence to this law of debt, when conjoined with the progressive mobilization of the soil, which took place under the Roman régime of property, could only be the gradual enslavement for debt, or the expropriation of the small landowners, and the establishment of great estates, worked by slave labor, as a universal condition.

The Gracchi saw, clearly enough, that the concentration of land ownership was responsible for the enslavement of the Roman citizens; they well understood that the man who was debarred from exercising his rights to the soil must inevitably be a slave.

They had no sympathy for the slaves, considered by themselves. Pagan morality, although it took noble flights in certain directions, never got to the point of declaring for the universal brotherhood of man, and it seemed but natural that those who were not Roman citizens ought to be slaves. But the condition was that the Roman citizens, themselves, were being remorselessly forced into slavery.

The Gracchi correctly apprehended the cause of this condition, and sacrificed their lives in attempting its removal. The lesson should have some value for us, who are committed to a more comprehensive economic doctrine, because it clearly indicates the way we ought to go to secure the emancipation of the masses.

Look wherever we may, the concentration of wealth and power, and the concentration of land ownership have always gone hand in hand. Note the condition of affairs in France, in the period preceding the revolution. Taine, in his "Ancient Régime," has given us a graphic picture of those times. The privileged classes held about all the land worth having, in addition to which they had largely shifted their feudal obligations onto the shoulders of the suffering peasantry. The abbey of St. Germain des Pres, alone, owned 900,000 acres of land; one-fifth of the soil belonged to the clergy, one-fifth to the nobility,

one-fifth to the King and communes, the remaining two-fifths to the third estate and the rural population. This three-fifths owned by the privileged classes was the most valuable land in France, and they enjoyed its revenue almost entirely free from obligations of any kind, the burdens of government being almost exclusively borne by the non-privileged classes. The possessions of the clergy, capitalized, amounted to nearly 4,000,000,000 francs; 399 monks at Premoutre estimated their revenue at more than 1,000,000 livres and their capital at 45,000,000; the Benedictines of Cluny, numbering 238 enjoyed a revenue of 1,180,000 livres; in Franch-Comte, Alsace and Rousillon the clergy owned one-half of the property; in Hainaut and Artois, three-fourths; in Cambresis, 1,400 plow areas out of 1,700. The Princes of the blood had, together, a revenue of from 24,000,000 to 25,000,000; the Duc d'Orleans, alone, enjoyed a rental of 11,500,000. The peasants and workmen were, everywhere, in the greatest destitution. At Lyons, in 1787, 30,000 workmen depend upon public charity for assistance. At Paris, out of 650,000 inhabitants, the census of 1791, enumerates 118,784 as indigent. It was such political economy as this that precipitated the French revolution.

## KISS ME, DARLING.

BY FRANK A. MYERS.

No. 2.

Had Tol cast his eyes toward the grim, black fringe of woods along the oriental skies, he would have seen the first gray beams of the early summer morning tinting the horizon with a faint silver tinge; a little later a ruddy or orange glow shot up higher, giving plain evidence of the approach of old Sol in all his glory, who would soon burst upon the sleeping world with a gorgeous splendor that disdains the puny imitations of the artist's brush on canvass. How grand is the sunlight, born anew each day to a drowsy world! How enlivening and cheering the rays that quicken the earth with life and give hopeful promise of futurity! How beautiful the sunbeams that give color to the rose and blush to the maiden's cheek! How mysterious its life-giving powers, and how like a death knell to the painful sighs and distressful ohs that dwell in the cobwebbed chambers of the soul! O, what *would* this world be without the sparks that flash from the spokes of Apollo's chariot as he flies through the sky?

Gradually the daylight gained upon the night, until the shadows began to flee in panic to other quarters, and the roseate morn was at hand with a broad smile and a liberal courtesy. The air was a little

misty with the morning dew, but clear as crystal, and it felt a little fresh and heavy in the new-born day as it lay over Curtis and the surrounding country—the fields and hills and woods and river. The momentous significance of a new day, glancing over the world with a glad, fresh smile of cheer, scarcely touched Tol—indeed, he did not think of it—as he sat buried in this most interesting story. Oh, the glorious promise of a new day!

Tol read where Baneful

“With smooth dissimulation, skilled to grace  
A devil's purpose, with an angel's face.”

plied his arts of lying words to the too ready ear of innocent, credulous Rose, and had gained her affections, with a faint spark of reserve on her part, but with aching heart he gave her up as lost and Tannver driven entirely from the field of wooing. Rose treated this honest, manly lover with cool *sang froid*, while she acted toward Baneful as if he were the only man in all the world worthy of her love.

“I wish girls did have a bit of even crude sense to distinguish between an honest soul and a black-hearted villain with no honor and ‘no intentions,’ but they do not. I suppose they never did have and never will have. They always turn a cold shoulder to the ‘nice young man,’ saying foolishly, ‘He ain’t my style,’ and cozen up to the rake, the roué, who has no thought for her good. They are, I suppose, ‘her style,’ but I pity ‘her style.’ It is not very much of a ‘style’ if I may judge, and all the good people of the world coincide with me. And girls that you would not think have just such unaccountable tastes. They like ‘dash,’ not manly reserve, except at a distance. They say they can’t bear these goody-goody young fellows, who are half sapless and witless, but later in life, when it is utterly too late to mend things, they see the error of their standard of true and abiding and proud manhood. Now, here’s Rose; I suppose she’ll marry Baneful, and then a little later have the scales knocked from her eyes and repent her rash, hasty, foolish, wicked marriage all the rest of the days of her life. But that is the way of the world.”

“So let the world wag along as it will,  
I’ll be gay and happy still.”

And he sang this with a good deal of force at that instant.

“To think. At the first interview with Rose this infamous and fermented compound of humanity said boldly to her, ‘Kiss me, darling!’ The idea! She would have been justified in quoting Burns—

‘Haud off yer hands, young man,’ says she,  
‘And din na sae oncivil be,’

and so forth. But she did not, and there she is just about as guilty as he. ‘Kiss me darling!’ Why, if a man was to say that—listen! That’s the whistle of No. 4. She’s here.”

And he ceased soliloquizing and hurried out of the office to attend

to his business. The broad beams of the expansive, clear morning put his dim lantern to shame, and he placed it down inside the depot waiting room door, and stood alone on the platform looking at the swiftly approaching lightning express, a sort of F. F. V., if we may borrow the phrase of another road. The black smoke spread back heavily over the swift-rolling coaches, and the dark monster came up fearlessly, enlarging as it drew nearer. Its rumbling echoes reverberated far and near, its shrill screaming whistle pierced the morning air and seemed to split the very heavens, its burden of precious freight rested perfectly trustful within these enlarged peanut like shells, and its valiant engineer and fireman were faithfully stationed at their posts. The thundering monster, the air brakes being applied, paused perfectly still at the station, and the engineer sprang down with a long nozzled oil can in his hands to apply a little oil to the journals of the drive wheels and press the backs of his knuckles to the axles of the same to ascertain whether they were too hot or not.

"Hello, Bob," exclaimed Tol, familiarly, and with general bonhomie, as he saw the engineer leap to the platform. Tol approached him. Bob went on oiling hurriedly. "All right, I suppose?" queried Tol, lightly.

"All right," returned Bob lifting his oil can high upon its nose and filling the oil receptacle. Bob was not a little black and greasy, as engineers are usually and unavoidably, but he was wide awake and attentive to his business. He knew just how much depended upon him, and this was a stimulus to wakefulness and to duty.

"Four or five minutes slow, eh?"

"Not over one minute," returned Bob, without looking up from the business before him. "Some way luck is against us, and has been all the way. We started a few minutes late and we have turned these wheels all the way as hard as we could, and still have not quite caught up yet. And yet luck's been with us, for we are still on the rails."

"O, you'll make it, of course." And Tol turned once around on his heel with a sudden swing, in a sort of youthful activity, with no purpose save the desire of motion, and then added: "When do you go back?"

"First run back after I get in," answered Bob, settling his smutty skull cap closer to his short cut hair. All this occupied but a single minute. The fireman sounded the bell, whose tones struck a peculiar note upon the early morning air. The engineer tipped his can to one more journal. The conductor, who had assisted a single male passenger to alight upon the weather beaten platform, signaled to the engineer with his hand, which he shook gently above his head, to go on, and the engineer sprang into the cab with alacrity and touched the lever. The train again began to move.

Tol, at the instant the engineer leaped to his post, turned to gaze into the darksome looking car windows. Rose and Baneful and Tannver strangely possessed his mind. The windows were a curious

mystery of shadows, the lights within scarcely vieing with the swift approaching light of old Sol, who has been doing duty for the world for so many ages together and knows exactly how to confound lesser and artificial lights. All the windows were blank but one, and he was just on the point of turning back into the office to finish the tale that had so attracted him through the lonely hours of the night. Just then he espied a sweet female face in the half open window of the chair car, and there was something about that proportionate physiognomy that caused him to look again. The car was moving faster and faster, and the engine was coughing heavily on the damp early air and quivering in its efforts to draw the coaches. Tol's strong, full eyes met the careless glance from the window. It was an innocent eye that looked upon him, such as an abstract person might have when gazing upon a tree or rock. Tol did not pause to think. He was not attracted except in the common way, toward the beautiful, youthful face. But the sweet face observed his second look. He was standing close to the coach when the pretty face moved by and just above him. Intuitively the words that Baneful had used to Rose came to his lips and he exclaimed nonchalantly: "Kiss me, darling!"

Instantly the abstract, dreamy eyes flashed like gems of the mid-night sky, and a black look of scorn swept over the expressive face like a swift whirling cyclone, or the tornadoes of Egypt did in the evil days of Pharaoh. A moment more and the coach and the face had gone, and for aught Tol knew, forever. As he uttered the careless, thoughtless, improper words he impulsively turned upon his heel and hurried into the office to complete the story of misplaced confidence. His own ungallant, if not vulgar, familiarity toward a beautiful strange lady never once entered his novel-filled head. It was a passing, trivial, amusing affair, born at the moment and buried with it, and even the memory of it vanished as he sat down to read.

But who was the lady he had so rudely insulted. It was not because he did not care, but because he did not stop to think. She may have been the daughter of a multi-millionaire, or the pretty young wife of some dry goods clerk, or the angel of a poetical, youthful lover, or the sensible girl of some retired old merchant or farmer, he could not know had he even paused to reason in the case. Dear reader, do not imagine his unwise, challenging remark was the beginning of a flirtation and a romance that led to orange blossoms and wealth, or that the outcome is anything like Feuillet's "Romance of a Poor Young Man." There is a romance in his impolite, insulting words, as you shall soon see, and we are not sure but you will say he deserved not all that befell him.

Throwing himself into the well whittled office chair he did not arise till he had finished the book, which was just a few minutes before the day operator walked into the office to relieve him.

"I'm glad she did not kiss the villain Baneful, and that she married in the end the right man. Girls, now-a-days, do not always choose the right fellow; they generally take the clothes with the

thing called a dude thrown in, to boot. It is really sad to see splendid young girls often make fearful shipwrecks of life on the hidden reefs of matrimony. But Rose, finally, after dangling a long time on the ragged edge of a fearful precipice, got her eyes open and took the right man. She is such a good, sweet girl that it would have been a pity had she blundered into a fatal marriage with the villain in the story. O, well! matrimony is a lottery after all!"

Just then the day operator walked in and Tol Vernon walked out, passing some jesting remarks as he did so, and to his home, where he tumbled into bed and soon fell asleep. His business necessarily made the day his night.

The next day something happened to Tol to bring very vividly to his mind the chance words he let fall to the lady in the car window. He clearly remembered, then, that he said to a strange, sweet-looking lady, just as the train pulled out of Curtis, "Kiss me, darling!" but it never entered his mind that his words would ever return to confront him as they did. This casual remark—well, you shall read and see what it did for him.

Tol always arose about 3 o'clock in the afternoon, and sauntering down town, passed the time as best he could till 6, when he again went on duty. He almost always was at the depot when the 4 o'clock train passed through, and carelessly looked at the passengers that got off or got on, and even stared at those who looked out the windows of the coaches at the fast decaying depot and the staid old town of Curtis.

On the next day after Tol's mischievous remark to the lady traveler he was at the depot when this above named afternoon train passed through on its way from Terre Haute to Evansville. As the train stopped he was a very little surprised to see an official of the road spring from the steps to the platform. At first he supposed the officer, whom he knew only in their relations as master and servant, would re-enter the coach and continue on down the line, but in this he was mistaken. The train moved away and left the railroad dignitary, whom we shall call for the want of a better name, Geddis T. Redfern, standing upon the sun-cupped platform. Tol did not think much about it, for he was not in Mr. Redfern's department or business of the road, and therefore his coming could have no relation to him. In fact he felt perfectly secure. But he said to himself he would "hate to be in somebody's shoes." Continuing in modernized language peculiar to the young of the day he mused to himself, while his back was toward Mr. Redfern:

"Somebody's going to get it in the neck, I'm sure. Redfern looks like it. I can see it in his face. If I ever got into a fight with a bull dog, I'd like to borrow his face to help me out. I don't know—I guess I like him well enough, but the men over others are generally too bossy for the happiness of those under them. If his coming here means anything, I'm with the boys on a strike. I'll go out with—"

Just then a hand fell heavily on his shoulder, and with a sudden,

flushed, startled whirl around he gazed with half anger into the cool, deep-purposed eyes of Redfern. But he instantly saw in the officer's eyes a something that at once disarmed him and made him the subordinate, easily. It was not exactly fire that he observed, but a resistless determination that it was well to respect. Their eyes met a moment, but Tol's quavered and turned aside. He was convinced it would not do at all to attempt to resist the half blow on his shoulder, which he now felt was a menace to him. Was it possible that after all this man was after his scalp! No! no! It *could* not be! But a withering, momentary sensation passed over him.

Redfern was a stout, well built, middle aged man, with a full, florid face, and a singularly penetrating, small black eye. He moved like a dapper business man, overburdened with a multitude of pressing duties, but he dressed well and seemed to have a high standard of family pride, judging from his general appearance and demeanor. Tol Vernon saw instantly that physical or moral antagonism on his part was utterly foolish, and so he put himself in a sort of defensive attitude and awaited results.

"Is your name Vernon?" interrogated Redfern in a rather rasping tone. It provoked Tol, but he answered graciously:

"It is, sir."

"Night operator here at Curtis?" in something of a mandatory spirit. And his brows knit ominously.

"Yes, sir."

"I thought I knew you."

"Well?" Tol tapped his right toes nervously on the platform, and thrust both hands deep and searchingly into his pockets.

"Well—I suppose you know me?" This was steely and threatening.

"Mr. Redfern, I think." Tol now pulled his hat down a little on the sunny side, and then stuck his hands into his sack coat pockets and drew the garment tight around him.

"Yes—you know."

"But what does all this preliminary talk mean? If you have an offer to make, or a promotion to tender, or dismissal papers in your pocket—out with it." Tol now felt like kicking somebody. He was in no sugar-and-molasses mood, as he himself afterwards expressed it, and he read from Redfern's general air something unfriendly to himself.

"I *have* something for you, sir," and a fearful frown distorted the officer's face.

"Let's have it." There was now a consciousness in Tol's bosom that something was radically wrong between him and Redfern, but his mind could not conjure up a thing or suggest a reason for the state of the man's feelings. He was sure he was angry, but he could not divine for what. Tol did not know what to think of himself—whether he was a gentleman or a criminal. For one thing he was sure he had never consciously laid even a straw in Redfern's way. If he was employed by a great soulless corporation, he did not know

that that gave a superior official the right to domineer over him. And he was more than half inclined to speak unreservedly to Redfern, even at the risk of losing his place. What was that to him by the side of his manhood? But after all, a gentleman is known by the extent of the control he has over his emotional propensities.

"Were you on duty yesterday morning?"

"I may answer you, sir, but it is not in the line of your official duty to ask. I was, sir." There was an assumption of dignity and coolness in this that was a revelation to Tol himself.

"You were on this platform when No. 4 went up, then?" There was an ominous glare in Mr. Redfern's eyes and deep knit brow that apparently boded evil.

"I was, sir." Tol was not in the least overawed by his superior's offensive attitude, for in his opinion position did not make the man.

"You said to a lady at the window the insulting words, sir, 'Kiss me, darling,' and waved your hand in intensifying manner to your words."

"I did. But what is that to you sir?" Of course he recalled the scene now in most vivid colors. He saw himself standing on the platform and waving a kiss to a strange, sweet-looking lady at the window. It had not occurred to him before, so trifling had it seemed, and so engrossed was he in the love story he was reading. But now that Redfern had recalled it he remembered it all very distinctly. Such words had escaped his lips in a careless, thoughtless moment to a strange lady on a train the morning before, but how Redfern had found out the words was "a puzzler."

"You meant to insult a strange lady, did you, and 'thought you would never be found out, as she would be gone the next moment? You were mistaken, and your cowardly deed has found you out." This was uttered in a most angry tone, and Tol felt it. But what could those words of the day before be to Redfern. How in the wide kingdom did he know that such a phrase of love had fallen from his lips! There was a mystery in this he could not fathom. It made him a little nervous, and he changed from one foot to the other and looked out across the woods that apparently stood in the line of the railroad far away in front of him.

"I don't understand you."

"Of course not."

"What do you know what I said? And what is it to you?"

"I'll show you, sir. Those words were uttered to my wife, sir. She was most grossly insulted, and entertains the vilest opinion of you. When you spoke to her you spoke to me, and I am here, sir, to demand satisfaction!"

This was a revelation. It flashed through Tol for the first time, that our words, a form of action, have a significance he little dreamed of before. They come back when we least suspect.

"I—I—I beg—"

"No stammering apology will do. It is too late. The insult has been given and I am here as a retribution for a thing done and past

remedy—do you understand?" No words can paint the bitterness in this. Tol wanted to rip the earth wide open. He saw a fierce resolve in the countenance of the enraged man glaring with desperation upon him.

"What do you want?"

"You dirty coward, take that!" and he dealt Tol a savage blow in the face. The young man fell to the platform like one deprived of life, and then Redfern stooped over and struck him several times in the face. It was a fearful chastising he gave Tol Vernon, but persons standing on the platform and who had been observing the animated conference, rushed in and parted them.

"Smile, now, will you, at another man's wife," said Redfern, exultantly, as they held him away from the prostrate form of Tol Vernon.

Tol was taken to his room, and the official, having partly avenged himself for the insult to his wife, returned to Terre Haute on the next train.

Tol had received a savage punishment, and he was not able to leave his room for a week. At the end of that time Tol received a notice of dismissal from further service to the railroad company.

"Well," he mused in a distressed train of thought, "this is what comes of a foolish remark, a silly flirtation with a pretty face in the car window that morning. I knew better, and I believed myself better, than to say what I did and to a stranger, but the fatal words of that blankety blank novel did it all. I got a clean knock out by her husband in public, before all my friends. Everybody knows it. It is a disgrace. And now I am out of a job—hunting a place. And all because of that pair of fatal eyes at the car window. I can't help it now, and must make the best of my luck. It's no use to cry over spilt milk. I see no other plan than to go west and grow up with the country."

[To be Continued.]

---

## THE SOLIDARITY OF ALL REFORMS.

BY JOSÉ GROS.

No. 3.

As we promised in our previous article, we shall now keep on proving that our socialistic friends have been attacking, all along, a certain product of their own imagination which they call the single tax, and is nothing of the kind. We enjoy their attacks very much. They are to us like the expenditure of powder in fire salutes, with which to celebrate the birthday of a grand idea, like that of—the real single tax, for instance.

One of those friends of ours expressed himself as follows in the

June number: "What the single tax offers to 95 per cent. of the people, the wealth producers without capital, is only what they could get on land of no rental value and with the poorest tools in use; all the rest would be confiscated by the single tax, for the benefit of the 5 per cent. non-producers." Well, the average annual product of our family average group is called \$1,000, although really but \$900, because at least \$100 is used to make up for the wear and tear of our tools of production, including the keeping of our working animals, horses, &c. The average product per family group in the poorest land and with the poorest tools is \$400 at the utmost. That is the approximate sum that our average farmer, in the wilderness, earns for the whole year, if as much as that. We have then a difference of \$500, which we should multiply by 12,000,000 working families. That will give us \$6,000,000,000 to be confiscated by that dreadful single tax, the scarecrow of our wise and timid socialistic friends, all according to the statement we have quoted from the June number. About twenty-five lines below, in the same article, we find another statement as follows: "The single tax, by destroying monopoly rent, would bring economic rent down to  $\frac{1}{10}$  of the former." That would be, say \$150,000,000, since monopoly rent could hardly be over \$1,500,000,000.

Did you ever see a more funny logic in your born days? The single tax is made to go up to \$6,000,000,000 and down to \$150,000,000 per annum, from about \$90 per capita of population down to a little over \$2 per capita. And that absurdity is not big enough for our friends, according to the article in question, because while the lower sum is supposed to be the one that alone could be collected by the nation as total public revenue for all public needs, the larger sum, the \$6,000,000,000, the \$90 per capita of population, that would be confiscated from the workers and go into the coffers of the monopolists, the 5 per cent. of the nation. And the latter are such a pack of idiots that they have not yet become single taxers! No explanation is given of how the two processes could be the result of the same reform, or should be expected to coincide if the reform took place.

No, gentlemen, such a confusion of thought will never do. You must try to give us clearer conceptions of what you mean. The above is totally incomprehensible. It shows that you are in a perfect muddle. Apparently you have attempted to criticise what you fail to understand. And if we have misunderstood you, let us hear about it. We desire to carry on the discussion without any spirit of personality, and simply as a noble struggle to master all fundamental truth in the realm of economics. Time is too precious to be wasted in search of any personal vain glory.

As a ratification of all the above, we are told, in the same article, that "even with the single tax in force, the possession of capital and machinery would enable the non-producers to appropriate all over a bare living from the producers, on account of the iron law of wages." Don't you see? Our friends imagine that the single tax and the iron law of wages can exist together! Almost any school boy could

be made to understand that the two items can not co-exist, because they destroy each other. The iron law of wages!—that old phantasm of old uncles and old aunties! What is it that gives existence to such a law? Land monopoly. What is the object of the single tax? To suppress land monopoly by making it unprofitable for any one to hold more land than he can use in full, according to the conditions of each period and locality.

When we understand the single tax we know that it means: Gentlemen of all schools, plural taxers or *tutti* taxers, henceforth money shall have no power to buy land, no power to keep land out of the circle of production, no power to even indirectly control land. And all that shall be accomplished through the simplest and most precise form possible. All land not fully used shall be subject to the annual bids from the workers of each locality, on auction transfers, in small parcels, on fixed dates and regulations, for annual payments as rent to meet all public expenses, improvements, if any, to be paid to the old holder at their actual commercial and market value. And that is all there is about it.

Under such principles, it stands to reason that labor and labor only could control land, and all of it, from that economically worth nothing up to the most valuable one.

Labor, and labor alone, would then fix the annual value to be paid for the possession of all land to which the community had imparted any value.

Under such economic conditions money loses all power to control land, and capital loses all power to control labor. Is not all that just as self-evident as 5 and 5 makes 10?

Face to face with the above status, or a similar one, what becomes of that *iron law* of wages and that scarecrow of interest that so frightens our timid friends of all socialistic schools? Just as well ask what would become of our planetary system if to-morrow the solar disk was converted into a glacier, and no other sun should take its place. As for the iron law of wages and all the other atrocities of that dismal science, the old political economy, they all were converted into smithereens by *Progress and Poverty* in 1879.

The peculiarity of that immortal book is that it appeals to the humble student, but finds no response with the proud, infatuated with their own human wisdom, and as such, at war against Divine Truth. Yes, brother reformers of all schools, the single tax shall in due time play the whale, and those two old social Jonahs, the iron law of wages, and interest on top, shall be no more. And that shall take place in spite of the old and young professors, more in love with themselves than with God's truth, either too old or too dyspeptic to even dream of that coming single tax civilization that shall crown labor as the king of the social fabric, something that none of our socialistic schools can ever do. And yet, who knows! The Industrial Republic, for a few years, may yet be needed as an "emetick" to clean the social system, and thus prepare men for—industrial righteousness—the single tax.

Yes, the iron law of wages, and interest as an oppressive industrial feature, and monopolistic salaries or profits—they all are the product of human enactments repudiating the most fundamental law of nature, trampling upon the most basic human rights, that of men's free access to land, free from all tribute to other men, free even from all rent when there is no genuine competition for the actual use of such land, and only subject to that rent which springs up when such competition arises, the rent increasing just in proportion as the needs of the social compact increase, because of higher collective aspirations, &c. When our friends want to suppress that natural law of rent, they remind us of those men who wanted to build up a tower high enough from which to take possession of heaven without God's permission!

Yes, let human laws respect that basic human right, that fundamental law in nature, part and parcel of divine ethics if not the whole of it, that freedom to land which alone can give us free men; and your iron law of wages with the rest of past and present social deformities become figments of the imagination, a mirage, a set of dreams.

As for capital controlling labor without controlling land, that some reformers want to believe possible—that is the most fantastic superstition that ever took hold of the human mind. We regret to have to illustrate the folly of such a conception, and shall be short about it. Take a plough worth \$10. There you have a \$10 capital. And such capital is a complete negation until a man uses it on a patch of land. And land alone gives me the materials out of which I can make a plough. And so with all tools and all capital. They all come from God's eternal capital to men—from land. Just as the tree controls its branches, so the landholders control all capital. And, please, don't mention us the American farmers. They are not landholders. They simply hold the shadow of their farms. We have shown that in article "Farming Under King Monopoly." See MAGAZINE, October, 1892.

In regard to interest as a permanent factor, a little quiet thought on the subject will convince any candid mind that such interest is the child of land rents pocketed by a group of monopolists, large or small. Stop that leak. Let such rents be collected and determined by the social organization that creates them, and all interest shall gradually vanish, except as transient accommodations, just as it often happens among millionaires themselves. And remember that we don't want the economic rent to be determined by any set of government officials. We don't want plutocracy in any form, not even one composed of socialistic saints. Nor do we, the people, want wages determined by government officials, captains of industry or anything like it. We want to give every man the potentiality of being his own boss, and also that of fixing his own wages, if he prefers to work for somebody else. We would rather be under the economic laws of nature than under the most elaborate human conceptions that any group of men may be able to concoct, no matter how

good the intentions of those men may happen to be. And we know that most of our socialistic friends are lovers of humanity, in their own way.

We are told that "no economic reform will do which leaves the machinery of production and exchange in the hands of 5 per cent. non-producers." That sentence boils down the whole empirical science of socialism. That sentence involves two misconceptions, one against God's order in nature, and one against God's order in ethics. We shall prove all that later on. We don't fancy long articles. They are generally read in a hurry, if read at all. We shall then finish this one with a parting broadside.

Why is it that in all nations about 5 per cent. have forever controlled most of the machinery of exchange, most of the money? Why has the same 5 per cent. forever controlled most of the machinery of production, most of the capital, most of the tools? Why has the same identical 5 per cent. controlled the standard of wages? Even on this side of the ocean we hear of labor strikes in colonial times and soon after the birth of the nation. There is but one answer to those questions, and the answer is: Because that identical 5 per cent. has always controlled most of the valuable land, made valuable by the presence of population and the competition that that evolves for land of best conditions. There we have the key of the real science of economics. Reverse the old social status. Give to 95 per cent. of the race the control of all land through the process specified in the sixth paragraph of this article, or a better one if you can devise it, and it will not be long before the 95 per cent. control most of the machinery of production and exchange. If not, why not? Let us have some logical answer. Let us have a little backbone, all around, even if it is only for the fun of the thing. Let us grasp the spirit of our respective principles, and let us drop the letter which, with our human limitations, is apt to leave some corners for sophistry to play around.

(To be continued.)

## THE CONCENTRATION OF WEALTH.

BY GEORGE C. WARD.

No. 3.

I concluded my last communication with the following tabulated statement:

Net increase in wealth, 1890 . . . . .	\$2,300,000,000
Less retained by workers . . . . .	80,000,000
	<hr/>
	\$2,220,000,000
Interest and Profit so invested as to become part of such net increase . . . . .	850,000,000
	<hr/>
Residue to be accounted for . . . . .	\$1,370,000,000

Before proceeding further with this investigation, I wish to recapitulate certain data. The sum of four billions, given under the head, "Farm and home mortgages," does not include \$828,739,486, loaned upon real estate by loan and trust companies, savings banks, &c.; which sum was included in the item, "Loans and Discounts," in banking statistics. This makes my total estimate of farm and home mortgages, \$4,828,739,486. At this writing the United States census office has issued statistics covering this item in twelve states. The per capita debt in these several states in 1890, is reported as follows: Alabama, \$26; Connecticut, \$107; Illinois, \$100; Iowa, \$104; Kansas, \$170; Maine, \$94; Massachusetts, \$144; Missouri, \$80; Nebraska, \$126; Rhode Island, \$106; Tennessee, \$23; Vermont, \$84. This makes the total ascertained mortgage indebtedness in the twelve states, \$1,781,773,802; so that my estimate will probably prove to be under, rather than in excess of the total for the United States.

It will be remembered that I accounted for the railroads and municipal franchise corporations under the head of bonded indebtedness and net profits above fair wages, choosing rather to handle such items in that manner, instead of reserving them as land values, to be treated under the head of rent. It seems to me that unless national and state control of these utilities was so complete and rigid as to enforce a maximum tariff of rates and charges, there would be nothing to prevent the corporations from adding the single tax to their rates and charges, thus increasing, instead of lessening the people's burdens. Again, single taxers compute the railroad land values at five billions, and strenuously contend that personal property, improvements, &c., should not only be free from taxation, but should be entitled to earn the current, prevalent rate of interest upon their cost as well as sinking fund for repairs, replacement, etc., etc. As the railroads, rolling stock, etc., irrespective of right of way, actually cost four billions or more, this would give us nine billions of dollars upon which must be realized by the railroad corporations, five per cent. above expenses, making an annual burden of \$450,000,000, of which sum \$250,000,000 would be returned to the people as a tax. If the water were squeezed out of the railroad capitalization, and five per cent. net, upon four billions only, was the limit of the burden of transportation, the people would be \$250,000,000 better off than under the single tax method.

But to return to the main question. It will be remembered that although the burden of interest and profit charges aggregated \$1,645,000,000, I only counted \$850,000,000 as being so invested as to form a part of the net annual increase in national wealth, or residual increment. This fact is attributable to a line of reasoning which applies with as much force to the factor rent, as to interest and profit. Many bank and manufacturing stockholders support themselves and families with the dividends received upon their stock shares. Much of the interest upon farm and home mortgages, and rent of farms and homes, is received by individuals to whom such interest and rent affords the only means of livelihood they possess.

Many of the farms occupied by tenants are mortgaged and it takes most of the rent to pay the interest and taxes. A very large proportion of such interest, dividends and rent is received by residents of foreign lands, principally England, and is spent by them in their own countries. An eminent English authority in speaking of the wonderful productive resources of the United States, says:

The interest from money loaned and profits of investments of English capital in the states amounted to \$727,000,000 last year, or more than sixty dollars for every vote in that country of universal suffrage, much more than is received in the same way from all the British colonies combined.

A goodly amount of interest received is added to principal already possessed and is reloaned, thus being compounded. In these and divers other ways, quite a large proportion of interest, profit and rent charges fail to be invested in land, permanent improvements or tangible, material wealth of any kind, and so fail to become a part of the sum given by statisticians as the net increase of visible wealth which accrues at the end of each succeeding year.

We now arrive at a consideration of the factor, rent, and the part it plays in the concentration in the hands of the few, of the wealth produced by the labor of the many. There are several classes or subdivisions in the factor broadly covered by the term, rent. There is the unearned increment, which is, primarily speaking, the increase in the selling price of the land. Free, or natural rent, to quote Mr. Middleton, which, before the invention of railroads, was tersely defined as being "the excess of the produce of land over that which the same application can secure from the least productive land in use." To such definition should now be added, "of equal distance from market." Monopolistic rent, which is defined by Ricardo as "that portion of the produce of the earth which is paid to the landlord for the use of the original and indestructible powers of the soil."

These are all the definitions which are necessary to cover each and every kind of rent of which single taxers seem to have knowledge or are willing to allow to enter into a discussion of single tax principles. And right here I must strenuously insist that, excepting the first term, unearned increment, these definitions cover no lands in cities or towns. Neither business or residence lots produce anything whatever, hence, do not come within the limitations of these definitions. Moreover, monopolistic rent is a separate and distinct addition to natural rent, but, in practice, includes it. Mr. Middleton says:

Before we can attempt to estimate the sufficiency of economic rent as a fund to tax, we must know what economic rent is.

If that rent only is economic rent which would appear in a perfect state of freedom and if we accept the doctrine which Mr. George himself seems to teach in some places, that only such rent can be used for government purposes, then Mr. Stuart's point is indeed a vital one.

Mr. Stuart, Mr. J. W. Sullivan and some others have lately sought to restrict the meaning of the term, economic rent, to a something which, in the present state of society, it is utterly impossible for any one to determine. How can Mr. Stuart or any one tell what even would approximately be the pure economic rent in a perfect state of freedom? It is merely a matter of conjecture or theory as regards either its sufficiency or insufficiency.

And then stultifies himself and controverts his foregoing statement by unconsciously admitting that he, himself, proposes to levy his tax upon that something, which in the present state of society, it is utterly impossible for any one to determine. He says:

I agree with Locke, that I have a right to all I can produce or use, whether products or land, limited only by the rights of my fellow men, and I believe in introducing a tax upon present land values and franchises limited to the needs of government economically administered, and, if sufficient, that alone, because I believe it is in perfect harmony with those rights.

I am not such a stickler for the single tax as I am for a tax on land values, sufficient, if need be to wholly break up speculative holding of vacant lands by the individual.

When occupancy and use becomes a prerequisite to a claim to land ownership, and non-occupying landlordism is abolished, we shall have arrived at a perfect state of freedom, at least so far as land is concerned. No longer, then, will occupying owners of agricultural lands be protected by non-occupying landlords in the absorption of monopolistic rent. Thus do single taxers contradict themselves. Mr. George errs in supposing that pure economic rent can result so long as non-occupying landlords may hold land by virtue of improvements. Mr. Middleton errs in supposing that anything more than pure economic (natural) rent can result, when occupancy and use is a prerequisite to a claim to land.

If, as Mr. Middleton says: "The Ricardian theory of rent upon which the single tax is based is correctly stated as far as differences in rent are concerned, by Mr. Stuart, when he quotes: 'Rent of land is determined by the excess of its produce over that which the same application can secure from the least productive land in use.'" (*Progress and Poverty*, chapter 2, book 3.) then we have nothing whatever to do with Ricardo's other definition of rent, "that portion of the produce of the earth which is paid to the landlord for the use of the original and indestructible powers of the soil." Of which Mr. Middleton says:

A well accepted meaning of the term from that time to this has been the market value of the land; and the market value of a piece of land is determined by its excess of productivity over the least productive land in use, or margin of cultivation.

The market value of land is that sum of money upon which the land will pay a net profit equal to the current, prevalent rate of interest, under a system wherein land is bought and sold, as other property is. This is where Mr. Shearman errs in taking five per cent. upon the selling value of land, under a system of land speculation, as the economic rent which should justly and equitably form the single tax. He arrives at monopolistic, not economic rent, as a result. But I have made a lengthy digression from the investigation proper.

There are yet two other kinds of rent: Commercial rent, which may be defined as that amount of wealth which may be absorbed upon a given piece of land, by means of the factors, interest and unnatural profit, which is in excess over that amount which may be

absorbed upon the least advantageously located site; all under a reign of non-occupying landlordism.

Sufferance rent: Which I will define as the varying amount, dependent upon location, which is paid for the privilege of residing upon that portion of the earth laid off in lots and blocks.

I am now ready to take up for consideration the item of increased land values. Upon approaching this subject, I am filled with wonderment at the peculiar fact that never, to my knowledge, has there appeared in print, a plain and lucid elaboration of the basis for the contention that, under the operation of the single tax, unlimited, the capitalized rental of agricultural lands would greatly decrease, while commercial rent, or the rental values of business lots in cities and towns would, nevertheless, continue to greatly increase. That such would be the case, may be demonstrated in one simple postulate, thus: There is no business center to agricultural lands. In every county, in every state, all over the United States—with the nation gridironed with railroads, large cities in every state, and export markets on the Atlantic and Pacific coasts and the Gulf of Mexico—wherever a tract of land can be found susceptible of cultivation, the only difference in value would be relative fertility and contiguity to market. With a total acreage in farms, in 1890, of about 685,000,000 acres and only 360,000,000 acres improved, there would be of lands now owned by railroad corporations, aliens and land speculators, 250,000,000 acres which would have to be, at once, either improved and put to the best possible use, sold for varying bonuses, dependent upon location, fertility, etc., or else incontinently abandoned by the present owners. Besides this, there would, at once, be a cutting up or division of large farms into smaller ones, as no man would care to pay a tax equal to the amount some other man was willing to pay for its use, for land which he could not fully utilize either by cultivation or by the pasturage thereon of every hoof such land was able to sustain. This would, probably, at once provide farms for twice as large an agricultural population as is now engaged in farming, and would lessen the value of agricultural lands in two ways: 1st. By increasing the supply as compared with the demand. 2d. By decreasing the price of agricultural products by increasing their production.

But such would not be the case with business lots in cities and towns. When just beginning to grope for the truth, *a la* single tax, and as yet seeing "through a glass darkly," I said in the November, 1891, number of the MAGAZINE:

But the fact that Mr. Steers seems to entirely overlook, is that the desirability or value for use would be determined under the single tax, just in the same manner as desirability is determined at present. The *rent* is the same, or perhaps higher, and it makes no difference to a tenant who he pays his rent to. Under the operation of the single tax, all alike would be tenants, and goods would not any the more readily sell from a store well out in the suburbs of a city, than they sell at present under such conditions.

The truth is that Mr. Steers must move or shift the center of business before he can reduce rents, and even then he will raise rents at the point he es-

tablishes his new center of trade. The value of a location depends upon certain contingencies and surroundings that the single tax is powerless to affect, and Mr. Steers' "new stores" would not be built unless there was a prospect of doing a profitable business therein, just as under the present system; new stores are not built by land owners until the business demands seem to guarantee a tenant and prosperity to such tenant, to insure his ability to pay his rent. Mr. Steers is respectfully informed that he cannot reduce the rent of desirable locations by multiplying buildings upon undesirable locations. He cannot move the business center of a city by simply building quarters for it to occupy.

After eighteen months' unprejudiced study of the question, I find no reason to change the opinion thus expressed. Under a single tax régime the same causes which now operate to cause the enormous and unprecedented rise in land values in the business centers of our cities and towns would yet continue to operate, if anything, with increased strength and force, caused by the increased volume of farm products to be handled. Nothing can decrease this rental value of business lots but a decrease in the estimate in which men hold money, *i. e.*, a decrease in rates of interest, with the consequent lowering of the standard by which men judge of the goodness or badness of the returns realized as profits upon money invested in business. The rate of interest is the standard by which the profitability of all investments is judged. Mr. Shearman recognizes this fact when he takes what he considers to be the current rate of interest upon the selling value of lands and calls such interest the economic rent of the nation.

Business lots in cities and towns are considered valuable in the exact ratio in which they absorb wealth by means of the factors, interest and profit. As business increases, such lots become more valuable and the rent is raised so as to make it equal to the current rate of interest upon the increased value. As business lots are continually changing hands, being sold by one to another, the increased value of such lots, and of all other land for that matter, becomes a separate and distinct source of absorption and concentration of wealth, totally distinguished and apart from the factor we call rent. If the land in the nation was worth, in 1880, twelve billions, and in 1890, was worth nineteen billions, and if such lands should have all changed hands during the year 1890, the sellers receiving the various other forms of wealth, then they would have absorbed, absolutely, without returning any equivalent, seven billions of wealth belonging to the people. The single taxers have never claimed more than one-half of that they might claim. Not only would such tax divert monopolistic rent from the enrichment of individuals to the support of the several governments, but it would save the people from paying in purchase money, an unearned increment, in the form of increased selling price of land, amounting, during the decade 1880-90, to about seven billions of dollars. The owners of rental lands in cities and towns eat their cake and yet have it. Commercial and sufferance rent amounts to not five per cent., but ten per cent., five per cent. of which is compounded. The land increases in value five per cent. and five per cent. rent is collected. Next year rent is

collected on the increased value, and another five per cent. is added to the value, etc., etc.

If I did not directly state so, I did, at least, suggest the inference that the whole of the \$2,300,000,000, net increase in national wealth for the year 1890, was the product and creation of labor. This view of the case, however, is not strictly and literally true, because quite a large portion of what is commonly entitled "national wealth" is not wealth at all, being the increase in value of real estate and fictitious capitalization of railroads and other corporate properties. All actual, tangible, material wealth is produced by labor and represents, in its own proper self, an increase or addition to the visible stock of valuable things. Land values, while created by the joint labor, energy and prosperity of the whole people and resulting from the pressure of population, do not after all constitute an increase in wealth, because the quantity of land is not increased, it being simply the rental and selling values of the same quantity of land that are increased. Hence, instead of being an increase in wealth, increased land values are an addition to the burdens of a people. What one sells, another must buy, so that increased land values mean that those who have no land must either buy at an advanced price or pay a greater amount of rent for the use of land. And yet, neither the productiveness or utility of land shows any increase, so that the real value must remain the same and the increase inheres not in the real but in the monopolistic value of land. This raise in the monopolistic value of land hurts those who own and occupy agricultural lands as badly as it hurts those who own no lands, because, for the last twenty years, prices of farm products have steadily tended downward, while the investment represented by land values have steadily increased in value, thus calling for a greater amount of interest upon investment and heavier taxes. Of course, in speaking of land values, I mean bare land only, improvements being an actual, tangible addition to the nation's wealth.

As a result of very careful investigations, I submit the following as the increase in values of bare lands for 1890:

Lands embraced in farms . . . . .	\$125,000,000
Lands in cities and towns . . . . .	440,000,000
Unoccupied farm and timber lands . . . . .	40,000,000
Mines, petroleum and coal lands . . . . .	95,000,000

Total increase . . . . .	\$700,000,000
--------------------------	---------------

I have really lengthened out this communication to such an extent that a further consideration of the subject will have to be deferred for another number. I therefore conclude with this tabulated statement:

Residue to be accounted for . . . . .	\$1,370,000,000
Less increase in land values . . . . .	700,000,000

To be accounted for . . . . .	\$670,000,000
-------------------------------	---------------

[To be Continued.]

## MISS SUSAN'S SPIDER LILIES.

BY BESSIE MORGAN.

"Good afternoon, child, how warm you do look!" said Miss Rebecca. "Sit right down on the porch, an' get cool. I've been out here with my knittin', most o' the day. This hot weather don't make a body feel ambitious, exactly."

There, take my palm leaf fan, an' I'll bring you a glass o' lemonade. I've got it all made there on the table.

If we could have a shower, 'twould be cooler. The country's gettin' dreadful dry and dusty, my garden's all scorched up.

Oh, no. The spider lilies don't 'pear to mind it, an' they make a good show, blazin' away out there in the sun.

You call 'em "tiger lilies?" Well, I s'pose spiders must be out o' fashion, now-a-days, but that was what I was brought up to call 'em. I never can look at 'em without thinkin' o' Susan Chapman. She had a regular swamp of 'em, growin' round her house, for good luck.

"If you wish to live an' thrive,  
Let the spider run alive."

she used to say.

She was a dreadful superstitious woman, Miss Susan was, 'peared as if she was hampered an' hindered at every turn by signs an' wonders.

I used to tell her I wouldn't try to live, if I was bothered as she was, every time a crow flew 'cross the fields, or a whip-poor-will sung by the back door, or she'd spilt the salt, or seen the new moon over her left shoulder, or a dog had howled at night. My goodness! There wan't no end to the worries that woman had. 'Twas one calamity after another!

She was always havin' warnin's in dreams. Why, she had her mournin' made up, an' ready for more'n a year, 'fore her brother Joshua died, 'cause she'd been warned, there was goin' to be a death in the family!

She was a real good woman, though she was so fanciful. She took Joshua's children home to live with her, all four of 'em. 'Course she was glad to get Cynthy, I guesss he couldn't a took the boys without her.

Cynthy was the oldest, you know, an' she'd looked out for the family since her mother died. 'Twould broke her heart, to ben separated from her brothers—Ed, an' Ted, an' Fred, they was called.

They was a trial to Miss Susan, those boys, but she put up with 'em somehow, an' she got real fond of 'em, an' interested in 'em, an' after a while, she got kinder used to 'em.

But she told me, it seemed to her at first, that they'd drive her distracted, an' you couldn't wonder she felt that way.

Cynthy kep' 'em as quiet as she could, an' 'pressed it on their minds, that if they wore out their Aunt Chapman's patience, they'd

have to be sent off this way an' that, for there want nobody else in the world, who was goin' to bother with 'em.

There was one point where Miss Susan put her foot down solid. They shouldn't have nothin' to do with the Sheldons, who lived next door. That did make Cynthy a world of trouble, for the Sheldons was lively. There was boys in the family, Nat Sheldon was just the age o' Ted an' course they was always gettin' together.

Nat was great on fishin', an' he was 'lowed to go barefoot, an' in swimmin' when he was amind to, an' one o' his brothers had a little gun, that he lent him sometimes, an' he had the biggest lot o' bird eggs, o' any boy round. So takin' it altogether, it wan't no wonder Cynthy's brothers was always workin' to get off with him.

It made it hard, 'cause when they asked Cynthy to tell 'em why their aunt objected to Nat, she couldn't for Miss Susan had a few rules that she always went by, an' one was.

"If there is a person that we don't like, that is one of whom we ought never to speak."

Another rule was,

"If you can't say any good of a person, don't speak of 'em at all."

So when Cynthy asked her aunt 'bout the Sheldons—thinkin' that if she would give the boys a good reason for keepin' away from Nat, they'd be more willin' to mind—Miss Susan would say,

"They're well enough. I've nothin' to say against, or 'bout 'em anyway. But I don't want none 'o my family runnin' backwards an' forwards, an' gettin' mixed up with 'em!"

"I s'pose it's a bad sign!" the boys would say, out o' patience, an' Cynthy would tell 'em.

"You should be willin' to mind Aunt Susan, without any reason, more'n her askin' you." But she never could get 'em to promise they wouldn't play with Nat when they got a chance.

An' far's she could see, he 'peared to be a good boy. He was a real handsome little fellow, with square shoulders, an' big brown eyes. The Sheldons was all good lookin' an' well-mannered.

When they met Cynthy an' her aunt out ridin', they'd smile an' show their white teeth, an' take off their hats, though they might be drivin' a load o' hay or ridin' on a ox cart.

Cynthy couldn't understand what the matter was with 'em. 'Course they was lively, an' kind o' noisy, over at their house, sometimes, but they didn't have no women folks to keep 'em quiet, 'cept Mr. Sheldon's sister, who lived with 'em, Mis' Sheldon bein' dead, but she was as deaf as a post, an' their noise didn't disturb her, none. 'Twas always good-natured laughin' an' singin' an' playin' after their day's work. An' Cynthy didn't mind hearin' it a bit, if it hadn't made her brothers so restless.

Miss Susan wouldn't let 'em be out o' doors after dark an' Cynthy tried to entertain 'em best she could, but if they heard the fun goin' on over to the other house, they couldn't be satisfied to sit still, an' be read to.

The sounds would come in through the open windows, an' the boys would fidget, an' groan, an' twist on their chairs. They wanted to be out, playin' "I spy" too, an' I don't know's you could wonder.

Cynthy never blamed 'em. She didn't have nothin' very enter-tainin' to read to 'em. They liked best an old history o' the Revolution, but they knew it by heart, an' for Sundays, they had "The Pilgrim's Progress" an' "History o' the Bible."

I reckon Cynthy wouldn't a minded a run in the dusk herself, 'stead o' sittin' cooped up in that little hot parlor, with a starin' lamp. She couldn't wonder at the boys, but she always upheld her Aunt Susan's authority. She was a good girl, Cynthy was—you wouldn't a s'posed she'd ben the first one to break through her aunt's rules. But this was how it happened.

Miss Susan, she come down stairs, one mornin' lookin' dreadful low, an' they couldn't get her to say what was the matter, till after breakfast, an' then she told 'em solemn as could be, that she knew something was goin' to happen. She'd had her warnin' dream again, the night afore. Course she couldn't tell jest what it meant, but some misfortune was hangin' over 'em.

Well, first the little boys looked real scared, then they see Cynthy didn't 'pear to be upset by it, so they kinder took courage, an' went fishin'. Cynthy told 'em they could go, if they'd be careful. Miss Susan was feelin' so poorly, she thought 'twould be a relief to her to have 'em off.

Cynthy didn't have a very lively mornin', Miss Susan she talked the whole forenoon 'bout the misfortunes that always followed that dream o' her'n.

She told one doleful story after another, till spite o' herself, Cynthy begun to think 'twould a ben better not to a let the boys go over to the river that day.

When it come to be twelve o'clock, an' they hadn't come back, she was worried enough. But she didn't want to bother her Aunt Susan so she kinder passed it over to her, till after dinner, then she said she'd go call the boys to come home.

The river lay over 'cross the fields, back o' the house, an' soon as she was out o' sight, she run fast as she could, till she got down to the shore. Then she walked up an' down an' looked, an' called, but 'twant no use, she couldn't find nothin' o' her brothers.

She didn't know what to do next, she felt as if she should go distracted. Then all to once, she thought p'raps they might a' gone off with Nat, an' she went down to the water fence that divided the Sheldon's land from Miss Susan's an' crep' through. She see one o' the boys comin' down to the water with his oxen, an' she could ask him if he had seen 'em.

'Twas a pretty place, down there on the shore, the river windin' in an' out 'mongst the hills. There was a strip o' sandy beach at low tide, but when the water was high, it come up close to the tall, coarse grass that was fringed 'long the edge with cardinal flowers. 'Twas real wet walkin' through it, but Cynthy didn't stop for that.

When the young man with the oxen see she wanted to speak to him, he took off his straw hat, an' come to meet her. 'Twas the oldest one o' the Sheldon boys, an' the best lookin'. She'd heard his brothers call him Dan.

Well, he listened to her troubles polite as could be. He thought 'twas likely her brothers had gone off with Nat, he'd heard him say that mornin' he was goin' fishin' over to the pond.

"O, dear" sez Cynthy, distressed enough. Then she asked him to tell her where the pond was, cause she felt she'd ought to go find 'em.

Dan was a real kind-hearted boy, an' he see how the girl worried, so he told her, 'twas a long walk, over pretty rough ground, he didn't think she'd better try it. He'd go an' look up the boys himself, an' bring 'em home.

But Cynthy said no, she couldn't go back, till she'd found 'em—she didn't need to trouble him.

But course Dan wan't likely to be thinkin' 'bout the trouble, an' he knew all the places where the boys would be likely to go, better'n she did.

So they went 'long together, Cynthy thought under the circumstances her aunt wouldn't mind, an' Dan 'peared to be real pleasant an' gentlemanly.

He had big brown eyes, like Nat's, an' an honest, square way o' lookin' at you. Course they got to talkin' some. Cynthy begun by sayin' how sorry she was, the boys should a run off, that way, an' Dan said he didn't think 'twas good for 'em to keep 'em too much tied up.

"I don't know but we 'low Nat too much liberty," sez he. "But he's the youngest of us you know, an' it's hard on the poor little fellow, not havin' any mother. We try to make it up to him, well's we can, but it aint the same thing."

Cynthy thought that was a kind way to speak o' his little brother, an' the more they talked, the more she wondered what 'twas Aunt Susan had 'gainst the family. She'd never seen any young man she thought seemed nicer'n Dan.

'Twas a good long walk over to the pond, an' when they got there, they only found little Nat, sittin' on a rock under an old willow tree, fishin' all by himself. He opened his big eyes, wider'n ever to see Cynthy an' Dan, but he didn't know nothin' 'bout the boys.

Cynthy was scared worse'n ever. She'd made sure they was out there at the pond, an' when they didn't find 'em, she couldn't help 'memberin' Aunt Susan's "warnin' dream," an' she was dreadful 'fraid they was all drowned in the river, an' she told Dan so.

But he kinder cheered her up an' told her, most likely they went home jest as she come away, an' she'd find 'em all right.

Women have a good deal o' confidence in what a man tells 'em—I don't know why—an' when Cynthy got home an' found her brothers was there, jest's he'd said, she thought his judgment was somethin' wonderful. The little boys was safe, but Aunt Susan was

out lookin' for Cynthy, an' she met 'em, as they was comin' over the hill. Dan he bowed to her, real polite, an' said goodby to Cynthy, an' went off to look for his oxen. One of 'em had got mired in the swamp an' made business for him for the rest o' the day, but I guess he thought 'twas worth it.

Aunt Susan, she didn't say nothin' an' when Cynthy began to explain, she jest waved her hand.

"I knowed I didn't have that dream for nothin'" sez she.

"I was 'fraid it meant the boys was drowned" sez Cynthy, speakin' kinder tired an' sad.

"I shouldn't a ben surprised if it *had* meant *they* was going' to get into mischief" sez Aunt Susan, "But I s'posed I could trust *you* Cynthy."

Then she went into her room, an' shut the door, an' Cynthy felt as if she'd done somethin' dreadful. Course she knew she hadn't meant to do nothin' wrong, but it 'peared as if she'd done it all the same.

Well, I don't say Cynthy wouldn't never a thought o' Dan again, if it hadn't a ben for the way her aunt acted, 'cause he was a very pleasant boy, an' one folks always took to naturally. But course she couldn't help wonderin' what the Sheldons had done that wasn't right, an' that led to thinkin' o' Dan, 'fore she knew it. Aunt Susan s'prised her one day, by askin' how he 'peared.

Cynthy, she didn't know what to say, she got as red as could be. "I—why—I think he 'peared very kind an' nice," sez she, but Miss Susan shook her head, an' groaned.

"I see the moon over my left shoulder, last night," sez she. "You can't place no dependence on good lookin' young men. They are all deceitful an' desputly wicked. I don't believe in speakin' ill o' my neighbors but that's Gospel truth an' there aint no harm in quotin' it, if you don't call no names," sez Miss Susan. "If girls only knew what was good for 'em, when they see a likely young man comin' their way, they'd run as if old Cyphus himself was after 'em."

Cynthy, she got redder'n ever, an' looked dreadful guilty, for lately it seemed she couldn't go nowhere, without meetin' Dan, an' she knew 'twas wrong.

"Who's old Cyphus?" sez Fred, comin' up an' leanin' 'gainst Cynthy's shoulder.

"Same's old Nick," sez Ted, "Cynthy, do you s'pose Aunt Susan would let us stay out a little late, to-night, to catch a bat?"

"A *bat*! Theodore! What you talkin' 'bout!" sez Aunt Susan. "Don't you know it's dreadful unlucky to kill a bat!"

"We'd like to get it alive," sez Ted. But Aunt Susan wouldn't hear to it. "You just come in an' let your sister Cynthy read to you," sez she, "the doo is beginnin' to fall. Your feet look to me, as if they was wet a' ready."

"It don't hurt boy's to have wet feet!" sez Ted, an' Cynthy hurried an' got out her book, 'fore any more could be said.

Over to the other house, the boys was playin' "I spy," as usual,

racin', an' chasin' an' hollerin' to each other. Ed an' Ted, they groaned an' sighed, equal to Miss Susan when she'd had a bad dream, while Cynthy turned up the lamp, an' found her place in the old history.

"Sit still, boys," sez she an' begun' "The takin' o' Ticonderoga, an' Crown Point, was soon followed by the memorable battle o' Bunker Hill."

Miss Susan sot a minute, an' listened to the readin' to show she 'proved o' that way o' spendin' the evenin', an' then she bid 'em good night an' went off to her room. The boys they kep' quiet while she stayed, but the door hadn't hardly shut behind her, when they begun to fuss an' complain.

"If ever I was tired o' anything in my life," sez Ted, "'Tis o' hearin' 'bout that battle o' Bunker Hill. I 'clare I feel as if I'd ben there myself. I guess I could write a better 'count o' it, this minute, than that old fellow did, 'givin' a slap to the Hist'ry, as it lay on Cynthy's lap.

"Would you rather I read 'bout the Swamp Fox?" sez Cynthy, turnin' over the pages.

"O, don't bother!" sez Ed, "Just hear what a good time they're havin' over there!"

The words wan't hardly out o' his mouth, when there come a scream from Miss Susan's room, that was right over the one where they was a' sittin'.

"Who's that, hidin' in my spider lilies?"

'Twas such a hot night, the windows was standin' wide open, even the curtains wan't down. The boys started up in a minute, wild as could be.

"Throw the history at him, Cynthy!" sez they, an' out the window they pitched, head first, glad 'nough o' a chance to get out o' that hot sittin' room.

There'd been somebody round, an' no mistake, for they heard him runnin' off, an' they pelted after him, hard's they could tear, 'cross the orchard, an' over the fence. Then they lost him, but they didn't care, for they run into a lot o' boys, playin' "I spy," an' they joined right in, an' forgot all 'bout Miss Susan, an' Cynthy, an' the man in the spider lilies.

Cynthy, she was scared 'nough, to see the boys run off like that, not knowin' who the man might be, an' knowin' Miss Susan would be displeased with 'em for goin' out so late, no hats on, nor nothin'. She went to the door an' called 'em, but they didn't answer, so she see nothin' for it, but to go after 'em as usual.

So she run down through the orchard, an' clim' over the fence, she see some boys runnin' ahead of her, an' she followed on after, without much of an idea where she was goin'. Then all to once she heard a great shout of "I spy," an' then she see she'd got mixed up with a crowd o' Sheldon boys, an' she stopped short, an' didn't know what to do next.

'Twas so dark, she couldn't tell one of 'em from another—till Dan

come up. She couldn't help laughin' as she told him what was the matter.

"It's just the same old story," sez she, "lookin' for my brothers!"

"They're playin' with the boys," sez Dan. "I see 'em a minute ago, you couldn't catch 'em, but the game's most over, an' they'll all go in. You hadn't better go back the way you came. It's easier round by the bars."

So Cynthy went 'long with him. It did 'pear to be an easier way, but there was no denyin' 'twas a good deal further.

So you see, when Miss Susan come hurryin' down stairs, fast's she could, she didn't find nobody there, an' the doors an' windows was all standin' open.

She shut things up pretty quick, but when she'd waited fifteen minutes or so, an' nobody come back, she concluded she might as well look 'em up. So she put on a hood an' a shawl, for all 'twas so warm, lighted her lantern, an' started out.

She called to 'em, but they didn't none of 'em answer. Then she thought she heard Ted's voice, over in the direction o' the Sheldon house, shoutin' out somethin' or other. So she went through the gate, an' walked over that way. She didn't go trapesin' through the long orchard grass, you may believe.

Mr. Sheldon was leanin' on his gate, as she come up.

"Miss Susan!" sez he, "Is anything the matter?" 'Twan't often that anybody see Miss Susan out after dark.

"Well I don't know," sez she, "I see a man lookin' into my settin' room window, an' Cynthy an' the boys run out to try an' catch him, an' they aint come back, an'—I stepped on a spider by accident this mornin'—an' Theodore killed a toad—an' Cynthy forgot an' shook the table cloth out o' doors after dark"—lookin' at him kinder defiant, "I don't s'pose you think all that means nothin'."

Mr. Sheldon sort o' laughed, an' shook his head.

"You're mistaken then, Susan," sez he, "I'm the most superstitious man livin', an' I've reason to be. Killin' a spider, brought me bad luck once, an' I've not forgot it, though 'twas twenty-five years ago," sez he.

Miss Susan give an impatient sort of a sigh, an' turned to walk on. "I reckon you aint thought 'twas bad luck, all this time!" sez she, "Did you say you hadn't seen nothin' o' Cynthy an' the boys?"

"No," sez he, "I didn't see nobody. They've most likely gone home fore this," he took the lantern out o' Miss Susan's hand, an' walked along side of her. He heard her mutterin' to herself, as the light shone on her shawl.

"There! I've got it on wrong side out! 'Twouldn't do to turn it now—'twould be dreadful bad luck!"

"Susan," sez he, "Aint there no good signs, a body could run across once in a while?"

"O, land, yes!" sez she. "But they aint so common. There's more bad luck'n good, in the world by a long sight, fur's I've seen!"

The Sheldon boys had finished their game at last, an' Cynthy's

brothers 'membered all to once that Miss Susan would be expectin' 'em.

"It's too late for any more hist'ry to-night!" sez Ted. "There's that much gained!" But when they come up to the house, 'twas all dark. The windows an' doors was fastened tight, an' nobody answered nor paid no 'tention to their knockin' an' callin'.

"S'pose they're goin' to keep us out all night, to pay us for runnin' off?" sez Ted.

They was all standin' on the back door step, thinkin' what they'd do next.

"Oh, Cynthia wouldn't serve us that way!" sez Ed.

"No, she wouldn't, but it's Aunt Susan's house, an' Cynthia's ben tellin' us all the time, if we wan't good, she wouldn't let us stay here!"

"Do you s'pose they'll keep us locked out always?" sez Fred, beginnin' to cry.

He was the youngest o' the family, an' the thought o' spendin' the rest o' his life on the doorstep, scared him most to pieces. The other boys felt pretty serious, too. 'Twas gettin' real dark. They never had no idea afore, how lonesome 'twas outdoors at night.

"Don't you cry, Freddy," sez Ted, drawin' a long breath. "Course they'll have to open the doors in the mornin', an' then we'll see Cynthia an' get her to coax Aunt Susan."

While the two older boys was tryin' to cheer up Fred, Cynthia an' Dan come 'long up through the orchard.

"You mustn't never speak to me in that way, again!" Cynthia was sayin', I owe everything to Aunt Susan, for her goodness to my brothers an' me' an' I wouldn't displease her for the world!"

"But if she was willin'"—sez Dan, course he didn't feel under the same obligation as Cynthia, an' couldn't give in all to once, without a fight for't.

"O Cynthia! Cynthia!" sez they, "Aunt Susan has locked up the doors, an' she won't let us come in no more!"

Cynthia was full as scared as the boys. Her conscience wan't clear either. She went round an' knocked on all the doors an' windows, an' when she didn't get no answer, she broke right down an' cried jest like poor little Fred. Ed an' Ted, they give up too, when they see Cynthia take it that way. 'Twas an awful time for 'em all, they felt so homesick an' forlorn, for all the world like so many babes in the wood!

Dan was sorry enough for 'em, but he didn't know what to do. He begged 'em all to come home with him, an' told 'em there was plenty o' room in his house, an' his aunt would make 'em so comfortable, they'd feel as if they was at home right off.

An' somehow he'd got his arm round Cynthia's waist, an' she put her pretty head down 'gainst his shoulder, an' cried worse'n ever. She wouldn't listen to him. She wan't goin' to do nothin' to vex Aunt Susan more'n she was a' ready. They'd stay there on the door step till mornin' an' then beg her to forgive 'em. An' then

Cynthy cried again an' the little boys made such a fuss, Dan couldn't hardly hear himself think.

In the midst o' all the distress, Miss Susan come up to the front gate with Mr. Sheldon.

"Susan," sez he, "I hope we may be more neighborly in the future'n we've ben in the past!"

"It's best to let well enough 'lone, Horace," sez she.

"If there aint all those children waitin' for me on the doorstep! Good land! where 'll they think I've ben to!"

The moon had come out by that time an' they could see 'em pretty plain.

"My son Dan'l is with 'em," sez he.

"He's got his arm round Cynthy!" sez she. What does he mean by that, I'd like to know!"

Mr. Sheldon put his hand on her arm.

"I reckon he means jest what I did years ago, Susan," sez he. "An' he aint killed no spiders as yet to spoil it all for him!"

"Spiders!" sez Miss Susan, "'Twas him 'twas tramplin my lilies down! I know him now I come to look at him! S'pose he was hangin' round tryin' to see Cynthy. But I won't have it! Cynthy knows I won't have it!"

"Let Cynthy have it then, an' you take me, instead, Susan!"

"My patience!" sez Miss Susan, "You must think I'm a fool, after all these years! That weddin' was 'pointed once, Horace, an' put off. It's a dreadful bad sign to 'point 'em a second time!"

"'Twas all for a bad sign, I lost you afore, Susan," sez he, "I aint goin' to pay 'tention to 'em no more!"

"There's somebody down to the gate, with a lantern!" sez the little boys all to once, an' Cynthy an' Dan looked round.

"It's my father!" sez Dan.

"It's Aunt Susan!" sez Cynthy.

"He's holdin' her hand!" sez the little boys.

"That's why she didn't let us in," sez Ted, "She was out walkin' herself!"

They didn't none of 'em say no more for a minute. Then Dan he made up his mind that then was his time, an' he took Cynthy by her hand, an' led her down towards 'em.

"Cynthy!" sez Aunt Susan, "What do you mean?"

"Share an' share alike, is a good motto," sez Dan, "An' a fair exchange is no robbery. Miss Susan, I'll give you my father, if you'll give Cynthy to me!"

"What do you take me for?" sez Miss Susan, "I don't want your father for nothin', an' as for Cynthy—she'll have to fix things to suit herself. It's onlucky to meddle with other folkses' love affairs!"

An' Miss Susan, she marched off into the house, an' you'd better believe Cynthy an' the little boys wan't far behind her. They'd had enough o' bein' locked out, for one night!

Mr. Sheldon an' Dan, they stood an' looked at each other a minute, then Mr. Sheldon heaved a sigh, an' spoke.

"I reckon she was in the right on't," sez he. "It's dreadful on-settlin' to the mind to go trapesin' round the country by moonlight!"

I guess they both of 'em felt pretty lonesome goin' home, but the moonshine did 'pear to a softened Miss Susan, for after that night, she didn't stand in Dan's way, no more, an' the little boys was happy enough, 'cause nobody interfered with their playin' with Nat, an' if you'll believe me—when Cynthy's weddin' day come round, Miss Susan an' Mr. Sheldon, they stood up an' was married too, only one pair was joined in the mornin', an' the other in the afternoon, 'cause a double weddin' would a ben unlucky.

I don't know's you think there's much 'bout spider lilies in this story, child. But I never could see one, without thinkin' o' Miss Susan.

## IS IT A SUCKER OR A WHALE?

---

BY WILFRED P. BORLAND.

---

Mr. Ward's "pin hook" style of argument necessitates that I should quote the expressions with regard to rent, which I referred him to in my June article, and which, by a process of mental color blindness, which generally afflicts those who see only what they wish to see, he has evidently overlooked.

As long ago as January, 1892, after identifying the profits of the Standard Oil Company as being largely composed of the earnings of monopoly, I made use of the following language:

"By reason of special privileges granted to the Standard Oil Company, they have been able to crush out competition and increase their earnings at the expense of the people. There is no doubt in my mind, that for every gallon of oil produced in this country the consumer pays one, and possibly two cents more than he would pay if it were produced under circumstances of free competition."

During the course of the same article I examined Mr. Ward's contention that "rent is interest on capital invested in land," and, in connection with such examination, I introduced a diagram from Walker's "Science of Wealth." I clearly illustrated the natural factors, viz: desirability of location and increase of population, which go to make up rent, and in summing up I said: "Rent, then, is not interest upon capital invested in the land." In speaking of payments made to individuals for the use of land, I placed in quotation marks the language of Mr. George:

"Rent is the price of monopoly, arising from the reduction to individual

ownership of natural elements which human exertion can neither produce or increase."

Here, at the very outset of our controversy, is a very clear distinction between natural and monopoly rent, and a plain admission that monopoly rent increases the price of products. Mr. Ward could have understood this language had he been so inclined.

In May I made a further analysis of the natural factors of rent, introducing diagrams to illustrate my reasoning; and in August, during the course of an article written in reply to Mr. Ward's criticisms of my May article, I said:

"If Mr. Ward had read my article carefully he would have seen that competition for the use of land was, at all times, supposed to operate freely."

Mr. Ward is not ignorant of this language, as is evidenced by the fact that he quotes the sentence immediately following it in the context, in his last article. During the course of this same article I said:

"It makes not the difference of the value of one little yellow dog, as to whether the lands used for business purposes are owned by users or non-users. In either case the effect on rent is the same. In the case of a business man who owns the land upon which he carries on business, the value of such land is entered in his capital account, and in addition to wages, interest on his real capital, his profit must be sufficient to pay the ordinary rate of interest upon such value."

The argument which supported this assertion, like all my arguments which Mr. Ward has felt himself incompetent to meet, was quietly ignored. During the course of this same article, in speaking of the mortgage indebtedness of farmers, I said:

"The condition complained of is in large part due to the effort to impart value to land which is economically valueless. \* \* \* A large part of the land upon which farmers are attempting to eke out a precarious livelihood, should, and under correct social conditions would be still the haunts of wild beasts."

In criticising Mr. Ward's articles on "Scientific Taxation," I said, in the November MAGAZINE:

"The error lies in the implied assumption that economic rent, as it at present exists, would be in no wise altered under the operation of the single tax, when the indisputable fact is that by reason of the destruction of the speculative margin, what is now termed economic rent, would, in all cases, be greatly reduced, and with respect to those cases upon which Mr. Ward reasons, it would, to a great extent, be entirely obliterated." \* \* \* "It is through the influence of competition that opportunities are monopolized and held out of use, thus forcing down the margin of production and increasing necessary cost at that point, which, by reaction, causes an increase of increment at those points above the margin."

In December I said:

"We have seen that rent is an increment which attaches to all points above the productive margin. It varies in amount at the different points, strictly in conformity with the various differences in necessary cost at such points, being higher where necessary cost is lower, and lower where necessary cost is higher, and disappearing altogether at the point where necessary cost reaches its maximum or becomes identical with the highest price at which consumers, acting through economic demand, consent to receive the product. \* \* \* Non-

occupying landlordism has a very important effect on rent; it causes a very material increase of rent by forcing down the margin of production to a point below where it should naturally rest, thus increasing necessary cost at that point and creating an unnatural increment at all points above the margin. If use and occupancy constituted the only title to land, the margin must, of necessity, be raised; thus causing a reduction of increment at all points above the margin, but as long as there remained even one superior location in the productive area, such location would yield rent. To change the form of landlordism would merely change the manner of collecting the increment; whereas it is now collected indirectly, it would then be collected directly. We cannot suppose that it would not be collected at all, for to suppose this we must suppose that demand supports production at but one point in the area. \* \* \* The Georgian economy does not condemn landlordism, with any qualification whatever, as being the cause of rent; it condemns the whole institution of private property in land as being the means by which the increment which exists in the very nature of things wherever men come together in the social state is diverted into private pockets and away from the society to which it properly and equitably belongs."

There is but one construction to be placed upon this language. If it means anything at all, it means that present rent is not pure economic rent; it also means that the unnatural increment is an indirect tax upon consumption, since there is no other way for it to be collected except through the medium of price. Let me inform those readers who may not be acquainted with Mr. Ward's "pin hook" style of argument, and who may not have read the articles from which these quotations are taken, November and December, 1892, that their burden is to show that rent is not a part of price, and that use and occupancy as the only title to land would not destroy rent, two propositions which Mr. Ward affirmed. Giving me credit for just the least little bit of intelligence, the reader may judge what were my ideas concerning rent. Coming now to the March issue of the present year, I introduced a diagram for the express purpose of illustrating the difference between present rent and natural rent. Referring to the diagram, I said:

"The condition herein shown is precisely such as governs our land supply to-day."

I further said:

"By reason of the extension of the margin to the lines c, a new relation is established; the advantages which operate to give value to land are no longer estimated by comparison with land situated at the natural margin, but by comparison with land situated at the speculative margin. An unnatural rent is thus created, which we term speculative rent, to distinguish it from rent proper, or rent arising by reason of the free operation of natural laws. Just how much of our land values are natural, and how much speculative, it is impossible for any power short of omniscience to tell. \* \* \* From our knowledge of the operation of the law of supply and demand we are warranted in inferring that our land values are much greater than they would be if allowed to arise naturally."

In the face of all this, Mr. Ward has the effrontery to assert that Mr. Borland has learned lots since last March, and that he hung on pretty well to his omnibus term, economic rent, until forced by stress of circumstances to divide it up into economic and monopolistic rent. Now let us examine Mr. Ward's expressions as to rent,

which my arguments were intended to disprove. In February, 1892, he said:

Rent of used and occupied land is simply interest upon the money value of such land. \* \* \* Increase in value of unused and unoccupied land, less the taxes paid upon such land is the net interest upon the original money cost of the land.

In June he said:

I consider rent a crime against humanity and would supplement paper title deeds and supplant individual landlordism with a system of *actual* individual use and occupancy as a prerequisite to any title to the possession of land. The single tax would license occupancy by *proxy* and allow capital to monopolize all the land it was able to improve. The way to destroy rent is to cease to tax land in use and force each man to use and occupy his own land. Then the competition incidental to business and commercial enterprise will wipe out rent, even as it now, in many cases, obliterates *net* profits, remaining content with rent, interest and running expenses.

Is Mr. Ward willing to assert that when he used this language he had in mind any idea of natural rent? Did he not consider rent simply as so much interest upon land values, exploited by non-users of land solely by virtue of ownership, and extorted from the masses by reason of their necessities? And was he not quite positive that under the untaxed use and occupancy régime there could exist no such thing as rent? That this is his idea is proved by the following declaration, which appeared in September:

My position is this: I claim that it is not individual land ownership, but non-occupying landlordism that is responsible for the existence of the factor, economic rent. That non-occupying landlordism acts in the nature of a protective tariff in protecting occupying land owners in the absorption of economic rent. That if use and occupancy were made a prerequisite to land ownership the natural law of competition would first wipe out economic rent, and then cut down profit and interest, while the single tax would perpetuate rent by collecting it as a tax.

When it is considered that no single taxer has ever claimed that individual land ownership is responsible for the factor economic rent, the purpose of this declaration is not exactly clear, and does it not, in view of later developments, seem as though I was justified in asserting, as I did, that when Mr. Ward talks about competition destroying rent he gives pretty conclusive evidence that he does not understand the nature of rent."

In January of the present year Mr. Ward finds it necessary to elaborate his ideas on rent more fully, and proceeds to dogmatize as follows:

Although single taxers are very fond of using the terms speculative margin and economic rent, there are very few of them that have the most remote idea of what the terms really mean.

As for instance: There is no speculative margin attached to the *selling price* of a Kansas or Texas farm. The speculative margin is all such portion of the price asked for land, by land speculators above such a price as the actual buyers, for use, are willing to pay. This may not be a scientific but it is a common sense definition. Economic rent is the legal, current rate of interest upon the actual cash, selling price of the land. Single taxers need to master these rudimentary principles before they conclude that they experience no

difficulty in discerning the illogical and worthless character of the figures which are paraded with such a show of exactness, and turn their attention to a refutation of the statement that speculative margin attaches only to land bought for speculative purposes, and is, in no sense, a part of the actual selling price of land bought for use and occupancy in a farming country, where every tract of land is for sale at some price. What people pay for land in such a country is the natural price consequent upon the pressure of population. The margin above what people are willing to pay is the speculative margin.

Then, after reiterating his former declaration, which I have quoted, he proceeds, as follows:

And this was the remedy offered:

A tax equal to the full rental valuation, or economic rent, should be levied upon land occupied for business purposes by others than those who own it.

There should be levied a cumulative graduated tax upon all unused and unoccupied lands. No other land should be taxed.

I supposed that any one would remember that land occupied for business purposes must be situated in cities and towns. And, as I do not propose to tax unoccupied lands in the country, at all, I tacitly admit that there is no economic rent inhering in occupied farm lands.

But I must insist on not only confining my language to cities, but also on confining the argument in each case to each city for itself and by itself, and not in competition or comparison with any other city or cities.

And then I must insist on leaving out of the question any discussion as to production or its cost, relatively, in different locations. These terms, margin of production and natural price, are very foggy and but poorly understood, besides which, they have reference to a condition of affairs which have nothing to do with rent or the land question, but are the product of an idiotic and unscientific system of transportation. Apply the postal system to freight transportation, and all land will become of the same value, while the margin of production would be obliterated.

Verily, here are some brilliant ideas! One must suppose that Mr. Ward has made a very exhaustive study of the rent question. Stripped of superfluous words, here is what he says: "Economic rent is the legal current rate of interest upon the actual, cash, selling price of the land." This applies only to land situated in cities and towns and it may be wiped out by forcing every business man to use his own land, and every citizen his own residence site, which they may do free of taxation. There is no economic rent in country lands, notwithstanding he has just been telling us about the *selling price* of Kansas and Texas farms. Then, to equalize the value of all land we have only to apply the postal system to freight transportation. We are not told whether this is to be done before rent is wiped out or after; presumably, before, as afterwards there would be no value to equalize. Great is the pin hook style of argument!

But, Mr. Ward, after delivering himself of this string of sophisms, begins to perceive that there is a screw loose somewhere, and finds it convenient to tack onto his transportation argument the proviso that all lands will become of the same value providing they will produce as much an acre, and locality will not figure in the item of cost. Continuing, Mr. Ward says:

The value and uses of land must be classed under three divisions, as follows:

- 1st. For residence purposes, and held vacant for speculation.
- 2d. For the production of wealth.

3d. For the absorption of wealth.

Land embraced in the first division is the only land the value of which can truthfully be said to be the direct result of the efforts of the community or people. The value of lands in the second class depends upon the success and profits attendant upon the production of wealth. The value of the land in the third division is dependent upon the success and profits attaching to the absorption of wealth.

Which is simply nonsense. It will puzzle Mr. Ward, exceedingly, to account for the value of his second and third class lands, after eliminating the factor efforts of the community of people.

Mr. Ward winds up his January exposition of the rent problem as follows:

Were there no landlords to pay rent to, price would be reduced in just the amount now paid as rent to landlords and absorbed as rent by those occupying their own land. Of course, I never meant that destroying non-occupying landlordism in Chicago would abolish rent in Kansas City, but I do assert that it would disappear in Chicago and Kansas City, were non-occupying landlordism abolished in both cities.

There is not the slightest evidence in this language that Mr. Ward had any idea of rent, other than that of its being an unnatural and unjust charge upon the people, collected by means which he had very fully set forth in his arguments. His remarks in February are but a further extension of the same idea. But, in the interim between the composition of his February article and the one that should have appeared in April, Mr. Ward, by some means, assimilates the idea I had all the time been presenting to him, and which it was necessary for him to understand before he could get any clear view of the single tax theory. Here are his latest ideas:

My correlative, or corollary, propositions are: 1st, That non-occupying landlordism is responsible for the absorption by individuals of monopolistic rent. 2d, That were use and occupancy the only valid claim or title to land, that in the case of lands occupied for income production or profit making business, competition would entirely eliminate monopolistic rent, leaving only pure economic rent attendant upon relative advantage of business locations. These propositions, I affirm and Mr. Borland denies.

Just note that Mr. Ward here, for the first time, substitutes the term monopolistic rent for economic rent, and recognizes the fact that the latter is natural. He recedes entirely from his former position, but presumes upon his readers' ignorance by proceeding complacently with his argument from this new standpoint, as if his theses were in no wise altered, in nothing changed; he attributes sentiments to me which I never entertained, and expressions which I never uttered, and then proceeds to tumble over the man of straw, he has thus built up, with as much eclat as though he were engaged in a legitimate proceeding. That he thoroughly understood that he was subjecting me to misrepresentation is indicated by the following:

I am also, by his argument, convicted of the oversight of being too loose and careless in my definitions, not holding strictly to the difference between economic rent (produced by relative fertility in the country and relative location in the city) and monopolistic rent, the result of non-occupying landlord-

ism. I concede the fact that there would yet remain a small degree of economic rent, were use and occupancy the only title to land, but contend most earnestly that monopolistic rent would entirely disappear.

Here is an admission that he understood the purpose of my argument, and a concession of the very point I had so long been trying to make plain; yet he proceeds, as if such admission had never been made, to subject me to the most outrageous misrepresentation. After falsely asserting that my effort had been to prove that monopolistic rent could continue to exist in the absence of non-occupying landlordism, Mr. Ward winds up as follows:

Natural rent, arising from differences in relative fertility and location might continue to exist, but it would be but as a drop of water, compared with the ocean of tribute now exacted from labor by land monopolists.

Which I considered as a concession of the vital point in the controversy between us. His May article is but a continuation of the same process of misrepresentation. Had I been animated by any other motive than the desire to arrive at truth, I might easily have asserted that Mr. Ward "has learned lots since last February," and that "he hung on pretty well to his omnibus term, economic rent, until forced by stress of circumstances to divide it up into economic and monopolistic rent." I might easily have done this, and then proceeded to tangle the argument up with such a mass of rhetorical wiles and logical subtleties that the proverbial Philadelphia lawyer would have been unable to straighten it out. But my purpose has ever been to simply arrive at truth. I am not married with the single tax idea; I have accepted the idea because my economic studies (which, by the way, have not been confined to the works of Henry George) lead me to believe that it will give us a society free from all monopolistic influences and combination. This being my position, I accepted Mr. Ward's concession that there was such a thing as natural rent, as a step in advance, and, after venturing to enter a mild protest against being subjected to wilful misrepresentation, I endeavored to place the real issue between us in a light which could not be mistaken; giving Mr. Ward credit for the same motives as animated myself. But in response to this Mr. Ward makes not the slightest attempt to discuss the issue between us; his article is in no way calculated to settle the point as to whether or not the single tax will destroy monopolistic rent, and he virtually admits the impeachment of dishonesty, calling it his peculiar and self-chosen style of argument. Well, if these are the ethical principles which animate our socialist friends I can find moral as well as economic reasons for opposing them.

Mr. Ward should remember that Mr. Middleton will not deny that those who discuss the single tax from my standpoint are compelled to assert the total destruction of monopolistic rent, and the existence only of natural rent; and this is the only question between Mr. Ward and myself to-day; let him confine himself to it until we arrive at a conclusion, after which I shall be pleased to discuss other points which are, at present, irrelevant.

Mr. Ward lays much stress upon the fact that certain single taxers have estimated the revenue expected from the single tax, upon the basis of our present land values. Well, why should they not? Present rent furnishes a very good basis for reasoning; besides, single taxers have very good reasons for believing that the economic rent which would be evolved under a system of absolutely free competition would fully equal present rent. But, Mr. Ward must remember that such estimates are not germane to our argument; we are concerned only with the logical consequences of the theory, quite independent of individual opinions and assertions from any source. Mr. Ward has made the assertion so often that the single tax would perpetuate the present monopolistic conditions instead of destroying them, that it is about time he introduced some proof to support it. The question of sufficiency is one which does not concern our present argument in any way whatever; so Mr. Ward may curb his anxiety on that point for the present. When we come to some conclusion about the effect of the single tax upon monopolistic rent, I may be able to satisfy his anxiety, as I have some ideas on the sufficiency proposition myself, thank you. Mr. Ward calls on me to explain what kind of crops business lots produce. Nothing easier, my dear sir. Just turn to that paragraph in my March article, which you are so fond of quoting, and read:

"A location where 100,000 suits of clothes or pairs of shoes may be sold yearly, is a better location than the one where but 1,000 of such things may be sold, supposing price in each instance to be the same, and the larger rent which attaches to the superior location is but the recognition of this self-evident truth."

These are the sort of crops business lots produce, Mr. Ward; they produce crops of economic rent, which belongs to all the people and which we propose to appropriate to the uses of the people. By his perusal of that paragraph Mr. Ward shall also understand what society has to do with the productiveness of land. Then let him follow my advice and attend to my definition of natural price, and he may save himself the trouble of misrepresenting my argument to such little purpose. The economic rent of residence sites is evolved by the same rule. Men pay more for convenient sites than for inconvenient ones, simply because the convenient sites are worth more. The man who lives at a great distance from his place of work or business would consider it a very foolish question if one should ask him if he did not consider the site near at hand to his work more valuable to him? The answer would be, of course it is.

Now, if Mr. Ward is desirous of any further exposition of single tax doctrine, from my standpoint, I must insist that he drop his "peculiar and self-chosen style of argument," and adopt a style which will tend towards conclusions. To begin, he might introduce proof of the assertion that "the withholding from use of the square b, adds nothing to the value of the residue of land within the lines a." After he has proved that assertion the rest will be easy for him.

---

## SINGLE TAX FALLACIES.

BY W. H. STUART.

No. 7.

The single tax program, in addition to the confiscation of rent of land, proposes that "when free competition becomes impossible, as in telegraphs, railroads, water and gas supplies, etc., such businesses become a proper social function, which should be controlled and managed by and for the whole people, through their proper government, local, state, or national, as may be." From which it appears when "free competition becomes impossible" in any business of a public nature—and all businesses that have for their object the supplying of human wants, are in their very nature public, and in no sense private—then single taxers favor public control.

When "Progress and Poverty" was written, the term "trust," as applied to a combination of capitalists for the purpose of controlling some particular industry and eliminating competition, was unknown. The theory in regard to trade combinations being, that with free access to natural resources, and absolute freedom of trade and commerce guaranteed, such combinations would be impossible; when in any particular business, the returns to capital exceed the normal, capital would rush in and soon an equilibrium of profits would be the result.

This beautiful theory—like most single tax ideas—proves to be false. Free competition is a myth, combination and co-operation is the watchword. Free competition is now confined to the intellectually inferior. The people of brains and capacity are everywhere combining. Capitalists are every day forming great combinations for the purpose of reducing the cost of production, eliminating the middlemen, and absorbing to themselves all surplus value over the cost of "free" labor. Witness the 200 trusts, with capitals varying from one to one hundred and fifty millions, that control nearly every form of industry in the country.

Where is the line of demarkation beyond which combination is not effective? In what way does the control of a railroad differ from the control of a sugar trust, or a gas or electric light plant from the leather, the cordage, or any of the other trusts that manipulate industry in the interest of the capitalist class? Occasionally one of these trusts, capitalized at three or four times their value, goes under temporarily, to which the single taxer triumphantly points as an evidence that the "trust" must go. But they don't go! When dissolved by courts they shortly reappear under a different form. They are here to stay! They illustrate the science of producing wealth along the lines of least resistance; at the least possible cost of labor. By employing the best machinery that human ingenuity can devise. They also eliminate the useless middlemen.

If the day of the stage coach and tallow dip has forever passed

away, the twilight hour has struck for the small producer in agriculture, as well as in manufacturing. The small farmer will soon be as obsolete as the spinning wheel. To object to this method of production is as irrational as it would be to object to the introduction of labor-saving machinery.

The only question for the intelligent workingman to decide is, whether he is willing that all the profits of this form of production should accrue to a few idle capitalists, or that the nation itself shall control all the means for the production and distribution of wealth in the interests of all the people. That the whole nation shall form a gigantic trust that shall operate the machinery of production for its own benefit, and divide the profits equitably among the shareholders.

I shall, however, refer again to this subject.

The reason why George abandoned the railroads and telegraphs to public control was because the value of the land used was so insignificant, compared to the value of the plants and franchises. The return in rent, or the tax on the land, would be ridiculously out of proportion to the value of the property. For it must be remembered that under the single tax scheme of taxation, the land used for the road bed of a railroad would have no more value for taxing purposes than a parallel strip of vacant land. Tax on land is to be *irrespective* of improvements. The rails and ties, the depots, the rolling stock and machinery are all "good things," whose production should not be discouraged by being taxed or "fined."

There are, however, single taxers who are reluctant to abandon such public utilities to the socialist plan, *i. e.*, public ownership. Some advocate government ownership of the road beds and tracks only, leaving transportation to be carried on by private companies. This plan would inevitably result in a monopoly, for the private company controlling the best equipments would drive out the weaker competitors and monopolize the entire business.

Other single taxers, among whom is Mr. José Gros, lay great stress on the value of railroad road beds for taxing purposes. This gentleman, while in a reminiscent mood, in a recent number of this MAGAZINE tells us he "is often forced to laugh when he reads his first essays, twelve, fifteen and seventeen years ago." If he lives and learns, I hope and believe that twelve, fifteen and seventeen years from now he will find even greater cause for mirth in the ideas he puts forth now; many of us can see the amusement in them now and need not wait so long to laugh.

He even manages to make a joke out of such dry reading as statistics. "And yet," he continues, with that charming *naïveté* and total absence of false modesty that characterizes great minds, "even at that time I had already discovered the source of all social disturbances, the primary cause of all national and international disequilibriums, something that many of our brother reformers, the plural taxers (*i. e.*, the outside rabble), have not yet found out." (?)

Here is another illustration of how great minds run in the same

channels. While Henry George was re-writing Patrick Edward Dove's "Theory of Human Progressions," to appear later in his own charming style, in that fascinating romance—"Progress and Poverty," Mr. Gros was investigating and discovering his theory of "disequilibriums" from the same standpoint.

This singular coincidence is only paralleled by the discovery of the theory of "Natural Selection" simultaneously by Chas. Darwin and Prof. A. R. Wallace.

Therefore, when a gentlemen so thoroughly *au fait* in the science of "disequilibriums" condescends to tackle so small a matter as railroad land values, something startling and original may be expected, and we are not disappointed. He states: "After long and careful study on the subject for the last five years, I offer the following estimate: Railroad land values five and one-half billion dollars." (?) Had this estimate been offered by a less distinguished statistician and disequilibrist, I would certainly have felt the need of some such expressive word as "rats!!!" to denote my opinion of the statement. But of course the use of slang would not be appropriate in commenting on the efforts of such an authority as Mr. Gros. Nevertheless I must call in question the correctness of his extraordinary claim. It is possible that the study of "international disequilibriums" impairs one's capacity for dealing in statistics. Mr. C. Wood Davis is almost as well known as Mr. Gros as a practical railroad man and an expert on railroad matters. He estimates the values of the railroads in this country at four and one-half billions, which would be an average of \$30,000 per mile; an estimate that many think is extravagant. I venture to suggest that ten per cent. of that amount would fully cover the value of the land. Ninety-nine per cent. of the land used is agricultural land of moderate value. Thousands of miles traversed by our transcontinental roads have hardly any value. This, then, would leave taxable railroad land at four hundred and fifty millions. But if my theory of the decrease in rental values that would be sure to follow the adoption of the single tax is correct, then we must reduce the estimate to at least one-fourth the estimate given, which would reduce taxable railroad land to one hundred and twelve and one-half millions, and if we must make a proportional reduction in the other estimates of land values given by Mr. Gros, his theory of "low taxes" is reduced to an absurdity. Better let the railroads, etc., go, Bro. Gros; your leader, Henry George, would never have given them up if he could have helped it. There is no way to tax public utilities by a land tax, the value of the land is usually too insignificant.

The first trust that raised its head after the appearance of "Progress and Poverty" was the Standard Oil Co. This company had acquired an enormous capital before it ever acquired a foot of oil land or bored an oil well. It took no chances by "wild catting" or hunting new territory. It allowed others to do this work. Those who bored for oil were either owners or lessees of the land. Therefore, the Standard Co. neither owned or controlled the land, or produced

the oil. This company acquired its great wealth practically under single tax conditions. It laid pipe lines from the oil districts to the cities where it would be refined, and there erected buildings for that purpose, generally on cheap suburban land. It was then in the market as a purchaser of crude oil, and as a refiner. It could transport the oil through the pipe lines at less than one-fourth the cost of railroad transportation. Therefore, oil producers were forced to not only sell their product to this company, but were compelled to take whatever price it offered. The producers attempted to build refineries for themselves, and attempted to lay a pipe line to tide water. But in a very short time the Standard bought the pipe line and crushed the refineries. They monopolized the transportation of crude oil and refining it; they compelled railroads to carry refined oil at very low prices. If the roads refused they were soon brought to terms by the loss of their carrying trade, which was enormous.

The history of this company gives the lie to the single tax argument, that all wealth is the result of the monopoly of natural resources.

Now and then, some single taxer, with a faint glimmering of the critical faculty, familiar with the conditions under which the Standard Co. was accumulating wealth, wrote to the *Standard*, "wanting to know, you know," how this could be. This was a poser for that paper, but something or some explanation must be made to save their theory. And here is how George accounted for it. Immense quantities of tin was used by the Standard Oil Co. as cases for their refined oil for foreign transportation. On this tin they were allowed by the government a rebate of 90 per cent. of the import duty. This rebate their small competitors lost through the trouble and red tape necessary to get it. Therefore, so the *Standard* said, the protective tariff was the indirect cause of the monopoly of the Standard Oil Co. When we take into consideration the enormous wealth of that giant octopus, with the small amount saved by the rebate on tin, the puerility of the reason given by George and accepted by his followers is simply astonishing.

At the zenith of its power, to protect against possible competition, the Standard Oil Co. obtained control of the principal oil lands of the country, and now, with its foreign allies, controls the trade of the world. As it was the first of the national trusts, it afterwards became the first of the international trusts, that in the near future will control the trade of the world.

Mr. Gros, commenting on my statement that the Standard Co. accumulated its wealth by its pipe lines and refineries, asks: "Can any one control tools without controlling land, the tool of all tools? How can that be done? Our friends never explain that."

Nothing easier, the Standard Oil Co. is an example, and there are a hundred other trusts that do not control natural opportunities, or are the result of our fiscal system. If Mr. Gros means that no wealth is produced without land, I reply: that is admitted; his question is frivolous and childish. If he contends that all who accumulate

wealth must themselves directly produce it from the land, and that it can not be absorbed from the real producers by capitalists, parasites and gamblers, he is talking nonsense that is discreditable in the discoverer of "national and international disequilibriums." And then adds Mr. Gros: "Just as if we could have pipe lines and refineries without land, and very valuable land, because useful to a certain and useful form of production." Here, without stating it in so many words, the inference is intended that the land used for the refineries and pipe lines would be taxed on the basis of its value to which the land is used. I have already pointed out in the case of railroad land, that the improvements add nothing to the rental value of land beyond the value of adjacent vacant land of equal productivity or site value. Therefore, the value of the land used for the pipe lines would be the same as the adjacent vacant land; and as the space used in crossing a state is about comparable to the space occupied by a string stretched across an acre field, its value for taxing purposes may be imagined. I regret being compelled to waste both time and space exposing such frivolous arguments. But Mr. Gros' disingenuousness, or ignorance of the theory of single tax, compels me to answer them. My experience is that single taxers are rarely able to understand the arguments of their opponents, and are often quite ignorant of the theory they attempt to defend.

I strongly advise Bro. Gros to stick to "disequilibriums," there he is secure, for no one understands him. I have tried, but to my shame, I confess that I could not. But on the subject of land values we do claim to "know a hawk from a hand-saw when the wind is westerly."

Sometimes I laugh also, when I think of the epigrammatic arguments so potent in converting single taxers to the true faith. There, for instance, is the story that George is so fond of telling, of the old greenbacker who was arguing with Louis F. Post. The O. G. contended that he would sooner own all the money than all the land. Then, quickly replied Br'er Post: "You take all the money and get off my land." I am afraid to estimate the number of single taxers that date their conversion to this brilliant sally; and yet, singular to relate, the land is rapidly passing into the hands of the Shylocks, and our farmers are becoming tenants on the land they once owned. Funny, isn't it?

By the way, did you ever notice that the Jews, the greatest financiers of the world, rarely own land? They prefer to let others own the land and produce the wealth, then they gobble it up, as the Standard did the oil. Then there is George's famous rhetorical statement: "Tax houses and there will be less houses, but tax land all you like and there will never be a foot less of land." So the indestructibility of matter, and the impossibility of diminishing the weight or diameter of the earth is made to do service as arguments for the single tax. When the single tax mind first gets a grasp of the tremendous potentialities of that theory, he is struck with awe and wonder, and in the spirit of a true devotee, he exclaims: "Great is the single tax, and George is its prophet!"

In the June MAGAZINE I cited the abandoned farms of New England as showing that under our modern system of production, mere access to natural opportunities would be of no avail to the man without capital. That within sight of the New England factories was land that could be obtained for a nominal rent. Yet, even under such practically single tax conditions, the exploitation of labor continues and wealth accumulates in the hands of the capitalist.

I used the illustration in a communication to the "Baltimore Critic." I was simply paralyzed at the reply of my critic. He asked: "Why does Mr. Stuart trot out the abandoned farms of New England, does he mean to assert that the single tax is responsible for that state of things?"

My argument was certainly lost on his brilliant intellect. But for utter vanity commend me to the comments of the gifted Gros on the same subject. Hear him:

Now suppose that every idiot in New England can have a farm within sight of a factory for the trouble of taking possession of it, as we are told to be the case. Well, what about it? We don't consider that our 700,000,000 acres attached to farms are worth over \$2,000,000,000 economic land value, capitalized value. Suppose that we have made a mistake, and that they are worth nothing. Well, so much the better for every one of us. That would show that the farming communities can get along without public improvements, or that farmers don't want any such improvements, and prefer to live without the comforts of organized society. That should be their own lookout. We can not eat the cake and have it.

Because, when our friends say that on such a place land has no value, they simply say that there is no need of any organized society on such a spot. When they say that such and such land has but a low value, that merely proves that only a very simple social organization is needed there, and so on to the end of the chapter.

If any reader of this MAGAZINE will explain what Bro. Gros means in the above I will reward him with a suitable prize. I have read it a dozen times hoping to get some clue to his meaning, but I give it up.

In the July number Mr. Middleton protests against what he calls the grossly unjust manner in which I treat Henry George. He says: "When Mr. Stuart devotes several pages of his article on the question, 'Would the single tax advance wages?' in an attempt to make out Mr. George to be a shallow and ignorant writer, who maintains that the landlord alone is able to live on the labor of others, I must protest."

He admits that George said: "Whatever the increase in productive power, rent steadily tends to swallow up the gain, and more than the gain."

But he says it is one thing to say it *tends*, and another thing to say it *does*. "Gravitation tends," says Mr. Middleton, "to draw everything to the center of the earth, but how much matter reaches that center."

So that really we must understand Mr. George in a Pickwickian sense, *i. e.*, matter does not really rush to the center of the earth,

*ergo*, neither does rent swallow up surplus gain. This is rich! Between his critics and his friends, George is to be pitied, but it is from the latter that he should ask the fates to save him.

I could quote a score of pages from "Progress and Poverty" to show that rent of land is the one thing that does and must continue to absorb all surplus wealth over a bare subsistence to labor, while private ownership of land continues. He upholds interest as the "wages of capital," and contends that under the single tax it would increase. He defends the thieves who rob labor by cornering the necessities of life. Indeed, the only form of legalized robbery he objects to is rent of land; and yet Mr. Middleton protests against my styling such a man, "a shallow and ignorant writer." My argument has not been *ad hominem*, but for the economic opinions of a writer who defends the exploitation of labor by means of interest and gambling, I have the most profound contempt. There is only two ways a man can subsist on this earth, either by his own labor or by the labor of others. He who lives on the labor of others is a robber and a parasite, no matter how unconscious he may be of the fact.

In this controversy I have been careful to quote George's own words, so that it could not be said that I was "fighting against a single tax of my own imagination." And yet Mr. Middleton does not hesitate to say, that by quoting a passage here and there, moving it from its context, and ignoring other writings, that I have been grossly unjust to Henry George.

Mr. Middleton goes into a long argument to show that the adoption of free trade would, by stimulating trade and increasing production, raise wages. I must express my surprise that any one pretending to any economic knowledge would advance so childish an argument. Why even George shows the fallacy of it. The social problem is not one of tariffs, or taxation, or free coinage of silver. If the abolition of the tariff lowers the price of commodities, in that very proportion it will lower wages. Are wages higher in free trade England than here? Any change in our fiscal or financial system that raises the money wages of labor will *pari passu* increase the price of commodities and products. Neither in free trade England or protected America does labor receive of the product which it creates, more than a bare subsistence. Nor will labor ever permanently receive more than its subsistence so long as the means and instruments of production continue to remain the property of the few.

In my July article I treated this subject at length, and I hope that Mr. Middleton in his reply will indulge less in vague assertions and generalities and more in facts and arguments than hitherto. In a former article I stated that under a single tax régime all the advantages that would result in the use of land above the "margin of cultivation" would be confiscated by the state, and that all the advantage that would result from the use of the best tools would accrue to the capitalist in the shape of interest. Mr. Middleton has not yet answered this proposition. I challenge him, or any other single taxer to do so.

Mr. Middleton quotes my statement that in 1881, less than one-sixth of the wealth product of England was absorbed by land rent. Upon which he remarks that that amount exceeded the public taxes, which are only one-tenth of the product there. I have to again remind him that that the rent quoted is monopoly rent. Under a single tax régime that amount would have to be reduced to at least one-fourth of present rent. It is singular how Mr. Middleton clings to the shallow fallacy that monopoly rent would persist under single tax conditions. He keeps on estimating revenues as if I had not fully pointed out this singular fallacy of George and Shearman. Because I am not able to state definitely the exact decrease that would follow the adoption of the single tax, whether, for example, it would approximate nearer one-fourth or one-fortieth of present rent, he affects to treat the question as purely conjectural, a mere fanciful theory that may or may not be true. I consider this mere trifling, and not at all creditable to Middleton. Nothing can be more certain than that a system of taxation that will prevent the holding out of use of unused vacant land, will enormously decrease rent. My opinion is that the decrease would be at least to one-tenth of present rent. To a single-taxer limited, who merely aims at a fiscal reform, who believes in private ownership of land and the justness of interest, I would suggest that the present system of land taxation is the best that could be devised for this purpose. It permits almost the entire continent to be monopolized by private owners, who keep on paying taxes on land, much of which will not be in use at the end of the next century. Adopt the single-tax and nineteen twentieths of this land will be at once abandoned, and the remaining one-twentieth would decrease in rental value to probably one-fourth present value. This reduces the single-tax theory to an absurdity, and makes Shearman's estimates, based on present rental values as laughable as Bro. Gros' "statistics" and "land values." Come gentlemen of the single-tax, get together—as Mr. Ward advises—and agree among you about what would be the difference between monopoly and natural rent, and if you decide that pure economic rent would be totally insufficient for purposes of revenue, then decide what other form of taxation you will advocate. Say for example, an income tax, as Bro. Shearman suggests. Or, shall we adopt Mr. Middleton's plan, i. e., enforce the single-tax till we have robbed the present owners of land, and then keep up rent to about present monopoly rates, i. e., substitute government for private monopoly and continue the robbing of the poor, by excluding them from God's earth, as single-taxers tell us with tears. Come gentlemen, which shall it be?

---

## MR. STUART'S SINGLE TAX FALLACIES.

BY JAMES MIDDLETON.

No. 6.

It is difficult to fully understand and follow all Mr. Stuart's lines of thought, as he confuses terms and oftentimes gives meaning to words widely different from their ordinary use in speech, or as used by the great majority of writers on economic subjects, and does so without calling attention to the fact. That is shown as markedly in his treatment of capital as in his treatment of interest. In treating interest first and then discussing capital he has, moreover, reversed the logical order and increased the confusion.

Now, it appears, he does not consider "contract" or loan interest, about which George and "pseudo economists" like Adam Smith, Ricardo and Mill have spent so much time, and to which the People's party has given so much attention, as interest proper, but a "form of interest that could be abolished without interfering materially with interest, i. e., surplus value."

He has the same lofty contempt for all economists who differ from him, as characterized his master, Karl Marx.

He says, "The old economists defined capital as that part of wealth used for the production of an income without personal exertion." I was astonished when I read that statement and tried to think what economists he referred to. I thought, perhaps, my memory was at fault, but upon investigation, have been forced to the conclusion that it was not the fault of my memory but my lack of knowledge of the old economists.

Adam Smith defines capital as "that part of a man's stock which he expects to afford him a revenue." He enumerates as capital a large list of material products, such as buildings, machinery, and provisions in the hands of producers and dealers. Certainly a large body of producers and dealers, usually called capitalists, work for what they get.

The new English dictionary, which the English Philological society is publishing, gives as a definition of capital, "Wealth in any form used to help in producing more wealth." It supports this definition by quotations from Cottgr, 1611 down to Helps in 1874. I hope Mr. Stuart will clear up this point about the "old economists."

He says "the term capital is a modern one and can only properly apply to our present system of capitalist production."

Though in Greece and Rome slave labor predominated, yet I had heretofore supposed that there were, in those times, merchants and manufacturers who employed free labor and that there were buyers and sellers, borrowers and lenders, and that the question of interest was often discussed. But, then, I suppose it was not interest proper but only "contract interest" which Aristotle and Plutarch denounced, and the taking of which was at one time punishable with death.

Strange, that one of the arguments which Mr. Stuart uses when he says "what loss has money sustained while in use," is very near akin to the argument of Aristotle, which Dr. McGlynn uses, that money, of itself, does not breed money.

Even in the days of Moses, the great law giver, interest was forbidden. Jesus is reputed to have talked of usury and of the hire of laborers. I had innocently supposed that all civilized and semi-civilized Indo-European peoples, from the time of Moses to the present, had carried on more or less of capitalistic production, differing rather in degree and form than in essence from the capitalistic production of the present; that even in the south during slave times, that there were some manufacturing and a good deal of buying and selling carried on by free labor. If I am in error I shall be pleased to be enlightened.

I am inclined to think though it will take a few more nickels' worth of castor oil to put on the wheels of his arguments and analyses in order to have them run smoothly to the end he so much desires.

He gives a "more scientific definition of the term capital" and proceeds to analyze a concrete example of production in the "Chino Beet Sugar Factory" near Los Angeles, as he thinks it would work under the single tax. In the analysis he says: "We have now eliminated the landlord and the lendlord and wages still remain at the cost of subsistence. Does any single taxer object to this statement and analysis of the production and distribution of surplus value? If so, I challenge him to show wherein I err, and let him at the same time please inform us as to the way the single tax will increase wages."

We will waive objection for the time being to his "more scientific definition of the term capital" and suppose the \$600,000 or more invested, represents nothing but "accumulated unpaid labor" in the hands of the capitalist.

Under the conditions he gives, the single tax has abolished the landlord, and the laborer has his land for the payment of a small annual tax to the government in place of all other taxes, and cannot be dispossessed from his land only on failure to pay that tax (and as I have heretofore shown only on compensation for the improvements he has made.) The lendlord is also abolished, which means if it means anything that all borrowers get their loans free of "contract" interest.

On the other hand, the hated capitalist has invested his accumulated robberies in buildings and machinery and a small tract of land with exactly the same conditions, as to taxation, as the laborer who raises beets. He grants that the 2 cents per pound bounty on sugar also stands. (A condition that would hardly exist under the single tax programme.) His capital is invested as it would have to be invested under the single tax in products created by labor and not in land values and franchises.

Of such capital Karl Marx says in "Capital," part III., chap. 7, sec. 1:

A machine which does not serve the purposes of labor, is useless. In addition, it falls a prey to the destructive influences of natural forces. Iron rusts and wood rots. Yarn with which we neither weave nor knit, is cotton wasted. Living labor must seize upon these things and rouse them from their death, change them from mere possible use values into real effective ones.

Under these conditions, which Mr. Stuart himself has given, is not the capitalist absolutely dependent upon the beet grower for his beets and upon his workmen in the factory for their manufacture into sugar? Again is he not absolutely dependent upon the sugar for his bounty? Before he can get back other returns, he must sell his sugars. Mr. Stuart must suppose the beet growers and the laborers in the factory are imbeciles, if he thinks under such conditions they cannot command their just proportion both of the bounty and of the market price of the sugar.

Suppose the market price of sugar will justify \$4.00 per ton and the capitalist says I will only give \$3.50—with the intention of pocketing the difference—as an extra profit or fleecing. The farmer would drive back to his farm and feed his beets out to stock, and with his other provisions raised in his garden, wait. What capitalist would be such a fool, under such conditions, as to refuse the grower his share of the bounty and the full market price for the beets? Suppose, through the idiocy or obstinacy of the capitalistic stockholders, they fail to agree and the forces of nature lay their wasting hand upon the buildings and machinery. Then the capitalist's "surplus value" subject to the wasting forces of nature will speedily become useless and the capitalist will cease to be one.

With the "lendlord abolished" and capital seeking investment without interest (hardly a supposable case, even if Mr. Stuart does allow it) what is to prevent the voluntary coöperation of the farmers and laborers to produce their own sugar, get their own bounty and find their own market? Surely also if they wished they could find other capitalists who would gladly help them for a share in the proceeds.

Under such a condition of affairs as Mr. Stuart so kindly supposes, loan interest, if paid, would be a free bargain between equals; and will even he dare say it would not be just? Whatever profits would accrue would be due to the organizing ability and foresight which assembled the materials for production, conducted the manufacture and placed them in the hands of the consumers. What the undertakers, the organizers, the managers of the manufacturing and of the sales departments and all other grades of labor got, would be their just shares of the total sales. Who could ask more? Whatever returns mere stockholders got under such conditions could be no burden to industry, but simply such a return as industry would voluntarily give for services rendered. What could be more just? Where could exploitation of labor come in? Does not this illustration of Mr. Stuart's show that capital, as he defines it "the accumulation of unpaid labor," would cease to be formed?

Profits under such a condition would no more be robbery than is

the excess of wages over a "bare subsistence," which many wage workers now receive.

The great error in Mr. Stuart's and Karl Marx's "surplus value" theory, lies in ignoring too much the functions of the few who invent, and the few who plan, organize and carry out productive enterprises; and that is where they differ from single taxers.

Single taxers, as I have previously shown, are as much opposed to the monopoly of the various public franchises, national and local, such as railways, pipe lines, lighting and water privileges and banking privileges by the few for their profit at the expense of the masses, as are the socialists?

But they generally claim, and most justly, as I believe, that where the inventor or the captain of industry by his genius doubles or trebles the product of a thousand men, he does that thousand men no injustice but a benefit if he gets a large part of that increase. It is just as much a product of his labor as is the vastly smaller portion of one of that unskilled thousand. That unskilled laborer is the gainer. Under the single tax they both may gain and justice be maintained.

The evil lies not there, but in allowing the captains of industry and others to get control of our valuable vacant or partly unused lands and unrestrained possession of franchises and banking privileges, and also in further fleecing the consumer through unjust taxation. These are the points where the real robbery goes on.

I do not deny but that under complete state socialism similar results might be accomplished, but I do claim that the single tax as embodied in the platform adopted at the national single tax convention in New York in September, 1890, presents a better and safer way, and one more in harmony with human nature and human needs. It opens the way to an enlarged voluntary coöperation in all production which is not in its nature a monopoly, and provides that those industries that are in their nature monopolies shall "be controlled and managed by and for the whole people concerned."

This, I believe, is the wisest and best path to take to inaugurate the era of true freedom, equality and fraternity.

In his closing paragraph he quotes from Prof. J. T. Rogers' *Work and Wages*: "I have stated more than once that the fifteenth century and the first quarter of the sixteenth was the golden age of the English laborer, if we are to interpret the wages he earned by the cost of the necessities of life."

I am pleased that he made this quotation, as it gives me unimpeachable historical evidence that so far as the single tax frees us from the dominion of the landlord, it will raise wages.

That period, as Rogers and others have pointed out, followed the famous *Black Death* which swept away nearly half of the English laborers. The survivors had their own lands on which they could work and they had the employing landlords and capitalists at their mercy, and hence their wages arose to what was an extraordinary amount, so far as mere food was concerned. As they were

without political power, and as that power was vested in the landlord classes, it was used with fatal effect to the wage workers.

Says another investigator of that period, speaking of the results, Gustav F. Steffen, in current number of the *Nineteenth Century*:

Bishop Latimer in 1549 censures the English nobles for being "enclosers, graziers, and rent raisers," who made "dowerless slaves of the English yeomanry."

Scary, Bishop of Rochester, in the year 1551 presented a petition to the king in which he complains that in his part of the country there were only "ten ploughs where formerly there were forty to fifty. Two acres out of three have been put out of culture. Ruined dwellings, evicted husbandmen everywhere to be seen; sheep and oxen destined to be eaten by men, have devoured men," and consequently "thousands in England now beg from door to door who formerly kept honest houses."

Even the statute book bears testimony to the people's wrongs. More eloquently still speaks the peasant insurrection of 1549 suppressed by the aid of foreign mercenaries.

This was the beginning of that long era of exclusive rent policy, when the power of the nobles and the "great men" in parliament assembled and otherwise, was so successfully directed towards swelling of rent. An ever increasing proportion of the nation's output henceforward appears under the schedule rent.

These words give emphasis to this utterance of Karl Marx, which I quote from Prof. Ely's "French and German Socialism in Modern Times," p. 181:

The foundation of the capitalistic method of production is to be found in that theft which deprived the masses of their rights in soil, in the earth, the common heritage of all."

If, then, the single tax frees labor from the dominion of the monopolizing landlord and from the tyranny of the landlord, and frees it from the heavy burden of unjust taxation, do not Mr. Stuart's illustration, the quotations from Karl Marx, and the cold facts from history, and economic laws, all, conclusively demonstrate that exploitation of labor will cease, that buyer and seller, borrower and lender, wage worker and capitalist, will meet on a plane of equality, and that what each will get in the distribution of the product will be his just share of that product? Who can ask more? Who should be satisfied with less?

Mr. Stuart, in closing his sixth article, indulges in an unworthy sneer at the converts to the single tax theory. It is hardly in good taste, especially from one of a still smaller band of thinkers and propagandists in Anglo Saxon countries than are the single taxers.

A large number of earth's ablest and wisest men, statesmen, economists and divines, as well as a great army of obscure thinkers, have, with more or less clearness, seen the wide reaching and beneficent effects of a tax upon land values, and have labored with tongue and with pen to spread the light.

If names are needed let me name John Locke, one of England's greatest philosophers; Turgot, one of the greatest statesmen of France, a man of profound scholarship, and whose devotion to the single tax cause drove him from office and nearly landed him in the Bastille; Thomas Chalmers, one of Scotland's greatest divines, of whom the

Encyclopædia Britannica says, "The dearest object of his earthly existence was the elevation of the common people."

Let me not forget John Stuart Mill, who founded the Land Restoration League of Great Britain, nor Prof. Alfred Wallace, now living, a man whose ability and scholarship are unquestioned; or Prof. Canfield, of a Kansas university, and others, besides Henry George and Dr. McGlynn, whose names are widely known and whose intellectual abilities are unquestioned.

No single taxpayer need blush as he goes over the list nor allow his zeal to flag for fear there are no great thinkers with him. But, even, if he alone saw the truth, he should speak and not remain silent.

Nineteen centuries ago the great Gallilean peasant sealed the doctrine of the Fatherhood of God and the brotherhood of man with his heart's blood. In the centuries that have rolled by, a constantly increasing army of faithful ones have sought to realize his dream with limited but increasing success.

Two centuries ago John Locke laid the foundations of the single tax in philosophic thought. No single taxpayer, when he thinks of the slow progress of fundamental reform ideas, should feel discouraged. We aim to accomplish in the economic world what the far-sighted Gallilean sought in the spiritual world.

His aim will yet be realized, and so will ours; and there shall yet be a true human brotherhood living under just laws of spiritual, social and industrial freedom.

---

#### A PLEA FOR SHORTER HOURS.

In the world there's need for labor,  
Useful effort, fair and true;  
Work is good so let all share it,  
Mine for me and yours for you.  
Rich nor poor, let's have no shirkers;  
Make a world of fellow-workers.

Through the world there's need for leisure,  
Time to think in, time to pray;  
Time for winning health and pleasure,  
Time for wiping griefs away.  
Share the spare time, nor abuse it;  
Teach each other how to use it.

You who slave make others idle  
Thus you work a double ill—  
You are sweated, they are starving,  
They bind you upon the mill.  
Share the work! Rich idlers ride you;  
Whipless, soon they'll work beside you.

Rich nor poor there'll be no shirkers,  
But a world of happy workers.

—*Railway Review* (London).

## POSSIBILITIES OF SECURING AN EDUCATION.

---

BY THOMAS PRAY, JR.

---

The article in JUNE MAGAZINE seems to have stirred up some inquiry at least, and if some of the inquirers are in doubt, or to put it plainly, a trifle skeptical on the means, it is nothing to be wondered at. The fact is, that a man or woman who is in earnest, will find ways to accomplish what is in their way, and it does not matter as to whether it is getting rich or getting an education, if they are sure of their purpose and capable of some persistence.

It is a fact that one of the most capable, as well as one of the brightest, of the American astronomers of to-day is a man who has not had the benefits of a collegiate or university education, and yet he is respected for his numerous and valuable discoveries, as well as for his hard work and unswerving loyalty to his pet science.

This man had a mother of most superior natural ability, she was left a widow when he was a small boy, she had some knowledge and began to teach him Greek, to which he proved not very apt at first. At this time in his life he had to do a day's work first and the studying afterwards; but from Greek he went into elementary mathematics, and from his small earnings he loaned a small amount of money, taking as security for its repayment a package of what, after it had lain for some time, proved, on examination, to be several works on various subjects, among which was one on astronomy; to this the young man took especial interest and at once began to find out what could be done with a very limited apparatus, consisting mainly of a pretty old and hard used spy glass. But the seed had been planted, he had become interested in one thing, and that was the study of the stars. The way he had, but not the means. Then he took up the study of optics, and found out how to make lenses. To do certain things necessary, and with almost no means, as far as money went, he commenced the construction of a very modest telescope—and he also earned the money to pay for it as it progressed, so far as he, with his own hands, could not do the work. After months of working and waiting he had it finished, and in a few nights after he sat it up and commenced to look for something, he astonished the men who had been supplied with everything they would or could wish, by discovering what had not been seen by them, and on looking in the direction he had suggested, they found his first addition to the numerous family. But this did not turn his head; he had begun to be interested in what might lie beyond, and at once commenced a systematic search to make certain on some points that were at that time being discussed in the circles of scientific or professional astrono-

mers, and it was not long before he made another discovery that somewhat startled them by its accuracy and importance. This was all done under very discouraging circumstances, but he was persistent, and after his second find he began to be sought out, and it was not long until older men in the science gave to him an opportunity to enter into an observatory and to gratify his desire to know what did lie beyond the vision, as then considered. It took him some time to get familiar in his new position, and he tells some happy stories to his friends as to his mistakes and experiences at that time. But he soon gave his friends a greater surprise, for it was one of the satellites of a very distant planet that he captured next; and it was so carefully and accurately done that his critics of previous record now came to look at his work as of no mean order. But his work was not done yet and his next effort was a complete surprise again, for this time it took an entirely different scope, and he is now one of the eminent men in his line, of the world, and he is in the work in the finest equipped observatory in the world and is considered as one of the highest authorities, one of the most persistent workers, and one of the most modest of them.

What this man could do, almost without means, and with his task to do to earn his bread before there was time or means to study, and then to study nights and watch the stars, and so, step by step, attain to eminence in a line filled only with men who, as a rule, have the most polished education possible. To be recognized by them, and respected as well as to be esteemed by them, is only what some of our boys can do if they will.

The way is not an easy one, but as has been said before, when the position is fully attained, the retrospect is pleasant, for it has been earned.

The same way is pursued in mechanics and engineering. It can be done in any of the various branches of study, and it applies to the study of chemistry, which covers nearly every sub-division of the work most interesting and important to our readers; and with the study of these several branches it is easy to take hold of any other and to progress to the limit of human understanding, if, only we keep at the task and climb even one step at a time, for in that way it is sure and we do not look back but a small distance from any one of the places where we rested last.

Cannot a fireman or an engineer obtain a far better understanding of their daily work if they wish to or will? The starting point is the determination to do it, and that being done, then the only sure and easy way to do it, *is to do it*. The advantages are many and frequent; the main purpose of life is to secure money with which to live and care for those nearest to us. The men who earn the cash are those who have had, in one or another way, some education of hand or head, and can do more than the manual work required; men who think out the way to run such a ship as the *Campania*, across the ocean in shorter time and with better results, or to run the *Flyer 20* hours at 49 miles an hour each minute of the time, counting stops;

or the man who thinks it all out and then converts some manager to his way of thinking, and sticks to *one* thing until it is done so well that he can take up another thing and complete it.

Study is as necessary as work; for the man who studies it out first is in a study all the time, and if his mind is bent on something in particular, he is working for effect, but if he undertakes six different things at the same time, he is sure to foul or fail on some, if not on most of them.

The changes of construction in the last few months will call for still other and important differences in rolling stock and in the mechanical department of every railroad in this or any other country; and it will make business as well as money for the man or men who discover new ways of application of power, or means of safety, or certainty in the operation of the motive power and the rolling stock of all the roads with which we are supposed to be familiar, and will be more so with, if only we keep up the studies of the elements as the surest way of commanding familiarity and control of the whole problem.

This is far more important to us as a class, than either politics or taxation, in so far as the argument goes, and is nearer to those for whom we are supposed to be laboring day by day; but while we need not entirely discard the functions of the citizen, we are, in many ways, more expected to be secure in our position and relation, each one, as the head of a family who are utterly dependent on us and to whom our first duty and best efforts are due; and if we fail in this we are not doing our duty to those who are not capable of attaining their proper place in the economy of the natural, but are forced into an inferior position all their lives by our neglect, lack of ambition, or, shall I say, in too many cases, our vicious appetites, or our disregard of our sacred promises.

I am aware that this is not, in its essentials, a mechanical article, but is it needed or called for; will it be in place, and will some one be encouraged to take a new grip on the life as it is, perhaps, being lived? What are the requisites for this, is not easy to say, on the old principle that it is easier to find fault than to suggest a remedy, but it is not easy to say to each man what is best or which will bring the most in cash first, but it is far better to make the highest use of all the time we have, to fit for the unexpected, or to get into trim to do any part of our work better.

Our question box is an utter failure; it is as clear of interest as the ordinary beggar's hat. When he stops playing and passes his hat to the crowd all that can be seen of his listeners is usually their heels.

If our interest, each and all, is in the things that do interest us, would it be so? The mechanical department has seemed to droop for months. Has it no readers who are in full sympathy with making it of interest and of advantage to its whole number of readers? Let us hear from some of them, and why is it so? Who knows? The writer does not.

## HOW EASY IT IS TO BE MISTAKEN.

BY WILFRED P. BORLAND.

Upon reading the accounts of the wonderfully fast time which has recently been made, the thought occurred to me that there are some persons in this country who must now acknowledge themselves mistaken. Not so very many years ago I heard an engineer who is now filling a master mechanic's position, demonstrate, for the benefit of a circle of admiring friends, the impossibility of attaining a speed of even sixty miles an hour with the present type of locomotive. He laid down the proposition that it was an impossibility to build a locomotive that would turn a six foot wheel fast enough to develop a speed of sixty miles an hour without making a radical alteration in design of both boiler and running gear; and he proved it, too, to the complete satisfaction of his auditors. He said that those people who told stories about running a mile a minute were "loco'd;" they didn't know what they were talking about. Yet the New Jersey Central's 385 has a well authenticated record of ninety-seven miles per hour, and this with a six foot six wheel, and without any radical alteration in design of either boiler or running gear. The New York Central's 999 has a seven foot two inch wheel, and her record of one hundred and two miles an hour is not so well authenticated. But it is quite probable that she attained a speed of at least one hundred miles an hour, and the fact remains that she is constructed after the same general principles as prevailed fifteen and twenty years ago. I think my friend would now admit that a sustained speed of sixty miles an hour is within the possibilities, even with a six foot wheel and a defectively designed locomotive. Doesn't it beat all, that master mechanics will keep right on building locomotives which violate all correct mechanical principles after all the warnings of the "hammer blow" experts?

What a fearful blow must the 999 have delivered to the roadbed while running at a speed of 100 miles an hour? Why, if what the "hammer blow" experts have told us is correct, this engine ought to pound the track and bridges into smithereens; but I haven't heard any complaint about her being unduly hard on the track, and, upon the authority of *Locomotive Engineering*, she rides like a drawing room coach. Isn't it just possible that the "hammer blow" is a good deal of a myth, and that the experts are mistaken?

The new association of traveling engineers appears to be getting right down to business. This association is composed of men who are familiar with the practical details of the service, and who are in a position to introduce methods which will be of vast benefit, not only to the companies they represent but to the engineers and firemen as well. One of the subjects which will come before the association at its annual meeting, which will be held in Chicago, Sept. 12th, is "How can traveling engineers improve the service when en-

gines are double crewed or pooled?" The committee which has this subject in charge have issued a circular to all members of the association, which requests answers to questions that will no doubt bring out all the good and bad features of the chain gang system. One of the questions contained in this circular is interesting, as indicating a disposition on the part of the traveling engineers to pay some attention to a matter that has been altogether too much neglected heretofore. Question No. 9 reads:

● On double crewed engines do you try to place men on opposite turns on the same engine, that are friendly and work in harmony with each other?"

The debates which will take place at the annual meeting will certainly be highly interesting. If the traveling engineers succeed in doing nothing more than the introduction of orderly methods into the chain gang system, they will have accomplished great good for enginemen. Long live the Traveling Engineer's Association!

The master mechanic's committee on compound locomotives did not make as favorable a report for the compound locomotive as its many friends could wish. In fact, their report is quite indefinite and ambiguous; it is made up of truisms and indefinite statements which in no way tend to settle any of the points in dispute between the advocates of two styles of locomotives. The committee's report stated the following conclusions:

1. The compound is suitable for a variable class of freight service.
2. Its range of economy in such service is fully as wide as that of the simple.
3. Its increased coal economy over the simple in the average freight service of the country will be found to lie between 10 and 15 per cent. when in good running condition and handled with intelligence.
4. A well designed compound should not be more difficult to keep in a serviceable condition than a simple; that is, its regularity of performance should not be less than the simple.
5. The four cylinder compound will cost more for valve oil than a simple.
6. The running repairs of a four cylinder compound will be somewhat more than for simple; for a two cylinder compound they should not be more; the final comparison for repairs is undetermined.
7. The net running cost of a compound will be less on many roads than of simple, the figure depending upon the design, cost of fuel and other local conditions.
10. In passenger service the availability of the compound is undetermined.
11. Complicated designs of compounds are not likely to prove successful or economical. The prevailing forms of starting valves in use in this country are especially noted as being too complicated—certain valves employed abroad seem to have more commendable points.
12. Attention is called to the necessity of long time tests and averages of a considerable number of exactly similar engines of both types to properly establish the status of the question. In such tests the influence of higher pressure for either type should not be allowed to complicate the results, as the effect of the highest modern steam pressure on economy of the simple is undetermined.

Mr. Vauclain, of the Baldwin Locomotive Works, criticised those conclusions. Speaking for the compound advocates, he said:

We consider the compound suitable for all classes of freight service. We have them working in freight service from the light type to the very heavy de-

capods, weighing 200,000 pounds. We have reports from the railroads that both the light and the heavy engines give satisfaction. We have found where the simple engine has been compared with the compound that the harder you work the engines the higher the rate of economy in favor of the compound.

Speaking of fuel economy, he stated that 10 or 15 per cent. is the minimum of fuel economy that any compound engine of any type of two or four cylinders would probably effect in average freight service. He said:

We think the average of the fuel economy should not fall below 25 and 30 per cent. We have known it to reach far beyond that. On heavy grades with heavy engines the economy has reached as high as 44.9 per cent.

As to the passenger service, he stated that many of the high speed passenger trains in the east were hauled by compounds and the engines showed economy. He instanced the fast trains on the Philadelphia & Reading between Philadelphia and New York, and the Washington limited on the B. & O.

President Hickey, in the course of his annual address, paid his respects to the compound as follows:

A superficial view of the principles of compounding properly applied would appear to leave little if any doubt of its success. Additional machinery, however, involving an increased number of parts, enhancing the first cost and of necessity adding to the cost of maintenance, are essential questions when considering the policy of the introduction of compound locomotives. However, experience in practical tests with the compound engine, particularly where her dimensions were adapted closely to the work performed, has been so satisfactory and so productive of expected results that a continuance of these principles, as a matter of economy, is worthy of the highest consideration.

There can be no doubt but the compound has come to stay; it is in the order of development, and such disadvantages as at present attach to it will certainly be overcome. The electric locomotive is the only rival the compound needs to fear.

---

## VARIOUS TOPICS.

BY WILLIAM WEILER.

The wear on the guide beams of locomotives is equal, in theory only, on those which are run as much backward as forward, such as drill or switching engines, or some of the suburban traffic engines or those on the elevated roads which are designed to run in either direction, indiscriminately. But on locomotives which are run habitually in the forward direction, a little observation will at once show

that the most of the wear will be on the upper guide, if a double guide is used, or on the under side of a single side beam. For instance, while the pin is above the center of the axle the steam will be behind the piston pushing it ahead, and the natural result is, that the piston rod will try to assume a straight line between the piston and the pin, and as the pin is above the cross-head will bear up hard against the surface opposed to it in that direction. Again, while the pin is below the center the piston will have the steam in front of it shoving it back, and the main rod receiving the thrust and being below the center, will naturally lift the cross-head up and again put the wear on the same surface as before. On a locomotive running backwards the wear comes on the opposite side, as the pulling and pushing action of the steam and main rod are then reversed, and in each instance will place the strain on the opposite surface.

---

All the wedges used to hold the driving boxes of a locomotive in place, are held in their relative positions by means of the wedge bolts and set screws, and thus they do not move, but may be called "stuck" to the engine frame at all times; indeed, they are a part of the frame, and if it were not for the idea of being able to take up the lost motion caused by the rubbing of the boxes on the frame, wedges would not be needed, and the boxes would then slide up and down between the jaws of the frame. As the inequalities of the track cause the boxes to slide up and down in the space allowed them between the wedges, it is really a misnomer to say the wedge is stuck, when it is the box that has become fast between the wedges. A box may stick by not getting a proper amount of lubricant or by the introduction of sand or some gritty substance, and in some cases they are stuck by the over-careful engineer, who lines up the wedges so tight as to give the box no room to slide up or down. While it is right and proper to have sufficient room to allow of sliding up or down, there should of course be no lost motion backward or forward as that would introduce a "pound," which is an abomination to the watchful engineer, who is ever on the lookout for them, and uses every means to have as few of them as possible. Instead of saying "the wedge is stuck," it would be more proper to say, "the box is stuck."

---

The so-called heater-cock of the Monitor Injector, is at the overflow pipe, and according to the instructions sent out by the makers, should be left open when the injector is working; nevertheless, it is a fact, that after you have started a Monitor, and it is working in good order, you can close the heater-valve and the injector will work right on, throwing its full stream of water into the boiler. This is easily accounted for when you understand that this heater-cock does not close the passage from the injector to the boiler, but simply closes the overflow pipe. On the Mack Injector the same cock is lo-

cated in a branch of the injector away from the main line of the stream, and according to common practice, it is always left open, except in cold weather, when it is necessary to turn on a little steam to keep from freezing up; but the Mack Injector will work, and apparently, just as good, with the cock shut as with it open, but neither of them can be started with that cock shut. A little experimenting with the valves in different positions will soon give an insight into the internal construction, even if you cannot have access to any of the many sectional models sent out by different makers of injectors, and many dark points will become light under the searching eye of investigation.

---

The piston power of an engine is the area of the piston multiplied by the average pressure on the piston during the stroke. A 12 inch piston would have an area of a little over 113 square inches, and with an average of 100 pounds, would have a piston power of 11,300 pounds, or it would raise that weight if it was placed upon the piston. A 15 inch piston has over 176 inch surface, and, with the same pressure, would raise over 17,600 pounds, while the 18 inch piston would have over 254 inches, and would raise 25,400 pounds with the same pressure. As will be noticed the piston power of the engines differs in proportion to the size and the pressure used on them, and it also forms the first factor in getting at the horse-power of engines; the other factors being the stroke and the number of strokes per minute, or, in other words, the speed at which the power is used.

---

## AN INJECTOR EXPERIENCE.

---

MR. EDITOR:—Having noticed some questions in regard to working injectors with low steam pressure, which have recently appeared in the MAGAZINE, I wish to relate a circumstance which occurred to me a short time ago.

Our engine died with us out on the road, as luck would have it, at a water station. We had a No. 8 Monitor injector, in perfect condition, tank-valves and hose air tight; we had thirty pounds of steam. My engineer put on the injector and filled the boiler easily, but I think this was due partly to the weight of water in the tank. The top of tank on our engine is six inches higher than the injector, and when tank is full there is a constant leak from the waste pipe of injector. The thirty pounds of steam did not last long, but the

injector continued to work until the water in the tank fell below its level. I would be pleased to hear from Mr. William Weiler and others on this subject.

### CLINKERS.

---

Probably the most degenerate and disgusting specimen of humanity in existence, is the sycophant; he is to be met with in all the vocations of life, and the railway service is not free from him.

It is impossible to find a single admirable trait in such characters. We may find some redeeming features about the most cruel and blood-thirsty characters in history and fiction, but the Uriah Heeps excite in us only feelings of loathing and disgust.

If there is any difference between the man who sells his manhood for the sake of currying favor with his superiors, and the woman who sells her virtue for a dollar, it is by long odds in favor of the woman; and when it comes right down to business, the latter is more respected by the world at large.

There are big sycophants and little sycophants; those who adopt sycophancy consciously and who make a paying business of it, and those who adopt it unconsciously, simply because they are built that way. These differ only in degree and are all alike reprehensible to those who respect true manhood.

Those who use the sycophants to accomplish some base end, hate them in their hearts; even while accepting the results of their prostitution, there are only feelings of contempt for the prostitute, and when it comes to choosing between the sycophant and the honorable man, the former will have to walk the plank every time.

In railway parlance, those characters are known by the suggestive name of "suckers;" this title is used rather indiscriminately at times, but we all know the withering contempt with which the person who has once received this appellation is regarded, whether he be a fireman who attempts to cultivate the roundhouse foreman with a pocket full of cigars, or an engineer who tries to stand in with the master mechanic by the distribution of more substantial favors.

If I were asked to give any advice to a young fireman, or any young man just starting in life, I think I should begin by saying, "for God's sake, and your own sake, and the sake of your friends, don't ever let anybody suspect you of sycophancy; don't ever give any one a reason for calling you a 'sucker.'"

# WOMAN'S DEPARTMENT.

EDITED BY IDA A. HARPER, INDIANAPOLIS, IND.

## THE COLLEGE BRED WIFE.

When we confront the condition of 40,000 women in the colleges of the United States; the High School graduates of the whole country composed of a large majority of girls; clubs for every species of literary culture among women keeping pace with the increase of population; a Chautauqua circle at every cross roads, and university extension absorbing all the women who are left, we begin to ask ourselves the question, what is to be the result of all this "culture," from a domestic standpoint? It is too late to talk about the size of women's brains, their capacity for higher education, and various speculative topics that strained the massive intellects of the men of the last generation. Whether women can do certain things or not, has been answered in the language of the client to his lawyer—"they hev." Of course it will result in making out of some of them lawyers and doctors and ministers and editors and professors, but the vast majority, who will marry because it was so ordained in the beginning of the world, how will this radical departure from the old methods of training affect their domestic life?

Naturally this question resolves itself into one of matrimonial possibilities. Woman is always first considered as a probable wife and mother, afterwards as a member of society, of church, of state, if you will, but first as a candidate for marriage. In men the situation is reversed and the last thing that is thought of in their training is the effect it may have upon them as husbands and fathers. That may be one reason why they are so frequently a failure in this capacity. Both should be educated with a view to this highest and most important relation of life, therefore it is just and proper that we should inquire, what sort of wives and mothers are these colleges turning out? One point may be considered as settled, *i. e.*, that the educated man of the future will require a cultured wife. Ignorance will be looked upon hereafter as a reproach, if not as a disgrace. The next generation of men will demand strong minded women, indeed the weak-minded variety is at a discount with the present generation. There was a time, not a great while ago, when the vast majority of women were uneducated. It was taken as a matter of course that the most brilliant men of the age should have wives who were totally inferior to the husbands in intellect. A man was proud of his wife if she were beautiful and attractive, satisfied if she kept house properly and looked after the physical welfare of the children. This, practically, was all that was expected of her, and men of the finest mental culture were not ashamed of wives who knew only the

rudiments of the common branches, who had not read a book or newspaper since their marriage, and whose conversational powers were limited to matters of the kitchen and nursery and to neighborhood gossip.

We are already so far away from that condition of affairs as almost to believe that it never existed. The well-read and well-bred man of to-day is overwhelmed with mortification at a blunder on the part of his wife which shows an ignorance of current events or a lack of education; while, on the contrary, his face beams with pride when she shines in conversation and he can present his friends to her with the assurance that she will entertain them in such a way as to reflect great credit on his choice of a companion. He is by no means satisfied that his guests shall find the coffee clear, the biscuits light, the steak nicely broiled—and an ignoramus presiding over the table. Of the two he would prefer that the food should be not quite so appetizing and his friends so delightfully entertained as not to be aware of the deficiencies. But, fortunately, the modern wife is both an educated woman and an accomplished housekeeper, and the modern husband is proud of her to a degree that was unknown to his ancestors. He will take pains to tell you where his wife graduated and also to inform you that his daughters all are to go to college. Fathers now take it as a matter of course, that it is as much of a duty to select a first-class school for their girls as for their boys; or, rather are they apt to leave the whole matter to their wife “because she knows so much more about these things.” The average husband wants his wife to belong to a club and to fill the offices. He wants her to be recognized in the various organizations that spring up for the good of the community and is offended if she is left off of the committees. In fact he is very nearly as proud of his wife's achievements as of his own, which is putting the case very strong, considering his traditional selfishness and his long usurpation of the honors and emoluments.

The unmarried men, also, are beginning to take account of her education in making an inventory of a young woman's stock of attractions. There is one species who fight shy of the educated girl because of an uncomfortable consciousness of their own inferiority; but the brainy young man, a graduate himself, will declare with much satisfaction that his sweetheart is a Wellesley girl or a Vassar girl or a graduate of the High School. He goes to hear her graduating essay and lays his heart with his flowers at her feet. He marries her and finds an intellectual companionship which grows stronger with the passing years and the trying vicissitudes of life. Occasionally, however, the man of brains is so captivated by a beautiful face or fascinating manners as to wed a girl who is without mental attractions, with the result, usually, that, after the superficial charm has departed, he turns elsewhere for mental comradeship.

This is the day of clever women. When John Stuart Mill said no man wished to find an equal at his fireside, he did not foresee the present conditions. It is the destiny of the vast majority of women to marry and it is of vital importance to the race that they shall be

competent wives and mothers. The home with an inefficient mistress is such only in name. It does not lie within the power of the husband to supply her deficiencies. There was a time when it was an essential qualification of a wife that she should know how to spin and to weave and to make the cloth into garments for her husband. She must understand how to brew and to cure meat, to make lard and soap and candles and carpets and practically everything that her family used. All of this knowledge now would be utterly useless. The demands upon the modern woman are equally as important but of an entirely different nature. That she is fully equal to them is shown by the well managed households of the present time. Men still, occasionally, sing the song of "how my mother used to cook," but they would not exchange the homes of to-day for those of the olden time, even though the imperfections of the latter are seen through the rose-colored mists of memory. Under the new dispensation we have come to understand that science is nowhere more needed than in the household. The woman of broad intelligence must, in the very nature of things, be most capable of dealing with the complex requirements of housekeeping, the questions of hygiene, of sanitation, of healthful cooking, of correct dress, of finance. We must renounce entirely the old theory that as women become educated they grow away from these things, and that they make good housewives only as they are kept in ignorance of outside matters. Man should never lose sight of the fact that the woman he marries is to be the mother of his children, and that, not only will she be largely responsible for their rearing, but also will transmit to them, through inheritance, many of her own qualities. It is held that sons, especially, are apt to resemble the mother. It is at once manifest how vitally important it is that this mother shall be possessed of fine mental vigor and shall have had a thorough intellectual culture. It will be found that the discipline of an education has prepared her, as nothing else could have done, for a wise training of the physical, mental and moral natures of her children. When they grow older she will not have to abdicate her reign because they have gone beyond the narrow limits of her knowledge, but can go with them to the threshold of their college life, can sympathize and counsel with them through all its varied experiences and can command their unqualified respect for attainments equal or superior to their own.

As age comes on, when the duties as master are ended and the household no longer makes its demands, the woman of intellectual tastes may drink from a never-ending fountain of enjoyment. She need not suffer from that keen sense of loneliness which comes to the old when they feel that their early companions have passed away and that they are no longer necessary to those of their own family; but she may renew her youth and her interest in life in the reading of her favorite authors or the current literature of the day. Considered entirely apart from its business and financial advantages, and only in regard to its influence upon women as wives and mothers, there is an overwhelming weight of testimony in favor of the higher education.

## WOMAN'S RIGHT TO WORK.

Labor statistics show that in New York city more than 100,000 women are working for wages, and that *three-fifths of them support whole families!* In a dry goods establishment there, recently, it was proposed to reduce the wages of the women in order that those of the married men might be raised, but upon investigation it was found that the number of persons supported by the single women was greater than the number supported by married men, and the reduction was not made. What is true in New York is true in other cities and towns, and such investigations as the one mentioned above show the great injustice of the complaint that women should be crowded out of the field of labor because they are lowering the wages and taking the places of men.

The address of President Bertha Honore Palmer, at the opening of the Women's Building at the World's Fair, was remarkable from two points of view: 1st, because of its liberal and independent spirit; 2d, because of its eloquent plea for working women by one whose whole life has been passed in the atmosphere of luxury and leisure, which is possible only to those of great wealth. A few weeks ago, when I stood in her beautiful home, one of the most elegant in the United States, I thought "It means a great deal when the mistress of such a home is willing to go down town every day for a year to an office and work as diligently and unceasingly as Mrs. Palmer has worked to promote the interests of women. It means something when in every address she has made she has championed the cause of the workingwomen. It signifies that the chasm which the agitators would have us believe exists between rich women and poor women is not so deep but that it may be spanned by sympathy and helpfulness."

She says: The cry which exists among conservative people that the sphere of woman is her home; that it is unfeminine, even monstrous, for her to wish to take a place beside or to compete with men in the various lucrative industries, tells heavily against her, for manufacturers and producers take advantage of it to disparage her work and obtain her services for a nominal prize, thus profiting largely by the necessities and helpfulness of their victim. That so many should cling to respectable occupations while starving in following them, and should refuse to yield to discouragement and despair, shows a high quality of steadfastness and principle. These are the real heroines of life, whose handiwork we are proud to install in the Exposition, because it has been produced in factories, workshops, and studios under the most adverse condition, and with the most sublime patience and endurance.

In reply to the oft-repeated question whether the advent of women into wage-earning occupations may not have a tendency to destroy the home, she says:

We feel obliged to state that in our opinion every woman who is presiding over a happy home is fulfilling her highest and truest function, and could not be lured from it by temptations offered by factories or studios. Would that the eyes of these idealists could be thoroughly opened, that they might see, not the fortunate few of a favored class, with homes they possibly are in daily contact with, but the general status of the labor market throughout the world

and the relation to it of women! They might be astonished to learn that the conditions under which the vast majority of the "gentler sex" are living are not so ideal as they assume; that each is not "dwelling in a home of which she is the queen, with a manly and loving arm to shield her from rough contact with life." Because of the impossibility of reconciling their theories with the stern facts they might possibly consent to forgive the offence of widows with dependent children and of wives of drunkards and criminals who so far forget the high standard established for them as to attempt to earn for themselves daily bread, lacking which they must perish. The necessity for their work under present conditions is too evident and too urgent to be questioned. They must work or they must starve.

She expresses the hope that through the statistics which the lady managers have been able to collect, and through the exhibit of women's work at the Exposition, public sentiment may be educated in regard to their right to be self-supporting and to maintain others when it becomes necessary. She makes use of the following forcible language, which we depart from our usual condition to quote at length, and commend to our readers:

We observe that there are two classes of the community who wish to restrain women from actual participation in the business of the world, and that each gives, apparently, very strong reasons in support of its views. These are, first, the idealists already mentioned, who hold the opinion that woman should be tenderly guarded and cherished within the sacred precincts of the home which alone is her sphere of action. Second, certain political economists, with whom may be ranged most of the men engaged in the profitable pursuit of the industries of the world, who object to the competition that would result from the participation of women, because they claim it would reduce the general scale of wages paid and lessen the earning power of men, who require all their present income to support their families. Plausible as these theories are, we cannot accept them without pausing to inquire what then would become of all women but the very few who have independent fortunes, or are the happy wives of men able and willing to support them. The interests of probably three-fourths of the women in the world would be sacrificed. Are they to be allowed to starve, or to rush to self-destruction? If not permitted to work, what course is open to them? Our oriental neighbors have seen the logic of the situation far more clearly than we, and have been consistent enough to meet it without shrinking from heroic measures. The question is happily solved in some countries by the practice of polygamy, which allows every man to maintain as many wives as his means permit. In others, etiquette requires that a newly made widow be burned on the funeral pyre with her husband's body, while the Chinese take the precaution to drown surplus female children. It would seem that any of these methods is more logical and less cruel than the system we pursue of permitting the entire female population to live, but making it impossible for those born to poverty to maintain themselves in comfort because they are hampered by a caste feeling almost as strong as that ruling India, which will not permit them to work on equal terms with men. These unhappy members of an inferior class must be content to remain in penury, living on the crumbs that fall from the tables spread for those of another and higher caste. This relative position has been exacted on the one side, accepted on the other side; it has been considered by each an inexorable law. We shrink with horror from the unjust treatment of child widows and other unfortunates on the other side of the globe, but our own follies and inconsistencies are too close to our eyes for us to see them in proper perspective.

Sentimentalists should have reduced their theories to set terms and applied them. They have had ample opportunity and time to provide means by which helpless women could be cherished, protected, and removed from the storms

and stress of life. Women could have asked nothing better. We have no respect for a theory which touches only the favored few who do not need this protection, and leaves unaided the great mass it has assisted to push into the mire. If we now look at the question from the economic standpoint, and decide, for good and logical reasons, that women should be kept out of industrial fields, in order that they may leave the harvest for men, whose duty it is to provide for women and children, then, by all laws of justice and equity, these latter should be provided for by their natural protectors, and if deprived of them, should become wards of the state, and be maintained in honor and comfort.

It will not be easy to answer such arguments as these. Many addresses of a similar nature were made before the recent congress of representative women held in Chicago. The tenor of all was simply, "Give us our freedom, give us only an equal chance." Then, almost without exception, came that other cry, which was tersely expressed by Susan B. Anthony at the meeting of Women's Trade Unions: "The difficulty with the working women is that they have no political fulcrum on which to plant their lever."

---

## THE NEW ISSUE.

---

A noteworthy event is the passage by the Michigan legislature of a bill extending municipal suffrage to women. It passed the senate by a vote of 18 to 11, and the house by a vote of 57 to 25, and was signed by the governor. It permits women to vote at all city, town and village elections on the same terms as men, except that the women must know how to read and this is not required of the men. Women also are eligible to any municipal office. They have had school suffrage for a number of years in Michigan. Women have now full suffrage in Wyoming, municipal suffrage in Kansas and Michigan, and school suffrage in one half the states. These three states first made the experiment of school suffrage and then extended the privilege. Kansas will submit a constitutional amendment this fall for granting presidential suffrage to women, and there are encouraging prospects that it will be adopted. Michigan is a large State, of nearly 60,000 square miles, and has long been noted for the progressive tendencies of its people. It is the home of one of the largest universities in the country and is distinguished for the general superiority of its educational facilities.

---

The newspapers continue to discuss the action of the National Convention of Republican Leagues, at Louisville, in May, in regard to the question of woman suffrage. Thirty-eight States were represented by 600 delegates. President Clarkson in his opening address expressed himself unequivocally in favor of woman suffrage, and

the sentiment was greeted with prolonged applause. Forcible arguments were made by Mrs. J. Ellen Foster and by the delegate from Massachusetts, Henry B. Blackwell, husband of Lucy Stone. A strong equal suffrage resolution was unanimously referred to the committee on resolutions. It was not expected that anything so radical would be adopted, but the committee reported the following substitute:

We recommend to the favorable consideration of the Republican Clubs of the United States, as a matter of education, the question of granting to the women of the State and Nation the right to vote at all elections on the same terms and conditions as male citizens.

This resolution was adopted by a vote of 375 to 185. The comment of the various Republican papers is amusing. Some of them declare that this action must be accepted as an endorsement of the principle and proceed to support it by strong words of commendation. Others make haste to insist that it was a mere complimentary concession to the friends of the measure and meant nothing. In the near future when it shall become a party issue it will be highly edifying to watch the gyrations of these papers as they try to get in line. The more astute of the practical politicians read the signs of the times, and in the Democratic party we find such men as President Cleveland, Governor Flower and Senator Hill showing a favorable attitude toward this question. The *Daily Truth*, of Scranton, Pa., puts the case clearly when it says in regard to this resolution:

It is significant, because it shows that—however much silly-minded men may laugh over the question in legislatures and elsewhere—the men who lead in statecraft and can read the signs of the times recognize the fact that women are quietly getting ready to accept the responsibility for the progress of the body politic in right directions. The more they work for reform and civilization the more clearly they see and more deeply feel how much of their best work and its results is blocked and ruined by politics as managed exclusively by men. The women who have cared nothing for the suffrage as a personal right or a personal privilege will soon move forward to demand it as the means of doing the higher work of the world which rests largely in their hands. When they demand it they will surely have it. The politicians who see this first are the ones who are wise.

As was predicted, the effects of the World's Congress of Representative Women are beginning to manifest themselves in the altered tone of the daily press. Nowhere is this change of heart more manifest than in the *New York Sun*. For many years it has been most bitterly unfair and unjust in its attitude upon the question, declaring everything and predicting everything without any regard for the veracities. In commenting upon the Congress it says that it was "a monster woman suffrage meeting;" that "the veteran woman suffragists were the heroines of the great gathering," and that the emancipation of women has not made them less feminine, but that "never before were they so beautiful, so lovable, so companionable as to-day," and whenever women adopt the fashion of wearing the little, yellow ribbon, emblematic of woman suffrage, it shall be our badge also." There has not been a greater conversion since that of Saul of Tarsus.

## SOME LABOR LEADERS.

"Tell the truth though the heavens fall" should guide men when they write either obituaries or biographies. In labor literature, nothing nowadays is more common than to estimate the status of labor by quoting the sayings of labor leaders, whether they be genuine or *pseudo* leaders, and, generally speaking, little effort is made to make distinctions. This hesitancy, the outgrowth of timidity, to use no harsher term, is to be credited with many of the ills which have fallen to the lot of labor, and failure to be less than honest and truthful has led to numerous discomfitures in the past, and, if not corrected, will be fruitful of disasters in the future.

The conscientious writer of labor affairs, in surveying the field, is forced to the conclusion that the wrecks which labor bemoans, the factions which have been created, the envies and jealousies that blotch its record, are to be traced directly, in a vast majority of cases, to unfortunate leadership. This, intelligent workingmen see and know, they realize the peril of the misfortune, but fearing "hard feelings," permit the wrong to proceed, while the enemies of labor, taking advantage of the lack of courage exhibited by organized labor, perfect their schemes for its overthrow.

Were it required, we could here point to numerous disasters which have overtaken organized labor, from which it has never recovered, having their origin in the misfortune of incompetent leaders, supplemented by faction, envy and jealousy to an

extent that resulted in utterly destroying organized labor on one of the greatest railroad systems in the country. And, in accounting for the calamity, everything that could be suggested has been made to do duty, except the one thing which was really responsible, the utter incompetency of the leaders of the factions.

And yet, paradoxical as it may appear, such deplorable results grow out of what is termed "fealty to organization," and hence fealty to the chosen leaders; a fidelity which, while accounted a crowning virtue under certain conditions, becomes to the last degree, vicious when it blinds men's eyes to real dangers, and sacrifices all that is good in organization for the sake of "downing" some other organization, forgetting that that sort of internecine war, by which one organization triumphs over another organization, not only defeats both, but strikes a deadly blow at organization as a whole.

The organization of railroad employees has been going forward for more than a quarter of a century. The great work was begun by

WM. D. ROBINSON

in the ranks of locomotive engineers. The great army of railway employes has not, so far, produced his equal. Tried by any recognized standard, he was really a great man. He was a seer, gifted with prescience to a remarkable degree. No man of his time saw more distinctly than did Wm. D. Robinson, coming events in railroading. He saw with prophetic vision the net work of tracks and systems that were to embrace and cover the country. He knew the ever increasing responsibilities that were to devolve upon men who were to have charge of the trains. He saw the outcroppings of the dominant idea of corporations to maintain the wages of their thousands of employes at the lowest point practicable, and he knew, if this mercenary policy was to be overcome and railroad trainmen were to secure their rights, it must be through organization, and he resolved to devote his life, strength, energies and capabilities to the task. In summer's heat and winter's cold, in storm and shine, through evil and good report, in poverty and want, and with increasing infirmities, this magnificent man, accepting toil and privation as the heritage of pathfinders and reformers, always expanding to a noble stature he went forward, leading locomotive engineers to a higher plane, gaining footholds upon rugged and treacherous acclivities, and holding his ground against all enemies. And this first Grand Chief of the Brotherhood of Locomotive Engineers, now with

"eternal sunshine settling on his head," made it possible for Mr. P. M. Arthur to occupy his present position as grand chief.

In the nature of things in the eternal verities of order, it must be right and proper to place Wm. D. Robinson, the first grand chief of the Brotherhood of Locomotive Engineers and P. M. Arthur, the present grand chief of the order in juxtaposition, and attempt a parallel—a comparison.

In common parlance, we say, W. D. Robinson is dead, and that P. M. Arthur is living—but, great men, like kind words never die—a good example is immortal. It warms into more vigorous life under the sunshine of prosperity, and fortunately, no Siberian winter is cold enough to wither its bloom. A good example never wears the wrinkles of age, no rust corrodes it, nor does moss gather upon it. In the night of despondency and gloom, that comes to all, great, generous loving words are as melodious as the fabled music of the Spheres, and a good example glows like a star of the first magnitude in the firmament of hope.

Of all the hosts of employees in the railroad train service of the country, P. M. Arthur has been the chief beneficiary of Wm. D. Robinson's pioneer work. Mr. Arthur says he began railroading as a "wiper," a position of the least possible consideration—and he further says, he has been a member of the Brotherhood of Locomotive Engineers from its "birth." If he tells the truth, which he doubtless does, then he was a pupil of Wm. D. Robinson, followed in the track the great leader and Grand Chief blazed out through a wilderness of doubt and anxiety, which, in a noble nature, would inspire sentiments of the profoundest gratitude.

When Wm. D. Robinson, in infirm health, the result of work, sacrifices and persecution in the service of the brotherhood, was reduced to poverty, what could have better stamped P. M. Arthur with moral greatness, largeness of soul and warmth of heart, generous impulses, Christian charity and fraternal fellow-feeling, than to have done all in his power to mitigate the misfortunes of Wm. D. Robinson and smooth the pathway of his declining years? Did he do this? No! Why not? Was P. M. Arthur poor? No! Men living in Cleveland, Mr. Arthur's home, estimate his wealth at not less than \$300,000—and it is believed by some, well equipped to make estimates, that his fortune will reach \$500,000. How has he managed to accumulate such a fortune? He is on record as saying that when he entered

Cleveland, he was "without a dollar." His salary, since 1874—nineteen years, may be said to have averaged about \$4,000 a year—and yet, according to the lowest estimate, he has been able during the period, to lay by an average of \$15,789 a year. Hence it is seen, if Mr. Arthur refused all pecuniary aid to Wm. D. Robinson, it was not because he did not have the means. While Wm. D. Robinson, who made it possible for P. M. Arthur to be grand chief, control the funds of the brotherhood, without giving bond for the administration of the trust, lives in a palatial residence, on an aristocratic avenue, and rolls along the streets in an elegant equipage—we say while P. M. Arthur was thus enjoying luxuries secured by his connection with a great brotherhood, Wm. D. Robinson its founder, was suffering the pangs of poverty and privation, but the heart of Mr. Arthur was never touched with so much as a sympathetic thrill for the impecunious old man. Why? Truth is said to be, sometimes, stranger than fiction, and in this case, we are confronted with the fact that P. M. Arthur was not only bound to Wm. D. Robinson by the ties of brotherhood, but, being a professor of the Christian religion, men looked on with amazement as they beheld P. M. Arthur withholding the smallest pittance of relief—exhibiting a heart as callous as adamant, dead to all appeals for relief—cold as ice and as relentless as a scourge—making the obligations of brotherhood, and the professions of Christianity things to excite derision and loathing.

True, it may be said, some men are "built that way;" whited sepulchers, pharisees, who make long prayers, to be seen of men, but who practice duplicity for the sole purpose of making money; become so selfish and callous as to be scarcely aware that they are loathed by all honest men. Such characteristics might be treated with the silent scorn they merit and passed by in silence, but when P. M. Arthur, availing himself of the privilege of Grand Chief—a position for him made possible by the sacrifices of Wm. D. Robinson—turned upon the unfortunate man when he was on his death-bed, with a tongue as venomous as the fangs of an asp, seeking to sting him to death and make his memory a hissing and a by-word, then it was that every self-respecting engineer and fireman, and every railroad employe that values truth and loathes slander, was bound by the most sacred obligations, to rescue the fair fame of Wm. D. Robinson from the *mafia* clutch of the assassin.

What must be the condition of organized labor in the estimation of its membership,

when a man, claiming to be a labor leader, with the prominence of P. M. Arthur, in nineteen years, manages to accumulate a fortune estimated at \$300,000? What must be workingmen's estimate of a labor leader, who, having accumulated a vast fortune, eulogizes such an implacable foe of organized labor as McLeod, who permits no lodge fire to burn on a great railroad system, and with a ferocity born of relentless enmity and insane hate, attacks organization with a barbarity as inhuman as ever animated a Mohammedan, in his war upon the Cross, and at the same time hobnob with Chauncey M. Depew, president of a great railroad system, who hies away to Europe to witness the "Passion Play;" to bemoan the treason of Judas Iscariot, the implacable savageness of the High Priests, and the merciless edict of the Roman ruler, while his satraps hire Pinkerton thugs to murder workingmen on the N. Y. C.

That P. M. Arthur, Grand Chief of the Brotherhood of Locomotive Engineers, is rich, is universally admitted. That he was as poor as the fabled "church mouse," or the equally renowned "Job's turkey," when he became Grand Chief, he has admitted, by saying that when he entered Cleveland he "hadn't a dollar." Workingmen, organized or unorganized, have no objections to see a fellow-toiler accumulate money, but when a labor leader amasses a fortune of \$300,000 in nineteen years, they wonder how he managed to accomplish the transition from poverty to wealth. If it is asserted that the methods employed were honest, doubts arise and multiply until the mind is filled with uncertainties and suspicions take the place of confidence; and when the rich labor leader invests a portion of his wealth, as is asserted of P. M. Arthur, in such a rat publication as the *Cleveland Leader*, a paper that denounces organization, and as late as June 30, remarked:

The boastful leaders of organized tradesmen are wont to prate of their power, and many timid politicians have been led to believe that sure defeat awaits the public servant who fails to obey the commands of unionism.

Such paragraphs, though, in themselves, contemptible, explain why the *scab Leader*, at the time of the Toledo, Ann Arbor and North Michigan strike, was furious in the denunciation of the strikers and of Senator Voorhees for taking prompt action looking to the determination of the question, whether, under any law of the United States, railroad employes, by a decision of a Judge, could be reduced to a part of the rolling stock of a railroad. And it is just here that the fact is asserted that P. M. Arthur, the labor leader, and Grand Chief of the Brotherhood of Locomotive Engineers, has

used a portion of his great wealth to maintain a scab plutocratic newspaper, that plays into the hands of the McLeods, Carnegies, Corbins and others, who seek, by every means that wealth can employ, to obliterate lodges and disrupt labor organizations.

We write of P. M. Arthur as a labor leader—as a labor leader of great wealth, accumulated in the short space of nineteen years, reaching the grand total of \$300,000. We write of him as displaying his great wealth in a palatial home, on an aristocratic avenue in the city of Cleveland. We write of him as the eulogist of plutocratic employers of labor, whose favor he seeks by the most disgusting flunkeyism; we write of him as investing his surplus wealth in a rat newspaper which, under his own nose, omits no opportunity to stab organized labor, nor sparing the organization with which he, as Grand Chief, is connected.

As a labor leader, Grand Chief Arthur is the only one within the range of our reading or knowledge who has grown up into the plutocratic class. He is the only labor leader who uses any part of his money to maintain a *scab* newspaper that is the avowed enemy of organized labor and the apologist and defender of those who would if they could crush organized labor.

For Grand Chief Arthur, personally, we care nothing. In the ranks of the Brotherhood of Locomotive Engineers there are a thousand if not ten thousand men his superior intellectually, men, who if asked to enter into bond for the faithful administration of trusts committed to their charge, instead of threatening to resign if the request was urged, would either resign or give the required security, who would rather pluck out their palpitating hearts and throw them to the dogs than to use their positions to grow rich while thousands of tramp engineers, with families dependent upon them, know not where nor how subsistence is to be obtained; men, who, were they Grand Chiefs, and, therefore, labor leaders, would rather live in a humble cottage than a palace, knowing that their fellow-workmen were forever wondering how they got their money; men who would rather go on foot, without shoes, than to exhibit themselves eulogizing the McLeods, the Carnegies, and other labor robbers, and would commit suicide rather than subscribe stock to support a *scab plutocratic* newspaper, and thereby contribute to the demolition of labor organizations.

It was thought, at one time, by statements

made by Grand Chief Arthur, that he was ready to retire. Bemoaning his advancing years, he asked for an Assistant Grand Chief, professing that when he should be fairly drilled for the responsibilities of a Grand Chief labor leader, he, Arthur, would retire. It was a grand opportunity, and Mr. Youngson was promptly elected Assistant Grand Chief. The scheme was adroit, Mr. Arthur secured more time to attend to his accumulating wealth, and now it is given out that he does not propose to retire at all. Perhaps he does not think that Mr. Youngson is sufficiently drilled, that he does not properly appreciate the friendship of such men as McLeod, Carnegie, Corbin, Depew, and the Vanderbilts; perhaps he thinks that Mr. Youngson, in nineteen hundred years, to say nothing of nineteen years, could not as Grand Chief amass a fortune of \$300,000 and make himself popular with plutocrats, and would never subscribe stock to a *scab* newspaper to scalp labor organizations, at any rate, it is now given out that Mr. Arthur is beginning the *indorsement* business, the first act having been played recently at Schenectady, N. Y.

\* \* \*

The "union meeting" was largely attended, and the same programme was introduced. There were the usual welcoming addresses, the usual compliments to engineers who hold the throttle and guide the iron horse—all of which were well enough, but the real nub of the meeting was to *indorse* Grand Chief Arthur. But what to indorse was evidently perplexing. Manifestly, the meeting did not want to indorse the accepted fact that Mr. Arthur had in nineteen years, as Grand Chief, and a great labor leader, secured a fortune of \$300,000. The meeting did not want to "Whereas, Our Grand Chief is now a plutocrat, and subscribes stock in a *rat* newspaper, therefore be it resolved." They did not want to "Whereas, The time having arrived when our Grand Chief contemplates retiring from his great office to seek repose in his palatial residence and meditate upon that kind Providence which has enabled him to grow rich, richer than any other labor leader who ever lived and flourished, therefore be it resolved," therefore just what to indorse was the question, until finally they concluded to indorse "our Grand Chief" in the action he took in the strike on the Toledo, Ann Arbor & North Michigan R. R., when in fact he did nothing at all except what the law compelled him to do, and which his *own scab* newspaper, the *Cleveland Leader* denounced, the intention being manifestly to use this indorsement with others of the sort to be obtained, to urge Mr. Arthur to maintain his position as Grand Chief and labor leader until Mr.

Youngson is sufficiently drilled to take the helm, and it is possible that Mr. Youngson is of the opinion that before the close of the nineteenth century he will be sufficiently drilled, but as long as Mr. Arthur can average about \$16,000 a year by being Grand Chief and labor leader, brother Youngson will have to wait. His hair will turn gray, his eyes will grow dim and he will totter upon staffs before Mr. Arthur will be willing to relax his grasp upon a good thing and retire to the shades of obscurity.

\* \* \*

The resolution of indorsement having been "unanimously" put through, the Grand Chief was presented amidst tumultuous applause. Hats and handkerchiefs waved, and amidst clapping and stamping and yelling Mr. Arthur was introduced to the meeting as "the grand old man of our brotherhood," but if Mr. Jacobs had introduced Mr. Arthur as "the rich old man of the brotherhood," he would have made the hit of the meeting. He could have said:

"Ladies and gentlemen, I now have the pleasure and the honor of introducing to you the grand old rich man, the chief of our brotherhood, who when young commenced his career in Schenectady as a wiper, and now returns to you the richest labor leader in the world, whose fortune is estimated at from \$300,000 to \$500,000. If any one questions his magnificent leadership, I point proudly to his great fortune and say no man could accumulate so much wealth in nineteen years unless he possessed special qualification as a labor leader. In introducing this rich old chief, I desire to call your attention to the splendid example of his life in accumulating riches, and in closing say, let every locomotive engineer strive to own a palatial residence, throw our dinner buckets away and retire from the cab. Let us own prancing steeds and be able to own stock in a *scab* newspaper, such as the *Cleveland Leader*."

\* \* \*

Mr. Arthur reports only a part of his speech. His admirers may regret the abridgement, but they will find consolation in the fact that, with the exception of a few words, it is the same old speech that has done duty for nineteen years. Mr. Arthur had a notable opportunity to have made an entirely new speech. He began right by saying he started in railroadng as a "wiper." Here was an opening. He could have repeated his declaration: "When I entered Cleveland I hadn't a dollar." Then he could have told how he managed, at an average salary of say \$4,000 a year, to save about \$15,000 a year. He could have told his audience how much stock he holds in a *scab* newspaper that denounces labor organizations and comes to the rescue of

such knavish concerns as the Toledo, Ann Arbor & North Michigan corporation. This would have been refreshing, but, instead, he got off the old chestnut that "the stream never rises higher than its source," and that he wanted engineers "to aspire to something higher than simply contenting themselves with running locomotives." Here was an opening for him to have said: "Look at me; I started in as a wiper, and now I am a sort of Vanderbilt. I am grand chief. I live in a palace, I associate exclusively with the rich, I drive thoroughbreds hitched to a carriage, such as Carnegie or any other plutocratic labor robber might be proud of, and I own stock in a *scab* newspaper, and I want you all to profit by my example."

Instead of winning immortality by such a speech, he repeated the old chestnut, that "I have opposed the B. of L. E. forming into any alliance with any other class." He need not have repeated the stale assertion, but he could have said, that "the B. of L. E., in spite of my opposition, did adopt a plan whereby such alliances can be formed," and this is true. Engineers know the value of alliances, have sought and obtained them, as the Firemen's Brotherhood knows to its cost, and notwithstanding the B. of L. E. in convention sat down upon the Grand Chief, we find him still repeating the asinine platitude that he "does not believe it possible to place all men upon the same plane." What plane? Does he believe that all railroad employees cannot be placed on a plane of justice and fair play? And does he assume to place the great brotherhood of engineers in a position of antagonism to such a manly policy? Manifestly so. Grown rich by methods he would not care to confess, he has developed into an aristocrat, and, seeking to palm off cant for conscience, he swings around half the circle of the jurisdiction of the brotherhood, preferring, for good reasons, the East to the West, to obtain "indorsements," that may be used at the right time to secure re-election.

Mr. Arthur, in his Schenectady speech, after denouncing other labor leaders as "demagogues," said: "I have been aiming to establish an aristocracy that I call a manhood aristocracy." Manhood? What is Mr. Arthur's idea of manhood? Manifestly it is to be Grand Chief, get rich, own a palatial residence, live like a prince, drive a spanking team on the boulevards, own stock in a *scab* newspaper, antagonize alliances of organizations, profess religion, and when labor gets into trouble try to get out by consulting McLeod, Carnegie, Corbin, Depew or some other labor leaders of their ilk, and in addition manipulate union meetings for "indorsements" so that a real

good thing may be retained; a manhood of money, not moral greatness; of cash, not courage; of intolerance, not integrity; the cardinal idea being as Mr. Arthur expresses it. "I do not believe it is possible to place all men upon the same plane," that is to say, the trackman, the brakeman, the switchman, the car man, the shop man, the fireman and conductor can never be acknowledged as a member of the manhood aristocracy for the establishment of which Mr. Arthur has been "aiming," and of which he would have engineers and other railroad employees believe he is the Ward McAllister.

We dismiss the subject. It has been pursued to expose bigotry and duplicity in the interest of organized labor. Labor leaders, to achieve success in the interests of labor, must be men whose lofty integrity is of such unimpeachable soundness that

"what they say  
You may believe and pawn your soul upon it."

Men whose high ambition it is to help their fellow men, instead of amassing a princely fortune; men who in their daily lives are not too proud to associate with the workmen from whose earnings their salaries are drawn; men of heart, soul and conscience as well as brain. Such men glorify the cause of labor, and they will in good time hew out the way to its emancipation.

#### STARTLING.

The *Railroad Telegrapher* of June 15th contains an editorial article captioned "They Revolutionize the world." The caption affords a wide field for fine writing. It reminds us of the Kansas poet, predicting a cloud burst, or something in the nature of a cyclone. He said:

"The bullfrog raised his tail on high,  
And went bounding o'er the plain—  
The bumble bee came thundering by,  
And then came down the rain."

Our esteemed contemporary starts out as follows:

"When we hear of people coming on the stage of action with the intention to revolutionize the world, that the movements they have on foot will be carried out, that the plan which they have been marinating far eclipses anything which has ever crossed through the minds of the greatest labor leaders in the world, and when we see a mere handful of men who say they will change the entire order of things, then it is then we stop, then it is we look to them with a certain amount of admiration, but not with the knowledge that they will succeed. They may be of this class, but it is doubtful; they may be of the class who mold public opinion; but they cannot step in and change the minds of millions of people."

To what extent our esteemed contemporary suffered in gestation and delivery of the foregoing, we have no means of determining, but we apprehend that the writer's mind indulged in a delightful retrospect, when he "heard of people coming on the stage of

action with the intention to revolutionize the world," by declaiming against organization for protection—when they got upon their hind legs and denounced strikes, when, with their bellies in the dust they crawled into the presence of men whom they acknowledged to be their masters and superiors, and licked their boots, and never ceased shouting "that's the way to revolutionize the world, that's the plan which far eclipses anything which has ever crossed through the minds of the greatest labor leaders in the world." The writer, evidently, looked upon the men engaged in denouncing protection and strikes, and in beslobbering corporations with asinine eulogies, "with a certain amount of admiration, but, suddenly, he heard something drop. His large, lustrous and penetrating eyes were opened, and then we hear him exclaim, "then it was that we stop." He might have said "then it was that we pop," or something else equally classic. He saw that the molding "of public opinion" in that direction did not suit the telegraphers; that crawling and boot licking was not the way to revolutionize the world; that it was worse, if possible, than a "bogus dispatch," that it was arrant damphoodism and the right thing to do was for such world revolutionizers to swallow themselves, and after digestion, start out on another track—that is to say, laud and magnify protection, and strike every time the moon changes, and "pause to think that other people have ideas, that others have an insight into what they believe is right and what they, in fact, know is right."

Some people whose intention it is to revolutionize the labor world, believe in protection, and if need be in striking for protection. While some people have believed the way to revolutionize the world was to denounce protection, declaim against strikes and cater to corporations—and some people, so believing, once, have been converted, yielding to aggressive argument, they have said "our intention to revolutionize the world is a flat failure," and this being true, what could possibly be more becoming than for the editor of the *Telegrapher* to exhibit modesty?

In referring to the advocacy of new measures the *Telegrapher* says:

"It is not always the sore-head who becomes an advocate of new measures. They may be sincere in what they are advocating, they may believe that they will succeed, but when their plan comes before many people it will be found lacking the most essential points which they at first believe it will bear. If we remember correctly, at periodical times there comes on the scene of action, new plans for binding the labor men closer together, but after due investigation it is found that they will not stand the storm."

We do not doubt that the editor of the *Telegrapher* speaks by the card. He was doubtless sincere when he opposed protection and strikes; he was doubtless sincere

when he championed the policy of corporations, and his head may not have been sore when his great conversion overwhelmed him but just now the editor's head seems to be sore. He does not seem to be satisfied with himself, and he does not like to hear of any one attempting to revolutionize the world. He forgets how recently it was that the task was presented, to revolutionize him, to knock the nonsense out of him, and get him in a condition to advocate protection and strikes. True, our brother is not the world, nevertheless, it follows if he could be revolutionized, others equally brainy may also be revolutionized.

It is worthy of remark that our esteemed contemporary, as he proceeds, finally concludes that in our labor organizations there is much chance for improvement. Right you are. There should be fewer "bogus dispatches," less occasion for suspicion that grand officers play mole and hawk for the purpose of spreading butter thick on their bread, matters about which there is great need of revolutionary enterprises. There must be less conspiracy, more devotion to men, and less to corporation. If the pen is still to be mightier than the sword, it must be rescued from the hands of stupidity, and given to men of brains, who know the difference between a grammar and a monkey wrench. Men, converted against their will, are likely to go back to their wallowing, if a "bogus dispatch" ever goes wild upon the wires.

#### L. S. COFFIN AND HIS WHITE BUTTON.

The veteran friend of railroad employes, Mr. L. S. Coffin, though bearing the burden of four score years, is still doing the work of manhood's prime, in advancing the welfare of men engaged in the railroad train service of the country. Having labored to secure for them safety appliances for the preservation of life and limb, he now turns his attention to another matter of still greater importance, nothing less than to rescue men from the habit of drinking intoxicating beverages, and the sign of deliverance is the *white button*.

It is now a year since Mr. Coffin started his white button movement, and during the period one hundred thousand symbols of redemption from the debasing habit, have been called for, and the demand is increasing. The juvenile game of "Who's got the button" has developed into a heaven ordained scheme, to rescue men from a habit which impoverishes and degrades its victims, darkens homes, which otherwise might be bright and joyful, disrupts families, makes wives and mothers worse than widows and entails upon children calamities worse than orphanage. The question now is again heard, "Who's got the button?" the white button which proclaims that the wearer is redeemed from

the alcohol habit. One man writes to Mr. Coffin: I want to tell you what the white button has done for me. It has put a new carpet on the floor, put new dresses and shoes on my children and sent them to school, and best of all has made my wife the happiest woman in America." In this simple story there is an ocean of love and logic, reason, religion and redemption—life, liberty and the pursuit of happiness. The writer, by adopting the "white button" as a sign of his disenthralment, of his emancipation, at once made his home a type of heaven. He expanded to the full stature of manhood—he put a song as sweet as a lark ever sang in the soul of his wife, and wreathed the faces of his children in angelic smiles. His hard earned dollars were saved for his home. The saloon did not get them. The white button is an economic argument such as the great masters of economic problems might be proud of—at once simple and sublime. The man who wears the white button may say "hitherto, I have spent at least ten cents a day for some alcoholic beverage—or \$36.50 a year"—and he could say "this expenditure of money has not been the worst of the habit. It has led me into unfortunate associations, blunted my sense of obligation to home, wife and children—often incapacitated me for work—stolen my time, robbed me of character, wrecked hopes and aspirations, and left me often the victim of despair." Then pointing to the white button he exclaims, "This is the sign of my redemption—symbolizing a new, higher and better life." We like it immensely. We congratulate Brother Coffin upon his wonderful success. May the white button brigade increase in number and influence until every railroad man shall wear the white button, than which no titled favorite of royalty ever wore a more honored badge.

### THE VANGUARD.

The Chemical National Bank of Chicago, when it closed its doors some weeks ago, locked out its depositors and among the number was the *Vanguard*, one of the gallant champions of labor in the country. As a writer, Mr. Lester C. Hubbard, by common consent, stands in the first rank. His convictions are all in the line of justice and his courage would have won applause in the palmiest days of chivalry. He dares always defend the right, no matter who champions the wrong; an enemy of plutocracy and all of its schemes and wiles, and an American in his hatred of caste and the degradation which caste imposes, he moves upon the works of plutocracy, aristocracy, trusts and monopolies with iconoclastic fury and is never more in his element, than when beating down the gods and images which they worship and set up for the homage of others. But the chemical, more properly, the chimerical bank, by withholding the *Vanguard's*

money from circulation has for the present prevented that paper from doing its legitimate work in the field of courageous journalism.

In this hour of peril and supreme need what ought to be done? What ought workingmen to do? What ought all men to do who are in sympathy with good government and the welfare of the masses? We answer—promptly subscribe for the *Vanguard* and pay in advance and persuade others to do likewise. With special emphasis, we say this to the membership of the Brotherhood of Locomotive Firemen. In its issue of June 15th, the *Vanguard* says:

We hereby give our subscribers notice that we are pledged to the *Vanguard* as to a life work, from which there shall be no permanent divorcement. If circumstances compel us to skip a few issues, we will begin again just as soon as practicable, and give to our readers the full number of papers for which they have paid.

The MAGAZINE admires the pluck and persistency of the *Vanguard*. It may be that the Chemical will eventually pay something to its depositors, if not, then we shall hope that the people will come to the rescue of the courageous sheet, and make its future brighter than its past.

### CONSTITUTIONS.

Just now there is no little complaint from subordinate lodges, because they have not received the revised constitution of the brotherhood.

A little historical explanation is demanded, and is given, as follows:

At every convention of the brotherhood the constitution undergoes revision, more or less important. Formerly, it was the practice of the grand lodge to ascertain the number of members in each subordinate lodge and promptly forward a sufficient number of revised constitutions, so that each member could have one.

In numerous instances this proceeding did not meet with approval. The lodges were opposed to being saddled with the expense, and would pay for constitutions when they were wanted and only such a number as they might order.

After the Cincinnati convention notice was sent to each lodge that the new constitutions were ready, and with such notice a blank form for ordering constitutions was enclosed, with directions to each lodge, to fill the blank, stating the number of copies of the revised constitution the lodge required.

In every case where the order has come to hand, the required number of the constitutions have been forwarded. Who is it that makes the complaint that the lodge has not received the revised constitution? We answer, the lodges that have not sent in their order. Their negligence is responsible for the complaint, and there is only one way to overcome the difficulty. It is easy enough, and that is to fill the blank, as directed, and let the grand lodge know how many copies of the constitution are wanted.

THE *Twentieth Century*, "a weekly radical magazine," is always a welcome visitor to our exchange table. Its mind resources are exhaustless. It says good things in a way that is immensely attractive. In its issue of June 22, we find references to the Havemyer sugar refinery, which places Mr. Havemyer in a position eminently convenient to receive the contempt of all decent men and women. It appears that at the refinery last year, the mortality from the heat was frightful, men were carried out dead and dying, a dozen in a day. Their places were quickly filled by others who must work or starve. Like other soldiers, they faced death and danger for small pay. This year the firemen in the sugar refinery ask that they may work only eight hours. They told Mr. Havemyer that twelve hours per day meant death to them in the deadly heat. Mr. Havemyer knows from experience that there are plenty who will take a dead man's place. He refuses to reduce the hours. Mr. Havemyer knows that human life, that is to say, such life as workingmen may boast of, is about the cheapest thing to be found in the market, and he does not propose to advance the price, and the mere fact that ten or a dozen men a day are killed to enable him to make money, is a matter of small consequence. To execrate such monsters is a duty and we esteem it a pleasure to add our scorn to the sum total of the sugar refinery infamy. Referring to classes, the *Twentieth Century* says:

We have been mentally dividing American citizens into three classes: first, the class that work, be it with hand or brain, in the production of real wealth, transforming the crude materials of nature into the useful and beautiful. In this class are included all from the miner and machinist to the architect, artist and designer.

In the second class are all those who, while producing nothing, are constantly planning and scheming how to live comfortably off the products of those who do produce. In this class are the traders, speculators, bankers, brokers and stock gamblers. Neither of these classes attain to permanent security, but are the conduit pipes through which the smaller, exclusive upper class, draw all the surplus wealth produced. This upper class never works. It absorbs. It uses the middle class as a straw through which to sip its julep. The wealth produced by the working class passes through the middle class, but it does not stay there. It is all absorbed at the top, and when the straw breaks it is cast aside empty. The upper class is not as numerous as it was, but its power of absorption is greater. Not so many of the middle class are needed as formerly, so they are crushed out one by one.

The lower class members are cheap and plentiful; they may be killed off with impunity, for there are great reserves of unemployed from which to fill up the ranks, and heathen nations to draw from if the home supply fails. When some one remarks that there are no classes in America, it suggests the scripture query: "Who has sinned, this man or his parents, that he was born blind?"

THE *Laster*, Vol. V., No. 1, is on our table in new and improved form, and after more than a year's absence, we take special pleasure in welcoming it to our sanctum. It appears that the *Laster* was established in 1888, that in 1892 its publication was discontinued,

because it was thought that "daily newspapers" would answer the demand. The *Laster* says:

The experience of the last year without the paper convinced the union that a great mistake had been made when its publication was stopped, and so with practical unanimity it was voted at the convention this year that it should be re-established, and the general officers were directed to again have it published, the only restrictions being that it should be printed in a union office and have a member of the union as its editor and manager.

The action of the union in re-establishing the *Laster* was eminently wise. The *Laster*, as we remember it, was well and wisely conducted, and Mr. Edward L. Dally, the editor in the issue before us, says:

In assuming editorial charge we make no pretensions as to any ability to excel in a labor of this kind, and no boast of any intention to accomplish wonderful results. We are sensible of our lack of editorial experience, and of the trials and perplexities that attend journalistic work; but relying upon the support and co-operation of the union members, in whose interest the paper exists, and with unbounded faith in the justice and ultimate triumph of the principles for which labor papers and labor unions are contending, we simply announce our purpose to make the *Laster*, as near as we can, a model labor journal, and cheerfully await whatever measure of success the future may have in store.

The *MAGAZINE* wishes the *Laster* the largest possible measure of success.

WE have on our table the *U. P. Employees' Magazine* for July, and read with much interest the leading article, captioned "The Mission of the Knights of Labor." In the course of the article the writer says:

Wage slavery has but few advantages over chattel slavery, and must be abolished to make any better condition of society. It was to set their efforts in just that line that the founders of the Knights of Labor sought.

Unite men to most effectively check the greed of employes by uniting all, without regard to class, who when divided on class lines, history has proved, have exerted more force against each other than against the common enemy, and then make it an economic school whereby men studied from effect back to learn the cause, and then remove the cause; learn their true relation to earth, and occupy it, to be the equal in fact as well as in theory, to make unnecessary an employer.

Manifestly, the mission of the Knights of Labor is founded in the belief of man's capabilities for self-emancipation—to establish and maintain independence, and in the United States, at least, the way is clear for the highest possible self-assertion, and "the discussion of political and economic questions" which the Knights of Labor advocate, is in the line of the ultimate disenthralment of labor. Let the discussions proceed.

THE *Journal of the Knights of Labor*, of June 22d, contains a lengthy article over the signature of T. V. Powderly, in which he shows how "the tillers and tollers are fleeced," and exhorts the tillers and tollers to "get together." Mr. Powderly makes a strong appeal, points out how grossly ignorant some people are, and is of the opinion "that it will take some education before we reach the ideal of organization," and adds:

We have 65,000,000 people in the United States. Of that number about 25,000,000 will be engaged in gainful occupations; they, with those depending on them, will make up the bulk of the population. We have in the ranks of organized labor less than two million men and women. Let us say that the American Federation of Labor has 700,000, the Knights of Labor 500,000, and the various railroad organizations 400,000, and where are the others anyway? There are the Farmers' Alliances with about a million and a half, and remember I have given top figures when rating these organizations at the numbers given above. All told, in mechanical, mining, railroad, laboring and farming organizations, we have but 3,000,000 out of 25,000,000. Of course, leaders will be necessary, or the 22,000,000 men and women who never think, never talk to each other, never vote—except when General Jackstraw runs on the old party ticket—who never discuss a single thing that relates to their future, and who don't know enough half of the time to come in when it rains, but who do know enough to avail themselves of the benefits gained by the handful of organized people, will be always the medium through which our best efforts will be set aside.

Mr. Powderly is in favor of educating all, and of bringing all tollers into some organization, a work which the MAGAZINE indorses unequivocally.

#### A LOCOMOTIVE CATECHISM.

We have received from Messrs. Norman W. Henley & Co., publishers, No. 150, Nassau St., New York, a book of 350 pages, and nearly 200 illustrations, and seven folding plates, bearing the title of "Locomotive Catechism," by Robert Grimshaw. It is well said that the book, which treats of the locomotive in all of its parts, from boiler to the smallest part of the machinery, is a most practical and useful volume, and one which commends itself on sight to every locomotive engineer and fireman, and to all who design going in for examination for either position. "In plain English he gives (with their answers) not only the questions which would be asked by the examining engineer of a candidate for appointment, but those which the ambitious youngster would ask the veteran, and those which old hands delight to ask each other as "stickers." We do not hesitate to recommend the book to all engineers and firemen.

*The Journal of the International Association of Machinists*, for June, contains a salutory of Mr. James O'Connell, G. M. M. elected at the late annual convention, held at Indianapolis. Mr. O'Connell says:

In accepting the position of Grand Master Machinist I feel that it will be necessary for a faithful discharge of duty to first gain the confidence, respect and esteem of the rank and file of the Association, but in making my bid for the same I am unable to refer you to any brilliant attainments or past achievements of my life other than a firm and resolute determination at all times to do justice to my fellow-man in all things, and at the same time ask in return that consideration which every man owes his neighbor.

The association is steadily gaining in numbers and influence, and we do not doubt that under Brother O'Connell's administration, will achieve a still larger measure of success.

THE forthcoming number of the Quarterly Illustrator will be a *special summer issue*, and will contain over 200 superb illustrations, by 110 well-known artists. This exceptionally large number of illustrations, and the unusual interest of the articles which they accompany, make the third issue of this popular magazine the finest single publication of any art journal ever put forth in this country. The size has been increased to 104 pages of reading matter, and among the eminent painters and illustrators whose productions are found in the contents of the Quarterly Illustrator are: C. S. Reinhart, J. Carroll Beckwith, H. Siddons Mowbray, Julian Riggs, C. D. Gibson, Hughson Hawley, William Sargeant Kendall, Alice Barber Stevens, Victor Perard, R. F. Zogbaum, Wilson de Meza, Joseph Lauber, Marie Guise Newcomb and many others. Such well-known writers as F. Hopkinson Smith, Charles de Kay, Alexander Black, Frank Fowler, Frederick W. Webber, and Perriton Maxwell, have furnished the text, a novel attraction of which is an article on the summer studios of most of our leading artists, with numerous drawings of their warm weather ateliers, made especially for this number of the Quarterly Illustrator by the artists themselves. This notable issue will make its appearance about July 5. [The Quarterly Illustrator, published by Harry C. Jones, 92-96 Fifth Ave., New York.]

#### ORGANBUYERS.

Our advertisers, Farrand & Votey Organ Co., Detroit, Mich., write that they will send to every reader of the FIREMEN'S MAGAZINE, upon receipt of a two cent stamp, a Daily Memorandum Calendar, which is invaluable to all railroad men as their own "Time Book." This is a reputable firm, make a good organ and do just what they advertise. See their advertisement elsewhere.

#### LET US GET TO THE FRONT.

MR. EDITOR:—Now that our election of officers and boards for subordinate lodges is drawing nigh, let us endeavor to make the coming year a good and prosperous one; let us strengthen the dykes that protect our homes; let us build stronger the walls of our noble order. Men are so easily led away in times of excitement that we now lift a warning voice to our brothers throughout the land. We like to see men firm, positive and willing to stand by their convictions. But no habitual conviction can supplant the truth, and no excitement can justify wrong doing. All the orders should stand by one another and each lend a hand to help on the right; and the rank and file should be found in the front. Every man in the lodge, both old and young, should be found at the front storming the fort of sin, battling for our rights and privileges. Let us get to the front and let no blush of shame ever crimson our cheek because we have sacrificed right for wrong.

We speak in the interest of christianity. We are no preacher, but we do pray that pure thoughts, noble purpose, and high aspiration may fill our hearts and that in every movement for the glory of our noble fraternity and the betterment of our soul, we may be found at the front. I hope, with all my heart, that these noble orders of railway employes shall federate. I sincerely pray for such a consummation, believing it to be the greatest good that can come to us all.

E. L. Crauford.

# GRAND LODGE.

## ASSESSMENT NOTICE FOR AUGUST.

OFFICE OF THE GRAND LODGE, B. of L. F. }  
TERRE HAUTE, IND., August 1, 1898. }

ASSESSMENT No. 89, \$2.00.

### To Receivers of Subordinate Lodges:

**SIRS AND BROTHERS:**—You are hereby notified of the death and disability of the following members entitled to all the benefits of the order, viz:

**CLAIM No. 992.** E. M. Patton, of Signal Mount Lodge, No. 872, was declared totally disabled by Loss of Foot, December 1, 1897.

**CLAIM No. 993.** Michael Fitzgerald, of Wm. Hugo Lodge, No. 166, died of Uraemia, March 19, 1898.

**CLAIM No. 994.** John Braddock, of Phoenix Lodge, No. 23, was declared totally disabled by Loss of Leg, April 7, 1898.

**CLAIM No. 995.** John A. Shumaker, of Star of the West Lodge, No. 840, died of Pneumonia, April 9, 1898.

**CLAIM No. 996.** Joseph Leen, of Miami Lodge, No. 441, was declared totally disabled by Loss of Leg, March 5, 1898.

**CLAIM No. 997.** George E. Lawson, of Falls City Lodge, No. 108, died of Phthisis Pulmonalis, April 22, 1898.

**CLAIM No. 998.** Chas. C. Fowler, of Morgan Crane Lodge, No. 867, died of Peritonitis, April 23, 1898.

**CLAIM No. 999.** John Horwood, of Mt. Tacoma Lodge, No. 192, died of Consumption, March 28, 1898.

**CLAIM No. 1000.** James H. Cook, of Safety Lodge, No. 142, was declared totally disabled by Cancer, May 9, 1898. (Died June 8, 1898.)

**CLAIM No. 1001.** Frank Brown, of Lehigh Lodge, No. 251, died of Paralysis, May 19, 1898.

**CLAIM No. 1002.** T. B. Smith, of Cotton Belt Lodge, No. 204, was killed in a Railway Accident, May 12, 1898.

**CLAIM No. 1003.** John G. Meincker, of Air Line Lodge, No. 409, was killed in a Railway Accident, May 13, 1898.

**CLAIM No. 1004.** Chas. H. Hooly, of Fellowship Lodge, No. 121, died of Cancer, May 15, 1898.

**CLAIM No. 1005.** John Short, of Anchor Lodge, No. 54, died of Pneumonia, May 19, 1898.

**CLAIM No. 1006.** Fred A. Russell, of Gt. Eastern Lodge, No. 4, was declared totally disabled by severed Arteries, May 22, 1898.

**CLAIM No. 1007.** William Stephan, of Robt. Andrews Lodge, No. 165, died of Dropsy, April 1, 1898.

**CLAIM No. 1008.** B. S. Tinker, of Hampden Lodge, No. 807, was declared totally disabled by Consumption, April 6, 1898.

**CLAIM No. 1009.** John E. Tracy, of Tippecanoe Lodge, No. 86, died from Injuries received in a Railway Accident, April 14, 1898.

**CLAIM No. 1010.** Hiram U. Grenolds, of Eclipse Lodge, No. 107, was declared totally disabled by Loss of Arm, April 20, 1898.

**CLAIM No. 1011.** Kenneth Coughlan, of Gold Range Lodge, No. 841, was declared totally disabled by Epileptic Convulsions, April 29, 1898.

**CLAIM No. 1012.** Asbury E. Scott, of Signal Mount Lodge, No. 872, died of Inflammation of Bowels, May 2, 1898.

**CLAIM No. 1018.** Harry W. Barrett, of Signal Mount Lodge, No. 872, died of Softening of the Brain, May 4, 1898.

**CLAIM No. 1014.** S. P. McInnes, of Central Lodge, No. 22, was killed by Railway Accident, May 7, 1898.

**CLAIM No. 1015.** John P. McKevitt, of Athena Lodge, No. 183, died of Heart Disease, May 8, 1898.

**CLAIM No. 1016.** Owen L. McCoy, of Evening Star Lodge, No. 112, died of Pneumonia, May 16, 1898.

**CLAIM No. 1017.** Calvin Cheatham, of Pride of the West Lodge, No. 6, was declared totally disabled by Loss of Leg, April 1, 1898.

**CLAIM No. 1018.** Danl. Moynihan, of Morning Star Lodge, No. 88, was Run Over and killed, May 20, 1898.

**CLAIM No. 1019.** Edward Stephens, of Nauvoo Lodge, No. 891, was killed in a Collision, May 24, 1898.

**CLAIM No. 1020.** W. L. Bingle, of Bayou City Lodge, No. 146, was declared totally disabled by Loss of Foot, May 22, 1898.

**CLAIM No. 1021.** E. C. Kelleher, of Big Four Lodge, No. 837, was Scalded to death, May 3, 1898.

**CLAIM No. 1022.** W. J. Walthal, of Marias Des Cygne Lodge, No. 400, died of Pyaemia, May 28, 1898.

**CLAIM No. 1023.** Jesse W. Calloway, of Cactus Lodge, No. 94, died of Paralysis, May 28, 1898.

**CLAIM No. 1024.** Richard M. Jones, of Bayou City Lodge, No. 146, was declared totally disabled by Anchylosis of Shoulder, June 2, 1898.

CLAIM NO. 1025. Harry D. Cooke, of Davy Crockett Lodge, No. 145, was declared totally disabled by Spinal Irritation, June 2, 1893.

CLAIM NO. 1026. Henry E. Collett, of Bois d'Arc Lodge, No. 451, was declared totally disabled by Loss of Sight, June 2, 1893.

CLAIM NO. 1027. James T. Hussey, of Gulf City Lodge, No. 115, was declared totally disabled by Spinal Sclerosis, June 3, 1893.

CLAIM NO. 1028. Henry George, of Adopted Daughter Lodge, No. 3, died of Pneumonia, June 4, 1893.

CLAIM NO. 1029. James R. Dillard, of Nolan River Lodge, No. 449, was declared totally disabled by Pericarditis, June 5, 1893.

CLAIM NO. 1030. John H. Harff, of Canal City Lodge, No. 255, was declared totally disabled by Tuberculosis, June 6, 1893.

CLAIM NO. 1031. F. M. Conrad, of Red River Lodge, No. 8, died of Hemorrhage of Bowels, June 6, 1893.

CLAIM NO. 1032. Martin Creighton, of Triumphant Lodge No. 47, died of Typhoid Fever, June 9, 1893.

CLAIM NO. 1033. Wm. E. Henderson, of Oasis Lodge, No. 866, was declared totally disabled by Tuberculosis, June 9, 1893.

CLAIM NO. 1034. Wm. L. Guess, of Water Lily Lodge, No. 402, was declared totally disabled by Concussion of Spine, June 14, 1893.

CLAIM NO. 1035. W. N. Leekins, of Clinton Lodge, No. 84, was killed in a Collision, June 14, 1893.

CLAIM NO. 1036. Albert Wills, of Calhoun Lodge, No. 84, was Shot and killed, June 19, 1893.

CLAIM NO. 1037. James H. Getty, of Ambey Lodge, No. 85, died of Inflammation of Bowels, June 21, 1893.

CLAIM NO. 1038. Augustus S. Francis, of Great Eastern Lodge, No. 4, was declared totally disabled by Loss of Arm, December 24, 1892.

CLAIM NO. 1039. Manuel Texter, of Gate City Lodge, No. 98, was Crushed between two cars and killed, March 3, 1893.

CLAIM NO. 1040. C. W. North, of Hamner Hall Lodge, No. 494, died of Typhoid Fever, June 22, 1893.

CLAIM NO. 1041. W. H. Bigelow, of Paul Revere Lodge, No. 486, died of Oedema of Lungs, June 4, 1893.

CLAIM NO. 1042. John B. Lane, of Lake Shore Lodge, No. 183, died of Typhoid Fever, April 4, 1893.

CLAIM NO. 1043. C. Q. Woolnough, of Chipeta Lodge, No. 490, died of Pneumonia, March 29, 1893.

CLAIM NO. 1044. Thos. D. Henry, of Congaree Lodge, No. 427, was killed in a Railway Accident, June 2, 1893.

CLAIM NO. 1045. Andrew A. Holland, of Southern Star Lodge, No. 384, was killed in an Explosion, May 15, 1893.

CLAIM NO. 1046. Peter Wentz, Jr., of Lackawanna Lodge, No. 268, died of Stricture of Duodenum, June 9, 1893.

CLAIM NO. 1047. Wm. H. Drish, of Denver Lodge, No. 278, died of Typhoid Fever, May 2, 1893.

CLAIM NO. 1048. Frank Sherwood, of Magnet Lodge, No. 227, was killed in a Collision, June 6, 1893.

CLAIM NO. 1049. Wm. Pyle, of Delaware Lodge, No. 231, was declared totally disabled by Heart Disease, June 16, 1893.

CLAIM NO. 1050. Wm. H. Kingsbury, of P. H. Sheridan Lodge, No. 388, was declared totally disabled by Loss of Foot, March 16, 1893.

CLAIM NO. 1051. Theodore H. Spear, of Holbrook Lodge, No. 378, was declared totally disabled by Loss of Leg, June 7, 1893.

CLAIM NO. 1052. Eugene O'Brien, of Magnolia Lodge, No. 226, was declared totally disabled by Bright's Disease, June 2, 1893.

CLAIM NO. 1053. Walter S. Gardner, of Magnolia Lodge, No. 226, was declared totally disabled by Spinal Disease, June 2, 1893.

CLAIM NO. 1054. Peter Tisdale, of Sunset Lodge, No. 177, was declared totally disabled by Loss of Leg, May 15, 1893.

CLAIM NO. 1055. John S. Stratton, of Just In Time Lodge, No. 149, was declared totally disabled by Blindness, June 20, 1893.

CLAIM NO. 1056. Edward E. Gossow, of Rose City Lodge, No. 45, was declared totally disabled by Hemorrhage of Lungs, June 18, 1893.

CLAIM NO. 1057. Aaron W. Allen, of Trenton Lodge, No. 253, was declared totally disabled by Heart Disease, July 19, 1893.

CLAIM NO. 1058. Thomas A. Rue, of J. Donnelly Lodge, No. 350, was declared totally disabled by Heart Disease, June 13, 1893.

CLAIM NO. 1059. Frank Martin, of Mission Lodge, No. 281, was Shot and killed, June 23, 1893.

CLAIM NO. 1060. Leonard Dell, of Charity Lodge, No. 5, died of Inflammation of Bowels, June 2, 1893.

CLAIM NO. 1061. F. M. Willhoit, of Cherish Lodge, No. 440, died from injuries received in a Railway Accident, July 3, 1893.

An assessment of TWO DOLLARS (\$2.00) has been levied for the payment of the above claims, and you are required to forward said amount for each member whose name appears on the rolls of membership AUGUST 1st, 1893, (also for all members having taken a withdrawal (limited or final) after AUGUST 1st, and for all members who died or were totally disabled since that date), said remittance to reach the Grand Lodge not later than AUGUST 20th, 1893, as provided by Section 50 of the Constitution. Any lodge failing to make returns as above provided will stand suspended from all the benefits of the order, as per Section 52 of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

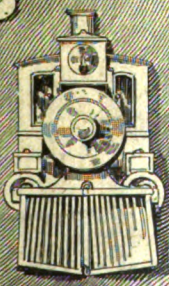

F. W. ARNOLD, G. S. AND T.

## EDITORIAL.

### THE MONEY QUESTION.

The money question is one upon which the most eminent doctors of finance disagree. Those who want a single standard, that of gold, and those who demand a double standard, that of gold and silver, in discussing the money question, exhibit all along the line such antipodal differences of opinion, that any expectation of agreement is utterly futile. Hence, men who care to familiarize themselves with the arguments and assertions of the disputants will have to exercise great fortitude and patience, and then take sides as their judgment may dictate. In this connection it should be said that the money question is not usually discussed dispassionately—either in private or in legislative bodies, and, to make matters still worse, sectionalism is introduced and epithets are unsparingly applied.

At this writing, while the panic is on, and banks are breaking and large industries are going to the wall, we are simply interested in ascertaining what the effect will be, or is likely to be on labor interests. Many very prominent citizens, men who are supposed to understand financial affairs, have repeatedly declared that there existed no real legitimate cause for the panic, but such declarations amount to little or nothing when one sees the panic rushing along with the force of a cyclone. Under such circumstances, men realize there must be a cause for the panic, and whether legitimate or bastard, they want to know what it is. Here, again, all is disagreement and confusion, and since a real cause must be found before a remedy can be applied, the squabble over the cause may not only protract the panic, but indefinitely augment its seriousness.

A great many people believe that the demonetization of the silver dollar, called the "dollar of the daddies," in 1873, was the starting point of the financial misfortunes of the country—because then silver dollars had their money quality knocked out of them, and the single or gold standard, it is charged, was established in the interest of "gold bugs" and "Wall street sharks," and it is further charged, that England took a hand in the demonetization of silver, by send-

ing to the United States large sums of money with which to debauch members of Congress, and placed the cash where it would do the "most good." Be this as it may, one thing is certain, there has since been a perpetual war over monometalism and bimetalism—the free coinage and the limited coinage of silver—together with its absolute equality with gold in its use upon some parity of value, but the advocates of silver have never scored a complete victory, and at this writing, the outlook for silver is anything but encouraging to its friends. It is not required that the MAGAZINE should assume an attitude of antagonism to either gold or silver. So far as the Brotherhood of Locomotive Firemen is concerned, the coins of both metals are eminently popular, and we shall be glad to know that a parity between the metals can be established that may be indefinitely prolonged, and the business of the country established upon secure monetary foundations.

Those who contend that the "demonetization of silver" in 1873 is the initial cause of the present panic, notwithstanding the wrong was perpetrated twenty years ago, are met by investigators and writers in the interest of the "gold standard," who tell them that from the foundation of the government the gold standard has practically prevailed, and this assertion is fortified by the fact, that from 1792, when the original Coinage Act was passed, to 1873, when the dollar was demonetized, only 8,000,000 silver dollars had been coined, while, within the same period, eighty-one years, the American mints had coined \$900,000,000 of gold, which, seemingly, establishes the assertion that the gold standard had prevailed during the entire period.

In 1878, five years after the demonetization of silver dollars, the coinage of silver under an act of Congress began in earnest, and from that time to December, 1892, 361,508,508 silver dollars had been coined of *full* legal tender quality—that is to say, the silver dollars have absolutely all the value of gold coins except the payment of interest upon the national bonds, which, as expressed in the bonds, must be paid in gold. Here it is seen that the 361,508,508 silver dollars have the same value in the United States as is conferred upon gold. But such statements, however concise, instead of elucidating the causes which have led to the present panic, serve to embarrass the investigation. Hence, another chapter relating to silver must be introduced, which may be properly styled the notorious Sherman Law. This law put a stop to the coinage of silver dollars, but did not interfere with the full legal tender quality of the dollars already coined. The Sherman law provided for the purchase of 4,500,000 ounces of silver bullion every month, or 54,000,000 ounces annually, and directed that this bullion should be paid for in treasury notes, to "be redeemable on demand in coin at the treasury of the United States," and the Secretary of the Treasury is directed to "redeem such notes in gold or silver coin, at his discretion." It is now claimed that the Sherman law is the real cause of the panic. Why? It is easy to ask question, and sometimes

difficult to answer them, but in answering why the Sherman law is the cause of the panic, or the initial cause, some space is required.

In the first place, the United States Treasurer is required to keep on hand \$100,000,000 in gold coin, to redeem on demand its obligations payable in coin. This \$100,000,000 reserve fund is regarded sufficiently limited to maintain specie payment, hence, any reduction of the reserve below the one hundred million limit places specie payment, and therefore the credit of the government, in peril.

As has been stated, under the Sherman law the Government is required to purchase 54,000,000 ounces of silver bullion annually, and pay for the silver in treasury notes redeemable on demand in coin, gold or silver, at the discretion of the Treasurer, but really the Treasurer has little if any discretion in the matter, because of the proviso in the law as follows: "It being the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be prescribed by law." Now then, suppose A sells the Government 1,000,000 ounces of silver bullion, and receives payment in treasury notes redeemable in coin. Having received the notes, he presents them for payment and demands gold; should the Treasurer refuse to pay gold and offer silver, that moment the "parity," the equality of the two metals would cease, and gold would be at a premium, hence, therefore, if A demanded gold the Treasurer would be bound to redeem the notes in that coin, because it is "the established policy of the United States to maintain the two metals on a parity."

Under the operation of the Sherman law, treasury notes amounting to about \$200,000,000, have been issued in payment for silver bullion; and European nations wanting gold, their agents get possession of the treasury notes, present them at the treasury and demand gold. These transactions have continued until the government reserve of \$100,000,000 in gold was seriously reduced. Notes of alarm were sounded. Gold continued to go to Europe on almost every ship. The reserve decreased, the press was full of warnings, and the panic started. Distrust took the place of confidence, confusion prevailed. Men who had money in banks became suspicious, runs followed, banks failed, industrial enterprises closed down. Men who had money locked it up, and thus as we write, the panic is sweeping along and wrecks mark its pathway, and boiled down we find a general agreement of opinion that the Sherman law is responsible for the starting of the panic, and this opinion is confirmed by the fact that President Cleveland has called an extra session of congress to repeal the Sherman law and put an end to the purchase of silver bullion, which will put an end to the issuing of treasury notes, and put an end to the further depletion of the gold reserve for the maintenance of specie payments.

This, it is thought by some, will at once restore confidence and establish normal conditions, while others are as confident that the salvation of business depends upon the free coinage of silver the same as gold; that there must be no discrimination, since, so long as sil-

ver is required to play second to gold at the mints, the discrimination will be fatal to conditions of the largest prosperity.

There are others who scout the idea that it is possible to place the United States on a plane of the largest business activity and security of expansion without a larger volume of currency, and aside from the issue of paper money, they claim that the free coinage of silver alone can solve the vexatious problem. The advocates of free coinage, which means throw the mints open to the coinage of all the silver offered, the same as gold, as was the condition prior to 1873, will secure (1) the double standard, gold and silver, at a ratio of 16 to 1 or some other rational ratio, and indefinitely increase the volume of specie currency. These advocates of free coinage point to France, the most prosperous of European countries, with an area of 203,000 square miles and a population of 40,000,000, which maintains in circulation \$700,000,000 of silver or \$17.95 per capita, and including gold, silver and paper, \$40.56 per capita, while the United States, with an area of over 3,000,000 square miles and a population of 65,000,000, maintains a circulation in silver of only \$8.85 per capita, and including gold, silver and paper, only \$25.15 per capita, or \$15 10 per capita less than France.

Indeed, when statistics, showing the portion of the currency of the United States held out of circulation which is said to be in circulation, the amount of currency actually in circulation is far below \$25.15 per capita, and it is just here that a large body of men attribute the present panic to causes other than the vicious forces embodied in the Sherman law. Hence, they say that the legislation all along the line from 1873 to the present, having been in the interest of gold and of flagrant injustice to silver, accounts largely for the present panic and widespread business demoralization.

Admitting, simply for the sake of argument, that silver is at the bottom of the present business demoralization growing out of legislation, in which the "gold bugs" have triumphed over the "silver fanatics," how stands labor? We hear much said about paying labor in "honest dollars." So much, indeed, as to leave the impression that the gold and silver factions have been animated all the time by a desire to do the fair thing by labor. But the inquiry is, What is the result? (1.) Throughout the silver mining regions of the country the silver mines are forced to close down and thousands of men are out of employment, without a remote prospect of a day's work. Want stares them in the face, and funds are being subscribed and appeals made to the railroads to scatter these idle men abroad over the country. (2.) Banks that hold the small accumulations of workingmen are closing their doors against depositors, and men and women shed tears as they see the doors close upon them and their little hoard. (3.) Other industrial enterprises are either failing, or temporarily closing their establishments and setting thousands of employes adrift, and these conditions have been brought about, admittedly, by vicious legislation. And to make matters worse, while all agree that legislation to *down* silver and exalt gold is the cause of

the panic, the probabilities are that remedial legislation is by no means assured. Meanwhile, labor suffers—and only labor suffers. The bankers will continue to fare sumptuously; the owners of silver mines and closed factories will not be seriously inconvenienced; the real victims of vicious legislation will be workingmen and their families. While this suffering continues, Congress will convene, and the wrangle will begin again over silver. The country will again be deluged with historical *chestnuts* relating to silver, from the days of Abraham to the present. We shall have windy dissertations on monometalism, bimetalism, single standard, double standard, free coinage international conferences, Latin unions, the rupee, *ad infinitum* and *ad nauseam*, and while labor suffers and starves and the panic proceeds, the debates will go forward.

If there are those who anticipate legislation that will immediately restore confidence, let them dismiss the hallucination. Panics, like wars, are destructive. Confidence, once destroyed, recovers slowly, and once started, like earthquakes, they subside only when their force is exhausted. Our advice to workingmen is, be rigidly economical—save the dimes, hoard your earnings with miserly care. Let it be understood that the gold and the silver factions are at war. And while the war proceeds, confidence will seek retirement and take its surplus cash with it into its hiding places. Already, the wires report that from one state alone orders for \$12,000,000 for merchandise have been cancelled. This canceling is likely to be many times multiplied, which means less work for railroads, less wages and reduction of employes. Hence, we say, to railroad employes, let the severest economy prevail.

We do not belong to the ranks of calamity howlers. We do not care to paint the outlook either blue or black, but a man is color-blind who declares it to be rosy. Panics, as we have said, run their course, and this of 1893 is not likely to be an exception, and since, as it is claimed, it is owing to vicious financial legislation the remedy would seem to be wise legislation, or legislation diametrically opposed to that which has produced the panic; and should such legislation be had, with the promptness the emergency requires, a full year would elapse before normal conditions could be established. Meanwhile, let the motto of workingmen be, save every possible cent of wages while wages can be had.

---

It is the opinion of master mechanics, that the speed of locomotives has reached its limit until there is greater improvement in tracks. When the track is as perfect as it can be made, 100 miles an hour will be an every day occurrence.

---

THE fastest of the Ocean gray hounds, makes about twenty-four miles an hour.

## THE STRUGGLE AGAINST WAGE SLAVERY.

There is probably no one thing connected with labor in the United States equal in importance to that which relates to the reduction of the hours constituting a day's work, and in this connection we reproduce the following upon the subject from the *Social Economist*, which, while not strictly accurate as to dates, is, nevertheless, important as history:

About seventy years ago the ship carpenters and caulkers of New York and other cities on the Atlantic Coast, who then worked from "sun to sun," commenced an agitation for a reduction of their working time to ten hours a day. Faint and feeble in its beginnings, this agitation increased in volume and in vigor, though repeatedly apparently suppressed, as the years rolled by, and finally achieved a triumph which was attended with important and widespread results. In September, 1832, a convention of delegates from farmers, mechanics and other workmen of Maine, New Hampshire, Massachusetts, Rhode Island and Connecticut, including several able men, met in Boston, and urged the adoption of various reforms, one of which was the ten-hour system. In May, 1835, a general strike for the ten-hour system took place in Philadelphia and several other cities, which, though it failed of its immediate purpose, presaged ultimate success. In December, 1835, the journeymen house carpenters of Boston met and resolved to do all in their power to reduce the hours of labor to ten hours a day; in 1836 they struck, though unsuccessfully, for the ten-hour system. The same result attended similar strikes then made in other places. Still the agitation made headway. On April 10, 1840, the ten-hour system was introduced in all the establishments under the Federal Government, and the example of the United States was speedily followed in private establishments in many trades.

In June, 1845, a great mass meeting was held in Pittsburg, Pa., in favor of ten hours, which was followed by an extensive strike. On July 4, 1845, a great mass meeting of workmen was held at Woburn, at which the ten-hour system and other labor reforms were strongly advocated by Charles A. Dana, now editor of the *New York Sun*, and other able men. In October, 1845, the New England Workingmen's Association, which had been organized at Boston in the preceding March, met at Lowell and passed resolutions of sympathy and encouragement for the strikers at Pittsburg. In this year (1845) petitions were received by the Massachusetts Legislature from more than two thousand factory operatives in Lowell and Fall River for ten hours, and referred to and heard by a committee, which made an extensive report thereon. The passage of the ten-hour law by the British Parliament, in 1847, also stimulated the cause in the United States. In September, 1852, a State convention of ten-hour men of Massachusetts was held in Boston, the proceedings of which were widely published in newspapers, as well as in pamphlet form. On September 21, 1853, the eleven-hour system was adopted in Lowell, Fall River and Lawrence, not by legal enactment, but by the action of the managers of the mills, taken in consequence of the pressure of the agitation for the ten-hour bill.

Having obtained this reduction to eleven hours without statutory coercion, the operatives hoped for a further reduction to ten hours (the ten-hour system having become general in other branches of industry), also without statutory coercion; but their minds were occupied for a dozen years by momentous questions in national affairs, and the ten-hour cause languished until the close of the civil war. The disbanding of the Confederate forces was soon followed by a revival of the agitation for ten hours. Ten-hour leagues were formed in the principal seats of the textile industries, and frequent meetings were held in aid of the cause. The Massachusetts Legislature, in 1869, having refused to incorporate the Grand Lodge of the Order of Knights of St. Crispin, the men

employed in the boot and shoe manufactories, of which that order was composed, called a state convention at Worcester for the purpose of organizing a labor reform party, and invited workmen, irrespective of the particular branches of industry in which they were engaged, to send delegates to that convention. Prior to this time there had been little if any co-operation between the men engaged in textile industries and those engaged in the manufacture of boots and shoes. The convention adopted a platform, which included the ten-hour law for textile manufactures, the right of incorporation for trades unions and other measures of reform, and from that time the workers upon leather acted in perfect accord with the workers in cotton and wool. The ten-hour movement was much aided by the Bureau of Statistics of Labor, established in 1869. In consequence of the pressure which was then brought to bear upon Republicans and Democrats, the legislature of 1870 passed an act incorporating the Grand Lodge of the Knights of St. Crispin, and the legislature of 1874 passed the ten-hour law.

How great has been the change of public opinion in twenty-five years! Then few favored the incorporation of trades unions or the ten-hour law. Now the Pope, the Kaiser, the princes of the church, the princes of the world, all favor the right of association and the incorporation of associations of workmen, and the beneficent effects of the ten-hour law are conceded by all.

When the struggle began for a reduction of the hours constituting a day's work, men were required to toil not less than fourteen hours a day, and in some departments of labor sixteen hours. Indeed avarice was so abnormally developed, that physical endurance was the only limit recognized.

Our reading warrants the statement that as early as 1804, or eighty-nine years ago, the first concerted effort for the reduction of the hours of labor began, and was kept up for thirty-six years, when the United States Government conceded the 10 hour day to its employes, equal to 24 hours, or one entire day a week to the toilers. This reduction was brought about by continuous, unrelaxing agitation on the part of workmen—and that too, at a time when organization in any proper sense did not exist, such organization being spasmodic and therefore ephemeral.

It will be noticed that according to the date supplied by the *Economist*, that it was not until 1853, after 47 years of struggle, that an eleven hour day was secured for employes in certain industries, and not till 1874—seventy years after the fight for a ten hour day began was victory achieved, and this was accomplished by organized effort on the part of workmen.

The struggle for an *eight hour* day has been marked by similar antagonistic effort on the part of employers, and in this, as in the ten hour fight, the general Government was the first to make the concession for the benefit of workmen in its employ. In certain trades, victory has rewarded agitation and persistency, while in others, ten hours is still maintained, and how soon the eight hour day shall be established, depends upon the united efforts of organized labor.

As a general proposition, the rescuing of from four to six hours daily from toil, is one of the greatest reformations of modern times. It marks a stupendous revolution in thought, which, starting with workmen, has permeated a very large per cent. of the truly en-

lightened men of the country, because they see in the movement, the ultimate emancipation of labor from the thraldoms that have environed it during all the centuries, and in this enfranchisement of labor, the people see distinctly the conservation of all that is most desirable in our civilization—physical and mental development, independence and self-respect, fealty to order, a steady advance to higher social conditions and security for our free institutions. And the fact that certain employers of labor antagonize the movement to secure a less number of hours for a day's work, whatever may be their boast of intelligence, demonstrates their enmity towards the public weal.

If workmen would unify for an eight hour day, it would be secured within a year throughout the country and the triumph would stand among the most beneficent reforms that glorify our advancement as a nation.

---

## THE PULPIT AND SOCIALISM.

---

Rev. Myron W. Reed is a very distinguished clergyman of the Presbyterian persuasion. He is one of those divines who "finds tongues in trees, books in running brooks, sermons in stones."

And good in many things, the average theologian fails to discover.

One of the distinguishing characteristics of Mr. Reed's sermons is that he sees more in a text than the average orthodox preacher. In a recent sermon, he had for his text "And I Saw a New Heaven and a New Earth"—and proceeded to show that if socialists do not yet see what was unfolded to the enraptured vision of St. John, they are working industriously in that direction. Mr. Reed thinks there is even now a pressing necessity for a new heaven and a new earth in the United States. He says, "there ought to be a new earth, and what ought to be will be. No one will assert that this is the ideal social system—this one that we are living under. Isaiah would not be satisfied with it, nor Plato. We are not satisfied with it. It is a makeshift." Mr. Reed points out that in New York City, "more than 800,000 people exist on a square mile." Does Mr. Reed think that with a "new earth," people would be less gregarious and more disposed to scatter? if so, then there should be a new set of people to inhabit the new earth; otherwise, we should see a reproduction of great cities, tenement houses, squalor and degradation, such as the world now complains of, and which might be remedied in a year if people would go to the country, where there is only one to twenty persons to the square mile. Mr. Reed remarks that "prophets and poets," as did St. John, "have seen" this "new heaven and new earth," that "Plato looked away and saw Atlantis;" the same may

be said of Lord Bacon, he too saw Atlantis, the dream of the ancients and located it in the middle of the Atlantic ocean, and he refers to Sir Thomas More who, in his utopia, saw the new earth, an imaginary coast, or island, also in mid ocean, like Atlantis, where everything was very much like heaven, as fancy paints it.

Manifestly, things are not just right in this world, and in so far as the United States is concerned, the question arises, who's to blame? Mr. Reed points out that during one recent year, 23,000 evictions took place in the city of New York, and thousands of evictions take place in great cities every year, and yet the people continue to crowd to the great cities; they go from the country to the cities, they prefer the tenement houses with their filth and poisoned air to the delights of country life, and if we had a new earth, upon which the creator would build a four room cottage on every ten acres, the people, at least half of them, would go to the cities.

A New York paper, of recent date, names localities near New York where female help, as cooks, and for laundry work, housekeepers, etc., are in active demand, but cannot be obtained, because the girls want society, amusements, etc., and therefore remain where there are 800,000 people to the square mile and evictions mount up into the thousands annually.

Mr. Reed remarks: "What a summer we had. War up in Idaho and Wyoming and down in Tennessee, and at Buffalo and Homestead. These little wars cost millions. Nothing was settled by them. Lock-outs and strikes will continue. It is no wonder that we hear prophets and poets saying: 'I see a new heaven and a new earth.' They are very much needed." Why do such things occur in the United States? Ah, because the people who have the ballot permit them. Who is going to create the new earth? God? Is this one a failure? Every one says the earth as it is is "very beautiful," and God said, after He had completed it, that it was "good." The trouble has been with man. He is a failure—particularly in the United States of America—and yet, if we accept statistics, he has done fairly well. What is required to improve the condition of man in the United States of America? Here a man, if he is not a criminal nor insane, is a citizen—a sovereign citizen. He has the ballot—a wonderful weapon. He can make and unmake constitutions and laws. If there is anything wrong he can right it. If an officer is incapable, or a rascal, the ballot can turn him out. If the laws hedge up our present opportunities, the laws can be repealed. What more is wanted? Here we have *free* speech, *free* books and newspapers. For five cents a man can purchase a newspaper every day that will take all his leisure to read it through, and with free libraries he can become familiar with the mind treasures of the world. What more does a man want? The free school is here, multiplied thousands of them, which, like springs of pure water, are inviting all to drink, slake thirst for knowledge and go on their way rejoicing. What better earth does Mr. Reed or any other socialist want? What other "divinity" is demanded to "shape the ends" of the country, or of

the government, or of individuals? Before socialism in its present form was heard of, the United States struck all the fetters from mind and soul, and men stood redeemed and disenthralled, free, absolutely free to work out their own destiny upon what was a new earth, not the vagary of Plato or Sir Thomas More or any other dreamer.

Mr. Reed says, "poverty and ignorance get together and crime is born," but he does not say what the result is when wealth and education get together. He does not define the terms "poverty" and "ignorance." A man receiving \$1.00 a day is poor, compared with men whose incomes reach \$1,000 a day, or \$100 a day, or \$50, \$20 or \$10 a day. A man may be said to be ignorant who can simply read and write, compared with a graduate of Harvard or Yale, or Dr. Briggs' theological seminary. People representing that description of "poverty and ignorance" are to be found by the thousands in the United States—men who are poor and ignorant, as compared with rich and educated. This sort of "poverty and ignorance" get together. It is found in all the work shops in all the factories and mines in the land, but *crime is not therefore born*. From the days of Plato, St. John the divine, the prophets and the poets, crime was born when the rich and the educated got together, and what was true in the far away days, when this earth was new, has been true all along the centuries, and is true now. The poor and uneducated have been the toilers, the builders, have constituted the army of progress and are now the hope of the world. In the ranks of the rich and the educated are those who rob the poor, as did the Pharisees, who "devoured widows' houses." Christ gave them a "new heaven and a new earth," but not the kind they wanted. A few concluded to form a community and have all things in common. It was the socialistic idea, but they mistook the meaning of Christianity and exhibited profound ignorance of human nature. Ananias concluded to join the community, went in with a lie on his lips and was carried out dead. And his wife followed suit, and the first society was wrecked, and all subsequent schemes of the sort have proven failures.

We return to the proposition that in the United States of America we have the "new earth and the new heaven." Not the dream of Plato and Sir Thomas More, nor the thing which John saw while on the Isle of Patmos, but a country extending from ocean to ocean, a country of boundless resources, capable of supporting a thousand millions of people, and this country is the new earth and the new heaven of workingmen, if they can be made to understand the fact. They can improve and embellish it until all of its square miles shall resemble the poet's wildest fancies of fairy land. Already this is a government of the people, by the people and for the people. The workingmen are in the majority, and therefore this is their country and their government, their new earth and new heaven. They can have such constitutions and such laws as they desire, and such Presidents, congress, legislatures and officers as they wish. They can maintain their individuality, be free and independent, and have just

the kind of a new earth and a new heaven they may deem best for their happiness.

Mr. Reed in his sermon advocating socialism, says, "I am as ready to buy meat of the United States as to buy it of Mr. Armour." Evidently it is the socialistic idea to have the United States turn butcher and supply the people with meat, turn grocer and retail soap and soda, turn gardner and furnish vegetables, organize a dairy and peddle butter and milk, and so on to the end of the chapter, and this would be a realization of Plato's dream and the vision of St. John; Atlantis and Utopia, castles of moonshine which prophets and poets have built as their imaginations have dictated.

Workingmen are in the majority, and if they will unify upon common sense lines and use the ballot to enthrone justice, the new earth and the new heaven will come—and come to stay. Wages will be just—homes will be beautiful and vocal with songs of contentment. The Government will not reduce the man to a thing as in Sparta, under Lycurgus. Man will still be man, and not a part of the rolling stock of the Government. Courts will inspire confidence, and judges will not be clothed in robes smirched in the filth of apostacy. Already we are reaching out for the new earth and the new heaven—not an Atlantis nor a Utopia, a land of butterflies and buttercups, rainbows and moonshine, but a country in which fact supersedes fiction, and honest wages reasonable hours of work, just laws and high-minded judges hold sway.

## THE COST OF AN IDEA.

The New York *Sun* says "the war for the Union was fought for an idea, and the idea was worth all it cost. The idea was the Union—

The union of lakes, the union of lands,  
The union of States none can sever;  
The union of hearts, the union of hands,  
And the Flag of the Union Forever."

The *Sun's* estimate of cost relates entirely to the money cost, having no reference at all to the cost of human life. The sum total of the cost is given as \$8,425,185,017, and is itemized as follows:

Current war expenses . . . . .	\$3,144,975,087
Bounties other than Federal . . . . .	285,941,128
Estimated private contributions . . . . .	50,000,000
Loss of soldiers' productive labor . . . . .	1,017,241,200
War claims of various sorts . . . . .	140,000,000
Interest on war debt . . . . .	2,355,829,102
Pensions on account of civil war . . . . .	1,431,198,500
<b>Total . . . . .</b>	<b>\$8,425,185,017</b>

Of this enormous sum something like \$7,000,000,000 has been paid. How many millions will yet be required to pay pensions is past

finding out, but from first to last, all that has been paid, and all that remains to be paid, will be paid by labor, or it will never be paid. It does not matter about the methods resorted to by the government to raise revenues, nor under what name taxes are levied, all revenues, all taxes, all debts are paid by labor. If the armies of labor were to stand still, revenues would cease then and there; hence, in so far as money saved the Union, it was supplied by labor, and therefore labor saved the Union. There is in such conclusions nothing fanciful nor far fetched. The logic is based upon axiomatic facts, beyond controversy and absolutely impregnable.

In looking at the matter in the light presented, there are those, who, like the *Sun*, assert that the Union or the idea of the Union was worth all it cost. And we are told that the war which cost so much treasure emancipated seven millions of African slaves. True. We would not, if we could, either dwarf or obscure the sublime fact. But now labor inquires: What has the expenditure of so much money done for labor? It asks someone, anyone—statesman, statistician, economist, philanthropist, labor leader—indeed, it asks the nation of 65,000,000 souls to point out something that has inured to the advantage of labor.

Any dispassionate survey of the field of labor forces the conclusion that while labor pays more than eight billions of money to save the Union, all that labor has received in return is its share in the glory of the achievement. The "progress and poverty" of labor since the Union was saved are as conspicuous as the progress and wealth of syndicates, trusts, corporations, and monopolies generally. They have flourished. Laws have been enacted, state and national, for their benefit, and the courts have come to their assistance on nearly all occasions; and so potential have they become that the armies of the states, at the tap of the drum, shoulder loaded guns, ready at the word of command, to make workingmen as quiet as the Chinaman, who

"Fell down upon the floor,

And subsequent proceedings interested him no more."

It is possible that some benefit has accrued to the negro, but we are referring to the white men of the nation who work for a living. If the saving of the Union, after an expenditure of more than eight thousand millions of dollars has benefited them, there ought to be some data at hand to prove the declaration.

Thinking men are devoting some attention to such subjects, and the result is that workingmen are concluding if they are to advance it must be through organization, and that all toilers must band together to achieve victories, and that they must take a more active part in legislation and in the administration of affairs. There is an abundance of prosperity, there is grand advancement, there is fabulous wealth. The trouble is that while labor is ceaselessly contributing of its skill, its muscle, its life, it is not counted as a factor in the distribution. It pays the cost of everything, and is merely permitted to live. A great reform is demanded and must come.

# CONTRIBUTED.

---

## OUR INIQUITOUS SOCIAL CONDITIONS.

---

BY S. D. GUION.

---

Under present conditions, in order to obtain what seems to them the most desirable, the greatest benefit and the highest good to themselves, men will overthrow, trample on others and wrench from them all that is possible to be gotten. Indeed, such is the only means by which some can rise above others. Perhaps there are but few who would pursue such a course with malicious intent; they follow the usages of society, conform to the customs of the times, obey the laws, taking advantage of them to obtain their rights when deeming they have been wronged.

It is generally considered that wealth is the most desirable, the highest good. Wealth gives power, ease, luxury; these constitute the ideal, the acme of human happiness. The usages, customs and laws of the day are the outgrowth of the present pernicious social system; are noxious, must produce evil, must warp the minds and harden the hearts of men. Man is the creature of circumstances, of education, of environment. Men have met with opportunities which they have taken advantage of, hoping to better their condition, even though but temporarily, but which have in fact started them on a career to wealth and fame, though such instances are rare.

The more wealth and power men obtain, the greater is their greed, and the more eager are they in the pursuit thereof. Great corporations and combinations controlling millions of capital are ever devising new schemes to facilitate and enlarge the flow of wealth into their coffers; the only question with them is, how can we increase our profits? Being soulless, they do not stop to consider that the increase in profits, and enlarged flow of wealth into their coffers will surely bring a greater amount of poverty to thousands of the toiling poor, and perhaps starvation to many. The most notable case of recent years was the lockout at the Spring Valley coal mines. There has been no other so thoroughly ventilated, so minutely described. One cannot read the story—and the internal evidence proves it true—without being convinced that it was a deliberate scheme of the rich to rob the poor.

The Chicago & Northwestern Railroad Company learned that there was coal at Spring Valley, and took measures to ascertain the richness and extent of the deposit without exciting the suspicion of the inhabitants of that section of country. They bought 15,000 acres of field and forest, for which they paid the farmers, who were very

glad to sell, an average of about \$60 per acre. They then formed a coal company and a town site company, and laid out the town of Spring Valley. By means of flaming and seductive advertisements strewn throughout the country, and particularly in the coal mining districts, they attracted to their new town the best and most well to do element of the mining class. Those who had been saving and thus accumulated a few hundred dollars, saw, as they supposed a superior opportunity to better their condition. Captivated by the delusive advertisements of the company, many hastened to Spring Valley and bought themselves homes, a few paying the purchase price at once, others paying a part and giving a mortgage for the balance, payment of which was to be deducted from their wages; while many, having no money, bought homes and gave mortgages for the whole of the purchase price, payment to be deducted from their wages as in the other cases. The land which the company bought for \$60 per acre, was sold to these poor miners at the rate of thousands of dollars per acre. The company kept the country flooded with their advertisements, men kept coming seeking work; there was always a surplus of workmen at the mines, and every possible means was taken to keep the earnings of all down to that point which would just enable the men to live after paying the weekly installments on their mortgages. The company made sure that the men should have nothing to lay aside for emergencies, and kept them in debt at their store. By such means the company kept their employees in a constant state of dependence, and by a lockout at any time could deprive them of, not only their means of subsistence, but also of their homes, by rendering it impossible for them to meet the payments on their mortgages, which would give the company a pretext to foreclose, thus driving the men from their homes upon which had already been paid somewhere between 500 and 1,000 per cent. profit on the original cost to the company.

This the company did. The mines were closed, the men were locked out, and most of the people of Spring Valley were face to face with starvation. The majority of the miners left for other parts seeking work, and it was only through outside contributions of provisions, medicine and money that those who remained with their wives and children were kept from sickness, starvation and death.

These millionaire mine owners followed the usages and conformed to the customs of the times; they disobeyed no statute law, they did only what the law gave them the right and power to do; yet they committed a most heinous robbery. They lured these poor miners to Spring Valley by fraudulent promises, and inveigled them into buying their land. But before they could pay for the land they were locked out and thus deprived of the means to pay. The company kept the money already paid, foreclosed the mortgages and repossessed itself of the land together with the improvements, thus consummating one of the meanest robberies of the age.

The present baneful social system is responsible for all such robberies. Before the lockout the company had secured possession of

40,000 acres of land, all supposed to be coal bearing. Under the present system they could evict if they pleased, let those use it whom they willed, put it to any use or, if they chose, keep it out of use. All life comes from the land; just as people are restricted from the use of land does their power of maintaining life become lessened, and, in that degree, is it possible for the millionaire and monopolist to take advantage of the restricted ones, which they fail not to do. With the land in their possession—while private property in land is lawful—the millionaire and monopolist can dictate to the landless ones the terms on which they shall be permitted to maintain their lives, and in what manner they shall do so.

The Spring Valley Coal Company—which was the Chicago & Northwestern Railroad Company, but with different members for its officers—having succeeded in luring to the mines a surplus of labor, having received the greater part of their pay from those who had bought land, and, wishing to regain possession of the land, took advantage of the law which gives them the power to evict or dispossess for non-payment according to agreement. Believing that by reason of private property in land, those evicted could not maintain their lives without complying with such terms as they—the company—should be pleased to dictate, the mines were closed and the men locked out. This is but one particular illustration of the gigantic evils for which the present pernicious social system is responsible. There must be—in fact there is—a sure and certain remedy for all social and economic evils. It was the right to hold private property in land that gave the millionaires the power to accomplish their hellish scheme of villainy at Spring Valley. To make it impossible for such evils to occur, and such villainies to be enacted, the right to private ownership of land must be abolished, or, to state it exactly, the private ownership of the rent of land must be abrogated by taxing it into the public treasury. This would be right and just, because the community creates the rental value of land. Land itself can have only use value; it is the location or site to which the community gives rental value. The only right to land is the right to possess and use it; this is a natural right, a right to which everyone is born. Tax land values (we will still call it land values); take the whole rental value for public use—a tax on the rental value is practiced at present, though only a part is taken; if it is feasible to take a part, then surely it must be feasible to take the whole—and as it would restore to all their natural rights, make it possible for everyone to make a good living and enjoy the pleasures of life perfectly independent of others, it would undoubtedly be just. Tax the full rental value of land and there could be no more speculation in land; no one would have to give the earnings of a lifetime for the use of a piece of land on which to build a home, or from which to make a living. No one could pay the tax without using the land, and anyone could use and occupy idle land.

Had this system been in force, the Chicago & Northwestern Railroad Company could not have initiated and carried out its scheme

of robbery. At no time would their employes have been dependent on them, as when they went to Spring Valley there was plenty of idle land on which they could have built homes, and from which they could have made a living, and so have been perfectly independent. The company would have been compelled to pay good wages and treat their workmen in all respects with consideration and justice.

The present social system upholds and maintains private property in land, makes it possible for the few to rob the many, and breeds millionaires and monopolists. This robbery taints every class of society; some debauched with riches, some wallowing in poverty, and some ever hovering between the extremes, contaminated by the general vitiosity. The first, obtaining or adding to their riches by no labor of their own, but by schemes and devices which will not bear publicity unrebuked, taking advantage of the necessities of others, extorting the last cent, ever relentlessly exacting the pound of flesh, their minds become warped, their hearts indurated, and, when transacting business, unconscionable. The others are but the complement of the first; they must be because the first are.

There are millionaires and tramps, rich and poor, beggars and thieves, murderers and suicides, drunkards and harlots, poverty, misery and degradation the most heartrending, and this too where there is more than enough for all; where gold is hoarded by the millions; where the granaries are overflowing, and the warehouses bursting with goods. Private property in land is the cause of these evils; the single tax is the remedy.

---

## SINGLE TAX FALLACIES.

---

BY W. H. STUART.

No. 8.

In the June MAGAZINE I summed up the argument against the single tax as follows:

What is it that the single tax theory offers to those without capital, the class that compose 95 per cent. of our population and that produce *all* the wealth? Merely this; all that can be produced on land at the "margin of cultivation," *i. e.*, on land with no rental value, and with the poorest tools in use. The difference between what could be produced on land of no rental value, and on land of the highest value would be confiscated by the single tax. The difference between what could be produced by the poorest tools and that of the highest productive capacity would be confiscated in the shape of interest by the small class of non-producers, who by the possession of capital and machinery will be enabled, as now, to appropriate all over a bare living to the real producers. For any lowering of the cost of subsistence that might be effected by the decrease in the rent of land, any improvement in our fiscal policy, or by changes in our financial system; under the operation of the well

known "Iron law" of wages, remuneration for labor must continue to depreciate to the minimum amount for which the laborer will continue the production of wealth.

In other words, as the wage system would not be disturbed, the capitalist class, who control the modern machinery of production, would continue to purchase labor at the cost of its subsistence. Any advantage that would accrue to labor by the government confiscation of rent would be lost by the competition between laborers that would inevitably reduce wages to the point of bare subsistence.

This proposition may not be true, but it is plain and intelligible, and should be readily understood by any one of ordinary intelligence, and that possesses a rudimentary knowledge of economic conditions. I may be permitted to doubt, however, if my critic, the eminent professor of "disequilibriums" and statistics, has grasped the full strength of the claim. But in order that I may do him no injustice I will quote his own words:

One of those friends of ours expressed himself as follows in the June number: "What the single tax offers to 95 per cent. of the people, the wealth producers without capital, is only what they could get on land of no rental value and with the poorest tools in use; all the rest would be confiscated by the single tax, for the benefit of the 5 per cent. non-producers." Well, the average annual product of our family average group is called \$1,000, although really but \$900, because at least \$100 is used to make up for the wear and tear of our tools of production, including the keeping of our working animals, horses, &c. The average product per family group in the poorest land and with the poorest and is \$400 at the utmost. That is the approximate sum that our average farmer, in the wilderness, earns for the whole year, if as much as that. We have then a difference of \$500, which we should multiply by 12,000,000 working families. That will give us \$6,000,000,000 to be confiscated by that dreadful single tax, the scarecrow of our wise and timid socialistic friends, all according to the statement we have quoted from the June number. About twenty-five lines below, in the same article, we find another statement as follows: "The single tax, by destroying monopoly rent, would bring economic rent down to  $\frac{1}{10}$  of the former." That would be say, \$150,000,000, since monopoly rent could hardly be over \$1,500,000,000.

Did you ever see a more funny logic in your born days? The single tax is made to go up to \$6,000,000,000 and down to \$150,000,000 per annum, from \$90 per capita of population down to a little over \$2 per capita. And that absurdity is not big enough for our friends, according to the article in question, because, while the lower sum is supposed to be the one that alone could be collected by the nation as total public revenue for all public needs, the larger sum, the \$6,000,000,000, the \$90 per capita of population, that would be confiscated from the workers and go into the coffers of the monopolists, the 5 per cent of the nation. And the latter are such a pack of idiots that they have not yet become single taxers! No explanation is given of how the two processes could be the result of the same reform, or should be expected to coincide if the reform took place.

I have stated more than once that the average single taxer is unable to understand the arguments of his opponent. Whether this singular fact is caused by the mental exaltation produced by an attack of single tax mania, causing the victim to believe that no prophet shall arise in Israel after George, or to the perversity due to diseased conditions, I know not; but the above is a striking verification of the claim. In the first place the quotation given in the first

paragraph—within quotation marks—as my exact words, is a fabrication pure and simple. I will charitably suppose, however, that he thought he was giving my statement of the matter, but it was a slovenly and careless action. It neither copied my words, or expressed my belief. But let it pass. What I desire to call attention to especially, is the astonishing results that are made to follow as logical deductions from my arguments. As a statistician the professor has passed the stage of glory and almost reaches the divine heights of sublimity. Note the statement, "That will give us sixty billions to be confiscated by that dreadful 'single tax.'" Which sum it appears is to "go into the coffers of the monopolists, the five per cent. of the nation." This amount, by the way, is the total estimated amount of the wealth of the country, and about four times our annual product. But if the facts do not agree with the statistics of the professor, so much the worse for the facts. Trivial things like facts must not be allowed to interfere with the calculations of one who deals in the grander problems of "international disequilibriums." But this is not all, if I understand him correctly, there is a further trifle of 150 millions that "could be collected by the nation, as total public revenues for all public needs." This is 6,150 millions of revenue annually collected over and above the cost of subsistence. (?)

All this the result of my unfortunate statement that present economic conditions would continue under a single tax régime. Is it any wonder that the professor asks in language almost as correct as his statistics, "Did you ever see a more funny logic in your born days?" Never, professor, never. I doubt if it was heard in prenatal times either. We give it up; and are hoist with our own petard, as it were. As you justly observe, "the above is incomprehensible;" and we appreciate your kindness in adding, "if we have misunderstood you, let us hear about it."

As our critic says: "We desire to carry on this discussion without any spirit of personality, simply as a noble struggle to master all the fundamental truths in the realms of economics;" and in this search we only ask permission to pay some little attention to established facts that your statistics entirely overlook.

My statement that, "even with the single tax in force, the possession of capital and machinery would enable the non-producer to appropriate all over a bare living to the producer, on account of the 'iron law of wages,'" is really too ridiculous for the professor to waste time and argument upon. Any school boy knows that the single tax and the aforesaid law could not exist together. Everybody knows that the "'iron law of wages' and all the other atrocities of that dismal science, the old political economy, were annihilated by Progress and Poverty in 1879."

That immortal book, the professor assures us, "appeals to the humble student, but finds no response in the proud, infatuated with his ignorance." This is a beautiful sentence, but if the professor would kindly allow me to add the words "and ignorant" after the word "humble," it would not destroy its beauty, and would give it additional force and truth.

"As for capital controlling labor without controlling land, that is the most fantastic superstition that ever took hold of the human mind."

The professor makes very short work of this claim by an illustration: "Take a plow worth \$10. There you have a \$10 capital; and such capital is a complete negation until a man uses it on a patch of ground."

Therefore, the professor assumes the landlord controls all capital. Well, let us put the statement in a little different form. You know the only proof in an example in mathematics is to work it out in at least two ways. For instance, "take a five million iron and steel plant at Homestead; there you have a five million capital, and such capital is a complete negation until labor uses it to manufacture iron and steel." Now, see the beauty of the single tax; had the land not been monopolized, the strikers could have started another factory and run Carnegie out of business. Wonderful! Just think of it! If Carnegie had had to pay the single tax instead of owning the land, how long could he have held out? Even hot water and electric wires could not have saved him. Or, if the "idiots," as the professor calls the people around Homestead, didn't care about starting opposition works, they could have taken up land in the vicinity and gone to farming. And then, under the single tax, the abandoned farms in New England could not be monopolized by greedy landlords and held out of use as they are now.

No, somehow the example of the ten dollar capital in the plow will not work out with the five million capital in the iron and steel plant, or in pipe lines, or manufactures of any kind. We are willing to confess that if capital would confine itself to plows, scythes, hand reapers and flails, many of the examples given by single taxers could be worked out very nicely.

In conclusion, the professor is very severe on the socialists. He says: "And, remember, we don't want economic rent determined by any set of government officials." (By the way, this is the very thing the author of that "immortal book" insists must and will be done.) "We don't want plutocracy in any form, not even one composed of socialistic saints."

This is rather hard on socialism, for if there is one thing the socialist is fond of, it is a sleek, healthy, well-fed plutocracy. "Nor do we, the people," continues the professor, "want wages determined by government officials." This is the unkindest cut of all, for above all things your socialist is a stickler for the "wage system." He may smile at attacks on capitalists, may keep his temper when you slander plutocracy; but, deride the wage system, and you arouse his honest indignation.

So much for a specimen of single tax "statistics" and criticisms.

I am aware that many may urge the unfairness of treating seriously the "statistics" and *sich* of this unfortunate gentleman, who is evidently in the last stages of *dementia singletaxiosis*, but to this charge I can answer that he is considered by others in the earlier stages of

the same mental disease, as an authority on single tax economics. His "statistics" are quoted favorably by Mr. Middleton and other writers for this MAGAZINE, and I am not at all sure but that his wonderful statistics and peculiar estimates may not become a distinct and powerful addition to single tax polemics.

We remember that just as an honorable member of parliament had concluded reading his statistics and figures to prove to the assembled house that it was impossible for any steam vessel to carry sufficient fuel to cross the Atlantic, the news came that the plaguey ship had got across.

History is silent as to whether the gentleman denied the fact, or admitted a fallacy in his statistics, but had he been a sufferer from *dementia singletaxiosa*, we have no doubt he would have made the denial rather than the admission, as one of the symptoms of that disease consists in denying facts that oppose any of their peculiar theories.

It never surprises us to hear that anyone *has* been a single taxer, but it is always a source of surprise and regret that he *is* one.

In the August MAGAZINE Mr. Middleton complains of the difficulty of understanding my terminology. The distinction between loan, or contract interest, and natural interest, is to him particularly confusing. He appears to think it was loan interest "about which George and pseudo economists like Adam Smith, Ricardo, and Mill spent so much time". If he will make himself a little more familiar with those writers, including George, he may understand it was natural, not contract interest, "about which they spent so much time."

It may also be a relief for him to discover that I did not invent the terminology; neither was it invented by Karl Marx, whose lofty contempt for other economists he so greatly deprecates. He will find the subject ably discussed by Dr. Böhm-Bawerk, in his scholarly work, "Capital and Interest." Prof. Smart, in his introduction and analysis of that work, says, "Now, it is interest proper, obtainable by the owner of capital without risk and without personal effort that is the object of our problem." He rejects loan interest, because in speaking of national debts he says, "The nation as a whole can not pay interest on its debts, unless the nation as individuals produce the wealth wherewith the interest is paid; otherwise the nation will be paying away its capital." And again, "The surplus that we call interest appears primarily in the price of products—that is to say, interest is in the first instance paid by the consumer of goods in the price of the product he buys. \* \* \* Loan or contract interest is secondary or derivative." Böhm-Bawerk points out that the ancient prohibition of interest from the time of Aristotle to the sixteenth century, did not apply to profit made by personal employment of capital. The cause that brought about the abandonment of the laws against interest, came as a result of the rise of the capitalist system of production, and the growing conception of the fact that loan interest rested upon the same ethical basis as natural interest,

or profits of industry. The clergy were soon converted over to the side of the exploiters, whom they defended with the same enthusiasm that they later displayed for the beneficiaries of African slavery.

Then again, my statement that the old economists defined capital as "that part of wealth used for the production of an income without personal exertion," Mr. Middleton finds perplexing. He says: "I was astonished when I read this, and tried to think what economists he referred to. I thought perhaps my memory was at fault, but upon investigation have been forced to the conclusion that it was not the fault of my memory, but my lack of knowledge of the 'old economists.'"

I assure Mr. Middleton that I fully agree with his conclusion, and I fear upon continued investigation he would be compelled to include the modern economists. He will be surprised to discover that my definition of capital is practically the universally accepted one from Aristotle down, and even includes Henry George. There is perhaps no economical term upon which there is such practical unanimity. I have already quoted Prof. Smart regarding interest, "obtainable by the owner of capital without risk or personal effort." Dr. Böhm-Bawerk, in the introduction to his work, "Capital and Interest," posits the problem as, "The phenomenon of an income flowing constantly from all kinds of capital without personal exertion of the owner."

Mr. Middleton says Adam Smith defines capital as "that part of a man's stock from which he expects to derive an income." Add, without personal effort—which Adam Smith assumed—and you have the same definition. Mr. Middleton says: "Certainly a large body of producers and dealers, usually called capitalists, work for what they get." Usually they scheme and gamble for it. But admitting they do, every capitalist will make a sharp distinction between what he derives from the mere use of his capital, and what he considers the reward for his work, his wages of superintendence, or "rent of ability." He can receive a certain return for the use of his capital without any personal exertion. If he uses his capital himself in production, he will expect to receive the same return, and in addition, his profit as an undertaker.

There is nothing incompatible in my definition with that quoted from the philological dictionary named by Mr. Middleton, viz.: "Wealth in any form used in producing more wealth." Add, "for the benefit of the owner of the wealth so used," and we reach the same definition. For it will be admitted—except in rare cases for charitable purposes—capitalists never use wealth for the mere indefinite purpose of producing more wealth.

I hope I have now removed some of the perplexities that so strangely embarrassed Mr. Middleton in regard to the various kinds of interest, and also cleared away the mist that enveloped the "old economists." I quoted the "old economists," not because there was any practical difference in definitions, but because they were more

frank, and did not attempt to disguise the real object of capital under an euphemism, like George and other "pseudo economists."

I shall now discuss the reply that Mr. Middleton makes to the concrete illustration of the capitalist system of production, as exemplified at the Chino Sugar Factory, that I offered in the July MAGAZINE.

Before doing so, I desire to say a few words on the "iron law of wages," first enunciated by Ricardo. The law is expressed by the formula, "that under free competition, wages will continually tend to the minimum upon which the laborer will consent to reproduce." This law is an evident corollary of his theory of rent, and under primitive conditions, monopoly of land would be a sufficient cause. Under conditions of scarcity of land rent would certainly absorb all surplus wealth over a bare subsistence to the laborer.

George's theory is, therefore, that if we abolish private absorption of rent, and confiscate it to public use, all would have equal opportunities for the production of wealth, and involuntary poverty would be abolished. Under conditions that existed in England during Ricardo's time, the claim of George would have some truth. The *impôt unique* advocated by Turgot, Quesney, and others of the physiocrats, would have reached probably 95 per cent. of all the wealth of that time. But the advent of modern machinery and new industrial conditions have completely revolutionized economics, agriculture is no longer the principal industry. Manufacturing nations like England, could practically abandon agriculture and give employment to its population in manufacture, which could be exchanged for the products of agricultural nations. Therefore, millions are depending for a living on capitalist employers in manufacturing industries. Improved methods in agriculture, the employment of expensive labor saving machinery, made small farming unprofitable, even in this country of vast agricultural areas the small farmer is being eliminated, and the man without capital is becoming more and more the slave of the large employer. Under such conditions "access to natural opportunities" becomes a mockery, and competition for work keeps wages down to the point of subsistence.

We have in this country, like all others, a certain standard of living, which varies according to the class of workers. Any wages that will purchase subsistence according to the standard, will set labor to work. Nothing above the wages necessary to sustain this standard need be paid by the employer. Any cause that would increase the demand for labor would of course tend to increase wages temporarily, but the constant displacement of labor by new machinery, and immigration, soon reduces wages to the old standard.

If we bear these facts in mind we may be better able to judge of the strength and force of Mr. Middleton's arguments.

Let us now return to the factory. It will be remembered that beets under private ownership of land brought \$4.00 per ton. Fifty cents per ton was the cost of the rent of the land. We introduced the single tax; eliminated the landlord and landlord; assumed for

the purpose of illustration that land could be obtained free, and presto! beets fell to \$3.50 per ton. Why? Because the standard of living could be maintained as well on \$3.50 per ton as it could formerly on \$4.00. Why need the owners of the factory pay more? The problem I proposed was: "Given the tools and instruments of production in the hands of a small class—and under private ownership they must belong to a small minority—*why should wages, any more than now, exceed a bare subsistence?*"

Mr. Middleton replies: Under the conditions given, the laborer gets the use of the land for a small annual tax in lieu of all other taxes; that he cannot be deprived of his land only on failure to pay his tax, and then he must be compensated for his improvements; that loan interest being abolished, he is also free from that expense. On the other hand, the capitalist has invested his capital in machinery and buildings, which he quotes Karl Marx to show must be used in order to become productive, and in addition falls a prey to the destructive influences of natural forces. All of which is true. Under these conditions Mr. Middleton asks: "Is not the capitalist absolutely dependent upon the beet grower for his beets, and upon his workmen in the factory for their manufacture into sugar? Again, is he not absolutely dependent upon the sugar for his bounty? Before he can get returns he must sell the sugar. Mr. Stuart must suppose the beet growers and laborers in the factory are imbeciles if under such conditions they cannot command their just proportions, both of the bounty and the market price of sugar."

Mr. Middleton further says that if the price of beets was lowered to \$3.50, the producer could drive back to his farm and feed his beets to his stock. This assumes that the laborer has sufficient capital to keep on hand cattle to feed their beets to in case the price at the factory is lowered. But they don't do that now. Why should they do it under a single tax régime?

Mr. Middleton feels confident the loss the capitalist would suffer through the deterioration of machinery and buildings would soon bring him to terms. Indeed! Why don't it now? Did Frick or the strikers at Homestead finally give in? Mr. Middleton says also that the laborers could co-operate, start factories and produce their own sugar. Well, why don't they do it now? The high price of land does not prevent them at this time. Why don't the laborers strike for \$4.50 or \$5.00 per ton? Wouldn't the machinery rust in the buildings and rot as quick as under a single tax régime? As a matter of fact, at other factories in the northern part of the state, \$5.00 per ton is now paid, and they formerly paid \$6.00 per ton, and the factories made money at that price. Why don't they insist on the same price at Chino? The reason is that labor is more plentiful here on account of a larger city to draw from, and the laborers can easily return after the crop is sold at Chino. All this inures to the benefit of the capitalist. Anything that will reduce the cost of subsistence of the laborer will simply add to the amount of "surplus value" that the capitalist can appropriate. It is probable that the

owners of the factory at Chino could pay \$8.00 per ton and make money, but they need not pay more than \$4.00. If the producers should introduce a new variety of beets containing twice the saccharine matter as those now produced, the advantage would not inure to the producers, either under present conditions or under conditions where the land was absolutely free. Capital would still continue to absorb all wealth over a living to the laborer.

In a country where land was scarce and all of it needed for the support of the population, the landlord could absorb the principal part of all surplus value in the shape of rent. But under conditions that obtain with us, the ownership of the machinery of production is the principal means by which surplus value is extracted from labor.

I shall reserve further considerations of Mr. Middleton's reply for a future article, as this one has already grown beyond proper dimensions.

---

## KISS ME, DARLING.

BY FRANK A. MYERS.

No. 3.

[Concluded.]

And he found a good position in the west.

It was not long, however, till he was again dismissed from duty, and for a time he knew not why. A friend at Curtis wrote him the first stunning intimation as to the cause of his discharge. The anger-provoking information was that Mrs. Redfern had heard of his employment in the west and had pursued him with malice prepense and by unfair representations had effected his discharge.

"That woman had a pretty face but an ugly heart. She is a she-hempbrake, a regular singe-cat, and I'll bet a pewter button." Tol was not placing any check on his tongue or feelings. "Whew! what a venom in her little, unforgiving soul. She is a human viper—that crawls pretty low. The goodness in her nature would not leaven a lump of meanness. But such is life—in large cities, as some 'poet' has said. If her gall follows me here, I'll go farther west."

After three months' service at Ogden he was again dismissed from further service in the company's behalf. He suspected the author of his trouble this time. But he bravely bore up under the difficulty, and pushed on to the Golden Gate. He had hoped he might yet escape this mad, avenging nemesis, get far enough away from her, where her unreasonable, vicious, unfeminine hatred could not reach him, but he reckoned without his host. He had yet to learn the fury of a woman defied, the hate of a woman abused.

Again her vengeance overtook him, and again she triumphed in his overthrow. It was dawning on him by slow degrees that Mrs. Redfern meant to hound him to death, to bring about his complete downfall, to utterly ruin him. With this new understanding of his real condition in life; with this appalling comprehension of the obstacle that lay in his way up the rugged incline of enlarging manhood; with a glimmer of the possible defeats and sorrows for him in the promising future, he set to work to defeat the machinations of a designing woman that could touch him and cause him to fall at a distance more than half across the continent away. To do this he changed his name, and thus concealing his identity he retraced his steps to Denver, where he secured a very pleasant and lucrative position as day operator.

There he formed new associates, and the world was going very well with him. Life again, at his all-bounding age, promised everything, with no possibility of defeat. His friends—o, well, if they did not know where he was. He was living a romantic sort of existence; a new "point," with a singular zest, had been added to it by the adoption of a new name and the birth of the resolve to defeat the vengeance of a beautiful human tigress; and his friends at Curtis would not grieve much over the supposed death of Tol Vernon. Yes, there was no Tol Vernon now. This was Mr. Rube Ruston, so his new-formed associates at Denver called him.

"I'd like to see Mrs. Geddis T. Redfern find Tol Vernon now," he mused one morning, about a year after he had "struck" Denver, as he walked to the depot telegraph office, where he was employed throughout the day. "I think the burial of Tol and the resurrection of Rube has been a successful ruse, and since she has no spite at Rube she will never think, of course, of looking for him. I'm Rube Ruston, if you please, and not Tol Vernon—don't you see? Tol's identity is gone, and there is no such fellow. But Rube, nevertheless, knows Mrs. Redfern, and he knows no good of her, he is sorry to say. I don't believe Rube would say to her in the early morning in a car window, 'kiss me, darling!' Rube knows better. O, law sakes alive, as the old maids say, this is a queer world!"

About a minute after he stepped into the office the instrument called him. The news was appalling. Passenger train No. 5 wrecked one mile below town, and a fearful slaughter of the people. Get out train, help and doctors. This dispatch was from the telegraph office in the vicinity of the railroad shops, near where the wreck occurred, and it put a new nerve and resolution and impulse into Tol, as we shall continue to call him, for reasons that are obvious to the careful reader. He threw himself into the chair and made further inquiries about the awful casualty, and then told those about him what to do—giving orders right and left. Soon a multitude of people started for the scene of the fearful calamity, but Tol sat at his post at the desk, "pounding brass" all day, like one rooted to the spot. Far and near he sent the news to the friends of the dead and injured. It was a fearful time, most exhausting work, and an ordeal never to be forgotten by

those who were in it as Tol was. He could not leave his seat all the day long, even for a minute, and nothing to eat and only one glass of water, so busy was he telling the awful news to the outside world and answering inquiring people, anxious about their traveling but wrecked friends. He stuck to his post like the true hero that he was, and never for a moment thought of giving it up to rest his overstrained nerves and over-taxed endurance. The day waned and the night came, and the excited people talked and moved here and there in confusion, but Tol stuck to his post of duty. There was no relief for him, and he did not ask any. It was enough for him to know that he could do something to quiet the feelings of the anxious ones far away, if he could not directly assist in relieving the pain of the injured and dying. Indeed, Tol was a real hero, a man of grand humanity and one worthy of the highest encomium.

It is not the purpose here to carry you, dear reader, through the harrowing scenes, the distressful sounds, the shocking wails, the terrifying confusion, the frightful row of dead, and amid the awfully mangled and bleeding and distorted human shapes here and there. Fragments of cars everywhere, engine broken out of all shape, track and ties torn up, the very earth plowed around, everything mere splinters of what they once were, and piled up in startling and confused manner, nothing resembling the once proud train. People pulled and pried pieces of broken timbers off of the dead, pinned to the earth; others tenderly helped the imploring wounded to more comfortable positions; and still others dug among the ruins to find those who might be buried out of sight. Men shouted to others to do this and to do that, the sound of the hammer and the saw was heard, the cries of the injured and the hiss of the wrecking engine shocked the air and made a never-to-be-forgotten discord. O, God, the shrieks of the wounded, and the pitiable moans of the fatally hurt! And then to add to the ghastly and frightful scene, and as if to intensify the horrible affair, the rain began to fall soon after the accident and made the situation of the wounded more wretched still, and the timbers so slick that men could scarcely pull them around, and the earth a miserable mud-puddle. Crowds of people came and looked on, hushed and awe-struck and shocked. Doctors tendered their services and did all they could to relieve the injured. The railroad company supplied vehicles to convey them to the city to comfortable quarters and saw the unclaimed dead neatly disposed in the morgue. It was an awful affair, and the complete history of it will never be written.

It happened this way: A long freight train failed to get more than half its length into the side track before the arrival of this swift flying passenger train, bearing its burden of precious freight in the opposite direction, and as a result the passenger train glided along the side of the freight train until it was crushed and pushed off the track and into the ditch. The coaches all piled upon one another and caused a fearful, shocking, horrible affair!

About ten o'clock that night, amid the cold, dripping, soaking

rain, a woman was gently borne from a car in which she had been brought from the scene of the wreck into the light of the ladies' waiting room at the depot by strong but gentle men. She had lain buried beneath the timbers all day, and was almost abandoned to her fate, when by a lucky accident she was discovered by a tireless laborer. At once they set to work and rescued her. She was a pitiable sight, wet, feeble, pale, haggard, and nerve-shocked. While no bones were broken, internal injury was feared, and not without good grounds. As they bore her into the depot she gave forth several gasping sounds.

The muffled voices and shuffling feet attracted Tol's attention, and he arose from his chair, where he had been practically glued all day and up to this hour of the night, and gazing through the ticket window saw the pale, wet form of a helpless female. He knew the poor thing had just been brought in from the scene of the wreck, and her distressful appearance shocked him. His first impression was, as he gazed at her under the yellow gas light, and saw her agonizing face, that she was dying or would soon die. A great wave of pity rolled over his heart, and he wondered who she was. Somebody, he felt sure, would grieve for a dead one, would know sorrow in their home, would perhaps refuse to be comforted because she was not. She was a beautiful woman, and even in her dying anguish, as he supposed, she sustained the beauty of which he had no doubt she had been quite vain enough. In her facial ensemble there was a rather haughty expression, he conceived, and when she opened her eyes in pain a moment, he was sure of it. She was dressed in fashionable clothing, and wore jewelry of no mean value. It was plain she was a lady of birth and social distinction.

It took but a moment to observe all these things, and very much more that need not be catalogued here, in this poor unfortunate creature, and while she was a total stranger to him, he some way felt an undefinable and aroused interest in her. He made no attempt to reason why. That he had a strong desire to help her, was entirely sufficient to him. He paused an instant longer in the quivering gas light to see her comfortably placed on a cot, while the men rested and discussed among themselves where they should take the poor woman—to the hospital or to a hotel. They had no doubt she had plenty of money and could pay liberally for all care and attention given her, and felt reasonably sure her friends would be better pleased to have her in a hotel than anywhere else.

"Take her to the hotel," broke in Tol, who overheard their remarks.

"Indade, an' we will, sir," said one of the men, who was an "employe upon public works," as they said in those days.

Just then Tol imagined he discovered a familiar expression in her eyebrows and nose, and then he felt sure he had seen that classic face somewhere before this. Perhaps it was in Ogden, or maybe in San Francisco, or probably on some railroad train or in some crowded thoroughfare—he knew not. He scanned the face closely as the men took up again their precious burden and started for the hotel Tol had designated. No, he could not place her.

They took this strange, fair lady, now perhaps in the throes of death, to this hostelry, and left her in the care of the proprietor, who was told that Rube Ruston, the much-trusted operator, would call to see the lady, if she were alive, on the morrow.

She had been unconscious ever since her rescue—a condition she was in when found, and no papers of any kind had been found upon her person by which she might be known. The poor, dying woman was an enigma—a mystery—a stranger in a strange land.

At ten o'clock next day Tol was ushered into the room of the injured lady, and he was agreeably surprised to see her sitting in a large, comfortable arm chair, her worn head lying back, and a physician near by. As he entered, their eyes met. He knew her. There was no mistaking the face. But she did not know him. His mustache was a perfect disguise, even if age and experience had had no hand in tempering the boy into a sober, useful man.

"Doctor, see that her every want is supplied," said Tol, very decisively. The order was one of those impulsive inspirations that a man cannot account for.

She turned her head feebly to see the one who was so interested in her in that strange place as to give such a clear-cut, deeply-concerned behest. No, she did not know him. His was a strange face. It could not be that she had ever seen him before. It was very evident he was a handsome, gallant-looking young man. But why he should be interested enough in her as to leave such an order she could not divine. And, moreover, she was too enfeebled and confused as yet to give any consideration to the problem. Evidently he was an unknown benefactor, and for the present he apparently designed to keep his identity concealed from her.

Her injuries were merely, and greatly to her joy, bruises upon the surface of the body. A savage blow upon the head had rendered her unconscious, but her skull had not been fractured, and after a week she was ready to proceed upon her journey home.

Before she left she sent for Tol to call on her at her room at the hotel, for reasons, as she expressed it in her note, he might easily surmise. She said also in the note that she could not go away without thanking him by word of mouth for the many deeds of disinterested kindness he had shown her, an entire stranger to him, and for his genuine goodness of heart.

As he entered the room, he beheld a woman, dressed in splendid apparel and attended by a maid. A chair was pointed to him, and he sat in it.

"I am told," she began, "your name is Mr. Rube Ruston, and that you are the day operator here."

"Yes, mam; I have been here about a year. This is not my native town." Tol peered stolidly into her cloudless black eyes.

"I am going on home on the next train."

"I'm—well, I trust you will have a pleasant journey, and that no more wrecks will overtake you." He had almost said he was sorry to see her go away. That would have been a slip, indeed.

"I don't know you, but I'm inclined to think you know me?"

"Yes, I know you."

"I accuse my poor memory for being so impolitely at fault—but where have I ever met you before?" Her black eyes seemed to search the very secret niches of his heart, and he almost felt she saw clear through him. But he was not sure that he had anything to conceal from her, and still he was not exactly disposed to answer her plainly—for reasons good and sufficient, as they seemed to him. He glanced out the window upon the pulsating street.

"They call me here Rube Ruston," he answered evasively. He said this in such a way as to leave the impression on her mind that this was not his true name. She thought: No—yes.

"Well, Mr. Ruston, I want to say that my poor stammering tongue cannot express to you the gratitude I feel for the interest you took in me and the help you have rendered me."

"Indeed, I felt under no obligations to help or aid you, but I did it because you were here, wounded, alone and friendless, and I felt interested in you from past acquaintance."

"During my nervous shock you cannot conceive what a comfort your kindness and friendship has been to me. Accept my most sacred thanks."

"I am abundantly glad and paid to know that you appreciate my little acts, scarcely worthy of notice."

"If I can be of any help to you in the future, I shall only be too glad of the opportunity, and I beg that you will not hesitate to give me the opportunity to help you."

"Many thanks. Can I be of any further service to you? Are all your needs for traveling supplied?"

"Yes—thanks. But let me see? Did you say Ruston was not your real name?"

"No, mam; I did not."

"What did you say then?"

"What makes you think I would deny my real name? Have I acted as a criminal to you?"

"By no manner of means—exactly the opposite—a genuine gentleman."

"I have always—save in one thoughtless instance—tried to be the gentleman my ideal has always held up to me."

"It is—it is—it is—no other than Tol Vernon, whom I have persecuted with a bitter vengeance. I know you now. You have abundantly redeemed yourself. God bless you! Forgive me. I did you a great wrong. Glad to know you better. What a grand nature, when you had it in your power to be revenged on me and would not. I humbly beseech you, dear sir, to forgive and forget. I had my husband whip you at Curtis, and send you away in disgrace. I was bitter toward you for your foolish words to me that morning at the car window. I shall never forget them. But I have been meanly vindictive. I shall make amends. Forgive me!"

Tears fell from her eyes. And her earnest, aroused manner brought a silent tear into the corner of Tol's eyes. She was as magnanimous as he was.

"I bore much, but it is all wiped out now."

"I lost you when you changed your name. I am glad I did. How cruelly mean I was to a good young man."

"You flatter."

"No, I am deadly in earnest. I shall see that my husband makes amends for the vicious past."

"I am already well repaid in all your good wishes for my happiness."

"A woman may amend her opinion, though few seldom do, and rectify the past. I shall never forget your disinterested goodness to me, your hateful enemy. And you, what is much more, was not going to make yourself known to me. That is a nobleness seen in very few in this cruel, cold, selfish, bloodless world."

"Did you call me here, Mrs. Redfern, to flatter me? If you did, you wrong me. But I forgot—you did not know me." Tol could not understand his own mixed feelings.

"I cannot blame you for suspecting evil of me. But I never was more in earnest in my life. Mr. Vernon, I hope you will do me the credit to believe this much, at any rate. I see the past and you in a new and singular light, and henceforth my friendship shall follow you as silently and effectively as my hatred hitherto pursued you."

"Indeed, when I recall all the circumstances I cannot doubt you, and besides your manner declares your sincerity, and I beg you will blow away to the idle winds the doubt I uttered a moment ago."

"Let's drop doubts and consider all things settled and understood. I had been west on a pleasure trip and was on my way home, when this fortuitous event threw us together in a most agreeable way. I do not regret it by any manner of means; on the contrary I am most thankfully glad."

"Of course I wish you well. I always hoped some day I might be able to wipe out the blot my ungallant, foolish, insulting words that morning you well remember made upon your pure mind. And after long years of waiting and suffering the opportunity came at last."

"I wish you well."

"Good by."

They shook hands and parted in person forever, but not in friendship rare and magnanimous.

Mrs. Geddis T. Redfern arrived safe at home.

In a short time Tol received a gold medal from the railroad company, for valiant service on the occasion of the awful passenger wreck, and in that beautiful recognition of his faithfulness he thought he recognized the hand of his new noble friend. It was not long till Tol was advanced in his line of duties, and in that he was sure his benefactress had an instigating hand.

Promotion after promotion followed, until to-day he is one of the prominent officials of a fine western railway, and we may say rolls in the lap of splendor and luxury. It is all due to his foolish words, properly amended afterward—"Kiss me, darling."

## THE CONCENTRATION OF WEALTH.

BY GEORGE C. WARD.

No. 4.

[Concluded.]

In the beginning of this series of articles I asserted that the net "residual increment," or increase in national wealth for the year 1890, was about \$2,300,000,000. I then endeavored, in the three articles preceding this one, to demonstrate that the interest charge for 1890, upon the various forms of interest bearing indebtedness, aggregated \$1,260,000,000, and that the net profits, above fair wages, absorbed by the various business interests of the nation, including railroads, aggregated the sum of \$385,000,000. Making a gross aggregate of \$1,645,000,000, of which sum I assumed that \$850,000,000 was so invested as to form a portion of those items, the sum of which is denominated the "net increase in national wealth." I then deducted, as the amount which statistics showed was retained by the workers, the sum of \$80,000,000, which left a residue to be accounted for, of \$1,370,000,000. I then deducted for the annual increase in the value of bare lands, \$700,000,000, apportioned as follows:

Lands embraced in farms . . . . .	\$125,000,000
Lands in cities and towns . . . . .	440,000,000
Unoccupied farm and timber lands . . . . .	40,000,000
Mines, petroleum and coal lands . . . . .	95,000,000

It is, perhaps, both proper and necessary that I should give the process of calculation by which these figures were arrived at:

The assessed valuation of the wealth of the United States for the year 1880, was, in round numbers, sixteen billions of dollars, which, at a 40 per cent. basis, showed the actual value to have been, in round numbers, forty billions of dollars. The assessed valuation in 1890 was, in round numbers, twenty-four billions of dollars, and, upon the same basis, the actual value about sixty billions of dollars. The amount given as actual value in 1880, included \$10,197,096,000, the value of farm lands and improvements, which value, following closely the single tax theory, I divided or apportioned as follows: Bare land, \$5,300,000,000; improvements, \$4,897,096,000. Farms increased in acreage about 30 per cent., and in value only about 20 per cent., and \$125,000,000 is, in round numbers, as nearly as I can approximate the tenth year's increase of a twenty per cent. gross increase in ten years upon \$5,300,000,000.

In 1880 the capitalization of the railroads (stocks and bonds) amounted to the sum of \$5,239,500,000, in round numbers, and, in 1890, this had increased to \$9,746,000,000, in round numbers, showing an increase of a fraction more than 86 per cent., against an average increase for all property of 50 per cent. So I deduct from twenty billions the sum of \$7,337,500,000 for the increase in railroad capitalization and farm values; while from forty billions I deduct the sum

of \$15,436,090,000, as the value of railroads and farms in 1880. This leaves me the sum of \$24,565,910,000 as the value of all other property in 1880, and the sum of \$12,662,500,000, as the net increase in such value for the decade. This is a fraction more than 50 per cent. or 4 per cent. per annum, compounded.

Concluding to compromise with my friend Mr. Gros, by splitting the difference, I estimated the value of bare lands in cities and towns at nine billions and allowed them slightly more than a 5 per cent. compound annual increase (65 per cent. for the decade), or \$440,000,000. Mines, petroleum and coal lands I estimated worth \$2,000,000,000 and allowed them 4.80 per cent. compound annual increase, or \$95,000,000, while unoccupied farm and timber lands I valued at \$1,000,000,000, and allowed them 4.32 per cent. compound annual increase.

The basis of my computations or estimates, as also the results, may perhaps be better understood if put into tabulated form, thus:

CLASS OF PROPERTY.	VALUE, 1880.	Increase per cent.	VALUE, 1890.
Bare farm lands . . . . .	\$5,300,000,000	20	\$6,360,000,000
Lands in cities and towns . . . . .	5,500,000,000	65	9,075,000,000
Mines, petroleum and coal lands . . . . .	1,250,000,000	60 +	2,000,000,000
Unoccupied farm and timber lands . . . . .	650,000,000	54	1,001,000,000
Railroads, (including elevated roads in New York and Brooklyn) . . . . .	5,239,500,000	86 +	9,746,100,000
Buildings and improvements, personal and all other kinds of property . . . . .	22,060,500,000	44 +	31,817,900,000
Totals . . . . .	\$40,000,000,000	50	\$60,000,000,000

The increase shown in the value of farm lands is almost entirely due to the increased acreage of some 145,000,000 acres, represented by new farms opened up in the west, northwest and southwest and even this added value is, to some extent, offset by a decrease in the value of farm lands in the older settled states. Take the state of Ohio as an illustration: According to a correspondent of the *Ohio Farmer*, the revaluation of the real estate of Ohio in 1890 shows the following exhibit: "Average value per acre 1880, \$27.00; average value per acre 1890, \$22.08; decrease value per acre 1890 of \$4.92. Aggregate value of real estate in 1890, as equalized by board, \$1,140,135,496; in 1880, as equalized by board, \$1,097,509,830; increase over 1880, \$42,625,666. Value of farm land 1880, \$675,826,516; value of farm lands 1890, \$560,361,909; decrease from 1880, \$115,464,607. Value of real estate in towns and cities in 1880, \$412,583,314; value in 1890, \$570,673,587; increase over 1880, \$158,090,273.

Strangely enough this same depreciation in lands outside of cities and towns is manifest in both free trade England and protectionist France. If space admitted, it could be easily demonstrated that the enormous impetus given to the production of wheat and cotton in

India, and the steady increase in the exchange value of the world's measure—the *gold dollar*—caused by the demonetization of silver, is responsible for this depreciation in capitalized rental value of agricultural lands in the United States and in England and Europe.

But to proceed with the main investigation. We have left to account for the "residual increment" for 1890 the sum of \$670,000,000. From this might justly and appropriately be deducted the sum of \$210,000,000, the increase, above an extravagant estimate of the cost of added mileage in 1890, of railroad capitalization; to say nothing of other fictitious values included in the estimate, as officially made, of the actual existing wealth of the United States. We will estimate the residue to be accounted for at \$450,000,000. It will be noticed that my estimate of national wealth in 1890, falls below that of Mr. Thos. G. Shearman, in the sum of two billions of dollars in round numbers, which difference may be accounted for, in great part, by the fact that I have not included gold and silver coin and bullion in my computations. I am thus particular in my specifications, because of the desire that the figures given may stand the test, both of friendly examination and carping criticism.

The census statistics seem to show that one-third of our farmers are tenants of rented farms. This being the case, the question at once arises: How great a percentage of the farm land values are represented by the holdings of these tenant farmers? For obvious reasons, we are safe in assuming that they represent one-half of the total farm land values. I then apportion to farm rent, 5 per cent. upon three billions, or \$150,000,000.

When it comes to estimating the amount of monopolistic rent paid by the people as royalty and rent upon coal and other mineral mines, petroleum and timbered lands, &c., &c., I am entirely at a loss for even an approximate basis from which to figure, and shall therefore follow the single tax formula and put it down at 5 per cent. upon two billions, or \$100,000,000. This, of course, in addition to the \$95,000,000 unearned increment, represented by increased selling value.

"Sufferance" rent, or money paid for the use of residence sites, is purely a privilege tax paid by more than three-fourths of our urban population for the privilege of living upon the earth. It is robbery, pure and simple, and as the occupancy of a residence site in no sense adds to the productiveness of either land or labor, its perpetuation in the single tax would simply perpetuate robbery, except as regards just so much of it as is now expended by landlords in the form of taxes paid for the improvement of streets, alleys, &c., &c., and the maintenance of municipal governments. Even that especial portion of it might appear to be more justly distributed, even under the single tax system, by levying such tax solely upon business lots, or lands occupied for income producing and profit making businesses. As it is now, tenants upon residence sites pay a double proportion of tax—one portion included in rent of residences, and the other in the price of goods, wares and services, such price including the tax

upon business lots. Rent paid for residence sites forms an unnatural and artificial addition to the price of all goods and wares, because such rent is included in labor cost, or "wages" as affixed and determined by the "iron law of wages." Were residence sites rent free, labor's wages would be increased by exactly the aggregate rent paid for such sites, or else the price (cost) of all goods and wares would be decreased, in the aggregate, by just exactly such amount. The census reports appear to indicate that more than three-fourths of our urban population live in rented homes. Putting the value of the nation's residence sites at \$4,000,000,000, we have sufferance rent amounting to 5 per cent. upon \$3,000,000,000, or \$150,000,000.

We now arrive at a consideration of "commercial" rent. Commercial rent is an unnatural and artificial addition to the natural price of all goods, wares, commodities and services sold upon business lots in cities and towns. Commercial rent is the direct result of and is perpetuated by non-occupying landlordism, and could not exist under a free competitive system, were actual individual occupancy made an enforced prerequisite to a claim to a business lot.

I am aware that single taxers contend that the "natural" price of goods, wares and commodities naturally? includes the rent paid by tenants to the non-occupying owners of business lots, but I reiterate my affirmation that they are guilty of economic lunacy when they so contend. To support their contention they must prove that such landlords are either land or labor. Or, more accurately speaking, they must show that these landlords are either the passive factor in the production of all wealth—land—or else they must show that landlords perform some necessary part of the labor required to put these goods and wares in the hands of final purchasers for use or consumption. This I defy them to do. Even Mr. Borland says:

It will be noticed that "natural price" is identical with necessary cost; it just barely covers ordinary wages and interest, leaving no margin whatever for rent, and "market price" always reverts to and is governed by "natural price."

It devolves upon him to show what portion of "necessary cost" rent paid to landlords constitutes. Does he include in his term "interest," the interest upon the selling price of business lots?

Single taxers broadly assert that rent is not robbery and cannot be abolished, and then blindly refuse to see the difference between the economic or "natural" rent (caused by different degrees in fertility and varying distances from market and superiority in business locations) and monopolistic rent, the result of non-occupying landlordism. Mr. Stuart correctly states the proposition when he says:

All rent therefore, whether of land or capital is robbery of the products of labor. For it is self-evident that unless labor produced more than its subsistence there would be no fund from which interest could be drawn. The ability to exploit labor is the result of private ownership of the means of production, viz: Land and capital.

Ricardo laid down the principle that "every commodity is worth in exchange the average amount of labor required to bring it to market." All political economists of note formulate the same axiom.

I would elaborate thus: "The just, or 'natural' price (*cost*) of all goods, wares and commodities, in the hands of final purchasers for use or consumption, is the labor cost, including transportation, required to lay them down at the place of sale and purchase, and deliver them into the hands of such final purchasers." Where! oh where does the landlord come in? Does he appropriate a portion of the fair wages justly due to labor, or does he add his rent to the price of the goods? He must do one or the other.

But enough on this line. Putting the value of business lots in our cities and towns at \$5,000,000,000, we have commercial rent at 5 per cent. amounting to \$250,000,000, and a grand aggregate of rent of all kinds, paid to land owners, amounting to \$650,000,000. Of this sum we will assume that \$450,000,000 is so invested as to form a part of the items which go to make up the annual "residual increment," and that is just the amount of residue we had left to account for.

To recapitulate the amount annually absorbed by interest, rent and profit (above fair wages), we tabulate as follows for the year 1890:

Interest charge . . . . .	\$1,260,000,000
Profit (above fair wages) . . . . .	885,000,000
Increase in land values . . . . .	700,000,000
Rent of all kinds . . . . .	650,000,000
Total . . . . .	\$2,995,000,000

Truly a wonderful and startling condition of affairs.

---

## THE SOLIDARITY OF ALL REFORMS.

BY JOSÉ GROS.

### No. 4.

In order to totally prove the fallacies of the single tax, our friends, the socialistic plural taxers, tell us that near Los Angeles there is a company owning a sugar factory, the buildings and machinery of which cost \$600,000, while the land plot is worth but \$1,000.

Any man who has traveled a little in this or any other country, and paid some attention to the relative value of land and improvements, knows that the above statement is a colossal misstatement. There is no such a thing any where on the face of the planet, for any length of time anyhow.

The city of Los Angeles is considerable of a center of population,

over 11,000 in 1880. It may now be double that. The land around such centers is invariably high priced. We are told that the factory in question employs 1,000 men, as it must, because of the great value of buildings and machinery. The 1,000 men alone would make a town of about 5,000 population, if not more, grouped not far off from the factory and close to a good size city. Buildings and machinery worth \$600,000 and resting on a plot of land worth but \$1,000, under the above conditions! That would make the average real estate broker split his sides with laughter. As for ourselves, we feel like crying, that is, deploring that friends whom we appreciate should allow themselves to fall into such grievous mistakes.

Taken all in all, the land improvements in this nation are worth about fifty-six per cent. of the combined property, improvements and land attached to them, or immediately dependent on them, or incorporated in the respective titles.

The land naturally attached or dependent on those \$600,000 worth in buildings and machinery—that land the company in question would not sell for less than \$100,000. It may have cost but \$1,000 ten years ago when that spot was but a fragment of the wilderness. It may stand at \$1,000 on the books of the Assessor. The writer could tell our friends a great deal about Assessors, and why to give us wild statements in order to prove the so-called fallacies of the single tax.

Wild statements indicate minds that have for a moment lost their center of gravity, and so their equilibrium, and thus they are in a state of dis-equilibrium—of mental disturbance, agitated because they cannot carry their points with actual or self-evident facts. Of course that such minds fail to understand language which is plain enough to others, that simply corroborates what we have been proving, that our socialistic friends have not yet grasped the essence of the single tax they criticise.

In the same article we are told that our grand sugar factory, with those \$600,000 in buildings and machinery, depends, for its very existence, on the bagatelle of 5,000 acres, from which the beets are raised out of which the sugar is to be manufactured in that factory of ours. There you have the cat-out-of-the-bag. So, that contemptible element of land is, after all, indispensable to the \$600,000 capital, that capital which our benighted socialistic friends think can be handled without land, or pretty nearly so, land without value to speak of.

Now let us go for the real value of those 5,000 acres of land, near centers of population and highly cultivated, because the work of 1,000 men, the support of 1,000 families, is dependent on the products to be raised from those miserable 5,000 acres. Well, land under such conditions is not apt to sell for less than \$300 per acre. That company of ours would not sell it for less, although it may have paid less than \$50 per acre some years ago, when the jungle or other wild productions were the only crops of that land, and with-

out population around. We have then \$1,500,000 of land values, monopoly value of those 5,000 acres, part and parcel of that concern, the factory with its buildings and machinery worth \$600,000.

What proves that our above estimates are approximately correct, is that ominous general belief, so innocently indicated by our innocent socialistic friends, that in the first year the owners of the factory doubled their capital, and that they don't even dare to deny that assertion. It takes a socialist not to see facts like that one, the mere result of increase in land values because of the rapid formation of a center of population, and the previous grasping of the land for a mere song, land gambling? And why is that gambling possible? Because of that criminal power we give to money, the power to hold land for a rise, vacant or poorly used, just the power that our own single tax would suppress.

And now let us ask a simple question: Under a single tax civilization, who would fix those blessed land values that keep our lovely, gentle critics awake all night along, year in and year out? Would they be determined by the few socialists or plural taxers floating yet around, in the land of the living? We are rather inclined to believe that such land value would be determined by the majority of voters, who, in a moment of frenzy, in a fit of insanity, had become single taxers. We are not sure that our critics shall understand the above lines; but enough plain honest people shall, and that is sufficient.

The human mind is a very curious instrument. Fill up that mind with a complicated human scheme, and there is no room in that mind for the simplicity of God's truth. Such a mind is the symbol of a building lot packed full with rubbish. You cannot erect a building there until you have first removed that rubbish. We are afraid that some of our socialistic friends never laugh at the intellectual mistakes they made when young. They are not inclined to remove mental rubbish. That is their own lookout.

Now let us touch some of the refreshing socialistic platitudes in the August number of the MAGAZINE of that brotherhood we so much love, and that, of course, includes that good friend of ours, Mr. Debs.

We are told that years ago the Standard Oil Company commenced operations under the single tax, "acquired its great wealth practically under single tax conditions!" Well, well, that is grand news! So the single tax really commenced operations before the birth of that idea in 1879! Do you want any better proof of what we have been saying, that our beloved critics don't know what the single tax means?

Imagine single tax conditions in the midst of taxes on about 4,000 articles imported, more or less, internal revenue taxes on a number of home products, taxes on real estate, taxes on moveable wealth, license taxes, &c., &c. Well, well, we give it up, we give it up in despair. We acknowledge ourselves crushed into atoms. We have stopped laughing. The subject is too sad for us; sad because we

have no bitterness whatever against socialists, as they seem to have against single taxers. Socialists are doing considerable good. They evolve a great deal of thought among many men. They call attention to great many of our modern evils. They are a force in the better civilization that is coming, that must come. We would not suppress any of our socialistic schools even if we could. We regret that socialism does not grow half as fast as we would like. The average socialist is about half way along the road that terminates with the single tax. Socialism prepares the minds of many for the single tax. Prohibition does the same. We have been very much surprised when coming in contact with many of the important prohibitionists and noticed that they could easily see the beauty of single tax conception. And so it is with many of our socialists in the humble ranks of life. It is only some of the rabid socialistic writers that are at war with single tax principles. And even that is good. They sharpen the minds of every one of us poor single tax writers.

Let us now attack another redoubt in the grand citadel of socialism. We are regaled with the beautiful fact that the Standard Oil Company had acquired an enormous capital before it had purchased a foot of oil land. It had erected buildings on cheap suburban land. Our poor friends don't know that suburban land is never cheap, and that it is through a rise on land values that all fortunes are more or less created. And what enabled that company to buy land on which to lay the oil pipes? That power we give to money by which money can control land; cheap land first, expensive land afterwards. That is just the power which the single tax would put an end to, as we explained in our previous article.

Listen now to what follows. It is just as sweet as any tropical fruit eaten under the tropics. We are informed that the oil producers were forced to sell their product at whatever price the Standard Oil Company wanted to pay. Why? Because that company controlled the pipe lines, the road through which the saintly oil went to the cities. With a single tax social compact the oil roads and the railroads, and any other road, would be under government control, either through payment of rent high enough to destroy the transportation monopoly, or by absolute public control as the postoffice.

In the next article we shall explain the process by which the people, the government, could ascertain the approximate value of any land rents manipulated by any large concern, trust or the like. We could not do so now without extending this article a little more than we desire. We don't believe in large doses of truth any more than of medicine, when we address ourselves in part, at least, to writers who don't seem to relish truth if they have not first discovered it themselves. They don't like freedom, either, those friends, since they fall into hysterics if we happen to coin a new word for the fun of the thing, as many have been sinful enough to do in the course of time. How could language grow without that process?

Of course, socialism is the suppression of most individual rights,

to be drowned in an ocean of collective rights. Socialism would destroy most individual initiative, most of the manhood we have so far acquired. It is a beautiful dream in certain respects. We wish that dream was possible. It would bring the single tax in five years after it had been tried or commenced.

## MARGUERITE.

*A Historical and Philosophical Romance.*

BY MARIE LOUISE.

---

### CHAPTER I.—A BIRTH.

On the Jura mountains, in the east of France, close to the Swiss frontiers, stands a small village, named Thesy, of about four hundred inhabitants.

On a bleak February evening at eight o'clock, in the little village, darkness and silence prevailed. The wind blew fiercely through the dense pine forests, the fresh snow on the ground was lifted in the air and promptly converted into whirling columns, to be almost instantly scattered about in a cloud of drifting sleet.

In a house adjoining the village church, a faint light peeping through the narrow windows, revealed that the inmates had not retired to rest. Shadows constantly moving on the white muslin curtains indicated considerable activity within the ground floor room.

On a dung-hill, a few yards away, a tall young man and a boy stood watching the moving shadows and chatted gaily, mingling their merry laughter with the hissing of the wind.

Presently the door of the cottage opened and a tall, stately, graceful lady, followed by a gentleman, passed out and rapidly gained the pathway.

"I am glad it is over," said the lady to her companion. "Such occurrences invariably depress my mind. Life is so full of deception and —"

"Aunt," said a voice by her side, "is it all over, and what is it?"

"Oh! Is it you, Joseph? What are you doing here in this blasting storm?"

"I stood on the dung-hill yonder for more than an hour waiting for some one to come out of the house and tell me the news. Well, what is it?"

"A girl," answered the lady, with a suppressed sigh. "All has passed fairly well."

"A girl!" murmured Joseph, as he turned away. "A girl! Ah! I have been unable to get the mother—but who knows? Some day, perhaps, I may get the daughter—the daughter of Clothilde—*her* own daughter!"

---

## CHAPTER II.—LEÓN DUVAL.

On the following day (February 14, St. Valentine's day), the storm which had raged so fiercely during the night subsided, and the cloudless sky unfolded right and left, a beautiful background on which the radiant sun displayed in relief his numberless sparkling gems.

Inside our little cottage, a man, not quite twenty-one years of age, sat on a low stool and was in the act of giving the last polishing touch to the sole and heel of a shoe he held on his knees. A small lamp on the floor, upon which a polishing iron was being heated, sent out an unpleasant odor and smoke.

In the same room, the bed was occupied by a young woman whose pale and gentle face was turned towards a dainty little cradle on the floor by the side of the bed.

"León," said she, "see how soundly she sleeps, and how beautiful she looks in the cradle. I am sorry to have to disturb her. Could not we wait till she wakes up?"

"We need not disturb her before your mother arrives," the man replied.

"Mother will soon be here. It is one o'clock, and the christening takes place at three. I wish we could postpone the ceremony for a day or two; baby would then be stronger and better able to stand the cold wind."

"Postpone the ceremony!" the man ejaculated. "What are you thinking of? Suppose the child dies during the night; she would then be buried in unconsecrated ground, and her soul could never enter the presence of God. Would you save her body at the risk of damning her soul?"

"God forbid!" exclaimed the mother, gazing fondly and anxiously at the sleeping babe. "But, oh, León, it seems so cruel to take her out of her warm cradle to carry her into the cold wind and have her head sprinkled with cold water."

"That water is holy!" replied the husband and father. "God has blessed it."

"Yes," sighed the mother, "it is holy, but *cold*, nevertheless."

"Woman!" exclaimed the husband, rising from his seat and assuming a solemn attitude, "tempt not God."

The young mother made no reply; her face flushed and her eyes sought the ground to conceal her confusion. Then glancing at the babe with an expression of surpassing tenderness, her whole soul illuminating her face, she clasped her hands on her breast and closed

her eyes to shut out all things but, the picture of the sweet babe by her side.

A few minutes later the tall lady, with whom we became acquainted in the preceding chapter, opened the door of the cottage and entered the room.

"Good morning, Duval; good morning, Clotilde," she said with a smile, "how do you feel to-day, my daughter?"

"I feel well, thank you, *maman*," answered the young woman, "baby slept well all the forenoon."

"Now, I suppose, we had better dress it," suggested the lady, "it is getting late."

"Very well," said Clotilde, "her white dress and pelisse are in the bureau. Take them out, *maman*."

"I will take them out, while you wake up the baby," said Léon Duval.

"Do it gently, *maman*, do not frighten her," pleaded Clotilde, "fright is so injurious to babes."

"Be easy," replied the lady, "trust to me."

"Your mother ought to know how to handle children," put in Duval, "she has had seven of her own."

"This true, my son," replied his mother-in-law, "but the mother's heart trusts to nothing, believes in nothing, accepts nothing from whomsoever it may be, when her maternal solicitude is involved. A mother may submit to conditions she knows to be injurious to the well being of her child, but submission does not mean approval. Nothing can rule over, or subjugate the maternal instincts. In the mother's mental vision, all the world is condensed into one small being—her own babe—and that small being is so magnified that it fills the entire universe."

"Hey!" observed Duval, "I suppose that in that mother's mental vision, the father is entirely obliterated. He has no claim to a respectable place in that universe she so easily minimizes into one small being, and no title to that small being she so dexterously magnifies into a vast universe."

"Nay, my son," the lady replied, "paternal rights are acquired and conferred, *they are not inherent*. They are acquired by the statute laws which have been manufactured by men; they are conferred by the mother upon the man she acknowledges as the father of her child."

"What!" exclaimed Duval, "is not yonder babe mine as well as Clotilde's?"

"Certainly, it is," the lady answered. "Clotilde has ratified the assumption of the law by acknowledging you as the father of this babe. You know she is unflinchingly truthful; her word is her bond. Nevertheless, Duval, she is the giver, you the receiver. The law declares that a woman, on being wedded, becomes the property of her husband, herself and all that belongs, and shall belong, to her. Accordingly, the man claims the children as his own."

"He has the *legal* right to own them," said Duval, musingly, "what does all that avail?"

"It avails but little," the lady answered, "it is merely a *fact*, and a fact does not constitute a right. A mother's kingdom is all embracing and absolute. One great principle in maternity is fundamental, viz., the child is a part, a fragment so to say, of its mother. With the mother's blood, the embryo adds to itself tissue after tissue, and cartilage solidify into bones. The mother conceives the offspring, she develops it during gestation, brings it forth to the world herself, nourishes it, and watches over it with a love and devotion compared to which the appreciation of her own life is but a faint glimmer. The new born infant turns to its mother's breast and attaches itself there with tenacity. It seeks no father; for it only one being exists in the world, its mother."

"Madame Ferrier," said León Duval in a vexed manner, "you are like all strong minded women, you seem unaware of the humble sphere in which God has placed a wife; you forget that only through bearing her husband's children and being submissive to him, she can become worthy of entering the kingdom of Heaven."

"In so far as our religious teachings are concerned, your statement is correct," replied the lady, "but I maintain that maternity is a design of nature, subject to no religious dispensation, or conventional laws. It is apart from all things outside; it is incomparable and unequalled; it is a world within itself, revolving among other worlds and never colliding with any."

"Ah, Madame," interrupted Duval, "you ought not speak so in the presence of your daughter. Keep your dreamy notions to yourself. Pride is the incentive of strong-minded women, and the Bible says: 'Pride goeth before a fall.'"

But for the timely arrival of a visitor, this discussion might have proved disastrous to the good relations of Madame Ferrier and her son-in-law.

---

### CHAPTER III.—THE CIVIL REGISTRATION.

"Good day to you all," said the visitor, as he walked into the room, "How are you, Clotilde, and how is your little son?"

"Little son!" exclaimed Madame Ferrier, "did not I tell you last night that it was a daughter?"

"A daughter, is it?" Well! How can I ever have forgotten it?" said Joseph, with a laugh. "But never mind. Pray how is the daughter of Madame Duval?"

"She is well, thank you, cousin," replied the young mother. "Look at her and say if she is not pretty."

"Pretty! Most certainly she is pretty. She looks like her father. Does not she, aunty?"

"Yes," answered Madame Ferrier, with a witty smile, "she is the very picture of her father."

"Well," said Duval, "she could not resemble any one nearer, I am sure."

"When is the christening to take place, aunty?"

"At 3 o'clock; and previously we have to go to the magistrate's and have the child registered civilly."

"Certainly," observed Joseph, "and, it being a female, will require more time to register, for you will likely be obliged to undress her to prove her non-serving-in-the-army sex. Now-a-days mayors are very skeptical when you declare a child to be of the female sex. Let us hasten. Who is the other witness, aunty?"

"Our neighbor, Jean Morin."

"Oh! the blind man. How will he manage to sign his name?"

"Be easy, Joseph," said Madame Ferrier. "There will be no difficulty about it. We will call for him on our way to the magistracy."

The infant being draped in a long white gown, a warm pelisse and about half a dozen of caps on her head—linen ones underneath, then woolen ones laid over, then a lace and ribbon one covering all the others, in accordance with the ridiculous, hurtful and ugly French fashion, the party started towards the house of the magistrate. This dignitary was ready to receive them. He had heard about the birth of a new citizeness, and he had prepared the necessary documents for registration, for according to French law a child must be registered within twenty-four hours following its birth.

The magistrate, therefore, sat in his office expecting the arrival of the party.

Tall and well built, with his official badge spread diagonally over his breast, this man's general appearance was dignified and solemn. A careful observer analyzing his features would, nevertheless, have discovered that the halo of solemnity surrounding his person was simply due to the awe-inspiring tri-color scarf shining on his breast. But remove that "bauble," with the consciousness that it is only a bauble, and the man in his own merit and demerit stands before you. Intelligent critics would pass a judgment little flattering to the vanity-inflated magistrate. His apparent dignity would dwindle into a vulgar impudence and his solemnity into a grotesque clumsiness.

On entering the office the members of the party made a humble bow. All eyes were turned toward and riveted upon the dazzling tri-color badge. Like the wonderful enchanting snake, the insignia of the law of France kept these men and women in breathless fear and reverence.

"Approach!" said the magistrate in a stentorian voice. "To what sex does the infant belong?"

"To the female sex, Monsieur le Maire," said M. Duval.

"When the child belongs to that sex, the law requires that undeniable proofs be given. Please, madame," said he to Madame Ferrier, "proceed to undress that child."

"Is it absolutely necessary to do so?" objected Madam Ferrier; "you know that we would not perjure ourselves in the august presence of the law and of our Saviour lying on this cross, by the blood and death of whom we swear to tell the truth."

"Madame, I command you to remove the clothes of that infant. The law permits no one to make observations or objections. Obey my orders."

"Certainly," put in Duval, "give Monsieur le Maire the satisfactory proof he demands."

"Ah! Pierre Chauvin," said Madame Ferrier, "do you not assume too much authority when you happen to wear the official badge? Do those insignia so transfigure you that we must silently obey and tremble?"

"Silence!" thundered the now wrathful magistrate.

"Duval," said Madame Ferrier, handing the babe to her son-in-law, "fill yourself this office which the law requires. You are a man, hence a free being. Therefore, you *must* obey the laws of France. I am but a woman—what is more, a *married* woman, *femme couverte*, therefore, not responsible. I obey my husband, and there the privilege of the law is somewhat curtailed. One *master* is enough for me!" So saying she bowed to all present and swept out of the room.

(To be continued.)

---

## SHORT STUDIES IN POLITICAL ECONOMY.

BY WILFRED P. BORLAND.

No. 9.

The facts of history all go to prove that private property in land leads to its concentration in the hands of the few most cunning members of society, and that along with this process of concentration goes the concentration of wealth. The conditions of land distribution determine the conditions of wealth distribution; there is no plainer fact in all history than that, and, as private property in land leads to improper conditions of land distribution, it must, in the nature of things, lead to improper conditions of wealth distribution. This is inevitable because of the workings of that principle or human nature which lies at the base of deductive political economy, the principle that men seek to satisfy their wants with the least exertion. From this principle of human nature the economists have deduced their most important arguments in favor of free trade; the assumption being that when trade is unhampered by restrictions of any kind, the natural inclinations of men will lead them into the most profitable forms of production and the result will be the greatest attainable prosperity. The assumption is a legitimate one, and

the wonderful production of wealth which has marked this country as unique in the world's history, is mainly due to the fact that many of the old restrictions which hampered trade in every direction have been swept away, and the human intellect has been allowed to expand after its own fashion in the effort to supply the wants of its material body. But the application of this principle has been only partial. That very quality of the human mind upon which the free trade argument is postulated, has thus far operated to prevent the establishment of complete free trade. For, as men continually seek to satisfy their wants with the least exertion, they continually seek to devise ways and means to obtain advantage over their fellows and thus reduce their own exertion to the minimum. The consequence of this partial application of the free trade principles has been to give us an enormous production of wealth accompanied by exceedingly unjust and improper conditions of distribution. The doctrine of free and unrestricted competition advanced by the economists has been accepted as true, but the anomaly is presented to us of both nations and individuals declaring their implicit faith in the soundness of the doctrine, and, at the same time, adopting every artifice and bending every energy to escape its consequences. It is this acceptance of the spirit of the doctrine while neglecting the practice that has brought free competition into disrepute. We have the same problem of unjust distribution confronting us as confronted our remote ancestors; we have the few rolling in luxury, the many groveling in poverty; we have great fortunes and great estates, with the accompaniment of an industrial proletariat, as did the Romans of old; and, pointing to these facts, the opponents of the present social order exclaim: "Ho, ye believers in a society based on free competition, behold the legitimate results of your pernicious doctrine!" If these are, indeed, the legitimate results of free competition, then is the doctrine condemned as a most pernicious economic policy; no possible advantages to production can begin to compensate for the misery entailed upon the masses by our execrable conditions of distribution. But, before admitting that these evils are the result of free competition, we must be quite sure that the facts warrant the admission. It may be that we shall be able to discover that it is not free competition, but the effort to *avoid* free competition, which has produced the results so much deplored by every friend of humanity. The wage workers are the ones upon whom the doctrine of free competition, as it has been applied, has fallen with crushing force. They have been told that they were free agents in determining the conditions of their employment; that they were at perfect liberty to make any bargain they pleased with their employers, and might accept or reject conditions at will. They have been told that the conditions of their employment were determined solely by the state of the market, and that they had a right to demand for their labor the highest price the market would bear; that, in fact, their labor was a commodity, the price of which was regulated by the laws of supply and demand, the same as any other commodity. These are the beautiful

abstractions upon which it has been sought to regulate the employment of labor, but the fact is that they are not true. The conditions necessary to the execution of a free contract between employer and employe do not exist. In speaking of Adam Smith's theory of industrial freedom, Arnold Toynbee, in his "Industrial Revolution," says: "Had he attempted to analyze competition, even under the conditions of his own time, he would have become conscious of the fatal flaw in his doctrine. He would have discovered that what he sought to establish was the *free competition of equal industrial units*, that what he was in fact helping to establish was the *free competition of unequal industrial units*." And that is the case in a nutshell. Free competition cannot exist in the labor market because the laborers are not free to reject terms which do not suit them. The laborer is always confronted with the argument of imperious necessity, he must work or starve, his opportunities for employment are extremely limited, if he does not take the present chance of employment starvation may overtake him before he gets another. With such considerations more or less tangible to his mind, he must compete with thousands of other laborers who are animated by the same thought. The argument of free contract thus becomes a farce. Although it is true that the employer of labor is dependent on his employes for the success of his undertakings, it is not true that he is dependent on them in the same degree as they are on him. He can afford to wait when the laborer cannot. He is not restricted in his choice to this particular laborer or body of laborers, but this particular laborer or body of laborers are restricted to him. He may secure other laborers if he cannot make terms with these, and can afford to wait with that end in view, but these laborers may not secure another employer and they cannot afford to wait upon the well known uncertainties of the case. Under these conditions the argument of mutual dependence falls to the ground. The mutual dependence existing between laborers and employers of labor is, at present, such as exists between the horse and its owner. The owner is dependent on his horse for a certain amount of work and the horse is dependent on the owner for its feed. The food may be insufficient, but the horse has no power to compel its owner to provide more. The amount of work which the horse shall do, as well as the amount of food it shall receive, are circumstances that are wholly within the owner's will, and determined by his own self-interest. In this respect the laborer is in precisely the same position as the horse. The amount of work he is called on to do, as well as the compensation he shall receive for it, are circumstances that are wholly within the will of the employer, and are determined by his own self-interest. The abstract theory of free competition, as applied to the wages question, is true. Wages are regulated by the law of supply and demand. But the demand for labor is naturally limited only by the necessities of the laborers themselves; wherever there is a want there is a demand for labor to supply that want. The power to regulate the conditions of supply and demand of labor, is a power which is

potentially possessed only by the great body of laborers as a whole. This potential power they have not used because they have never realized that they really possessed it, and, instead of regulating the supply of labor by the demand of their own necessities, they have allowed it to be regulated by the demand of the necessities of the comparatively few employers of labor. Thus has been brought about that "*free competition of unequal industrial units*," which we suffer from, instead of the "*free competition of equal industrial units*" which we ought to have.

---

## MR. STUART'S SINGLE TAX FALLACIES.

---

BY JAMES MIDDLETON.

### No. 7.

Says Böhm-Bawerk, one of the ablest opponents of the socialist exploitation theory: "In fact, the majority of the socialists have exercised their intellectual powers not so much in laying the foundations of their own theory, as in bitterly criticising the theories of their opponents."

Mr. Stuart is a striking illustration of the justness of that criticism, except that he is not always bitter. Sometimes his pen is dipped in gall, and then anon he is in a sportive mood.

He flits about the whole field of economic thought as aimlessly, apparently, as a butterfly in a field of clover. If his assertions were always facts, his assumptions always true, and his logic equal to his rhetoric, he would, indeed, be an invincible opponent.

He attacks single taxers with all the vigor of his imagination, because they advocate a policy which he himself claims would lead to government ownership of land; yet he demands that the people should own the land.

He attacks the proposition of the single taxers, that "when free competition becomes impossible, as in telegraphs, railroads, water and gas supplies, etc., such businesses become a proper social function, which should be controlled and managed by and for the whole people, through their proper government, local, state or national, as may be," because, forsooth, he says, that would embrace all industry; yet he demands "that the whole nation shall form a gigantic trust that shall operate the machinery of production for its own benefit and divide the profits equitably among the shareholders."

Could opposition be more illogical or more inconsistent?

Yet, Mr. Stuart is a fair type of the out-and-out state socialist.

L F M 4 Sept 98

One would think they would extend a little consideration to those who demand more things in common with them than any other school of economic thought or social reform. But, no; against single taxers they hurl their most venomous darts. I can only account for it on the ground that they fear absolute freedom of production and trade will bring about such a happy condition of freedom and prosperity that society will find complete state socialism utterly unnecessary.

It would seem that they are so enamored of a system, so dazzled by the unquestioned ability of Karl Marx, that the system is more to them than the welfare of humanity itself. They are so wrapped up in the means they forget the ends.

In his seventh article, Mr. Stuart says: "The theory in regard to trade combinations being that, with free access to natural resources and absolute freedom of trade and commerce guaranteed, such combinations" (trusts) "would be impossible; when in any particular business the returns to capital exceed normal, capital would rush in and soon an equilibrium of profits would be the result. This beautiful theory—like most single tax ideas—proves to be false."

When? Where? Certainly not in this country, not in France or Germany, and most assuredly not in England.

England to-day groans under the burden of indirect taxation, and in no country does the burden of taxation fall so lightly on the landlord as in England.

Another point he takes up is the value of railroad lands and franchises. He fails to comprehend the nature of a railroad franchise. It is simply the right to a continuous narrow strip of land, extending, say, from one commercial point to another. The value of the franchise is simply the value of that continuous strip of land granted by general government by the right of eminent domain for railroad purposes.

To compare the value of a short portion of that strip with a corresponding strip of farm land adjoining, is like comparing an arm of Powers' Greek Slave with a crude piece of marble from the same quarry and of the same weight. In the arm is not only the genius of the sculptor, but the arm also forms a part of a perfect whole; in the block of crude marble is only the work of the quarryman. In the piece of railroad land is the power of the franchise; in the other simply the power to raise a crop. It is just as absurd to estimate the values equal, as in the case of the piece of marble and the arm of the perfect Greek slave.

Mr. Stuart either misunderstands or misrepresents Mr. George in the question. Mr. George advocated that part of the platform before the single tax convention on the ground that the railroads could add the tax on the franchise to their charges to the consumer.

Under the single tax such franchises would become more valuable on account of increased use, and unless controlled or owned and operated by the government, would become a more important means of fleecing the consumer than now.

The Standard Oil Co., which he quotes, is really no help to him. Instead of being formed under single tax conditions, it was formed under the very opposite conditions. Men of means formed a company and got differential rates from railroads, giving them a great advantage over other shippers; something that could not be done if railroads were run on the principle of the postoffice, as proposed by George.

With the fortunes thus acquired, they were enabled to get franchises for pipe lines, build their own lines and thus again down competition, which franchises would, under the single tax platform, be controlled or owned and operated by the general government. Their rebates on tin; their gaining control of the oil lands; each step, from the beginning to the present of their gigantic monopoly and fortune, is a striking example of conditions exactly the reverse of what would obtain under the just carrying out of the single tax platform.

Regarding the advantages England gained by the adoption of her partial free trade, he has no reply but sneers. Sneers are not logic. He says, "if the abolition of the tariff lowers the price of commodities, in that very proportion it will lower wages." The facts I quoted from English history prove the contrary. Under her partial free trade, prices of nearly all commodities went down, and yet wages advanced, as Mulhall, Giffen, and other statisticians before quoted, have demonstrated.

He says, "are wages higher in free trade England than here?" England has not true free trade, but a tariff for revenue, which comes out of the consumer in direct proportion to his consumption. Wages are higher there than in the highly protected countries of Europe, and lower than in the United States. Wages are higher here because, as Carlyle says, "we have vera much land and vera few people," an advantage which our unjust tax laws, favoring monopoly and speculation, are doing their best to get rid of.

As Mr. Stuart seems to have got to the end of his "fallacies," and now contents himself in rehashing rather than in entering into a full explanation of the socialistic form of society, I will summarize briefly the ground gone over.

The first striking point raised was the freedom of the mortgagee from taxation under the single tax program; 2d, security of tenure; 3d, sufficiency. He then raised the question of the justness of interest, and the effect of the tax upon wages. He next undertook an analysis of capital, and his seventh article, which I have just partially reviewed, is a sort of all around criticism and reply to various objections and arguments brought against him.

I have shown in detail that under a just carrying out of the single tax, mortgagee and mortgagor would be treated as joint owners, so as to lighten the burdens of present holders of mortgaged property; and that ample protection would be given to holders of improvements, so as to sacredly protect the homes of the poor, a something which is not now done.

As to sufficiency, I have shown that present rents are more than sufficient when you include, as should be done, the values of franchises. It is true, as Mr. Stuart and Mr. George have both shown, present monopoly rent would be largely diminished, but so far from that being an argument against the tax on land values, it is one of the strongest arguments in its favor. The only strength it has, is against the word *single*. My own judgment is, that the decrease in rents of farm lands and the like, will largely be met by an increase in values of railroad franchises and the like, through the great stimulus to production and exchange. Further, I think I have conclusively shown that the government can, under the single tax, own enough land to reduce and control rents, and yet gain enough from the single tax to amply meet all expenses, giving the wage worker and small producer and small farmer full exemption from the present heavy burden of taxation and its accompanying evils.

I have shown by unimpeachable historical evidence, that by freeing production, you stimulate it, increase the product and raise wages. I have shown that true capital of individuals will consist of perishable goods, which must be cared for by the hand of labor, either to be preserved, or to give an increase, and that borrower and lender, employer and wage worker, will to that extent be placed on a plane of equality, assuring to the wage worker his full share of the product, and to the lender only that which the borrower will freely pay for services rendered. Under such a policy, there will be given for the first time, free play to the individual, and voluntary co-operation will be fully realized wherever it can do better than the government. The principle of voluntary co-operation has proved a success in religious matters. I believe it will also prove so in the industrial world.

In opposition to this policy, which proposes that freedom and material prosperity shall be united, giving to every willing worker his full share of the product, and to every industrious family, if they will, the opportunity of a home, yet leaving to each the full privilege of saying when, where, and for whom he will work, and whether for himself, for another, or for the state, is the proposition of the socialists that "the nation itself shall control all the means for the production and distribution of wealth in the interests of all the people."

In another article I will show why I am opposed to complete state socialism.

# MECHANICAL.

---

## THINGS THAT "CAN'T" BE DONE, AND THE REASON WHY.

---

BY THOMAS PRAY, JR.

---

Raking over the scrap heap of our memory a few days ago to accommodate a man who has a great deal more time than anything else on hand, the writer found a remembrance that struck him as in some ways a good lesson for "the boys" to get into the corner of their skulls where they "lay in stock" for reference. The man in question had an idea as to the working of a certain arrangement on a locomotive, and had hunted up the patent office reports, and wanted the writer to suspend all other work to look up the "quips and quirks" of his idea, only to find that a far better man had in the years now agone done it a great deal better, and after trial laid it on the shelf. In loosing my own grip on the work in hand when his interruption occurred, an old time story popped into my head, and the result was so ludicrous that it is worth repeating. It is some time since the writer adopted the universal practice of telling any man "to go and die" when he begins with "I can't," or that the "Can't family died years ago."

Strange as it may appear the following is a fact, or a series of facts, and although it is twenty-four years ago, or thereabouts, yet it remains a record. When Ben Healy was the superintendent and whole team of the Rhode Island Locomotive Works, in Providence, R. I., his house and that of the writer were so near that we could and often did when both were at home, chat from our respective windows from one to the other, in summer evenings, while smoking or cooling off to get in possible condition to do some sleeping, and it was often of what some of the men in charge of the rolling stock used to do or want done, that these chats across the few feet of space referred to, were the subject of.

Healy had at that time an order from one of the roads out of Boston, and he had, in his way of doing what he thought was best, made changes in the size of the tubes in the new machine, and she was nearly ready to go out of the shop. He had made up his mind to put in a tube a quarter of an inch larger diameter than was then generally used, and he had done it to give the road a better, for a faster engine was wanted. The sequel is interesting, and to have heard Mr. Healy tell it when he had only an audience in whom he could trust, was a treat that would not tolerate whole suspenders, nor leave many buttons on the garments if they were not put in a "fatigue" state before the story.

The engine was finished and sent out on the road and was expected by her builder to do a clean thing and do it fast, but the "Can't" family were then living and it soon proved to be the case that they were numerous. The great man at the head of the road heard of the change in the size of the flues and his fiat went out at once, "The thing could and would never draw her train on time," but he did not know so much of a locomotive as a mule does of trimming a woman's head gear, so far as his own actual "know how" went.

Then the master mechanic "sort of thought" it out that there was "suthin wrong," and while he didn't know what it might be, he "had an idea" that there was something wrong, and so it went all down clear through the whole rank (?) and file of the operating department, and then when the trials came off it was an impossibility to make her go as wanted. The "Darned thing couldn't and wouldn't draw her train on time," that was all there was to it or of it, and this matter was set down on. She "couldn't" either steam or be kept hot, or do anything else, and after a considerable time spent in the supposed trials, but which if the truth had been written it would have read the "Trials of a lot of ignorant engineers and firemen who were prejudiced against the machine," the engine was sent back to have a standard boiler put into her, for the departure from "standard" practice had involved her in a complete failure. So Healy took her into the shop and put in the "right size and number of tubes," and after she went out again in a few weeks she was a "good machine," and done her work so well that the "boys" took a great pleasure in telling what an awful thing it was that such a mistake was made in her, and the trouble it made, but they soon had cause to shut up on her work, for Healy had a vein of fun in him and was not slow to get square with any one who for the moment had got the best of him. As soon as the new locomotive was on her feet and all right, there was a chance for a fast timer on another road running out of Boston, and this time it was by a master mechanic that had graduated from the right hand side, and when a man did not do what he ought to do our master mechanic just jumped into the cab and made the run himself, and if he done it easy then there was an end of one or the other of two things, complaints or the engineer's job.

Healy and the master mechanic laid out what was wanted, and agreed on a trial machine, and the same boiler on which such a mistake had been made was put into the frame, with cylinders a full inch larger in diameter, and the engine put on the track and steamed up and made ready to be on hand for train. The terribly large tubes, less in number, were all in their places and ready for business. The master mechanic was in the cab, Healy was on the train, and the whole thing was to be tried on sound business ideas and not on the "can't" bosh.

After making a start it was found that she was picking up on steam, and when it was found that she was not easy to keep in time she was let out a little, and soon demonstrated that she was on hand for a "racket." When the report came to the men on the other road

that their old friend, the big flues, were scooping all the machines on time, and pulling the full train, they said "She is clean now, just wait." And they did wait, and she kept so clean that at the end of a year there were four more of her same stamp, and she was and is now, to-day, in splendid shape, can just lead the prize machines and she has a record of a flyer made of "junk" of the "can't" family.

Here is an example revived after many years by a talk with an old timer while the writer had been attending to some business in Boston after an absence of nearly three years, and it has occurred to him that it is a first-rate thing to show to what extent the prejudices of a man will go with not the slightest shadow of reason but simply to gratify the prejudices of a man who has an idea that if a time table were to be changed in the slightest to suit a changed set of circumstances, it would be all wrong, and his old-time fossil-like ideas were the solid and correct things to attend to and abide by.

There is a sort of cropping out of ideas in the minds of thinking men all leading up to an improvement in some of the apparatus of the rolling stock of the railroads, and when such an innovation is made on the fossils of past ages they, when it comes into their hands, sit on it in judgment and determine that it shall not succeed if they can prevent it, and as a rule they do prevent it by ignorance and prejudice, to say nothing of their dishonest reports, and the old but now exploded idea that they must keep the control of ideas as well as of practice in their own hands.

Improvement in its march, has set its most emphatic seal of disapproval on all such men or practices, and the watchword now is Brains, Results, Improvements; not forty years in the harness or in a situation, but what have you done, or what can you do, that is the style now? It don't make a bit of difference how long you have served, or who your father-in-law is. What is your own record? What your father was is not of the least earthly account in your own make-up. He may have been far the better man, but he is dead, and you may be of some account; but if it don't show plainly what you have accomplished, then you must go at it in earnest and make your own record. But please don't try to build up yours by pulling down some other fellow, or by any practical prostitution of any authority put into your hands from which you can influence results which are not in every respect and fully reliable.

The narrative recalled to the writer is only one of many in which such a set of results have from his own experience been watched, and it is only due to the sequel to say that men who peddle patents of their own into a railroad shop are usually laid off after a while. Such as in some cases have been concerned in such work sooner or later find their level, and are discarded as unreliable. It is in a spirit of fairness sure to be in a way to lead to trouble when any one stoops to do anything that is not in the fullest sense right and true, for all men have in their make-up a sense of what is due them, and it is always dangerous to step aside from the right in any respect, for it is a violation of one of the cardinal laws of man's code, as well as

of the higher law of right, from which any deviation is as sure to be punished as we are certain of death.

It is often urged that a man can not succeed in this mortal life unless he takes advantage of circumstances, and this is again construed to mean that if others steal, I must; or if others do wrong to increase their pile, so must I. A dozen wrongs do not, can not and never will make one right. It is not possible to do wrong and not in the end balance up all accounts, and it is as sure that we pay more for the indulgence of such a practice than we gain in our speculations, and no man who has ever tried it but what will, if now honest, endorse this last statement in a most unequivocal and emphatic way.

The road to success is rocky, but it is as straight as the rule of right. The road is not easy to climb, but requires persistent effort and inflexible purpose; rest there is not on the route, but peace there is when achieved. It is easy to look back at our blunders and to be patient with those who have not so far progressed, and to wish them all an easier path and faster progress, but who is it that succeeds?

---

## WHERE THERE IS A WILL THERE IS A WAY.

BY WILLIAM WEILER.

---

Mr. Pray in the July MAGAZINE has pointed out an instance where there was a will in a man and how he found a way to become an "eminent man in his line," in spite of his meagre advantages, but the keynote of his success was that he had a will to rise, and as one of conditions he became a "most persistent worker" in his chosen field of investigation. Instances of success in life in spite of unfavorable circumstances are not by any means rare, and the names of men written high on the scroll of fame in the history of the country or in its commerce and finances abound with self made men, who rose by virtue of their will power which enabled them to work for success. Call to mind Abraham Lincoln, who started from a log cabin, to split rails and eventually reached the White House. Garfield reached the same place by starting along the tow path as a mule driver. Grant had a better start, but afterwards seemed to get out of the line of promotion when he became a tanner, until at the call of his country he came to "tan" the rebels; but after all it may have been his experience as a tanner, whose work is so notoriously slow, that gave him the persistency "to fight it out on that line if it takes all summer" and to reach the presidency. In the race for wealth it is not the start that a man has that gives him success, for A. T. Stewart, the dry goods merchant, Peter Cooper, the manufacturer, Girard, the ship owner, Vanderbilt, the first Commodore, Gould, the railroad king, all had very little both of money and edu-

cation to start life with, but they had the will power that made them persistent workers, and they made use of all the means in their reach to accomplish the end they had in view.

As it is with place or position and wealth, so it is with knowledge; it can be had if there is a will to get it, but of course if the will is lacking it will not come of itself. This is no doubt the reason that makes Mr. Pray despond, in looking over the lack of interest in the Mechanical Department, for the will to improve does not seem to permeate the rank and file of the order or we should see these columns crowded to their full capacity with interesting topics and inquiries pertaining to our business.

Mr. Pray asks why is this so? My answer is: The seniority rule in vogue on all the roads has held sway so long that it has become a common expression that is used by firemen: It is no use to study; I will be promoted when my turn comes anyway. This while it ought not to be permitted to keep these men from study is no doubt the one reason that so little work is done in this line. When a strict examination on the fundamental principles of economic railroad management and practice shall be introduced, as it surely will at some time, some of these men will be found lacking and will then mourn over lost opportunities.

Another reason for the lack of interest manifested by many is no doubt found in the chilling reception a novice meets, and the curt answers he receives, when in the search for knowledge he attempts to get it from those who, by reason of their long service on the road, he thinks ought to be able to give him the desired information. Whether these rebuffs are the result of ignorance on the subject, and are given to prevent exposure, are the result of a trade unionism, which is aiming to keep the supposed trade secrets, or are simply the result of a desire to make the inquirer feel his inferiority in the presence of such mighty intellects, the natural result is the same—the earnest inquirer becomes disgusted at the search for knowledge under such difficulties and either relinquishes the pursuit or turns to other channels to get it, where he will be saved from sneers and rebuffs. He can find information in books and papers treating on his business, but there are in actual railroad practice so many differences in circumstances, that a man on a locomotive may at any moment find himself in a situation, while somewhat like that he or some other one has been in, yet differing in material points and requiring different treatment. For these special cases he cannot find a ready made remedy, and it is in preparation for them or in reviewing them that the greatest value is to be found in the columns of a Mechanical Department such as this.

But now in coming to the MAGAZINE we find that the editor has thought best to shut down on *nom de plumes*, and wants every contributor, whether old or new, whether accustomed to spread his ideas to the public or making his first trembling appearance, to sign their true names and thus give themselves away. If he is a new man he will probably be ridiculed as an upstart who would

have no business to inquire into matters beyond his comprehension; if he is an old hand and makes an inquiry the cry will be that he ought to know that much without asking; if he ventures to differ from others in regard to best method he is decried without mercy as a theorist, even if he has had practice to confirm his ideas. Then again in explaining situations it would often times serve to bring in other men, even without mentioning names, by the mere association which ever exists on locomotives, and the writer who would venture to criticise those over him, even if he had the best of reason and facts on his side, would no doubt find rather uncomfortable quarters, if allowed to continue in them at all. These are reasons which prevent the Mechanical Department from being as great a success as it might be, and the latter is no doubt one reason why it is not now so well filled as it used to be; but as the latter is an easily removed objection let us hope that it will be speedily cast into oblivion, and that the "boys" will have a chance to be heard from without giving themselves away if they don't want to. . . .

We are living in a fast age, with everything going at railroad speed, but now it is becoming a question what is to be considered fair railroad speed. All the roads are speeding up their trains, by shortening up the curves and taking out the grades where it is possible, by limiting the stops to as few as possible and as short a time at the stations as their business will permit; and then they come to the motive department and shorten the schedule time a few minutes here and there and get the speed up to 45 and 50 miles, and are not content to rest at that, but are now pressing on toward a higher mark yet, and as we hear of fast runs every day, some of which are ahead of the mile a minute gait even, it will not be long before we shall have trains regularly running at 60 miles an hour. Many runs have been made surpassing this speed and cutting the time down to a mile in 38 seconds, or at the rate of nearly 95 miles an hour, and it will no doubt soon reach the 100 mile an hour gait.

Nothing has done more to demonstrate the possibilities of fast traveling than the running of the Empire State Express by the N. Y. C. R. R., the regular schedule time of which is at the rate of over 52 miles per hour. As will sometimes happen on the best of roads the train has been delayed at times along the road, but it nearly always arrives on time at the end of its trip. To do this occasional runs have been made at the rate of 80 to 85 miles per hour on the west end of the road between Syracuse and Buffalo, where the grade and line of road is exceptionally favorable for high speed. Mr. Chas. Hogan is engineer in charge of the "999" which pulls the train over the western division, and is credited with having made the best time on record, and in a recent issue of *Locomotive Engineering* the secret of his success as a fast runner is given "in the steady manner of working up to speed; in the careful study he makes of how to work the engine into high velocity with the least possible drain on the boiler. He feeds the water very regularly, and never has it high

enough to cause priming, no matter how fast the cylinder may be drawing the supply of steam. He runs with a full throttle and regulates the speed by the reverse lever." The secret being thus out and made public it may be used by others, but the point we make is that theory is not against practice as at the head of this, but that good theory and good practice go "hand in hand," and that while by study we can form a theory, the practice will confirm and prove it. Dry steam used with a full throttle is good theory and will and does prove good practice.

---

As W. J. Edwards would be pleased to hear from me on the subject of the injector problem, which has aroused his attention, I will endeavor to answer him; but in doing so he must permit me to start off with the assertion that the injector is a mechanical paradox, for its action is apparently opposed to reason and common sense. Suppose, for instance, that a party of ten men were in a house holding a door shut, and that a party of men of the same size and strength were on the outside trying to get in by the door, but that owing to the door jams only eight men could find room to exert their strength on the door; would it be natural to believe that the eight men could force the door open and go in themselves, and take in with them such of their friends as they had a mind to? Yet this is what the injectors in use all over the land do in their everyday working, for we have, say, a pressure of 100 pounds on the top of the check valve, and take a part of this steam out, turn it in a pipe, allow it to pick up some water, and then when it comes to the check from the outside seeking admission, the force inside is not able to keep it out, but the door is as it were lifted from the hinges, and the outside crowd rushes in just as long as it pleases, in spite of the fact that the inside crowd is still pushing on the door with all its might and power, as is readily seen, for when you shut off the injector the check valve is brought down with a "click," showing that the power was still there ready to shut the valve but temporarily overpowered by the influx of the mixed stream. Of course, in trying to explain the working of this machine we hear of condensation of steam and induced currents and what not, yet it is as hard a question to answer as it would be to explain fully how it is that I bend my fingers in writing these lines, at the dictate of the invisible mind. It is true that there are some facts which are hard to prove, if they can be proven at all, and yet we must accept them as such.

Now, in regard to filling a boiler with 30 pounds of pressure, let me say that in my experience in the roundhouse and on the road I have found that a great deal of water can be put into the boiler with 30 pounds of pressure, having at times filled up boilers several gauges with a loss of only 15 to 20 pounds of steam, and have had injectors work with as low as 10 pounds of pressure, but the Monitor is not a success (at least in my experience) as a low pressure injector or even as a variable pressure injector, for it seems to be very sensitive to slight variations of pressure, requiring constant watch of the over-

flow as the pressure is reduced to make it take up its water. If the steam pressure was all gone from the boiler—in Bro. Edwards' case—and the water in the tank was higher than in the boiler, the boiler could be filled from the tank provided the water in the latter was high enough to overcome the weight of the check valve. As a matter of course the overflow valve would have to be closed, and some valve above the water in the boiler opened so as to produce no compression, and as it is the nature of water to find its level it would no doubt flow as long as its levels were unequal.

Having in a manner answered Bro. Edwards, I now wish to ask him some questions, and hope he will have pity on my ignorance and enlighten me. In the first place, how did your engine come to "die"—at a station at that? In my sixteen consecutive years, and in my previous service and connection with roads, I never saw or had anything to do with "a dead engine" whose boiler was in condition to be filled up, as seems to have been the case in this instance. Bro. Edwards says they had 30 pounds of steam; they must therefore have had water in the boiler, and to make it safe to fill her it ought to have covered the crown-sheet. What then was the idea of putting in more water and thus using up the steam instead of using the steam to re-kindle the fire, and then when that was done go on and supply water as needed? Again, if the engine was dead, what was the use of putting in water, if she had enough to cover the crown-sheet? If she had not enough to cover this, it would do more harm than good to put water into the boiler, even if the plates were cooled off in part. We have had dead engines by reason of bursted flues, dropped crown-sheets, blown out whistles, defective hand-hole plates, and by holes punched into the boilers in collisions, but in none of these cases was it desirable, necessary, or even possible to fill the boiler after the fire was gone, as I understand was the case with Bro. Edwards' engine. I should therefore like to have further light on the subject, which is certainly dark to me now, and I hope Bro. Edwards will in the interests of thousands of our fellow workers give us all the facts of the case, so that we may get all the points involved, and be able to form a better idea of the peculiar situation in which they were placed, and in which we may at some time find ourselves as well.

---

## PROGRESS OF THE ELECTRIC LOCOMOTIVE.

BY WILFRED P. BORLAND.

The electric locomotive is slowly but surely making its way to the front, and we may be sure that before many years steam locomotives will be nothing but a memory. The first electric locomotive of any considerable size in the United States, and what is claimed to be the

first practical high speed locomotive in the world adapted to the requirements of steam railroads, has recently been completed by the General Electric Co., and will be exhibited at the World's Fair. This locomotive is of thirty tons weight, and is designed for a normal speed of thirty miles an hour. It runs on four wheels 44 inches in diameter, and has two motors, one for each axle. The drawbar pull is calculated at 12,000 pounds. It was designed, primarily, for elevated railroad service and for passenger and light freight service on secondary lines. The only objection to the use of the electric locomotive over long distances is, at present, the great cost of long lines of electric feeders. When the problem presented by this condition is solved—and we may be quite sure that it will be solved at no very distant day—it will be only a question of time when the electric locomotive shall entirely supersede the steam locomotive in all kinds of railway service. Between places comparatively near each other, where the extreme cost of maintaining long feeder lines has not been encountered, the electric locomotive is even now becoming a dangerous rival of the steam locomotive. The General Electric Co., predicts as follows:

The evolution of the use of electric locomotives will probably follow along the lines dictated by expediency and favoring conditions. At first they will probably be used in elevated railroad service, and in New York, Brooklyn and Chicago alone their advent will be hailed with a feeling of deep gratitude. They will then probably be adopted as feeders to the trunk lines, both for freight and passenger traffic; and to operate short suburban lines, where a rapid efficient service is requisite. Their peculiar fitness for switching purposes will advance their use another step, and then slowly, as the different problems presented are overcome, they will invade the province of the trunk line steam locomotive, and the millennium of railroad travel will be within the realities of life.

Commenting on this, the *Railway Age* says: "It must be conceded that its predictions are fully within reasonable limits."

In France, recently, electric propulsion has been applied to locomotives upon apparently incongruous principles. Each locomotive is to generate its own power; a stationary boiler is mounted upon the locomotive frame, and the steam power generated in this boiler, instead of being applied directly to produce motion, is utilized for the generation of electric power, which is applied to produce motion. At first sight it would appear that there was not much to be gained by this method, but it is expected that the economy gained in the absence of all reciprocating parts will more than offset the apparent loss attendant upon the rather roundabout method of conversion of power, and, as each machine will be independent, and there will be no necessity for power stations and expensive feeder lines, it may be that it is in some such way as this the problem of electric propulsion will eventually be solved. With the general adoption of the electric locomotive, the duties of enginemen, and especially those of firemen, will be completely revolutionized. What will those who now perform the duties of locomotive firemen have to do on the electric locomotive? Many of the important duties which they are now called upon to perform will no longer be necessary, but there

will undoubtedly develop other duties quite as important as those which disappear. This generation shall probably not witness much change, but it is within the range of possibility that the locomotive fireman as we now know him, will, to the next and succeeding generations, be but a memory of the past."

At the recent convention of the Master Mechanic's Association, the committee on smoke prevention offered the following propositions:

Smoke prevention means perfect combustion. The matter of perfect combustion has been discussed, and the principles upon which it depends have been thoroughly established long before the existence of this association. Perfect combustion means:

1. That temperature of the fire box must be maintained at a sufficient high point to insure prompt combination of the carbon of the fuel with the oxygen.
2. An adequate supply of oxygen.
3. Proper presentation of the oxygen to the fuel.

It may be taken as an established fact that if the temperature of the bed of fuel is maintained at the proper point, and its efficiency not impaired by the addition of an excess of raw and cold fuel, and if the proper amount of oxygen is supplied, the prevention of smoke will be accomplished. We find in practice that the ordinary locomotive with deep fire box, equipped with a fire brick arch and ten two-inch combustion tubes, three on each side of the box and two on each end, can be operated practically with no smoke while running. It is understood that the locomotive is fired carefully, the fuel being introduced in small quantities so as not to lower the temperature of the incandescent mass of fuel.

There are suggestions here that firemen will do well to follow, but the first statement is misleading; it is not a statement of fact. If it had been put: Perfect combustion means smoke pervention, it would have been correct; but smoke prevention does not always mean perfect combustion. There may be, and in fact often is, very imperfect combustion with an entire absence of smoke. And now that may be a good question for the boys to consider. Mr. Pray very justly complains of the lack of interest in our question box. Let me put the question: Does smoke prevention mean perfect combustion? If not, why not?

In the discussion which followed this report many of the members described devices which had proved very successful in preventing smoke, but the unanimous verdict was that none of them ever saved a pound of coal. This experience ought to be conclusive that smoke prevention does not mean perfect combustion.

That remark of Mr. W. H. Marshall's in discussing the report, was a very just one. He said that "a good fireman was the best smoke consumer." That was probably the truest remark made in the whole course of the discussion. In the last analysis, both smoke prevention and perfect combustion depends upon the good work of the fireman. He must mix some brains with his work or else fails; however perfect any device may be it will fail to produce good results if manipulated by a poor fireman.

Now here is another question for the boys to consider. There is quite a common belief that there is a great deal of virtue in hot air to insure perfect combustion when admitted above the fire. Is there

any good grounds for this belief? Will we not accomplish as good results by admitting the proper quantity of cold air as though the air were heated? If not, why not? By admitting cold air in proper quantities do we abstract any of the existing heat of the furnace? If so, why so?

---

### AIR BRAKE PRACTICE.

---

MR. EDITOR:—There is quite an interesting discussion going on between the air brake people of the country, and, no doubt it will interest many of the readers of this department of the MAGAZINE.

The question at issue is, when a partial application is on, and occasion should arise for an emergency application, whether it is better to push the handle to the emergency notch at once, or first release the brake just long enough to recharge the train pipe and then make the emergency application. Some say that by putting the handle in release position for a moment before making the emergency application we shall get a more powerful application of the brakes than we could get by simply increasing to emergency application when partial application is on. It is wrong to release any brakes in case of emergency; but we are told not to leave the handle in release position too long, but just momentarily, in order to recharge the train pipe. But when we recharge the train pipe we release the brakes. The train pipe pressure holds the triple valve in release position and if we make a full service application we would get 50 pounds pressure in the brake cylinder. But they do not say when a full service application is on, but only a partial application; which would make it all the more powerful by pushing the handle clear to the right.

The graduating spring would have to be compressed before an emergency application could take place, and if a partial application is on, the piston of triple valve is not quite up against the graduating spring, but a short distance from it, which would leave room enough for the piston to receive the necessary momentum to compress this spring if the space between the piston and graduating spring cuts any figure in the case at all. The idea of releasing brakes which we have partially applied is certainly wrong; besides, we are told to do this in case of emergency, when we want to stop as soon as possible. It is too much of a scientific action to undertake at a time when an emergency application is desired. At such a time, if we released our brakes, we should have to watch the gauge to see when the train pipe was charged; that takes time, and time is the main thing in an emergency application of the brakes.

BALTIMORE, MD.

Walter C. Garaghty.

## THE ENGINE WAS RUN WITH AIR PRESSURE.

MR. EDITOR:—In answer to Mr. Weiler's question, I wish to give my idea as to how Mr. Holly created the required power to run a mile and win his bet. In the first place we will suppose that the cylinder packing and valve were perfectly tight. This being the case, I can imagine Mr. Holly sitting on the right hand side with the reverse lever in the back motion from the way he was being towed, and with the throttle and cylinder cocks open to admit the air into the boiler through the cylinders. Or, in other words the cylinder would act as an air pump to fill the boiler with air. In Mr. Weiler's article, it was not stated how far the engine was to be towed, and I am not prepared to give the exact distance it would take to accumulate air enough to run the engine one mile. I would like to hear from some one better posted than myself on that point. Here is a question to which I would like an answer: How far will a spot on the outer edge of a wheel, five feet in diameter, travel in going a given distance?

CHERRYVALE, KAN.

*Ira McNaught.*

## ANSWERS TO QUESTIONS.

MR. EDITOR:—I wish to answer Bro. Harvey's questions as follows:

1st. If monitor injector is in good shape, the heater cock may be shut clear down and water will still proceed on into the boiler.

2nd. Top guides always wear most, as the strain is on top guide all the time while engine is running forward and on bottom guide when running backward.

3rd. Engineers who say a certain wedge is stuck are correct. If the wedges are set up too close it causes friction and they will stick; if the wedges are pulled down friction is relieved and they no longer stick. Hence, the position of the wedge has all to do with the matter, in either case.

CHICAGO, ILL.

*J. E. House.*

## HOW HOLLY MUST HAVE DONE IT.

MR. EDITOR:—I think Mr. Weiler's story of running an engine a mile without steam or water is true. If I had been in Mr. Holly's place, I would have had the engine reversed while they were towing her and, by so doing, in a very short time the steam gauge will show pressure and the safety valve work the same as with steam.

ALLEGHENY, PA.

*W. J. Edwards.*

## IN ANSWER TO MR. WEILER'S PUZZLE.

MR. EDITOR:—In answer to Mr. Weiler's question, which appeared in the July MAGAZINE, I would say that I think a locomotive might be run a mile or two under the conditions mentioned. If I was in Mr. Holly's place, and could be towed out a mile or two, when I started I would put the reverse lever in the motion opposite to which I was being towed, and open the throttle. This would allow the air that was pumped into the cylinders to pass into the boiler, and by the time I had been towed a mile or so I would have pressure enough in the boiler to run a mile on level track. By an engine running ahead, in back motion, it makes air pumps of the cylinders. Let me know if I am right.

SOMERSET, KY.

*W. T. Franklin.*

## CLINKERS.

It is sometimes amusing to hear persons talk of their independence; one would suppose that they owed nothing whatever to any other member of society, being so entirely self-sufficient that they might exist alone.

This show of independence is mainly the result of ignorance, and its exhibition is almost always in bad taste. The fact is that there is not an entirely independent person on the face of the earth, from the Czar of all the Russias to the lowest tramp in existence; each person is, in some degree, dependent on his fellows for such benefits as he enjoys.

Mutual dependence is the very base of organized society; without mutual dependence society could not exist, and the wonderful development with which we are familiar could never have taken place. The wonderful triumphs of genius that enrich the world were not accomplished by independent beings.

Spite of the obvious facts of the case, men like to flatter themselves with the idea that they are independent; they like to believe that it is good for every tub to stand on its own bottom, and it don't require much argument to induce a man to think himself one of those tubs.

This exaggerated feeling of independence is one of the contradictions in the law of social development; it has always been a stumbling block to humanity at large, and is, to-day, one of the greatest hindrances to the elevation of the masses. When men learn that an acknowledgment of dependence does not necessarily imply a sacrifice of self-respect, we shall have taken a long step ahead.

Self-respect and independence are two very different qualities;

when one asserts his self-respect he asserts confidence in his own acts, belief in the equity of his dealings with his fellow men; his inner consciousness tells him that he has squared his conduct by the dictates of the moral law, and he inwardly rejoices that his conduct toward his fellows is above reproach.

But when he asserts his independence he simply asserts his power to live alone; he asserts the fallacy that his own merits, his own efforts and powers, are all sufficient for his needs; he asserts, in fact, that which is not true. It is the disposition to use these two terms synonymously that has produced the exaggerated notion that an independent person is a self-respecting person.

If we could only get rid of that notion it would be a grand thing for the cause of humanity; then, instead of seeing workers who have risen somewhat above their fellows, trying to stand alone and miserably failing in the effort, we should see them extending a helping hand to the less fortunate, and inviting them to assist in an united effort for a broader and grander social life.

Then, instead of seeing the different groups of workers trying to square their actions by the dictates of the false assertion that "every tub should stand on its own bottom," we should see them unitedly working for the attainment of a common end; then, instead of pulling in different directions and accomplishing little, both labor unions and individual workers would pull together and accomplish much.

---

## MECHANICAL MISCELLANY.

---

The example set by the Pennsylvania and the Lake Shore Railroad systems is one which it is to be hoped will be followed by every road in the country. These roads have granted to each employe two weeks' vacation, with free transportation to and from the exhibition at Chicago for themselves and all their dependent families. The exhibition now going on at Chicago is one the like of which will not probably be again seen in this country within this generation, and every possible facility should be given to those who can ill afford the expense of visiting it to do so if possible. The railroads are in a position to render much aid to their employes in the matter, and it is to be hoped they will make good use of their opportunities for doing good in this direction. Every employe will be the better employe for the education which will come of a visit to such an exhibition as this.—*American Machinist*.

While the compound locomotive does not seem to have met with the enthusiastic reception in this country that its projectors expected and hoped for, it still continues to hold its own in Germany. At a recent meeting of the German Association of Engineers, the Chief of the Locomotive Department of the Prussian State Railways stated that the trials of the compound locomotive indicated its superiority over the single system, in that it did more work, saved fuel, and threw fewer sparks.—*American Engineer*.

Dr. Brewer, of Cambridge, making all allowance for the Chinese inventive, lying faculty, allows them to have been acquainted with the properties of the magnetic needle B. C. 1715; while the early French Jesuit priests, who had no interest in supporting any mythical stories in the land of their adoption, believe trade routes and canals to have been in existence about the same period; that a system of regular marriages had been introduced among the people; that weaving was understood; banks and bank notes in existence; gunpowder; a regular calendar reformed B. C. 1498; a knowledge of lunar eclipses, and a division of the people into classes, each wearing a dress distinguished by its colors.—*Scientific American*.

From the appearance of the *Patent Office Record* a great many inventors are devoting their time to the designing of compound locomotives and their attachments. It looks as if the compound locomotive promises to become as fertile a source of revenue for patent lawyers as brakes and car couplers have been. At the beginning of this year there had been fifty-seven patents on compound locomotives taken out in this country. England was a little ahead of us with ninety-four patents, but it looks as if our inventors would be ahead before this year is out. Other countries have been well represented by inventors of compound locomotives, for France has 22 patents on this kind of engine, Germany 14, Italy 2, Switzerland 2, Russia 1, and Norway 1.—*Locomotive Engineering*.

One of the great decapods on the Erie met with a curious accident the other night. She went out to push a train up the hill from Port Jervis. One of her forward sand-boxes was filled and the other neglected. This caused her to catch on sand on one side only, and broke the side-rod between the two front pairs of wheels; one side letting go broke the other, and the first revolution the stub end of one rod flopped over against the saddle and chest and blocked that pair of wheels. The engineer could see or hear nothing wrong, after the first noise, and went on pushing the train some ten or fifteen miles. When he let go the train and started to back up she made racket enough to call for an emergency stop—she had flat spots 14 inches long on her forward tires.—*Locomotive Engineering*.

The old project of a ship canal from Georgian bay to lake Ontario at Toronto, which would shorten the water route between Chicago and New York 400 miles, has again been revived, and some strong names are given as members of the syndicate to promote it. As an engineering problem the work would not present great difficulty, but the real trouble will be to raise the \$50,000,000 or \$60,000,000 needed for making the canal and locks. If the cut-off should ever be built it would doubtless increase the competition between water routes and railways.—*Railway Age*.

On the 4th of May an engine on the Queen & Crescent came into Chattanooga with a bent piston rod. The rod and piston were taken out and the rod heated over a blacksmith fire. While the smith was straightening the rod the head exploded, killing the blacksmith and his helper and seriously wounding a man standing near by. Solid heads, so-called, those without followers and bull ring but cast in one piece, hollow, with the core-holes plugged up, have exploded several times of late years when heated and one case is reported where one blew up while under a drill press being tapped.—*Locomotive Engineering*.

The Richmond & Danville has put on a new fast mail train which leaves New York at 4 A. M. and Washington at 11:10 A. M., so as to arrive at Atlanta at 6 o'clock next morning, where direct connection is made with five or six diverging roads, distributing eastern papers and mail throughout Georgia and Alabama morning and evening of the second day from New York. The same fast time in the reverse direction will be made, thus bringing the north and the south closer together.—*Railway Age*.

# WOMAN'S DEPARTMENT.

EDITED BY IDA A. HARPER, INDIANAPOLIS, IND.

## THE COLUMBIAN EXPOSITION.

When I hear occasionally an individual say he is disappointed in the World's Fair, I wonder if there is anything in the universe that would not disappoint him. It seems to me the imagination could not picture anything more satisfying than this Exposition, whether taken as a whole or in detail. Nothing equal to it ever was seen, there will not be anything like it again within the next century. No nation within this space of time will attempt a World's Fair, as all succeeding ones would be measured by this. It would be impossible for any country, except the United States, to give such an exhibition, and, of course, it will not be attempted here again within the lifetime of any one now living. For that reason it is advisable for every one who is able to do so, to avail himself of the opportunity of seeing this unparalleled spectacle. It is to be most earnestly hoped that the railroads may find it possible to make such rates as will enable the general public to get to Chicago. My prediction is that before the end of the season, lodging can be obtained practically for what the lodger feels able to pay. There certainly is no lack of accommodation at present and prices have been already reduced. It always costs a good deal for board in a city but I have found no advance in the usual restaurant and hotel rates of Chicago. During a stay of three weeks I have not felt in any instance that I have been overcharged or swindled. There are many places where excellent lunches are put up for a quarter. At the restaurants one pays mostly for the service, and if he is willing to dispense with "style" he can get meals at reasonable prices. The World's Fair is not beyond the reach of any except those in straightened circumstances or those with large families, provided they do not have to pay too much to get to Chicago. Every one who possibly can afford it should attend the Fair, as it is in the nature of a liberal education, and will give a breadth of information that can be obtained in no other way. One comes in contact with the nations of the world and is able to make intelligent comparison.

Even with reduced railroad fare it is not probable that the attendance will be what was anticipated, because of the present financial stringency and the unsettled conditions. It is unfortunate, both for the people and for the Fair. A gentleman of national reputation said to me, "I do not enjoy the Exposition because I see the evidences of a big steal on every hand." He had had no opportunity for any of the pickings. The sight-seer need not worry about the

"steal." He will get the full value of every fifty cents which he pays at the gates. It doubtless would be too much to expect that so great an undertaking as this could be carried on without some of the funds being misapplied; the salaries seem unnecessarily large; there may be some crookedness in the matter of the "concessions;" but the fact remains that the public has offered to it the finest exhibition the world has ever seen, and it is not worth while to lose any sleep over the methods by which this was produced. The visitor at the Fair will find very little for criticism. One is particularly impressed with the arrangements for the safety and comfort of visitors. Every safeguard has been placed over the transportation by rail and by water, and it seems improbable that any accident could happen which possibly could be provided against. It is wonderful also how easily the people are managed and how little crowding there is. The buildings and grounds are so extensive that a hundred and twenty-five or fifty thousand people are able to go around with small inconvenience. There will be occasionally some crowding about a particularly attractive exhibit, but the visitors are in a continual hurry to see something else and one has only to wait a few moments for his turn. Filtered drinking water is furnished in abundance, free of charge, or one can have water from the Waukegan Springs for one cent a glass. Toilet rooms are free, but if one wants the use of soap, towels, etc., he pays five cents for them. There are plenty of seats everywhere, and one has to struggle continually between the temptation to occupy them and the other temptation constantly to move on and on in pursuit of the new and the interesting. I have met with nothing but courtesy on the part of the guards and all persons who were applied to for information, and I do not see how even the most carping and critical can find fault with the general arrangement and management of the Exposition.

The visitor finds here not only the products of all nations, but the greatest and best that these nations can produce, and he will be filled with surprise to see the high character of these exhibits. Countries which we have been accustomed to regard as crude and semi-civilized, astonish us with the beauty and skill of their display, while those countries even from which we expected much, amaze us by the magnificence of their exhibit. It is a good thing for a citizen of the United States to be brought face to face with these things, for he is prone to exalt the products of his own country above those of all others, and he sees in this object lesson that we have yet much to learn, in many departments, from the countries of the old world. It is a common remark from people who have been abroad that all their travels did not give them such an idea of the capabilities of other nations as they receive from a visit to the World's Fair. There are different ways of "doing" the Exposition. The specialist will select the one subject in which he is most deeply interested and spend his time in seeing what each country has to offer in this line. The careful, comprehensive observer will learn the location of every building and the nature of its exhibits, and will

map out each day's work systematically, obtaining a broad and intelligent idea of the entire Exposition. Another will skip about in a hit-or-miss manner, getting a superficial view of things, spending much of his time in visiting with acquaintances or sitting idly about and telling how tired he is, but when he gets back home his neighbors will think from his reports that he "saw it all." There is such a wealth of the interesting and instructive that it would be impossible to particularize. The Manufactures Building, whose walls enclose forty-four acres, contains the finest manufactured products of all civilized countries; the Art Hall has pictures and sculpture from all nations, the number running up into the thousands; the Transportation Building has everything used for carrying, from the ox-carts of South America to the most elegantly equipped railway train in the world, placed on exhibition by the New York Central; Machinery Hall, with every species of machinery, from a cherry seeder to a Hoe printing press, the silk looms of France, the great engines that furnish power for the machinery of the entire exhibit; Agricultural Hall, with every product of Mother Earth most effectively arranged; Horticultural Hall, with its splendid treasures of flowers and fruit from every country; the Electrical Building, which makes the stories of Aladdin and the genii a present reality; the Mining, the Forestry and the Leather Buildings, with their complete exhibits. Really, one must not attempt detailed description, for there is the Government display from Washington; the Fisheries; the Dairy, with its wonderful cattle; the beautiful buildings of the foreign countries, France, England, Germany, Brazil, Sweden, the East Indies, and many others; and all the state buildings, each with the attractions peculiar to its state, with California in the lead. Then there are the old convent of La Rabida, so inseparably connected with the history of Columbus, and containing over a thousand relics, centuries old; the caves of the Cliff-Dwellers; the Indian school; the great Krupp guns; the quaint Japanese houses, and the Alaskan and Esquimaux villages, with their most uncomfortable inhabitants. One does not know where to stop, but fortunately the daily newspapers have made all of these points familiar to the readers. Never before was there such a spectacle—but a step from Lapland to South Africa, only a moment's walk from the snows of Siberia to orange groves and magnolias.

Probably that feature of the great Fair which attracts the most attention is the Midway Plaisance, a long street or avenue, over a mile in length, devoted to what may be called Vanity Fair. This avenue is thronged from the time the gates are opened in the morning until almost midnight. Many people of culture and education declare that they find it a never-ending source of entertainment. To me it represents coarseness, vulgarity, fraud and immorality. I took it all in, with the proper escort, from the "Congress of Beautiful Women," the worst "fake" on the grounds, to the dirty Bedouins, at the end, attended the wretched theatres, drank lemonade in the beer gardens, promenaded the streets of Cairo along with the camels,

donkeys and filthy Arabs; and wondered in what particular spot the cholera would break out first. I can understand why everybody should want to make the rounds once, to satisfy curiosity. Here, side by side, are Fiji Islanders, Egyptians, Moors, Chinese, Japanese, Laplanders, Turks, Dahomeyites and other nationalities, in most picturesque confusion. There are a Babel of tongues, the din of every kind of music known to these nations, coarse, dirty men, bold, half-dressed women and the most promiscuous crowd of people that could be gathered under the sun. It affords, it is true, a study of foreign life, but only of one phase of it and that of a very low order. I cannot understand what it is that takes people of refinement down the Midway, day after day. Is it the Bohemian instinct that is usually suppressed by the conventional requirements of life but crops out when it dares do so? Daily contact with these scenes cannot fail to be demoralizing. The dancing in the theatres is extremely disgusting, and those who understand matters know that the customs of those countries would permit only one class of women to come over here in this capacity. There are some respectable features connected with the Midway, the glass works, the Ferris wheel, the menagerie of trained animals, but I cannot regard the general tendency as other than degrading. The foreigners themselves are not likely to be greatly improved, if one is to judge by the frequent spectacle of the Egyptians, South Sea Islanders, etc., carrying buckets and pitchers of beer to their associates at all hours of the day and night. It is said all of these foreigners develop an amazing taste for American lager beer, and they will take this and a great many American dollars away with them as souvenirs.

One returns with pleasure to the Exposition grounds, with their broad avenues, their beautiful buildings and crowds of orderly, respectable people. One of the distinguishing characteristics of the Fair is the excellent behavior of the crowds of people. It is a subject of universal comment. In three weeks' time I have not seen one person under the influence of liquor or one instance of disorderly conduct, and yet, during this time, there have been many hundred thousand people on the grounds. I believe a young girl, or a party of girls, could spend any length of time at the Fair without being annoyed by an improper look or word. There are various reasons for this: The Fair does not attract that class of men who are apt to insult women; any attempt of this kind would necessarily attract the notice of a large number of people; the police supervision of the grounds is admirable; but the chief reason, doubtless, is that everybody goes to see the exhibits, buildings, etc., and there is so much on every hand that is so intensely interesting as to leave no leisure or inclination for other pastime. One goes away footsore and weary, utterly exhausted in mind and body, but with recollections that time can never efface. Never was there such a scene as is presented at evening on the World's Fair grounds. The New Jerusalem cannot be more beautiful. On the east, Lake Michigan stretching away in the distance, the outlines of many vessels

standing in relief against the evening sky; near the shore the great gunboat, "Illinois," the graceful Spanish caravels, the sturdy little "Viking," naval exhibits of three countries and three ages; the lagoon wandering through grassy parks, spanned by graceful bridges and dotted by Venetian gondolas; the Wooded Island, with its luxurious foliage, its picturesque cottages, and the white swans coming down to the water's edge; the magnificent fountains throwing their silvery spray high in the air; innumerable groups of statuary; every conceivable style of architecture represented in the great white buildings, the sparkle of countless thousands of incandescent lights; the exquisite music of the Marine Band, the only sound that breaks the stillness. Nothing like it can be imagined. It is a picture of the old world and the new, the past and the present, the beauty of nature and of art. Fortunate, indeed, are they who can count as the choicest of memory's pictures this one of the City of Enchantment.

---

## WOMEN AND THE WORLD'S FAIR.

---

There is danger that this may be a World's Fair edition of the Woman's Department, but it may not happen again for four hundred years. The first structure that confronts one upon entering the grounds is the Woman's Building, and in this every woman feels an especial interest. Through the efforts of Mrs. Palmer it was the first to receive an appropriation from congress; it was under headway before the men had quit wrangling about money matters or commenced work; it was the first building finished, and almost the only one that was ready for dedication when the fair opened; it is, I understand, the only one that kept within the appropriation, of which it still has \$40,000. (It is proposed to make this the nucleus of a great permanent woman's building in Chicago to be used for congresses, lectures, concerts, etc.) Its architect was a woman, all the wood-carving, ceiling decoration, etc., were done by women. It is filled with the work of women of all countries—painting, sculpture, needlework, etc. The wonderful African exhibit of Mrs. M. French Sheldon is here, in charge of that lady, who has explored the very heart of Africa, the most remarkable deed ever performed by a woman. The display here does not fully represent the accomplishments of women, as their work which is entered for award is placed in all departments of the exposition by the side of men's work, with no distinguishing mark. In fact it is said that there is scarcely one department in which woman's work is not represented.

Although women are so prominent a factor in the fair they have had to fight for every inch of ground. The first fight was made by

the woman suffragists before congress for a representation of women on the board of managers. A bill was secured granting this, but the appointments were placed in the hands of the national commission of men. They were made in a purely complimentary spirit, without any thought of the women taking an active part. While some members of the commission have encouraged and assisted their efforts others have placed every obstacle in their way and contested every step they have taken. One prominent politician and member of the national commission wrote: "I am opposed to any woman having any position of either honor or profit connected with the fair." A few years from now, when he is soliciting the votes of women, this letter will make interesting reading. A determined effort had been made in every state to secure the appointment of women upon state boards, and in many instances it was unsuccessful. In a number of states the women were refused any money with which to secure an exhibit, or had to take such small portion as men were willing to dole out to them. When it came to the appointment of juries of award, positions with salaries attached, there was a determined attempt made to prevent women from receiving any of them, and it was only through a persistent fight on the part of Mrs. Palmer and her co-workers that women were allowed a share of these, and then it was granted at so late an hour as to make it almost impossible to secure the judges desired. This matter, like every other in this country, resolved itself into a question of politics, and in such a case women are always at an immense disadvantage. It is not till women attempt to do some public work or to transact business for themselves that they fully realize the situation. The World's Fair has offered women a magnificent opportunity to show their capability and has given such an impulse toward the cause of equal rights as to make its success a certainty at not a very distant day.

One of the interesting sights at the fair is the children's building, a place where the children may be cared for while the parents see the exposition. It is an exhibit of a model day-nursery, and, through glass partitions, the visitors may look at the dainty white beds, the white capped and aproned nurses and the babies receiving even better care than parents could give. In another department is the play room for older children, where everything possible is provided for their amusement. By the payment of twenty-five cents the child will be cared for all day. A man stood by the side of me as I watched the little ones. He held a child of, perhaps, two years old in his arms. He had been dragging it around the fair grounds all day and it was hot, tired, dirty and cross, the picture of discomfort. Looking at those within, clean, cool and comfortable, he said, giving the child a squeeze, "Papa never would leave his baby in there among strangers." I contrasted the condition of the children and said to myself, "There are several kinds of parental love."

---

## THE ANGEL OF DEATH.

---

Many of our readers have a personal acquaintance with Mrs. Eugenie Debs Selby and she has endeared herself to them by her sterling qualities of heart and mind. Others know her through the excellent contributions she has sent at rare intervals to this department. For many months her pen has been silent, for a dark shadow has rested upon her home, and she has realized that the life of the husband she loved so well was almost at its close. The marriage was an exceptionally happy one, it was consecrated by one bright and beautiful boy, and the future seemed full of promise. Then the sorrow came. Overwork on the part of the husband brought on mental and physical prostration from which he never recovered. The courageous wife took up the work the husband laid down and has made a brave fight against grief and anxiety and weariness of body and mind. The end came in June, and the tired soul found eternal rest. We, who have known Mrs. Selby for many years, understand with what fortitude and heroism she will bear this sorrow. Her cherished parents, her beloved child, her work in the brotherhood office, will continue to receive the most conscientious devotion; her grief will never make her selfish or forgetful of others, but it will shroud her heart with that desolation of widowhood which only those who have felt it can appreciate. Fortunate, indeed, it is that "Love and Hope remain forever." I am sure that I speak for all the writers and the readers of the Woman's Department, with which our friend has been always intimately associated, when I ask her to accept all that we can offer of sympathy and affection.

---

For several years the Woman's Department has published contributions signed "Wilda Chesterfield." They were from the pen of Miss Ida Orrell, of Murphysboro, Ills., and were among the very best articles ever received for this department. They were original, bright, independent and interesting, treating in an honest and sensible manner the various topics of the day, and were always published without a word of correction or change. From the same place came other contributions, equally meritorious, signed "Pebble," but in the same handwriting. I was puzzled to understand it until I learned, through a private letter, that "Pebble" was Mrs. M. Orrell, the mother, and that Ida copied her articles for her because she wrote a plainer hand. I felt an especial interest in these two writers and it is with the deepest sorrow that I learn, through a letter received from the mother, that her beloved daughter died June 26, of typhoid fever, aged twenty-one years and six months. Ida had entered into a lovely young womanhood. She had dedicated her life to the uplifting of humanity; she was secretary of the Equal Suffrage Association, superintendent of the Flower Mission of the W. C. T. U. and, with eloquent pen, championed the cause of every

right. Every reader of the Woman's Department will feel a sense of personal loss in the death of this gifted young woman and the ending of a career so full of beautiful promise. Our most sincere sympathy is extended to the widowed mother. Fifteen months ago she was called upon to bid a last farewell to another beloved daughter, twenty-six years of age; and a few years ago, within the space of five weeks, she lost through death a daughter of fifteen and a son of eight years. One only son is now left to support and comfort her in her sorrow. In such affliction very little consolation can be put into mere words, but we wish Mrs. Orrell to know that our hearts are full of tenderness for her in her terrible grief, and that we offer her all there is in loving remembrance.

---

## NOTES.

---

The poem from Chicago signed "Anonymous," cannot be used without the name of the writer. It awaits his permission.—— Several inquiries have been received this month in regard to the formation of Woman's Auxiliaries, but as I am away from all my books, papers and other references, I cannot answer them at present. A list of the Auxiliaries and National officers may be found in the August number of the MAGAZINE.—— A communication is received in regard to a "plagiarized" article which recently appeared in this department, but it cannot receive attention until I can get a copy of the MAGAZINE which contained it.—— A number of readable and properly signed articles have been crowded out of recent issues of the MAGAZINE, but I trust they may yet appear. The Woman's Department was liberally remembered this month.

---

The women of Idaho are amazed to learn that the last legislature took away from them the right of school suffrage. It was done so quietly and surreptitiously that they knew nothing about it until it was too late. If there had been just one woman in that body, this could not have happened. She would have sounded the alarm. Now the women will have to go to work with prayers and petitions and endeavor to get another bill passed. This is what it means to belong to a body of unrepresented citizens.

---

In Kansas, women are permitted to serve on the boards of trustees of insane hospitals, and Mrs. Mary A. Lease has been made President of the State Board of Charities. It seems to be a pretty good thing for the poor and afflicted that women receive equal recognition in Kansas.

## NOTES BY THE WAY.

---

When the recent case of "hazing" in the Wesleyan University at Delaware, O., occurred, sensational reports were published as to the active participation of girls in the cruel sport. Various papers took occasion to use this as an argument against co-education. An official statement has been issued by the faculty and leading citizens declaring that neither on this occasion nor any other has there been any "hazing" done by the girls of the college. The obstructionists will have to hunt up some other argument.

---

The legislature of Colorado has passed an act which sends to the county jail for sixty days any man who fails to support his wife and children. Wonderful legislation! If a man refuse to support his family, send him to jail for a couple of months, where he cannot work, and let him be fed and lodged in idleness while the tax payers foot the bills. Meanwhile, what becomes of the family? Why not put him at hard labor, deduct enough of his earnings to pay his expenses and apply the rest to the support of his wife and children?

---

## THE BENEFITS OF UNITED EFFORT.

---

Good morning! 'Tis a stranger that greets you and asks admittance to your ranks. You ask for the countersign? I can not give it. I am not a fireman's wife. But I know her. I have lived near her—so near that our joys and our sorrows seemed to intermingle. So near that the great headlight that each day came swinging into sight from around the mountain shed its light into my life as well as hers.

If the train is on time, the fireman's wife watches its incoming, smiling at the wave of a hand or handkerchief from the left-hand side of the cab. But if I do not, what does it matter? If the train is late—so late, in fact, that the stars have been dimmed by the red light in the east, who, then, watches for its incoming? The fireman's wife alone? No, the railroad man's wife, wherever she may be. Then what does it matter whether I listen for the shriek of the whistle or watch for the brakeman's signal lantern? Or whether my prayer has been for the one on the right-hand side of the cab or the one on the left? Or whether for the one who apparently has nothing to do but punch tickets and tell jokes, yet with his mind all the while with the great serpent-like train creeping so gracefully up the grade with its load of human freight? Or, if my thoughts are with the switchman, still at his post, or the dispatcher, yet in his chair, his temples throbbing and his chart spread out before him? For somewhere a woman anxiously awaits their coming.

Or, if I be the mother of the overworked boy operator, who, perchance, through some fault not all his own, has sent a dozen souls into eternity? Am I still not entitled to your sympathy and a place in your midst? It is too dark to see the wave of a well-known hand, but out of the darkness that comes just before dawn we are watching for the same train. Our thoughts and our prayers

are the same, and when a low, rumbling like that of distant thunder tells of its approach, whose heart is made lighter by the sound? That of the railroad man's wife. It matters not in what capacity her husband may be employed. I have on my table a dozen copies of the FIREMEN'S MAGAZINE, also a few copies of the Conductors' and Engineers' journals, and I read other railway literature. I try to find some good reason for preferring one above another, but I find none. When I read in the Woman's Department of the FIREMEN'S MAGAZINE some articles which to my weak judgment have appeared to be better written than others, I think possibly they are from a better brain but not from a better heart. The motive that prompted them was the same. So it is when I read the different journals. If we read in the spirit in which they are written, they all tell of splendid efforts devoted to a good cause, in that of running trains and properly organizing and conducting lodges.

Then a word to the railroad men: To run a train requires your united efforts. If you were requested to go out with a partial crew or a man short you would refuse. If another man be supplied and the former suspended, you would insist upon your right to investigate the matter and if possible restore to him his position. If you succeed, good and well. You release yourself from further obligation. Then you go to your lodge room and bar your door against him. Is this not inconsistent? It takes you all to run one train, then of necessity it takes you all to run one lodge. Virtually there is but one lodge. It is only an egotistical way of thinking. You erroneously believe you have separate interests. You are all striving for the same end, and the only way to attain this is by co-operation. "United we stand and divided we fall," is a maxim as true as it is old. Your interests are federated, from your wife, mother and sweetheart, to the highest official on the road. Then, why not federate your lodges? I like the FIREMEN'S MAGAZINE because it so wisely urges federation.

Not until you recognize but one brotherhood, will capital recognize your power. Already, through the legislatures, they are preparing a defence against the day they fear will come—the day when you will arise in your might and declare yourselves master. The lash is already in your hand, but as yet you are too weak to use it. When a man goes to New York City, and then to Wall street, the magnet that draws American speculators of great magnitude, he is not asked in what capacity he has served in the commercial field, but is at once tagged with gold and assigned to duty. He may deal in cotton, pork or corn—it matters not—his ambition is money, and not a straw is laid in his way. They organize themselves into gigantic trusts for the sake of mutual protection. From what or whom do they seek protection? Certainly not from each other. The plain simple object of such a trust is to compel you to pay their price for what your labor produces, and to drive out any concern which you might have the presumption to establish with your limited amount of means. They pull together as consistently and harmoniously as beavers; they never strike when you oppose them. They hold the reins of our government securely. That they may strike the blow at the root of the tree, they make the laws that hold us slaves, and laugh at our wriggling to free ourselves from its meshes. This is the test by which they tell how effectually they have done their work. As to strikes, I have seen and read of them until my faith is shaken. I think they should be but temporarily upheld by the brotherhood, on the principle that a poor prop is better than no prop at all, but all the while be hewing out timber for a better one. Strikes deplete the treasuries of the lodges, where the money must come from those that can ill afford to lose it, and without permanent results. They only tide over affairs for the time being. The best results to the laboring man must be brought about at the polls. The cost to the strikers has presumably been replaced by increase of wages, but not a single life has been replaced. The father can not be restored to the fatherless, nor the husband to the widow. When men fight and die for their right to earn a living, something is wrong, and a better way must be found.

'Tis not the blood of a money king that has been shed, but that of some un-

fortunate wretch who, having become disheartened with some former strike, has crept back like a whipped dog to do his master's bidding in return for his daily bread, and when another strike is inaugurated the emaciated face of a wife and children appeal to him, and the white slave cringes at the feet of his master. He is called a coward and struck down, while only God knows how brave an act he has committed.

And, thanks be to God, that he is oblivious to the fact that here in beautiful America, the land of the free, he is at last laid to rest in a spot made so conspicuous that it does not need an inscription to tell the world that he was a pauper and buried by charity. Only a pauper! There is no room for him beside the more fortunate dead. Flowers and tears are not for him, so let us pass on to some more favored spot.

In the name of the dear Lord, who spreads His sunshine over the rich and poor alike, I ask, when and how will this great wrong be righted? Reason teaches that it will be when men stand by their manhood—when money has no value in politics; when laboring men unite in helping to make the laws that govern them; when they read and think for themselves, and vote for the man of their choice without the aid of the political canvasser and schemer who persuades and hires men to be driven to the polls like cattle to the slaughter. Then, and not till then, will this awful wrong be righted. And may the time be near at hand when the FIREMEN'S MAGAZINE, by its untiring efforts, will succeed in bringing about complete federation of labor.

*Mrs. T. J. Burns.*

---

#### A MOTHER'S LOVE.

---

I wonder how many know how and when to appreciate a mother's love. Can a mother's love be supplied? No, a thousand times, no! By the deep, earnest yearning of my spirit for a mother's love, by the weary, aching void in my heart, by the restless, unsatisfied wanderings of my affections, ever seeking an object on which to rest, I answer no. Often do I sigh in my struggles with the hard, uncaring world for the sweet, deep security I felt when, of an evening, nestling in her bosom, listening to some quiet tale suitable to my age, and never can I forget her glance upon me when I appeared asleep—never, her kiss of peace at night. How great is the love of a mother! She will sacrifice every comfort to the convenience of her child, surrender every pleasure to his enjoyment. She will glory in his fame, and if misfortune overtakes him, and if disgrace settle on his name, she will love and cherish him the more. Alas! how little do we appreciate a mother's tenderness while living, but when she is dead and gone, when cares and coldness come withering to our hearts, when we experience how hard it is to find true sympathy, how few to befriend us in our misfortunes, then it is that we think of the mother we have lost, lost forever. Mother is the angel spirit of home. What is home without a mother? Those who are blessed with a good, pure, warm-hearted mother, find it difficult to answer this question; but, go to a poor orphan. She can answer from experience. You cannot realize the cares and affections of a mother until it is too late. She is gone from this world to wait for you in a better one, where there will be no parting. You may have relations and friends to love you, but none can fill the place of a dear mother. A mother's love and cares come natural and free; there is no deception in them—they come from the very depths of the heart. I say to all who have parents: "Learn to appreciate them while they are living, for you will miss them when they are dead and gone. Remember that your best friend is your mother."

Du Bois, Pa.

*Mamie Wise.*

## CHILDREN.

How many of the contributors to the MAGAZINE have children, and those who have, I wonder if they stop and think, as often as they should, what a very great responsibility it is to be a mother. How we should watch and guard every word and action, for nothing escapes the little ears and how quick they are to imitate *every thing* that mamma does. The mother, to them, is the God of creation, and how hard we should strive to be worthy our children's trust and confidence, for if there is anything pure on earth it is little children. God said "suffer them to come unto me and forbid them not, for of such is the Kingdom of Heaven." We do not, any of us, realize how sensitive their little hearts are, nor how a harsh word spoken in anger or a blow given out of season are not easily forgotten, but are treasured up and help to harden the heart of the little one, where in nine cases out of ten, kind words, and no blows at all, would be more effective. I am not much of a believer in corporal punishment. Of course, a child has to be punished in some way, and sometimes nothing will do but a little switching, but the parent should use judgment in that as in every thing else. I have a neighbor who is forever "yelling" at her children. She makes more noise than all the rest of the neighbors, and her children are the worst specimens of childhood I ever saw. Her trouble is that she will tell them to do a thing but will pay no more attention just then. They do not mind her at all. She thinks of it later on and her temper gets red hot. Then she whips them till she is worn out and it does not do the children any good. I have two children and since I have lived in this neighborhood I have learned a great lesson. I can manage my children without using the whip. Oh, how badly we would feel if one of our little ones should be taken away from us. Then we would regret every blow and unkind word we had ever given them. My children are small yet, one five years and one three, but I shall endeavor to so act toward them that when they grow up they will never have any but pleasant memories of their mother.

Another sad mistake that mothers make so often is not to confide in their daughters and tell them what they ought to know as they grow older. Make companions of your girls. Teach them the right way and make your daughter know that her mother is her best earthly friend, and in return she will confide all her little joys and sorrows to the willing and sympathetic ear of her mother. In too many cases the mother holds herself aloof from her daughter. I know from experience. I had as good a mother as ever lived but she made that one great mistake. She never seemed to realize that I was a child no longer, and I never dared to go to my mother and ask questions, I would have liked to ask. If a mother will talk to her girls, they will not seek for information elsewhere, and it is dangerous for a girl to get information from first one and then another.

AUBURN PARK, ILLS.

## WOMAN'S RIGHTS.

A right to tread so softly  
Beside the couch of pain,  
To smooth with gentle fingers  
The tangled locks again;  
To watch beside the dying  
In wee small hours of night,  
And breathe a consecrating prayer  
When the spirit takes its flight.

A right to be a woman  
In truest woman's work,  
If life should be a hard one,  
No duties e'er to shirk.

LOCKLAND, KY.

A right to show to others  
How strong a woman grows,  
When skies are dark and lowering  
And life bears not a rose.

A right to love one truly,  
And be loved back again;  
A right to share his fortune  
Through sunlight and through rain,  
A right to be protected  
From life's most cruel light,  
By manly love and courage,  
Sure these are woman's rights.

*Mary L. Mohr.*

## RAILROAD MEN.

I have been reading the July number of the *MAGAZINE*, and some of the letters are perfect gems, Mazie Burns, especially, and now may I say a word or two for the boys.

I know the railroad boys are considered by some a rough set. But they, like a great many people who have to take this old world rough and tumble, rarely, if ever, get their just deserts. I was deeply impressed with an occurrence which came under my observation not long ago that clearly proved that the innocent as well as the guilty have to suffer. There were two work trains stationed at this place; spent every night and Sundays here. The railroad boys knew some of our town boys and very soon they were invited to all our parties, societies, picnics, etc., and introduced all round, and we found them perfect gentlemen and they added a great deal to the pleasure of our little gatherings. They soon became very popular and were liked by every one. There were two who held aloof and never attended any of the amusements of any kind. Still, everything went along smoothly and the railroad boys were voted the finest. But one night when they returned to their cars they found the two men, before mentioned, quarreling with some negroes, who were drinking. The boys did every thing they could to keep the row down but in spite of them, the town authorities heard of it and came and arrested them all, and of course the innocent suffered with the guilty, and I am sorry to say the boys were not received as cordially after that in the homes where they had been made feel so welcome. Of course, the impression with the majority was that the boys were all drunk and it was a general fight and all were in it. One of the boys said later, "It is no wonder to me that we railroad boys have such bad names off the road. We get credit for all the meanness that is done, whether we are the guilty parties or not. That we are railroad boys is sufficient proof."

"We do not deny that there are bad men on the road. None of us have the reputation of being angels, still there are as good men on the road as there are to be found in the world and it is unjust that we get credit for the bad only. There are bad men to be found in every class of life and the railroad has its share of them."

Mrs. Harper, why can't you give us young people a correspondence page in your department, and let us discuss different subjects each month? I think we would all enjoy it, besides derive a great deal of benefit therefrom.

BIG SPRING, N. C.

*Sadie V. Marchall.*

[The pages of the Woman's Department are open to a discussion of all suitable topics.—Ed.]

## ON THE SEA OF LIFE.

Drifting, drifting, slowly drifting  
O'er life's dark and troubled sea,  
While the restless waves of sorrow  
Surge around unceasingly;  
On, still on, while surging billows  
Crush me with their mighty force,  
On, still on, while grief o'erwhelms me,  
Leaving scars to mark its course.  
Drifting, drifting, ever drifting,  
Out among life's breakers, deep,  
While the heart is filled with anguish,  
And my eyes sad tears do weep;

WEST OAKLAND, CAL.

For life's clouds that darkly lower  
O'er my way bring naught but gloom,  
And I grope amidst the darkness,  
Where bright sunlight ne'er illumines.

Drifting, drifting, onward drifting,  
'Neath a dark and leaden sky,  
Where life's hopes lie crushed and blighted,  
Where dense shadows gather nigh;  
And the heart will know no gladness,  
In the passing years, so dear—  
Dim and dark life's vista opens,  
Wherein no sunlight doth appear.

*Mrs. Nellie Bloom.*

# THE MAGAZINE.

PUBLISHED ON THE FIRST DAY OF EACH MONTH,  
AT TERRE HAUTE, INDIANA.

TERMS—ONE DOLLAR PER YEAR IN ADVANCE.

MANUSCRIPTS AND EXCHANGES should be addressed to Eugene V. Debs, Editor, Terre Haute, Ind.

REMITTANCES, SUBSCRIPTIONS, CHANGES OF ADDRESSES, and all correspondence relating to the business department, should be directed to F. W. Arnold, Manager, Terre Haute, Ind.

ADVERTISING:—All correspondence relating to advertising must be addressed to WM. N. GATES, MANAGER, 29 EUCLID AVE., CLEVELAND, OHIO.

W. N. GATES . . . . . Advertising Agent

SEPTEMBER, 1893.

MR. W. S. MELLEN.

The general manager of the Northern Pacific and Wisconsin Central railways died suddenly at a recent date, at Victoria, B. C., of paralysis of the heart. In all lodges of railroad employes where Mr. Mellen was known, there will be sorrow as the sad news is recited, for none knew him but to love and respect him. Mr. Mellen rose to the position of general manager from the ground floor; and he grew as he advanced, but never outgrew that kindness of heart which distinguished him when he was numbered with the toilers. Indeed, as promotion came to him as a reward of merit, the generosity of his nature expanded, and he evinced on all occasions his sympathy for meritorious employes when in misfortune. Struck down in the prime of mature manhood, he had shown himself equal to the best of the masterly men who had preceded him as general manager on the Northern Pacific system, and his death creates a void not easily filled. His sufferings were brief. He was spared wasting sickness, and though he went suddenly he responded to the summons like one who hears the plaudit, "Well done, good and faithful servant," and passes on to a still higher position.

THE MAGAZINE learns from the Phillipsburg Post of August 7, that Lehigh Lodge, B. of L. F., at Mauch Chunk, on the 6th inst., presented Bro. Charles A. Wilson, chairman of the grievance committee on the New Jersey Central railroad, with a superb gold watch as a testimonial of the high regard in which Brother Wilson is held as a brother fireman and an efficient official. We congratulate Brother Wilson upon his good fortune.

## AN ASSISTANCE FUND.

MR. EDITOR:—The fact that there is always a number of brotherhood men out of employment, through no fault of their own, and who are compelled to travel the country in search of work, is one which cannot be ignored. These men are in every respect worthy of assistance; many have families dependent upon them, and in their travels about the country such little store of wealth as they have, soon disappears. In such emergencies they become unwilling burdens upon their brothers in various parts of the country. The brothers are bound by every obligation of the order to render all the assistance in their power to brothers in need, and it is rare indeed that this duty is neglected; many carrying their ideas of duty in this respect even to the point of generosity. But it so happens that the burdens spoken of, however cheerfully and willingly they may be assumed, are very unequally distributed. The development of the railroad interests has been such as to attract the unemployed towards the western portions of the country as being the most favorable field for securing employment, and the western brothers have thus been saddled with burdens which those in the east are comparatively free from. The western brothers have borne these burdens nobly; those who lack the experience can form but a faint idea of the immense sum which is paid out yearly in aid of unemployed brotherhood men throughout the west, and which is mainly the result of individual generosity and ideas of duty. It is also true that many of those who are constrained to accept the assistance of their brothers do so unwillingly, their natures revolt against the idea of exposing their poverty to strangers, even though they be brothers. That many are thus compelled to become unwilling burdens upon their brothers, and that these brothers are thus unduly taxed for their membership in the order, seems to be due to an imperfect recognition of the inexorable truth that many of the brothers must, inevitably, always be out of employment, and, consequently, an improper treatment of the fact as it exists. The brotherhood man who is out of employment is worthy of the same protection and assistance from the order at large as is the one who may be employed in a paying position. This proposition will be admitted as true, yet its truth is continually denied by the different treatment accorded to the unemployed brother, as compared with the treatment accorded to the employed brother. The whole strength of the order is exerted to protect the rights of, and secure justice for the one who is working; but let him lose his job and he no longer finds any systematic recognition of his existence; he is then dependent upon individual ideas and interpretations of duty for such assistance as he may need. It

seems as though the unemployed brother ought to be officially recognized as a fact; it seems as though a systematic plan for his assistance ought to be inaugurated, a plan which will relieve him from the necessity of depending upon individual generosity; give him the independent feeling of one who is enjoying benefits which are rightfully his own, and, at the same time, distribute the burden of assistance equally upon the members of the order at large.

Let there be a fund created by assessment upon each member of, say, 25 cents per month. This assessment to be turned into the grand lodge treasury each month, to be there set aside and used for the assistance of the unemployed members only. When a member loses his position and is compelled to travel in search of work, let him receive, upon the same conditions as he receives his traveling card, a voucher bearing the grand and subordinate lodge seals, and having blank spaces for entering dates and amounts. Armed with this voucher the traveling brother may, when in need of assistance, apply to the receiver of any lodge in the country and receive the sum determined upon, say \$7 per week, which is to be calculated from last date entered upon the voucher, the new date and amount paid to be then entered upon the voucher. The receiver will take the member's receipt for the amount paid, which receipt is to be turned into the grand lodge as so much cash and which will be the grand treasurer's authority for transferring the amount named in the receipt from the assistance fund to, say, the beneficiary fund, thus balancing accounts. When the member has secured work he is to immediately surrender his voucher to the receiver of the nearest lodge, who will at once turn it in to the grand lodge, where the grand treasurer will check the receipts in his possession by the voucher, thus detecting any error which may have been made, and the receiver making an error should be held accountable for it. Upon issuing one of these vouchers the lodge issuing it should at once notify the grand lodge, giving the name of the member to whom voucher was issued and the number of the voucher, this information to be entered in a grand lodge register kept for that purpose, where it would furnish an additional check for detecting error as well as supplying valuable knowledge concerning the percentage of the membership that was traveling the country in search of work. With some such plan in operation the traveling brother would feel comparatively independent; he would be relieved from the necessity of depending upon individual generosity for the assistance which he must have, and he would be surely impressed with the idea that the B. L. F., as an order, was as truly solicitous for his welfare in periods of adversity as in prosperity. At the same

time those who are cheerfully assuming burdens disproportionate with the benefits they are receiving, would be relieved; they might feel that such burdens were equally distributed among all members of the order, and that their unfortunate brothers were a thousand times better provided for than under the old haphazard and unsystematic methods of individual relief. Of course it would be necessary to introduce some safeguards to protect the order from the schemes of unprincipled ones, who are found in all organizations and who would be inclined to take advantage of such a measure; but that might easily be done, and I believe an absolutely safe measure, such as I have outlined, might be introduced, to the everlasting honor and benefit of the entire order.

*W. P. Barland.*

#### NOT GRAY HAURED.

MR. EDITOR:—In the July MAGAZINE appears an article from O. N. Carpenter, trying to answer my article which appeared in the May MAGAZINE. Carpenter starts out with the assumption that I am an old-time engineer, but produces nothing from my article to warrant the assumption. No, I am not an old-time engineer. I have been promoted but a few days over three years; nor did I think his article written to slur the engineers, except those on the joint board. I took his article in just the way it was meant. Bro. Carpenter was not suited with the new articles in our schedule of last September, and he wanted to blame the B. of L. F. runners for it. He was so elated over the proposed new contract, and so sure we were going to get it, that he traded his good job of firing for a job of hostling one year, with the expectation of getting \$2.50 per day, or \$75 per month, without working very hard; and when they failed to get hostler's wages raised Bro. Carpenter wanted to place the blame on the B. of L. F. runners on the joint protective board; hence his letter, and hence his not thinking it right for B. of L. F. engineers to act on boards of adjustment. Speaking of members leaving the B. of L. F. as soon as becoming engineers, Bro. Carpenter says: "There is nothing in my article that would lead him to believe that I advocated such a policy." Now, how does this sound? "I am not in favor of B. of L. F. men, who are engineers, acting on our adjustment boards after they have become engineers and eligible to the B. of L. E." No, I have not allowed my imagination to wander; it is quite plain that Bro. Carpenter meant exactly that. In his last article he infers that he has ired no one but me. Let me say that his article has ired almost every true B. of L. F. man on this system: and I have letters in my possession from brothers far away from this system, con-

gratulating me for my timely article. His article has been discussed in many lodge rooms and very strongly condemned; and I have it from good authority that his own lodge has it under consideration, and very strongly advocates his expulsion. I did not write to give vent to my own particular feelings and views on his uncalled for article, but to express the feelings and views of this lodge, as well as many members along the line. I was even requested to write by some members of the protective boards. I believe he meant everything just as I took it; but when my answer came, and many members roasted him, he tried to put another face on his article and crawl out of it. But the stamp is on and he is not of the true blue, nor gray haired enough to erase it. And I am of the opinion that instead of getting one of the offices on the protective boards which he so anxiously seeks, he will have to be, like the boy should have been, thankful if he is not expelled from the order where there are true blue, gray haired B. L. E. runners, and left to join the ranks of the unknown. Hoping that his expectations of my reply in the MAGAZINE will meet with his approval, I am, not gray haired, but

fraternally yours,

NICKERTON, KAN.

*Charles W. Arnold.*

#### THE PROBLEM OF UNEMPLOYED FIREMEN.

MR. EDITOR:—Having read Mr. Frank Massey's remarks, under the above caption, I wish to say a few words on the same subject.

Did it ever occur to Mr. Massey that the firemen are mostly to blame for the existing circumstances? Probably not.

I have, on numerous occasions, remarked how utterly indifferent most firemen are, concerning the welfare of those unemployed ones. Why, if the general manager and master mechanic had to go out and handle the scoop themselves, few firemen would ever think of troubling themselves about looking for some unemployed fireboy! On some of our western roads, I have often seen the roundhouse foreman hire men to fire consolidation engines who, previously, were unable to distinguish the shaker-bar from the reverse-lever. This to the great discomfort of engineers who, of course, were expected to make time as usual, although half the time they had nothing but a boiler full of cold water to do it with. Now, this was not because the company were plotting to do up the firemen, but simply because there were no idle men handy; and I am sure no roundhouse foreman prefers an "Indian" to an experienced man, for whenever a fireman does not fill the bill, the foreman has to stand all the kicking. I

have, on several occasions, secured positions for idle firemen where the above circumstances prevailed, and if these men who wonder where all the idle firemen come from would do likewise, it would help matters a great deal. Now, here is another thought in regard to this problem:

Some time ago, Mr. P. M. Arthur, on being asked by a reporter for an expression of his opinion on the eight hour question, was quoted as saying that the B. of L. E. was unlike, and independent of, other labor organizations; that two hours less work meant two hours more saloon loafing and boozing; and, that the B. of L. E. was content to go ahead as formerly, etc.

I am not at all acquainted with Mr. Arthur, but I can hardly believe that the chief of one of our greatest labor unions should talk like that. The question of how to employ the thousands of idle men, has worried a great many smarter heads than Mr. Arthur's; and is it not better for all engineers and firemen to set a fixed number of hours, which must not be exceeded, than to work 45 or 50 days in a month while others are not making ten? Would it not be a good plan for the firemen to agree not to work over, say 2,600 miles per month, and when that has been made to take a much needed rest and give the extra men a show? Would not such a plan put a few of these idle men to work?

I have a good example of the above plan, right across from my home, where a brick house is being erected.

Not so very long ago, bricklayers and carpenters were working ten hours a day, and there was lots of loafing in the building trades; but now they are receiving more money for eight hours' work than they formerly did for ten, simply because a large number of men were taken off the labor market through the reduced hours; and now, a leading bricklayer is a white crow indeed, here in St. Louis.

No, Mr. Arthur, two hours less work a day, or twenty miles off of every hundred, does not mean two more hours in the saloon, but two more hours at home among one's family.

As regards Mr. Arthur's assertion that the B. of L. E. is unlike, and independent of other labor unions; I do not think it is quite correct, as whenever the B. of L. E. have had trouble on any road, they have expected everybody to sympathize with them, and give them their moral support at the very least.

If the workingmen of America expect to hold their own against the constant assaults of monopoly they must hang together, or, to use an old phrase, they will be hung separately. None of them can afford to go it alone, least of all, the railroad men.

*Frank S. Krebs.*

ST. LOUIS, MO.

## TO ASHLEY, OF THE ANN ARBOR.

I've been asked if I'd sing you a verse,  
As a sort of a gentle reminder  
Of the days you were right and we enginemen  
wrong.

When you fired at us fearful rejoinder;  
So, acushla, I've now got my pencil in hand,  
And the Lord only knows, in his glory,  
Whereabouts in the business I'm likely to land,  
If a song it will prove, or a story.

By this time your head must be swelled up, avick!  
When you think of how easy you downed us;  
But acushla machree, how we'd make you feel sick  
If the mandates of Ricks hadn't bound us!  
We would batter your nose just as limp, and as flat  
As a pancake; the way it we'd smother—  
For you're only a vain, egotistical brat,  
One who'd dance on the grave of your father

I'm told, also, your road is a family affair,  
With the stock owned by sisters and cousins;  
How they made you their general manager there,  
Till you squandered their thousands by dozens.  
In receiver's hands now are the two streaks of rust,  
And the scabs you have found to replace us,  
All because we requested you'd do what was just,  
And you'd not like dumb cattle disgrace us.

On your merits a jackass would climb up as high  
On the ladder of honest endeavor,  
As a railroader, Ashley, with hunger you'd die  
Amongst your poorly paid trackmen forever;  
But your friends boomed you up as the family pet,  
Never dreaming of brains you were lacking,  
Until Arthur and Sargent in conflict you met,  
Then you squealed for United States backing.

We've a scalping knife ready for Kirkby to slit  
Off his topknot as clean as a whistle.  
We will roast him upon a political spit,  
Till his flesh will be harder than gristle.  
Ricks and Taft are entitled to all our regards,  
For we always remember our foemen,  
And these limbs of the law will receive their re-  
wards  
From our ranks, full of good hating yeomen.

Now my pencil is dull as your own shallow head,  
And my darling old girl keeps bawling  
To blow out the light and retire to my bed,  
Or I'd give you a much longer mauling.  
But ere I conclude here's a tip I now give  
To you, Ashley, so rude and uncivil:  
"Our two brotherhoods nobly will flourish and live  
When yourself and your road's with the devil."  
*Shandy Maguire.*

## A KANSAS ZEPHYR.

MR. EDITOR:—If a fireman falls on his second trip to the superintendent of machinery for promotion, he drops to the foot of the list or goes to hosting. Such is the rule among the firemen on the Santa Fe system. Is this right? Is it in keeping with our obligation to throw over our older brothers, to give the younger ones their positions? It does not block those younger in seniority from taking their place in line for promotion, but it works a great injustice to the older ones. We ask them to pay the same assessments and we should protect them. We may find that they are not capable of firing or running an engine now, but just watch and you will see how the officials seek out those individuals in time of trouble. They slap them on the back, give them a cordial greeting and tell them that they are

just the men they want; they can then run any engine or train on the road. I think this rule should be abolished.

Another question in regard to extra firemen. One may go over this system, and at one division point he will find a terrible rush; firemen overworked and kicking for eight hours' rest, while wipers are being called to go out on their engines, and being promoted to firemen. Go to the next division point, and there one may find twelve or fourteen extra men, who are fairly starving. I know some of such men who have not earned five dollars during the month. Yet they continue starving them at one end and promoting them at the other. If we do not call a halt soon, we shall certainly have an overproduction of firemen.

Our agreement calls for a certain per cent. of our men to be hired; but we have failed to see any of them hired, as yet. Now, what is the good of such a law if we cannot make it stand? There is a weakness, somewhere, which we hope to see investigated soon in the best interests of our order. I would suggest system seniority for this one class of extra men, and believe in hiring 50 per cent. of the firemen, as well.

Cannot the order start an employment bureau, to keep our brothers in work? They might do this, and thus keep hundreds of firemen from traveling all over the country seeking favors. Let us talk this matter up and see if it cannot be remedied.

W. N. Breen.

NEWTON, KAS.

## EXPERIENCED MEN, OR BROTHERHOOD MEN?

MR. EDITOR: In the June MAGAZINE, Mr. Frank Massey makes the suggestion that the Brotherhood make an effort to procure work for experienced firemen who are out of employment. I would like to ask Mr. Massey if he wishes to convey the idea that railroad officials should be requested to employ Brotherhood men, or simply experienced men?

In the case of a fireman out of employment, the question naturally arises: how did he lose his former position?

This question presents grounds for considerable argument.

Mr. Massey is probably aware of the fact that there is a class of firemen who are experienced men, but who are not worthy of help; and who would not hold a position long if they obtained one. In fact, there are men who are not content to remain in one place over a certain length of time; and it certainly would be out of the question for us to help men who had lost positions through intemperance. Then again, if a brotherhood man loses his position, none can help him so well as the lodge to which

he belongs; for instance: If he has been unjustly dismissed, demand his reinstatement; but if he has been dismissed on account of neglect of duty, intemperance, or misconduct, he cannot reasonably expect help from any one.

To be sure there are many good, sober and industrious men who are thrown out of employment on account of reduction in forces, or as the result of strikes; such men should be cared for and every effort made to secure work for them.

The idea which I have in mind, is to request railroad officials to hire brotherhood men; at the same time giving them to understand that in order to become a brotherhood man, one must fire a certain length of time, which would insure experience enough to make him a competent fireman, if he is ever to be a success at all.

I agree, with Mr. Massey, that the firemen are to blame, to a certain extent, for these men being out of employment; and the question is: what is the best way to remedy the matter?

*Frank C. Keebler.*

BUFFALO, N. Y.

## THE FIREMAN COMES IN WITH THE REST.

BY W. H. ROE.

"The last shall be first;" Oh fifth cycle of time.  
That marks young Columbia's birth!  
Ring, Oh musical bells, ring your triumphant chime,  
In the queenliest city on earth!

Oh magical vision! Where lovely and grand,  
Lake Michigan's waves kissed the shore;  
The "pride of the west" lifts a welcoming hand,  
And the Orient kneels at the door.

To the famous "white city" she welcomes them all,  
From the north, south, the east, and the west;  
The prince and the peasant respond to the call,  
And the fireman comes in with the rest.

In the strength of his manhood, progressive and free,  
A sovereign, by right of his birth;  
And the peer of the best, for the fireman may be  
Just the kingliest heart upon earth.

From the north's frozen snows, to the far south he goes,  
Unfaltering at duty's behest;  
No matter what clime, he is always on time;  
And he's sure to get there with the rest.

Is a brother in trouble? Does poverty call?  
How quickly he'll help the distressed;  
By the law that makes each one a brother to all,  
He's a long way ahead of the rest.

Another "white city" I see, in a dream,  
All radiant and fair in the light;  
Like crystal, beside it, the bright waters gleam,  
Uplifted by the shadows of night.

'Tis a city far off from Chicago, my brothers,  
We call it "the home of the blest;"  
Its portal we find, where our life's pathway ends,  
And the fireman will come in with the rest.

## A FIREMEN'S HOME.

MR. EDITOR:—I wish to express a few thoughts on Bro. Garaghty's suggestion of "A Home for Disabled Firemen," which appeared in the June MAGAZINE. I believe, with Bro. Garaghty, that such a home should be built. I am ready to pay \$1.00 a year for the MAGAZINE, and if the home is a go with the boys you can put my name on the list for \$10 to help the thing along. I think it would be a good plan to write to each lodge and see what they will do. I am quite sure there are a few members of my lodge (102) who would be willing to put in a little more money than just enough to pay for the MAGAZINE. Of course this additional sum would come only from those who could afford to give. I believe there are a great many members who could and would give if the project was once started. According to the report of our Third Biennial Convention, there were 26,223 members up to August, 1892. Of course we have more members now, but we can certainly count on \$26,223, and out of our entire membership I am sure \$5,000 extra could be raised, which would bring the amount up to \$31,223, and for this sum a fine building could be built. It could be enlarged later on, if necessary. The ground could be got cheap from most any city that wanted to get the home. The city of Des Moines—my home—is about as central a point as could be found, and the lodge there could get the ground for almost nothing. As for myself, I do not believe there is a single brotherhood fireman who would not give something towards this project, besides paying \$1.00 a year for the MAGAZINE. The home could be kept up in fine shape and managed so that when one of the boys went there he would feel at home. I believe all the boys would strive harder than ever to further the interests of the home and the brotherhood. I consider this an important question and hope to see the boys take hold and do what they can. Let us hear from them.

*Fred L. Barnett.*

DALLAS, TEXAS.

## REDUCED TO \$1.00.

We have on hand a supply of bound volumes of the MAGAZINE for the years 1891 and 1892.

The volumes are artistically bound in a way to withstand wear, and we need not say are intrinsically valuable, containing as they do, a wide range of topics on subjects well calculated to interest the general reader, as well as those who are the students of labor problems.

In this connection we suggest that these bound volumes of the MAGAZINE would be a valuable present on birthday occasions, or as tokens of remembrance, to be presented at any time, and as the price has been reduced to \$1.00 we shall hope to receive sufficient orders to reduce the supply, since no fireman's library would be complete without one.

By addressing LOCOMOTIVE FIREMEN'S MAGAZINE, Terre Haute, Indiana, orders will be promptly filled. Cash must accompany each order.

## WM. D. ROBINSON MONUMENT FUND.

Wm. D. Robinson, who died at Washington, Ind., on November 7th, 1890, was the founder of the Brotherhood of Locomotive Engineers, and in doing this great work, he as certainly laid the foundation of the Brotherhood of Locomotive Firemen and all other organizations of railway employees.

In closing our obituary notice in the December, 1890, issue of the MAGAZINE, we said:

In this hour, when Locomotive Engineers and Firemen stand uncovered at the tomb of Wm. D. Robinson, the question arises, What can be done to perpetuate the name, the fame, the memory of a man who gave the best years of his life for their benefit? Is not the answer, We will build him a monument worthy of his deeds, of his labors and sacrifices? We will believe that such is the response. If it is, let the good work begin, and let it be carried forward until a granite or a marble shaft shall mark the spot where his dust reposes.

"What hallows ground  
where heroes sleep?  
'Tis not the sculptured  
piles you heap!  
In dews that heavens far  
distant weep  
Their turf may bloom.  
Or genii twine beneath  
the deep  
Their coral tomb.

"What's hallow'd ground?  
'Tis what gives birth  
To sacred thoughts in  
souls of worth!  
Peace! Independence!  
Truth go forth  
Earth's compass round  
And your high priesthood  
shall make earth  
All hallowed ground."

The poet's idea is correct. Where Wm. D. Robinson sleeps his last sleep is hallowed ground, and monumental marble could add nothing to its sacredness. But it is all of that without reference to the living. What can the living do to bear testimony that the last resting place of Wm. D. Robinson is hallowed ground?

We do not believe the name of Wm. D. Robinson is soon to perish and be forgotten. We believe the brotherhood he founded will be his imperishable monument, and that his name in connection with that great order is to increase in lustre as the years flow on. But that does not cancel the debt of gratitude the two great brotherhoods of the locomotive owe his memory, which if not met, will, in the judgment of mankind, cover the living with obloquy.

We believe the Brotherhood of Locomotive Firemen will respond in a way that will bear eloquent testimony of their appreciation of the life work of the man that made their organization fruitful above measure of blessings to locomotive firemen. Alone and unaided, our order, for the small sum of 25 cents each, could do the work. But we prefer doing it in conjunction with the Brotherhood of Engineers; nor would we confine subscriptions to the two orders, but would invite all the brotherhoods engaged in the train service of railroads to join in the great work of gratitude.

In discussing the propriety of erecting a monument to perpetuate the memory of the

dead philanthropist, we said in the April issue of 1891:

The idea of building a monument to perpetuate the name and fame of Wm. D. Robinson, originated with the FIREMEN'S MAGAZINE. The time has come for action. Contributions should be made. We have said that 25 cents each from members of the B. of L. F. would build the monument. But we surmise that other orders would want a place in the splendid work proposed, and we have opened in the Grand Lodge office of the B. of L. F.,

## A ROBINSON MONUMENT FUND.

Every contribution, however small or large, will be acknowledged in the columns of the MAGAZINE under an appropriate head, and when the contributions approximate a sum which gives assurance of success to the enterprise, a commission made up of the members of the various brotherhoods will be constituted to take charge of the fund and prepare for work.

Members of the various orders subscribing should designate their calling, and if they will give their address, it will be regarded as a favor.

Now, let the good work proceed. Wm. D. Robinson, when alive, was the friend of the workingman. He wrote and spoke and toiled to establish a brotherhood and to teach men the power of organized labor. Railroad trainmen had no more ardent and unselfish friend. Let a monument bear testimony that death did not sever the tie that bound him to the living.

If ever a man deserved the grateful homage of his fellows that man was Wm. D. Robinson. He devoted the best years of his life to the great work of organizing railroad men for their moral and material advancement. He toiled without recompense, he endured privations and made sacrifices, the half of which will never be told. He lived and died

WM. D. ROBINSON.

in poverty, that others might fare better than was his lot. Every man, woman and child who has been, is now, or ever will be the beneficiary of any of the brotherhoods of railway employees, owes Wm. D. Robinson a debt of gratitude that can never be paid. Such a man deserves a monument to bear testimony of the love and gratitude of those for whom he accepted poverty, persecution and all their attendant ills, and every member of every organization of railroad employees should cheerfully contribute his mite, small as it may be, to such a noble purpose. Contributions may be directed to the LOCOMOTIVE FIREMEN'S MAGAZINE, Terre Haute, Indiana, all of which will be acknowledged in its columns.

# GRAND LODGE.

## ASSESSMENT NOTICE FOR SEPTEMBER.

OFFICE OF THE GRAND LODGE, B. OF L. F. /  
TERRE HAUTE, IND., September 1, 1893.

ASSESSMENT No. 40, \$2.00.

### To Receivers of Subordinate Lodges:

SIRS AND BROTHERS:—You are hereby notified of the death and disability of the following members entitled to all the benefits of the order, viz:

CLAIM No. 1062. Elmer C. Saunders, of Fleetwood Lodge, No. 424, died of Pistol Shot wound, May 18, 1893.

CLAIM No. 1068. John C. Bull, of James Leahy Lodge, No. 475, was killed in a Railway Accident, April 18, 1893.

CLAIM No. 1064. Isaac P. Shipe, of Provident Lodge, No. 220, died of Typhoid Fever, July 8, 1893.

CLAIM No. 1065. Lewis E. Humpton, of Herald Lodge, No. 161, was declared totally disabled by Loss of Leg, March 28, 1893.

CLAIM No. 1066. Patrick Healy, of Trinity Lodge, No. 93, was killed in a Railway Accident, May 30, 1893.

CLAIM No. 1067. J. H. Billingsley, of C. J. Hepburn Lodge, No. 160, was declared totally disabled by Blindness, June 21, 1893.

CLAIM No. 1068. Emil C. Stenger, of Flower of the West Lodge, No. 205, was killed by Railway Accident, June 26, 1893.

CLAIM No. 1069. J. C. Neild, of Las Animas Lodge, No. 844, was killed by Gunshot Wound, July 4, 1893.

CLAIM No. 1070. L. B. Wiggins, of Magnolia Lodge, No. 228, died of Typho Malarial Fever, July 21, 1893.

CLAIM No. 1071. F. F. Smith, of Rose City Lodge, No. 45, was declared totally disabled by Injury to Spinal Cord, July 29, 1893.

CLAIM No. 1072. J. W. Cates, of Neches Lodge, No. 156, was killed by Gunshot Wound, July 10, 1893.

CLAIM No. 1073. P. H. Condon, of J. K. Glibbreath Lodge, No. 264, was Run Over and killed, July 13, 1893.

CLAIM No. 1074. Ronald J. Kennedy, of Snow Flake Lodge, No. 298, died of Phthisis, May 11, 1893.

CLAIM No. 1075. Samuel Lewis, of Silver Mountain Lodge, No. 827, died of Typhoid Fever, March 1, 1893.

CLAIM No. 1076. Theodore S. Huntley, of Fairmount Lodge, No. 383, died of Paresis, July 2, 1893.

CLAIM No. 1077. L. C. Stinson, of Front End Lodge, No. 845, was killed in a Collision, June 13, 1893.

CLAIM No. 1078. A. P. Rodgers, of Nickel Plate Lodge, No. 877, died of Suffocation, July 10, 1893.

CLAIM No. 1079. George Kemerer, of R. H. Wilbur Lodge, No. 384, died of Abscess of Brain, July 18, 1893.

CLAIM No. 1080. William G. Ray, of Water Lily Lodge, No. 402, was killed by Falling from Engine, July 11, 1893.

CLAIM No. 1081. Chas. L. Watson, of Mt. Baker Lodge, No. 412, died of Tuberculosis, July 24, 1893.

CLAIM No. 1082. Edward Locklin, of Magdalena Lodge, No. 261, was declared totally disabled by Loss of Arm, May 27, 1893.

CLAIM No. 1083. W. P. Boxwell, of Winchester Lodge, No. 430, died of injuries received in a Railway Accident, August 6, 1893.

CLAIM No. 1084. Frank H. Brew, of Liberty Lodge, No. 242, died of Chronic Nephritis, July 26, 1893.

CLAIM No. 1085. Hiram Fuller, of Success Lodge, No. 33, was declared totally disabled by Anchylosis of Knee, August 12, 1893.

An assessment of TWO DOLLARS (\$2.00) has been levied for the payment of the above claims, and you are required to forward said amount for each member whose name appears on the rolls of membership AUGUST 31st, 1893, (also for all members having taken a withdrawal (limited or final) after AUGUST 1st, and for all members who died or were totally disabled since that date), said remittance to reach the Grand Lodge not later than SEPTEMBER 20th, 1893, as provided by Section 50 of the Constitution. Any lodge failing to make returns as above provided will stand suspended from all the benefits of the order, as per Section 52 of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

F. W. ARNOLD, G. S. and T.

## BENEFICIARY STATEMENT.

OFFICE OF GRAND SECRETARY AND TREASURER, /  
TERRE HAUTE, IND., August 1, 1893.

### To Subordinate Lodges:

SIRS AND BROTHERS:—The following is a statement of the Beneficiary Fund for the month of July, 1893:

## A RAILROAD HERO.

When a man is killed on a railroad in Mexico, those whom the authorities think are at fault are thrown into prison.

On the 11th of March a bad wreck occurred on the Mexican Central. A south bound freight train was taking water at Encarnacion station, when it was run into by a north bound freight train.

Engineer J. T. Sweeney, of the south bound, was fatally injured, both legs being amputated. His fireman was also fatally injured. Sweeney was dying when taken from the wreck of his engine, but he realized that conductor Frank Hartman and engineer W. C. Beatty of the north bound were responsible for the wreck, and that under the severe laws of Mexico they would receive harsh punishment if captured.

He called Hartman and Beatty to his side and made his will, telling them where he had money on deposit. He then gave Beatty and Hartman \$500 which he had on his person, and told them to use what was necessary to leave the country and to leave at once.

The wounded man died a few minutes afterward, and the two men started out on foot. As soon as the authorities were notified, a squad of soldiers were sent in pursuit of the fleeing men, but they have not been captured.

If it was not heroic for Sweeney to think of the safety of his friends when they were in danger—though they were the cause of his own death—then the earth rolls her green fields to the sun without a hero upon her face.—*American Machinist.*

## THE OLD ENGINEER REMINISCENT.

"It makes me mad," said the old engineer, "to hear people ask why a man don't do so and so when his engine strikes. Lord! It all comes like a stroke of lightning. When we piled 'em up in the Whitesville cut, and killed eight, year before last, I was sitting in my window that night looking ahead as careful as any one could. We had started on the curve, and she was going as fast as the wheels could turn, forty minutes behind time, and the deuce to pay if we didn't make it up by morning. Jimmy Hartsell was feeding 'er every minute."

"I thought I saw a glimmer of light on the bank ahead. It was the flash from the headlight around the other bend of the curve. Between the time I caught that flash and when I saw the headlight swing around the cut as big as a tub, it couldn't have been the hundredth part of the second. We were nose to nose before I realized—no, I don't think I realized—but I put on the air with one yank, yelled to Jimmy, and fell out of the window. When they threw water in my face I 'posed I was cut all up. The wreck was on fire, and people was hollerin' underneath. I laid there feelin' of myself, expectin' every minute to find a soft, bloody place, but I was all right, and three days after I went to Jimmy's funeral. After that I don't want no man to tell me what you ought to do."—*Chicago News Record.*

The "Great Eastern" steamer was 690 feet long, 82 feet broad inside of the paddle boxes, and when loaded drew from 30 to 32 feet. She was therefore too large to get into the docks at Liverpool, and drew too much water to get to New York by way of the ship canal past Sandy Hook. Consequently she had to be loaded and unloaded at each port by means of lighters. The nearest place to New York at which she could lie was Flushing Bay, which she entered by way of Long Island Sound.

## RAVAGES OF TIGERS.

A man-eater in India was known to have killed 108 people in three years, and another killed an average of 80 persons a year for the same period. A third caused thirteen villages to be abandoned, and 250 square miles of land to be thrown out of cultivation.—*Scientific American.*

## EDITORIAL.

### BUSINESS DEPRESSION AND LEGISLATION.

According to *Bradstreet's*, from January 1st to August 1st, 1893, moneyed institutions of various descriptions to the number of four hundred and twenty-eight suspended, and during the same period, of the entire number, only fifty-eight resumed business.

During the months of January, February, March and April there were no premonitions the average business man could discover of the impending storm, and during the four months named, only twenty-six moneyed institutions suspended. During the month of May the cyclone struck fifty-four institutions; in June the wrecks numbered one hundred and eighteen, and in July the number swelled to two hundred and thirty-one, and the panic swept along, creating almost unparalleled depression in all departments of business.

*Bradstreet's*, of August 12th, surveying the whole field of finance and industries, informs the country that up to August 1st the suspended banks had assets amounting to \$105,000,000, and liabilities amounting to \$102,000,000, and that of the four hundred and twenty-eight suspended institutions only fifty-eight had resumed business. In commenting upon the industrial situation, the paper gives returns of eight hundred establishments of more or less prominence, which have suspended operations since June 1st, throwing out of employment 463,000 employees, and adds: "When it is realized that this report, complete as it may be, is quite incomplete so far as the country at large is concerned, \* \* \* it becomes plain to casual observers, that there are in all probability no fewer than 800,000 or 900,000 idle employes of manufacturing, commercial and other enterprises at this time who were nearly, if not all, actively employed three or four months ago." Since the tables of *Bradstreet's* were compiled, the work of depression has gone steadily forward, banks have continued to suspend and industrial enterprises have suspended operations and the army of idle men has received enormous accessions.

Under such circumstances men are inquiring and investigating to ascertain the cause of the depression, of the panic, that is producing wide-spread alarm, extending from ocean to ocean, and from the British possessions to the Gulf of Mexico. At this supreme juncture the President calls congress in special session, and in his message says:

To the Congress of the United States—The existence of an alarming and extraordinary business situation, involving the welfare and prosperity of all our people, has constrained me to call together in extra session the people's representatives in congress, to the end that through a wise and patriotic exercise of their legislative duty present evils may be mitigated and dangers threatening the future may be averted. Our unfortunate financial plight is not the result of untoward events nor of conditions related to our natural resources; nor is it traceable to any of the afflictions which frequently check national growth and prosperity. With plenteous crops, with abundant promise of remunerative production and manufacture, with unusual invitation to safe investment and with satisfactory assurance to business enterprise, suddenly financial distrust and fear have sprung up on every side; numerous moneyed institutions have suspended because abundant assets were not immediately available to meet the demands of frightened depositors; surviving corporations and individuals are content to keep in hand the money they are usually anxious to loan, and those engaged in legitimate business are surprised to find the securities they offer for loans, though heretofore satisfactory, are no longer accepted; values supposed to be fixed are fast becoming conjectural, and loss and failure have invaded every branch of business. I believe these things are principally chargeable to congressional legislation touching the purchase and coinage of silver by the general government.

In reading the foregoing it is seen that the President attributes the business depression, the panic, the wreckage of banks, the closing of factories and mines, the entire bad business to "congressional legislation." The arraignment of congress by the President is of tremendous import. The indictment embodies the charge, by inference, at least, of incapacity, of inability to comprehend cause and effect, and blindly pursue a policy that fills the land with calamities and which portends still other trials and struggles, that the bravest of men cannot contemplate without experiencing thrills of horror.

Manifestly, if, as the President asserts, the misfortune the country is now experiencing is the result of vicious legislation by congress, what hope is there that congress is either capable or willing to apply the needed remedy? Indeed the question arises, is it within the power of congress, however willing and capable, to apply any remedy that will restore the *statu quo* of business until the panic, like the plague, cholera, yellow fever, or smallpox, has run its course and prostrated everything not abnormally prepared for resistance?

In this connection it is prudent to inquire, who can resist the force of the panic? We answer, the rich. They can not only stand the storm, but grow richer in proportion to its violence. They are the wreckers on the storm-beaten coasts when the crafts go down or are driven upon the reefs and rocks. Thousands of the rich, we do not doubt, will suffer, but the term, in their case, has a limited meaning. There will be less luxury, but no decrease in the comforts of life. The real sufferers are the daily wage men—men without

work and without pay; men around whose homes the gloom increases to the point of despair. These are the real victims of congressional legislation, and of all vicious legislation. The charge is made upon the high authority of the President of the United States—not by agitators, not by anarchists, not by the depraved. Mr. Cleveland points out what the panic is doing in the way of disasters, and says, "I believe these things are principally chargeable to congressional legislation." What things? As *Bradstreet's* says, forcing into idleness 800,000 or 900,000 workingmen, employes of various enterprises. *Bradstreet's* admits that its report does not include the sum total of the idle. On July 31st Mayor Harrison, of Chicago, said, "There are 200,000 idle men in Chicago;" and he utters the terrible warning that unless something is done by the government to brighten conditions there will be deeds of violence that will shake the country like an earthquake. Everywhere the newspapers are trying to be conservative. They speak hesitatingly, they are afraid to tell the truth, the naked, hideous truth. The *Philadelphia Times*, a conservative paper, reports the canvassing of fifty-seven trades and callings in the city of New York having a membership of 99,960, and shows of those 36,177 are idle. There are probably in the city of New York more than one hundred organizations representing wage earners. We know of a city with a population of 125,000 that has eighty-three organizations, hence the *Times'* statement must be regarded as giving a low estimate. And it is notable that while the *Times* refers to conditions in New York, it is silent regarding the effects of the panic in Philadelphia, immediately under its nose and within reach of its reportorial force. The fact is, the country is left to conjecture regarding the direful outlook.

In a general way the *Times* discusses the panic, and tells the truth. It refers to the "financial revulsion," saying it was "declared to be entirely a rich man's panic; that only speculators and gamblers were embarrassed by it," and proceeds to say,

Whatever may be the causes which produce financial disturbances, and however the rich may suffer, the one class that cannot escape the bitterest dregs of the cup of misfortune is the working class. All ills of commerce, finance and trade end in the homes of the poor, and they must bear the chief burden of business disturbance. The rich can live on greatly reduced resources; they can stop their mills or mines and be content with profits already accumulated, but the poor who earn their bread from day to day as they consume it, when forced into idleness must face starvation.

It is true that the present panic is a money panic; entirely a money panic in its origin, but it has permeated into every channel of commerce, industry and trade, and to-day it affects every mill, mine, field and forest where industry has its home. The scarcity of money, no matter from what cause, has halted improvements, has reduced consumption, and the inexorable law of supply and demand enforces a reduction of supply. To attain that, labor must be dismissed from employment, and the laborer left without means to support himself and his family.

All panics of every kind and from any and every cause, end in fearful cost to labor, and it is lamentable to see how many of our industrial people are misled as to the remedy. Of all classes and conditions in this country they most need stable and just laws; they most of all need honest money, and yet from nearly

every industrial organization of the country we hear expressions of sympathy for those who are battling for cheap and dishonest money, the countless evils of which must in the end fall upon labor. Business that employs industry is disturbed to-day because our national money and our national credit have been impaired by insane concessions to cheap money advocates, and labor is to-day paying the fearful price of that folly.

It is true, deplorably true, that labor and only labor suffers by the panic; all else can wait until the storm has spent its force. The rich can close down their shells like a tortoise, pull in their heads and sleep. The notable thing about the *Times'* article is its closing paragraph, in which, like all champions of the plutocratic class, it seeks to throw the responsibility of the panic upon labor, intimating that it suffers because of its advocacy of a dishonest currency. When did labor control or influence the legislation of congress, which Mr. Cleveland avers is responsible for the panic? Vicious dampfoolism never went further than to intimate such a charge. Labor never had a voice in the financial legislation of congress. Labor never voted for a dishonest dollar of any description. Labor accepts the government's currency and has had an abiding faith in its honesty. It has made no war upon standard coins or redeemable paper. Whether in one party or another, labor has been loyal to honest money, has had implicit confidence in the *fiat* of the nation, and is not responsible for congressional legislation, which Mr. Cleveland says is "chargeable" with the present panic.

No sane man will challenge the propriety of greater activity in the ranks of labor to influence congressional legislation in the future. The *Times* demonstrates the absolute necessity for labor to take action, since it must bear all the ills.

Congress is now in session. Will it give relief to labor, which is now paying the "fearful cost" to which the panic has subjected it? As labor is not represented in congress, and since it is subjected to a fearful strain, it has begun holding public meetings. In Chicago, on August 15, three thousand idle men deliberated upon their condition and passed a series of resolutions. Speeches were made. A report outlines proceedings as follows:

Thomas J. Kidd, General Secretary of the Wood-workers' International Union of America, was greeted with cheers. A part of his remarks were:

"Send representative wage-earners to Washington instead of lawyers and millionaires. Let the masses and not the classes be represented. If you would do that, there would not be 200,000 idle men in Chicago, our poor-houses and prisons would not be crowded, and women would not be selling their purity for morsels of bread. Look at the Auditorium (and he moved his hand toward the structure); wage-workers cut and set the stone to build it, but they are the last ones welcomed there. Why? Because you shout for Cleveland and Harrison. Mrs. Vanderbilt gave \$150,000 for a collar for her poodle dog, when ten thousand children were starving to death in New York."

P. J. Grimes, of the Hardwood Finishers' Union, spoke briefly, saying: "Thousands in this crowd want work. It cannot be had. It is not their fault they are idle. The capitalistic press says it is. This is untrue. Many here know not where their next meal will come from. It is only summer now. What will winter produce? They will die like slaves. An empty stomach has no conscience. Our people sit on a volcano. Let them beware of the explosion."

The following resolutions were adopted;

*"Resolved*, That we demand of the present congress to fix a true standard of values based upon the product of labor, and that the government issue the circulating medium to the people.

*"Resolved*, That the government employ the idle men on the roadways and on the public improvements of all kinds where the convicts are now employed, and that public work be done by the people and not by contract.

*"Resolved*, That the hours of toil be reduced to that point that all may be employed, so that machinery will be a boon to the toiling millions rather than a curse.

*"Resolved*, lastly, That the unemployed be warned through the press that Chicago has thousands of men willing to work, but unable to find it."

The meeting is significant—others will follow. It is not required to so much as suggest how the fire will spread or the character of the scenes to be enacted. Whatever may transpire inimical to peace and order as the result of the panic, let it always be remembered, that President Cleveland says it is *chargeable to congressional legislation*.

---

## DEFENSELESS WAGE-EARNERS.

---

"Society has become accustomed to some very nice distinctions. The poor man is called a socialist if he believes that the wealth of the rich should be divided among the poor, but the rich man is called a financier if he devises a plan by which the pittance of the poor can be converted to his use."

"The poor man who takes property by force is called a thief, but the creditor who can by legislation make a debtor pay a dollar twice as large as he borrowed is lauded as the friend of sound currency. The man who wants the people to destroy the government is an anarchist, but the man who wants the government to destroy the people is a patriot."

The foregoing paragraphs are taken from the speech of the Hon. W. J. Bryan, M. C., delivered in the house of representatives, August 16th. They refer to current criticisms of men, motives and money, to schemes of legislation and to schemes protected by statutes for the purpose of the aggrandizement of the few at the expense of the many, to increase the power of the strong and to make the weak submit to their machinations.

The President called congress together to deliberate upon finances, and in his message took occasion to say:

"At times like the present, when the evils of unsound finance threaten us, the speculator may anticipate a harvest gathered from the misfortunes of others, the capitalist may protect himself by hoarding or may even find profit in the fluctuation of values, but the wage-earner—the first to be injured by a depreciated currency and the last to receive the benefit of its correction—is *practically defenseless*. He relies for work upon the ventures of confident and contented capital. This falling him, his condition is without alleviation, for he can neither prey on the misfortunes of others nor hoard his labor."

It is seen that the President, in calling an extra session of congress, recognizes labor—"the wage-earner"—and says what is true, that labor is the first to be injured, and he could have added, that

the injury continues during the whole period of business depression, always increasing in its deplorable consequences.

The President points out the difference between the "speculator"—the "capitalist"—and the "wage-earner," and in the President's specification the degrading point is made that the wage-earner is powerless, a creature who exists by permission, who, as against the "unsound finance," is "practically defenseless," not only "practically," but absolutely "defenseless." Hence what? Degradation, idleness, poverty, squalor, hunger, desperation, mobs and riots.

The President of the United States tells congress that wage-earners are "practically defenseless," that they are compelled to accept such conditions as congress and legislatures may inflict. The reference to wage-earners could not be made, by the use of language, more abject. To say that there are twenty millions of wage-earners in the United States may seem extravagant, but the estimate is, nevertheless, conservative, when women and children are included, and of the twelve to fourteen millions of votes cast in the United States for President and members of congress, at least eight millions are cast by wage earners. And yet the President says that against "the evils of 'unsound finance' they are practically defenseless" and further the President says that the "unsound finance" that affects the country is the result of "congressional legislation."

Accepting the declarations of the President as true, how does it happen that wage-earners, with at least eight millions of votes in the country are left "practically defenseless?" The answer is ready and easy. Wage-earners are "defenseless" because they cast their votes for men who betray them, who enact laws for the rich regardless of the interests of labor; as was said in congress, in discussing "the evils of unsound finance" and the prostration of business, the cry comes—

From forges where no fires burn,  
From mills where wheels no longer turn,  
From looms o'er which no shuttles leap,  
From merchants' shops—which sheriffs keep—  
From banks gone up, from stocks gone down,  
From God-made country, man-made town,  
From Wall street men, from sons of toil,  
From the bronzed tillers of the soil,  
From North, from South, from East, from West.

That wage-earners are "defenseless." Is it true that wage-earners are defenseless? Having been juggled out of their votes, is their lot to be mendicancy and misery, silence and suffering, desolation and despair? Are wage-earners to wait until a wrangling congress extracts the fangs from gnawing hunger?

The President says "wage-earners are defenseless"—that is to say, they are unarmed, unprotected, exposed, weak—voiceless and submissive, they are like dumb driven cattle, and "unsound finance," the result of "congressional legislation," is the pelting storm that is beating them down to death.

Is it not possible that the President is mistaken when he says the wage-earner is "defenseless?" Can it be possible that from five mil-

lions to ten millions of wage-earners are defenseless in this age and in this country? To say they are "defenseless" consigns them to soundless depths of degradation—reduces them to pariahs, peons, helots—slaves as in old plantation times, before Lincoln's proclamation permitted the African slave to stand up a free man.

We doubt if wage-earners comprehend the measureless meaning of the president's declaration that wage-earners are "defenseless." If it is true, then our flag, our starry banner "Old Glory," is a "flaunting lie." The wage-earner, a sovereign citizen of the great American republic, ought not to be said to be "defenseless;" he ought not to be considered the ward of the government; he ought not to be voiceless and silent when legislation strikes at his rights and interests, his work and his wages, his home and his children. In such perilous times he ought not to be regarded "defenseless." Nor is he defenseless.

We have heard of pools and trusts and of combinations by which the rich have managed to ascertain how much bread the wage-earner should receive for a day's toil, and when he asked for a fish, counted his gains, if he could palm off a scorpion, and the national prayer should be that in the United States wage-earners, to demonstrate that they are not defenseless, may never pool their woes, their hunger pangs, for the purpose of bettering their condition. Better far for wage-earners to pool their votes, solidify their ranks, abandon party and party leaders that have betrayed them and led the President to say they are "defenseless," and demonstrate that when they are unified and armed with the ballot, the President and the nation will find wage-earners amply able to take care of themselves.

But there is another side to the picture. Hon. J. C. Sibley, of Pennsylvania, not an anarchist nor a socialist, not a labor agitator, not a Republican or a Populist, but a Democrat, in closing a speech in the House of Representatives, said :

Prompted alone by our love for rich and poor, by our love for the welfare and peace of our common country, let us warn you that the masses of the people are aroused. All over this fair land they are on their knees in prayer. Their walls have been heard at the throne of the Almighty. My friends, hunger and cold know no philosophy and respect no laws; and when these twin devils are let loose and you force them out upon the world—

Then woe to the robbers who gather  
In fields where they never have sown;  
Who have stolen the jewels from labor,  
And bulldozed to Mammon a throne.

For the throne of their god shall be crumbled,  
And the scepter be swept from his hand,  
And the heart of the haughty be humbled,  
And a servant be chief in the land.

For the Lord of the harvest hath said it,  
Whose lips never uttered a lie,  
And his prophets and poets have read it,  
In symbols of earth and of sky;

That to him who hath reveled in plunder  
'Til the angel of conscience is dumb,  
The shock of the earthquake and thunder,  
And tempest and torrent shall come.

## REFORMATION AND REVOLUTION.

In the July *Arena*, a paper by Helen Campbell, on "Women Wage-earners of America," is a valuable contribution to the industrial literature of the times, showing as it does the varying conditions of the women wage-earners in the United States. The data supplied by the writer is methodically arranged and so interwoven with the text that the reader grasps facts and arguments in a way that indefinitely contributes to the interest of the subject.

The writer makes copious references to colonial times to show the environments of women who, with their hardy fathers, husbands and sons, laid the foundations of American civilization, industries, government and prosperity. In those primitive conditions, woman's work was confined to the home, and was chiefly for the family. They engaged in cooking, knitting, sewing, spinning and weaving. On farms they attended to the dairy and had more or less to do with the kitchen and garden. Everything was democratic and girls who went out to domestic service were treated, as a general proposition, on an entire equality in the families where they were employed. The writer says:

For nearly a century and a half, dating from the landing of the Pilgrims on Plymouth Rock, the condition of laboring women was that of the same class in all struggling colonies. There were practically no women wage-earners, save in domestic service, where a home and from thirty to a hundred dollars a year was accounted wealth, the latter sum being given in a few instances to the housekeepers in great houses. Each family represented a commonwealth, and its women gave every energy to the crowding duties of a daily life filled with manifold occupations.

The farmer—for all were farmers—was often blacksmith, shoemaker, and carpenter, and more or less proficient in every trade whose offices were called for in the family life. The farmer's wife spun and wove the cloth he wore and the linen that made his household furnishing, and was dyer and dresser, brewer and baker, seamstress, milliner, and dressmaker. The quickness, adaptiveness to new conditions, and the fertility of resource, which are recognized as distinguishing the American, were born of the colonial struggle, especially of the final one which separated us forever from English rule.

The foregoing are pictures of the home life of women during colonial times in New England, and they serve as well to illustrate pioneer life of those who abandoning the East, went West into adjoining states and territories to "grow up with the country." The wages of women who did work for others, as domestics, as seamstresses or milliners were so meager that reference to them now creates astonishment, and yet, by the writer's showing the condition of New England women at that time, as compared with every stage of evolution that has since become a matter of record, must be regarded in the light of all the facts, as superior to conditions generally that have marked industrial development. Notwithstanding "sand did duty as carpet for the floor;" that "the cupboard knew no china, and the table no glass," that "coal and matches were unknown," and that a stove was "never seen"—there was health, con-

tentment and independence. The homes were centers of virtue, and though the people, men and women wore home-made cloth, and subsisted upon rough food, the men were brave, the women chaste, the home influences such that when liberty was in peril, brave men encouraged by brave women, went forth to battle, achieved independence and established a new nation.

The homes of New England were centers of industry. The spinning wheel and the loom were in every house. The women made the gloves, covered buttons, and carried forward numerous other small industries, and these things went forward until factories were erected for spinning yarn, which was woven into cloth at the homes of the people. But when the factory came that could spin and weave, the women began to leave the home and go to the factory to work, and then began a system of woman slavery and degradation almost unparalleled in the history of our civilization. The day's labor varied from twelve to fifteen hours. "In most of the New England factories operatives were taxed for the support of religion," and "women and children were urged on by the cowhide." Many factories were "unfit working places for human beings," and "overseers flogged children brutally."

In this line the writer proceeds to show the change from home to factory work, and as a result, the nationality of the employes changed. The New England element disappeared and its place was filled by the Irish and the German, and finally by the Canadians, until the New England women constitute an exceedingly small per cent of the factory operative force of the present.

The article under review deals chiefly with women wage workers in factories, and it is admitted that as compared with its worst features as practiced in earlier periods, some improving advancement has been made, but the factory system for women workers is, nevertheless, the most vicious known to our industrial enterprises, as is shown by the following "objections urged against it," as appears in Carroll D. Wright's chapter upon the subject which is found in the Tenth Census Report:

- A. The factory system necessitates the employment of women and children to an injurious extent, and consequently its tendency is to destroy family life and ties and domestic habits, and ultimately the home.
- B. Factory employments are injurious to health.
- C. The factory system is productive of intemperance, unthrift and poverty.
- D. It feeds prostitution and swells the criminal list.
- E. It tends to intellectual degeneracy.

Leaving out of consideration all but the first (A) objection, which is admitted to be well founded—in fact, the conclusion is inevitable—that the factory system, employing women and children, is a standing menace to almost everything esteemed sacred in our civilization, Helen Campbell says:

Under "A" there is small defence to be made. The employment of married women is fruitful of evil, and the proportion of these in Massachusetts is 23.8

per cent. Wherever this per cent. is high, infant mortality is very great, being 23.5 for Massachusetts and 19 per cent. for Connecticut and New Hampshire.

If the objection "A" is based upon facts, which is admitted, then the remainder of the list may be accepted as in the line of probability, or in a large degree inevitable, since any system of industry that tends to destroy "family life and ties, domestic habits, and ultimately the home," involves every other wrong mentioned in the catalogue and becomes a foul blot upon our civilization, and that the New England factory system, however much improved since overseers urged women and children to their tasks "with a cowhide" and brutally "flogged children," the system retains throughout New England and elsewhere the germ of abominations well calculated to arouse alarm.

It is notorious that New England boasts of having laid the foundations of our civilization, as also the foundations of the factory system, and the proof is overwhelming, as Helen Campbell demonstrates, that the factory system has finally created conditions of women wage-earners which, striking at "family life and ties, domestic habits, and ultimately at the home," have already inaugurated a system of degradation, the prudent characterization of which takes on the form of exaggeration.

---

MULTIPLIED thousands are now searching for work, and the number is daily increased by the closing of mines and shops, and by the reduction of the number of employes in many industries. In this supreme emergency all eyes are turned towards congress, and congress talks—yawps.

---

THE Wagner Company has 700 parlor and sleeping coaches, while the Pullman Company has 2,366. The investments of these two companies in parlor and sleeping coaches, aggregate \$43,500,000.

---

SOME one says "it took Rome 300 years to die," and it is intimated that the United States can *kick the bucket* in less time. It is a question for workingmen to decide.

---

THERE are now about two hundred trusts in the country, which control, more or less, its staple products. Why? Because workingmen vote aye.

---

THE New York, New Haven & Hartford R. R. is to be four tracked between New Haven and New York. The work is already under way.

# CONTRIBUTED.

## SINGLE TAX FALLACIES.

---

BY W. H. STUART.

No. 9.

[Concluded.]

Mr. Middleton, in his closing article in defense of the single tax, in the September MAGAZINE, gives painful evidence of rapid mental disintegration and collapse. He says I attack the proposition of the single taxers regarding public control of what they call "natural monopolies, because, forsooth, that would embrace all industry. Yet he demands," continues Mr. Middleton, "that the whole nation shall form a gigantic trust, that shall operate the machinery of production for its own benefit, and divide the profits equitably among the share holders." And he asks with withering scorn, "could opposition be more inconsistent?"

Either Mr. Middleton has passed into the last stages of that dread disease, dementia singletaxiosis, or he is, to use a street phrase, "badly rattled." Pray heaven it may only be the latter.

I assure Mr. Middleton I heartily endorse that part of the single tax platform. As far as it goes it is straight socialism. My object was to show that all industry was becoming monopolized in the form of trusts; that competition among capitalists was giving way to combination, and that the distinction regarding so-called natural monopolies was a mere fiction of the single tax imagination.

Mr. Middleton complains that I attack the single tax that leads to the government ownership of land, while I demand that the people should own the land. Quite true. I have shown that landlordism is only one form of robbing, not a whit less respectable than any other form. A very large proportion of the land is in the hands of the farmers and toilers, who acquired their title to the same from the people (the government) on agreed terms. When the people desire to resume possession let them do so on equitable terms, and not by the contemptible scheme of robbery and confiscation proposed by Henry George.

Nationalists and socialists do not advocate confiscation. When we want the railroads or the telegraphs, we will buy them or build them, and we will treat the owners of the land with equal justice.

I call Mr. Middleton's attention to the fact that when he talks about taxing railroad franchises he is not discussing any proposition of the single tax theory; he is simply giving expression to his own private opinion, with which I am not at present concerned. When

he shows the absurdity of estimating the rental value of the road bed of a railroad the same as a parallel strip of land, *i. e.*, estimating land values irrespective of improvements, he is criticising the single tax theory, not me.

England's commercial supremacy was, no doubt, largely due to her system of free trade. It enabled her capitalist class to furnish almost the whole world with the products of her manufacturing establishments. Comparing wages paid, and the condition of workmen between the first and last half of the century, certainly shows an improvement. But, as far as the workmen were concerned, that was not due to free trade, but to the abolition of the laws against combinations among workmen, and the consequent rise of trade unions, and also to the legislation known as the "factory acts," reducing the hours of labor, limitations and restrictions regarding employment, and hours of labor for women and children, improved sanitary conditions, etc.

Under the wage system the producer only receives part of the value of the product as wages. He is consequently unable to buy back the product. Hence the frantic desire of commercial nations to extend their markets for the purpose of disposing of surplus products and commodities which their own exploited wage-slaves are unable to buy. While England had the world for a market, her capitalists acquired unbounded wealth; but with restriction of her markets her home industries are failing and wages are gradually being forced down. Her capitalists are now exploiting this country and others in the hope of producing surplus value from foreign labor, that they are no longer able to extort from English labor.

The purchasing value of wages of labor is not effected by tariffs.

Under capitalism and free competition among laborers, wages will remain at, or near, the cost of subsistence.

Mr. Middleton makes the singular statement that "it is true, as Mr. Stuart and Mr. George have both shown, present monopoly rent would be largely diminished." This statement, so far as Mr. George is concerned, is not true. There is not a line in "Progress and Poverty" that would indicate the faintest conception on his part of the difference between monopoly and natural rent. He ignorantly assumed that present rent was economic rent. His failure to see the difference reduces his theory to an absurdity, and "Progress and Poverty" to a mere pot-pourri of poetry and platitudes.

True, Mr. Middleton, to save the theory, is willing to rob the land owners of their property (to which they can often show much better title than the owners of capital can) and retain present monopoly rent, by substituting government for private monopoly of natural resources. This is the most contemptible proposition ever made by any one assuming the role of a reformer—a proposition, I will do Henry George the justice to say, he would reject with scorn and indignation.

In the August MAGAZINE Mr. Middleton asserts that Karl Marx's "surplus value" theory errs in "ignoring too much the few who in-

vent, and the few who plan, organize, and carry out productive enterprises, and that is where they differ from single taxers."

Would Mr. Middleton kindly mention one industry now controlled by capitalists that could not be taken under collective control and managed better, and at one-half or one-fourth of present cost? We pay successful presidents of insurance companies \$60,000, or more, per annum. What for? Their superior knowledge of the insurance business? Not a bit of it; but because they can take business away from other companies. This kind of "organizing ability" would find no market under nationalism.

Did Jay Gould earn his one hundred million from his superior knowledge of the railroad business? No! He had hundreds of men in his employ who had forgotten more regarding the legitimate business of railroading than he ever knew. But as a railroad wrecker he was a genius, and worth every cent he *earned*. But under nationalism the occupation of the railroad wrecker will, like Othello's, be gone.

By the way, the Postmaster General has 100,000 employers under his control. First-class men are anxious to serve as head of the Postoffice Department, and do so, at an annual salary of \$8,000. Who is willing to transfer the postoffice business to the control of private capitalists?

In regard to inventions: Do inventors generally reap the reward of their labors? Ask Edison, the most wonderful inventor of the age. He declares his inventions have brought him nothing. The superior "organizing ability" of capitalists, who haven't the brains necessary to perfect an invention, have relieved Mr. Edison of any worry in the matter. He touches the button, they do the rest. Besides, think of the monstrous doctrine that humanity to all eternity is to reap no advantages from the invention of labor-saving machinery. Consider, that any given invention is the result of the general advance in the sciences, to which thousands of unknown workers are continually contributing. For instance, the greatest invention of the century—the electric telegraph—is usually attributed to S. Morse. He reaped riches and renown from it, and yet he was not the discoverer of any law of electricity, was not even interested in the subject. But he availed himself of the patient labors of others, and simply, by a little mechanical ingenuity, gave the labors and researches of others a commercial value. No one wants to detract from the merits of Morse, but the claim that he would be entitled to confiscate most of the advantage of the telegraph is nonsensical.

One more point: Mr. Middleton speaks of interest under certain conditions, as a "free bargain between equals," and asks if, under such conditions, "will even he (Stuart) dare to be just?"

Let me answer him by putting the proposition in the shape a capitalist recently did in a conversation with me. Said he, "Take the case of a young farmer in Nebraska, a few years ago. He had plenty of range near him on which he could raise cattle profitably, but had no capital. He, therefore, mortgaged his farm for a couple of thous-

and dollars, bought young stock, turned them on the range, sold them in two or three years, paid his mortgage and the interest, and had a couple of thousand dollars ahead. Were not," he asked, "both parties to the transaction benefited?" My answer was, "yes, certainly." The farmer had merely shifted the interest, like the renter of a valuable site does his rent, onto the consumer. In the last analysis, all interest and rent first appears in the price of commodities and products, they are paid for by the consumer. Wages merely represent what is left after deducting rent, interest and profits.

That Mr. Middleton can see this so plainly in the case of rent but not in the case of interest, is to me utterly unintelligible. That a venal press and sycophantic writers in the interest of the exploiting classes should defend usury and exploitation of labor, is not surprising; they make a living by doing so; but that men like Mr. Middleton, who are honest and intelligent, should not be able to see through the sophistries of pseudo economists, and are content to be the defenders of labor exploitation, is to me one of the most discouraging features of the reform movement, and augurs ill for the chances of effecting the peaceable change from our present anarchic system of private ownership of the means and instruments of production.

I shall now indulge in a brief résumé of the principal arguments against the single tax, and close by the briefest outline of what I consider the only solution of the economic problem:

1st. It is a universal belief among single taxers that under a single tax régime, rental values of land would constantly advance and furnish a continually increasing fund for public purposes. If this be so, then it must be evident that security of tenure would be entirely destroyed under the operation of a tax that would vary so greatly with increase of population or business. We have seen land values increase from a few hundreds of dollars to as many millions in a lifetime. Improvements suitable for a town of 10,000 inhabitants would be entirely inadequate when the population had increased to forty or fifty thousand. Such an increase in population is frequently effected in less than one decade. As rental values would increase regardless of the income derived from the improvements, such improvements would have to be torn down or abandoned, at great loss to the owners.

It is admitted that security of tenure is absolutely necessary to insure the best use of land. But under such conditions of insecurity and uncertainty improvements would be discouraged, and when made, would be of a cheap and temporary character. Certainly no poor man would risk building a home in a growing town, lest increase in rental values might in a few years force him to abandon his home. In such a case he would, of course, be careful and select a new location outside the range of possible improvements and increase of rent.

So undesirable a condition was not anticipated by the author of "Progress and Poverty." His followers, however, urge that no one would be allowed to dispossess another without payment for improvements. This might mitigate the difficulty in some instances,

without effecting the general result. Rental values would be effected over larger areas than would be required for immediate use (as under present conditions), and only here and there might an owner effect a sale before the rapid advance in rental values would force him to move or abandon his improvements. This insecurity of tenure would also destroy the value of land and improvements as a basis of security for the advances of capital.

These objections are serious and vital, and entirely discredit the single tax as a practical solution of even the land question, an important, although not the chief, factor in the economic problem.

2d. The fallacy involved in the assumption that present rent would, under the operation of the single tax, be transferred to the state without diminution—nay, would indeed, as single taxers claim, be largely increased in amount. This assumption is based on the fallacy that present rent is economic rent, whereas, it is rent due to monopoly. The effect, however, of the single tax would be to entirely abolish monopoly rent. All land, both urban and agricultural, not needed for immediate use, would be abandoned from inability of the owner to pay the tax thereon, with the obvious result, that as we have an hundred times more land than we have use for, or can possibly use during the next century, and as all unused land would be thrown on the market for what it would bring; that rental values would enormously decrease to at least one-fourth, and probably one-tenth that obtained under the present system of private monopoly of land.

The fact is, as a scheme for absorbing the largest possible tax from land, our present system is, perhaps, the best that could be devised. It permits the practical monopolization of the entire continent, upon which the owners pay taxes, much of which will not be in use within the next century. The adoption of the single tax would throw 90 per cent. of this land on the market, from which no tax would be derived. The remaining 10 per cent. would not probably pay one-fourth of present rent. So that the term "single tax," as implying its sufficiency for all the purposes of revenue, is a misnomer and absurd, and exhibits in a striking manner the shallowness of the Georgian philosophy.

Of this effect on rental values that would inevitably follow the adoption of the single tax, George shows not the slightest conception in "Progress and Poverty," nor can it be found in the writings or speeches of any other single taxer up to three or four years ago, when, I believe, the writer first pointed out this singular economic fallacy.

3d. We have seen that the single tax theory is founded on the belief that all surplus wealth is directly or indirectly absorbed by rent, the result of the present monopoly of land, and that the sovereign remedy that George proposes, "which will raise wages, increase earnings of capital, extirpate pauperism, abolish poverty, give remunerative employment to whoever wishes it, afford free scope to human progress, lessen crime, elevate morals, taste and intelligence,

purify government, and carry civilization to yet nobler heights, is—to appropriate rent by taxation.”

We have thoroughly exposed this fallacy by showing that under the present conditions of the concentration of wealth in production, mere access to natural resources would be only a mockery to the man without capital. We have quoted Hon. D. A. Wells to show the results of bonanza farming in reducing the cost of production; that wheat and staple cereals can be produced at about one-third the cost of the small farm. We have in this state the steam plows, that plow the land at a cost of twenty-five cents per acre. Combined headers and reapers costing \$7,000, that cut, thresh and sack the grain at a cost of three or four cents per sack. We raise beans in little patches of from two to five thousand acres, the work mostly done by machinery. Horticulture is also rapidly falling under the domain of the capitalist method of production. Orange groves of a few acres are rapidly giving place to those of from one to five hundred acres. We have already a fruit farm of 1,600 acres that gives employment at certain seasons, to 1,000 laborers. A potato planting machine recently invented, will soon take the production of that staple vegetable out of the hands of the small farmer. Experience is showing that the same economics of production on a large scale is as possible and profitable in agriculture and horticulture as in other forms of industry, and that it is only a question of a few years before our present system of small farming will become as obsolete as the hand looms, the stage coach, and the tallow dip. We have pointed to the abandoned farms of New England as an illustration of the mockery of “free access to natural opportunities.” The Homestead strikers did not seem to be much impressed with the advantages of the practically single tax conditions that surrounded them. No; they preferred the terms of H. C. Frick to starving on the free lands near them.

Manufacturing industries are already monopolized by capitalists. He who can not see the trend of all other forms of production in the same direction is either blinded by prejudice or lacks ordinary intelligence. The trust and the bonanza farm are here to stay, and the only question for us to decide is, whether we are willing that form of production shall inure exclusively to the benefit of a few capitalists, or to the benefit of the whole nation. Certain it is, that under existing conditions of production, to offer men without capital (and that class composes 95 per cent. of the population) “free access to natural resources” as a solution of the economic problem, shows an ignorance of recent economic changes as deplorable as it is discreditable. Nor can it any longer be urged that trusts are the result of protection. The Standard Oil Co., the Big 4 meat combine, the Cotton Seed Oil Co., the Sugar Trust, and a score of others, are neither the result of our fiscal policy nor due to the control of natural resources. Their appearance simply proclaims the death of individual competition. They suggest the coming National Trust, in which the citizens of the nation shall be equal share holders.

4th. In the analysis of the origin of capital and interest we have adopted the dictum of Adam Smith, that wealth, economically considered, is the product of labor exclusively. This theory was endorsed and more firmly established by Ricardo. Therefore, labor has a just claim to the whole product, or its value. But under our system of capitalist production the laborer receives only a part of the product as wages, the remainder and largest portion going as rent of land and interest on capital. Rent and interest owe their existence to the fact that under our system of minute subdivision of labor, labor is able to produce a surplus over the amount necessary for subsistence. This surplus the land owner and capitalist are able to appropriate, through the private ownership of the means and instruments of production—land and capital.

Therefore, it is inevitable that under a system whereby the modern tools of production are in the possession of a small class, and that the immense body of workers, having nothing but their labor power to sell, must sell it under desperate competition with their fellow-workers or starve. Hence, the cost of the production of wealth is, under present conditions, merely the cost of the subsistence of the laborer. Labor, the producer of all wealth, itself becomes a commodity. The laborer makes the tools that produce wealth, which, in the hands of the capitalist, are the means of binding him more firmly to the system that degrades him to the condition of an appendage to a machine, distorts the conditions under which he works, and often in the bitter struggle for existence drags not only himself but also his wife and children under the cruel wheel of the juggernaut of capital.

The capitalist, as such, no more produces capital than the land owner does the land. Rent and interest are the result of the private ownership of the means of production. Capital is merely accumulated unpaid labor. All rent and interest represent, therefore, exploitation of labor, which, under the "Iron law" of wages, continually increases with the productivity of labor, *i. e.*, every invention of labor saving machinery increases the production of wealth, while at the same time it makes the capitalist more independent of the laborer, and enables the capitalist to reduce the laborer to a lower standard of living, through the constantly fiercer competition for work among the unemployed.

Finally, we have seen that nothing the single tax offers will redeem us from this bondage to capital. We have shown that under that system all rent of land above the "margin of cultivation," or land of no rental value, would be confiscated by the state, while all the advantages of labor saving machinery would continue to be confiscated by the capitalist as the "just return," as George puts it, for the use of their capital. Labor would, under such conditions, be forced to produce, as now, for a bare subsistence. The "Iron law" of wages would still operate. Under the brutal law of competition, wages would still continue to tend to the minimum upon which the laborer would consent to reproduce more wealth.

I have now concluded my criticism of the single tax theory. If my criticisms and arguments are sound, we are led to the logical conclusions, that the making of land common property, while an important and necessary step in economic reform, would of itself, under present economic conditions, not solve the problem. We must substitute collective for private ownership of both land and capital. The people, collectively, and not merely the small capitalist class, must control all the means and instruments for the production and distribution of wealth.

But we advocate no violent or unjust means to attain our ends. We expect to accomplish our purposes under a republican form of government, and by lawful and constitutional methods. Nor do we advocate any hasty or ill considered measures. We make no war on individuals who have lawfully accumulated fortunes by carrying to a logical end the false principles upon which business is now based. But we condemn the system which permits such inequalities of wealth. We denounce the principle of competition as simply the application of the brutal law of the survival of—not the fittest, but the strongest, most cunning, and most unscrupulous. We hold that our struggle should be against the forces of nature, and not against each other. Confident that under a system of fraternal co-operation there will be plenty for all, and humanity freed from the bitter struggle for the means of satisfying a mere animal existence, will rise to grander and nobler heights of intellectual and moral development.

There is a constantly widening consensus of opinion that the inevitable outcome of democracy must be the control by the people themselves, not only of their political system, but of their industrial organization as well. The monarchical idea was that the people should allow a king and an aristocratic class to govern them. We have abandoned that idea in political affairs, but follow the old paternal system in industrial matters by permitting an aristocracy of wealth to control our industrial system for their exclusive advantage. Not paternalism, but *fraternalism*, is our shibboleth.

We must, therefore, adopt the democratic principle in our industrial system—must adopt organized co-operation for the competitive struggle, and the consequent recovery in the only possible way of what J. S. Mill, quoting Fourier, calls “the enormous share which the possessors of the instruments of industry are able to take from the producers.”

Edward Bellamy well says:

The exercise of irresponsible power, by whatever means, is tyranny, and should not be tolerated. The power which men irresponsibly exercise for their private ends, over individuals and communities, through superior wealth, is essentially tyrannous, and as inconsistent with democratic principle and as offensive to self-respecting men as any form of political tyranny that was ever endured. As political equality is the remedy for political tyranny, so is economic equality the only way of putting an end to the economic tyranny exercised by the few over the many through superiority of wealth. The industrial system of a nation, like its political system, should be a government of the

people, by the people, for the people. Until economic equality shall give a basis to political equality, the latter is but a sham.

Even Henry George admits that the socialist ideal is a noble one, and in his opinion not impossible of realization.

Seeing, then, that the present concentration of wealth, if uninterrupted, must end in the establishment of an insolent and brutal plutocracy, supported by a nation of slaves, why should not all reformers unite in forming the co-operative commonwealth? the nationalization of all industry and the promotion of the brotherhood of man?

---

## THE SOLIDARITY OF ALL REFORMS.

BY JOSÉ GROS.

No. 5.

[Concluded.]

In this article we propose to outline the simple processes by which the people can estimate and recover the land values absorbed by franchise corporations, and even by all the others, if necessary, to stop certain industrial monopolies. Every corporation is, after all, the creation of human law, exists because of certain privileges given by law, and can and should be cancelled by other laws, by laws asserting equal rights to all. No especial privileges have the right to exist under a God-like civilization, as the single tax would produce, *if properly codified*. Please don't forget the last three words, socialistic friends. It will considerably help your mental digestion. It will save you from useless mental combinations. It will simplify your future articles and make them far more instructive, far more useful to the healthy social status that we all want to work for, that we all crave for, because we all hate our present industrial iniquities.

Before we commence the proposed job we desire to spend a few moments in demolishing one of those fearful paper citadels that our critics are apt to build up in order to frighten themselves or somebody else out of their wits in the science of economics.

We are told that with the immense quantities of vacant land thrown into the market by the single tax, land rents would be well nigh annihilated. Confidentially it has been stated to us that piles of single taxers, with tears in their eyes—they are most of them a sorrowful set—have, in their moments of despair, thrown themselves on their knees at the feet of Mr. Henry George, and have even kissed his boots, asking him to solve the above problem, and Mr. George, cold-hearted as he is, has refused to give an answer.

How dreadful! Of course most people, those who don't live in the woods or in their dreams, know that brother George has satisfactorily answered every question, except, perhaps, any one too stupid to be worth while answering.

The above problem is fully explained in the *LOCOMOTIVE FIREMEN'S MAGAZINE* for August, 1891. See article captioned "Labor in Society and in the Wilderness."

Any man willing to use his brains a little can answer to himself that fearful question which George has never seen fit to answer, according to some of our phantastic socialistic friends, with more imagination than it is good for any of us to have. Now, let us go for a short answer. For every 1,000 lots or plots of land that the single tax would throw into the market in and around every center of population, or fragment thereof, 100 lots, or even less, would be far superior to the rest, at any given date or period. Superior for residential purposes, superior in sanitary conditions, or because subject to higher profits in this or that occupation. And it is on these 100 lots or less, out of every 1,000 or more, on which competition would center itself, as a matter of course. It would pay far better to take those 100 lots at an average rental of, say \$100, than any of the other 900 at an average rental of \$10. Even with the higher rent anybody would clear \$1,200 in the choice 100 lots better than \$1,000 in the poorer lots, because further from the business center, from schools, churches, bays, good roads, good water, public parks, theatres, libraries, etc., etc. It is too bad to have to descend to the explanation of such simple phenomena, and all because some men are more fond of dreams than realities, or don't stop to think before they talk or write.

Now, let us see how the people could take back the land values of all corporations. We shall commence with railroads. According to the Inter-State Commerce Committee the capital of our railroads was \$9,829,000,000 for 168,000 miles, on June 30, 1891. One year after, the Poor's Manual, the organ of our railroads, says their capital was \$10,765,000,000 for 170,000 miles. Call it 10½ billions. According to Mr. H. V. Poor, no better authority on the subject, the real value of our railroads in 1891 was not over \$30,000 per mile, at a high estimate. That includes over \$4,000 per mile in right of way, original land value, and rents and interest income. It also includes \$4,500 per mile for earth-work and rock-cutting, an expense which only takes place in mountain sections. Besides, even rock-cutting and earth-work become land value at the end of 20 years by ethics, because of a permanent land feature fully paid for through 20 years interest. Our critics imagine that we single taxers don't understand our business. They act as if an old minister, who has spent his life in bible study, wanted to teach an old shoemaker how to make shoes.

Taken all in all, \$24,000 per mile more than fully covers to-day the cost of the 170,000 miles of railroad in question. We have then 4 billions as total labor cost. We have 6½ billions land value,

franchise value, belonging to the said organization, in ethics. Call it 6 billions, at 5 per cent., \$300,000,000 annual land value. About half of that would run the National Government, without army, navy and pensions. A God-like civilization would not need any such expenses. Nobody would even care for any government pension when everybody could make the equivalent of from \$15.00 to \$30.00 a day, with but enjoyable labor.

The other \$150,000,000 annual railroad land values could be applied to the gradual cancellation of the 4 billions railroad labor cost. To that we could add an annual issue of \$150,000,000 in government notes, to be also applied to such cancellation. The people could, in that way, become in 14 years the absolute owners of our railroad system of to-day, when rates would simply need to cover the running expenses, and the national government expenses, if we so preferred. In that case the local and state expenses would be faced by the local land values, and the surplus could be applied to the cancellation of the labor cost of all local franchise corporations. The annual franchise, land value of local corporations, would, of course, form part of the local tax fund—local single tax.

If the railroads or any other franchise corporations dared to increase rates with which to meet their respective single tax, that would cancel their charters, because defying the law of the land. The people would then at once take possession of their respective concerns by simply converting into 5 per cent. government bonds that portion of corporate securities representing labor cost, and subject to the gradual cancellation above indicated.

Take, for instance, the case with the railroads. The government could issue 4 billions of such bonds, 3 of them to make up for the 5 billions railroad bonds and 1 billion to make up for the 5 billions railroad stocks, on the supposition that the former are entitled to a larger share of real value than the latter. Then, in some cases, railroad bonds may embody investments from the relatively poor, widows, orphans, etc.

It is estimated by experts, including Mr. C. Wood Davis, so well known on the subject, that under government control the railroad expenses would at least be \$160,000,000 less than to-day, from the suppression of monopoly salaries, litigation, free passes, etc. Add to that the stopping of discriminations in favor of big concerns, and no doubt \$200,000,000 could be saved, and by that could we all at once reduce transportation rates, besides meeting our national government expenses, as indicated.

The Australian railroads, under government control, charge but \$6.50 for 1,000 mile passenger tickets against about \$30.00 in our country. That more than corroborates all the above in the advantages to be derived from absolute government control, if we consider it desirable or needed.

The question is now how to reach monopolistic combinations like that arising from the pipe lines of the Standard Oil Company. Such pipe lines could be consolidated with the railroads. The pipe

lines are transportation by a natural force, that of gravitation, which belongs to the social compact. Suppose that the Standard Oil Company saves one-eighth of one cent per gallon on, say, 2½ billions of gallons in annual transportation by that natural force over that of steam. There we have 3 millions annual land values from that source alone attached to those happy pipe lines. Let the company pay that to the rightful owner—society—or let the people take possession of the pipe lines by simply paying 5 per cent. interest on their labor cost, and there is the end of that monopoly, if it had not ended before, from the fact that, unable to hold vacant oil lands, 500 companies would, no doubt, sing Hail Columbia to our brethren of the Standard Oil Company.

The great curiosity among some of our American socialists is, that they repudiate the best conceptions of their German leaders, some of whom at least accept taxation on land values as one of the elements with which to improve social conditions. Why should American socialists be less broad-minded than the best in Germany?

All our past and present evils arise from socialism by 20 or 30 per cent. The absurdity of trying to cure such evils through socialism by 100 per cent. state socialism! The State has always transgressed the law of equal rights by especial privileges to some. Whether that is done by hereditary monarchs or by 500 elected monarch-legislators, the result is equally bad. We have always had government by, say, 500 wheels. State socialism means government by, say, 500 wheels. All we need is government with about 2 wheels.

First. Righteousness in the tax fund and its distribution.

Second. Righteousness in the monetary system, since money is the expression of values as language is the expression of thought.

The writer of one says: "Down with all plutocracies," even the elected one of 500,000 captains of industry, as state socialism would mean to-morrow in this nation of ours. Every man should be his own captain of industry if he so prefers. Nothing short of that will ever do.

Ah, ye reformers with little faith, forever trying to reform after the manner of men, and never after that of God; always in search of complexities, and never after the beauty of simplicity; constantly along the line of the greater resistance, and seldom if ever along that of least resistance! And the latter is the line of nature, the line of God in the cosmos and in history. And simplicity is the symbol of the eternal and divine, while complexities are the incarnation of the human, and perishable.

Let all individuals have the full equivalent of all exertions in all honest occupations. Give to society what is exclusively the product of social growth, the annual land values that the presence of population may evolve. Let government do nothing beyond enforcing the law of equal rights to all, as ordained by the direct voice of the workers who alone make nations possible, from whom alone all wealth comes, and let your minds rest in peace with God about results. That which is right and equitable cannot fail to be good for all.

"Seek ye first God's kingdom and his righteousness, and all these things shall be given unto you." All your healthy aspirations shall be satisfied, whether you be socialists by 20, 50 or 100 per cent., individuals pure and simple, or a combination of both elements, all of you shall then have your full measure of joy, on earth first, in heaven later on.

In my August article I stated that, according to a certain critic, the single tax would confiscate \$6,000,000,000 per annum from the 95 per cent. and for the benefit of 5 per cent., that being the difference between the lowest average earnings per family group of many workers and the total average annual net product of labor. The said critic, in the September number, says that the figure we mentioned was 60 billions. On that he finds room for a great deal of funny rhetoric. Our dear readers will easily see that that rhetoric is funny indeed, as it shows the funny mental disturbance of the mind in question. It is but one in many distorted quotations. We forgive him, because he is a dear friend of ours.

## MARGUERITE.

*A Historical and Philosophical Romance.*

---

BY MARIE LOUISE.

---

### CHAPTER IV.—THE BAPTISM.

The village church bell was chiming merrily and the villagers were slowly congregating inside the sacred edifice to witness the christening ceremony.

The priest, a man of about fifty, was giving to a young chorister the last instructions for the arrangement of seats and paraphernalia connected with a Roman Catholic christening.

The eyes of the priest were, ever and anon, turned towards the entrance of the church, and seemed to search in the crowd for some one especially.

At three o'clock sharp, the stately form of Madame Ferrier appeared under the portals, and, as she gracefully bowed right and left to the assembled villagers, the gaze of every one seemed drawn towards her. Some expressed ill-will, some affection, and some again respectful admiration. All were strongly affected by her presence. Having saluted the assembled villagers, she walked towards the aisle of the church where the priest stood by the side of the "baptismal fount."

"Good day, M. le Curé," she said. "Am I too soon for the ceremony?"

"Not at all, Marie Louise. I am glad to see you. You can never come too soon for a little friendly chat, can you?"

"We are here to perform a religious ceremony, Monsieur le Curé; it is hardly the time for a chat."

The priest looked at Madame Ferrier. His eyes, on meeting hers, filled with a burning expression. A thrill ran through his frame, and in a tremulous voice he replied:

"Marie Louise! Yours is the voice of a queen; it is welcome at all times and in all places, even in the abode of God. When God created you he produced a master-piece, of which he is proud! How could I, His humble servant, be indifferent to his great work?"

"Monsieur le Curé, you flatter me. I am but a feeble mortal, imperfect on many points. My only redeeming feature is my love for truth. Many times I have merited your apostolic anger, for I have questioned all your teachings and challenged all the religious dogmas. In accordance with the laws of the church I have deserved everlasting punishment. Yet, you have always been indulgent towards me and charitable. You have never hurled anathemas at my inquisitive mind, but quite the contrary, you have always sent me away with your blessing and the absolution of my sins."

"Marie Louise," replied the priest, "Can a minister of God curse that which is divine?"

"Thanks, father!" exclaimed the lady, seizing his extended hand and pressing it ardently. Her eyes met his in close spiritual communion, their souls blended. "Yes, father," continued Madame Ferrier, "Man is divine and truth is eternal."

At that moment a tall, slender man advanced towards the priest and waited to be recognized. He wore the blue blouse of the French peasantry; in his hand he held a silk hat, extremely high in the crown, such as were made and worn thirty years previously. The man's face expressed neither intellect nor refinement, but it suggested cunning, tempered with benevolence. His thinking power might have been great, but it constantly revolved within the same circle.

"Good day, Monsieur le Curé," he said.

"Good day, Jean Claude. You are to be co-sponsor with Madame Ferrier, I understand."

"Yes, Monsieur le Curé," he answered, fumbling with his hat and looking bashful.

"The baby's name is Marie Marguerite, is it not?" inquired the Curé.

"Oui, Monsieur," answered Madame Ferrier. "She is called after me and after the flower of which her mother is so fond."

"Oh, to be sure," remarked the priest, "Madame Duval is very fond of daisies; she often told me so."

The noise of many footsteps entering the church informed the trio that the child had arrived to receive the holy initiation through

baptism. León Duval handed the baby to Madame Ferrier, and the priest opened the proceedings by making the sign of the cross. Then, out of his breviary, he read the latin invocations and declarations of faith required for the performance of the rite, such as "Credo in Deo," "Pater Noster," "Ave Maria Gratia," and other devotional exercises pre-arranged for the recital of the faithful. This done, he called upon the Godmother and Godfather to swear that they would instruct the child in the Roman Catholic faith and be responsible for her conduct until she attained her spiritual majority (ten or twelve years) when she would relieve them of their responsibility by personally confirming and renewing the vows made by them at her baptism.

The ceremony was conducted with much eclat. Choristers in full uniform of white lace skirts responded to the "litanies." At the close, the priest raised a relic case in which the bones of some departed Saints were enclosed, and each person passed in rotation, kissed the bones through the enclosing glass, and dropped pieces of money into the silver plate close by.

The villagers then rose to depart, dipping their fingers in the basin of holy water by the door, crossed themselves, and turning around, bowed low to the grand altar, then they marched out of the church and clustered near the portals to take a critical survey of the baptismal party as they passed out.

Said an elderly lady: "What do you think of this ceremony? Was it not rather brilliant for a poor man like León Duval?"

"It was brilliant," said a man in the company, "but if León Duval is poor, Madame Ferrier is rich, and as likely as not she is paying for all that display."

"She likes display, anyhow," added a middle-aged woman, with a sarcastic grin on her thin, quivering lips. "She is as proud as a queen, although, God knows, she has little reason to be so haughty."

"Haughty, you say," remarked an old man in the crowd. "She is not so any longer. You should have seen her during the life of her first husband, then you could have said she was haughty. But since she married that man, Besson, her high spirit has considerably abated. I think she is not happy with him."

"She deserves to be miserable"—put in another woman; "What is pride? Is it not the first step towards destruction?"

"It has always surprised me"—said another, "that she married her daughter Clotilde to León Duval, a poor shoemaker."

"Madam Ferrier is too vain to have a farmer for son-in-law"—remarked another. "Tradesmen catch her fancy as being above the plain laborer. You know that girls in our time, believe they make a great match when they marry a shoemaker, a tailor, a carpenter, or any other mechanic."

"It is a pity"—sneered another, "that Madame Ferrier cannot find some Lords in our neighborhood to marry her daughters to."

"Why!"—cried a man in the crowd, "you have a great deal to

say about Madam Ferrier, but who among you, can impeach her uprightness and intelligence?"

"Hallo! *père* Morin, is it you?"—said a man,—Bravo! "stick to your friends."

## CHAPTER V.—CLOTILDE.

Let us for a moment return to Clotilde Ferrier Duval whom we have left alone in her cottage.

After her baby girl had been taken away to be christened, she lay in her bed motionless and absorbed in thought. Her mother's words regarding the interference of law with maternal rights and her husband's sharp retort, kept on ringing in her ears. Her imagination worked itself into a state of fever, her brain seemed to be on fire and large drops of perspiration covered her forehead. Prostrated under the conflict raging within her, she, at last turned her face to the wall and in broken utterances she murmured:

"I know it, the child is its mother's property. I know that my baby girl is mine, mine, and no one else's. Is not the child linked to its mother's body by a tie which cannot be severed until it has attained maturity and drops out into the world? Is it any way linked to its father? Not at all! Whom does my baby seek and whom did she seek as soon as she was born? Me, me, and me alone. And they say a child belongs to its mother's husband by law! \* \* \* by law! What a strange sound that word law has in my ear. I heard it mentioned many a time before and it did not seem to me very strange. But when they place that thing, the law, in antagonism with my maternal rights, its sounds, the very letters that express it, make me shiver. What is the law, anyhow? The French law is made by Frenchmen. The Bible says somewhere: "Man's wisdom is folly in the eyes of God," and the wisdom of French law-makers is no exception, I am prepared to swear. \* \* \* \* \*

"My baby belongs to Duval by law!—and does not belong to me! \* \* \* \* \* that is, if it belongs to me, it does so in violation of the law. Duval could legally snatch my little Marguerite from my breast, dispose of her at his will, because the law says she is his property, \* \* \* \* \* not mine! Horror, horror! Oh my brain is bursting! My God, why did my mother broach such a subject at a time when my torn bosom and my terrible sufferings of yesterday so forcibly tell me that my child is a portion of myself? \* \* \* Can there be another law but that of nature, by which woman may become a mother, may subdivide her own being? Does man bring children into the world, does he build up their little frame, tissue by tissue, until they are formed and matured for birth? No! a father has no natural right to own a child; if he had, why should he require the help of manufactured law to establish his claim? To develop and bring forth a child, woman does not require the help of law, she performs that task in accordance with the law of her own

being, even though all fabricated laws were to the contrary. I know that my baby girl is mine, with, or without the permission of the laws of France, and when I have become incapable of asserting my material rights, then let me be wiped out of this world, let me die! Better death than degradation!"—cried the tortured mother in a voice drowned in tears, and, as if to shut out a painful vision, she drew the bed sheet over her head and sobbed bitterly.

## CHAPTER VI.—ARTHUR BESSON.

A few days after the occurrence of the events related in the preceding chapters, Madame Ferrier sat in her parlor, which served also as a dining room. She was engaged in knitting a woolen sock. The ball of worsted lay on the floor by her side. Now and then, from under her chair, the lively paw of a cat would come out, deal a quick tap at the ball and send it reeling away.

"Kitty, leave off," cried Madame Ferrier, "You entangle my worsted."

Kitty's head peeped out of her hiding place, glanced at her Mistress with mischief in her eyes, gave an artful wink, and struck another dexterous blow at the ball of yarn which sent it wheeling to the other end of the room.

Madame Ferrier looked at the saucy face of the cat and laughed outright. "You have a will of your own, Kitty, have not you? Well, as you have it, keep it. Of course, a cat will paw a rolling ball," said the lady, patting gently the unruly animal.

"To whom are you talking?" said a man who had just entered the room unobserved. "I thought you had some one with you."

"I was talking to the cat," answered Madame Ferrier.

"It is just like you, Marie Louise—talking to a cat is a very fine pastime, I am sure. You will talk to your cat and caress it, while you hardly seem willing to speak to me, much less caress me."

"This may be true, Besson," said the lady. "I am not prepared to deny the charge, neither am I prepared to discuss the pros and cons of the subject. You and I have been estranged for a long time, and for reasons which to both of us are very obvious. Our relations being strained, how could we speak to each other and behave to one another in any other way but that of cold forbearance?"

"You created the position, madam," replied the man. "I was always willing to be gentle with you, but you decided otherwise. I daresay that if you could you would hastily get a legal separation and cast me away. Your indictment against me, however, does not stand good before the law. If I have committed adultery, as you say I have did you find me *in flagrante delicto* in your own house? No, you did not. Well, then, in such a case, when the offender is a man, the law does not hold it criminal. If I were a woman, then the offense would be criminal to the highest degree and a valid reason for obtaining a legal separation. *Moi madame, oh c'est different.* But you,

you are only a woman; your place is to be humble and submissive, not to scold and upbraid your lord and master for actions which the law does not deem serious enough to punish or valid enough to grant a legal separation for. What have you to say to that, Madame Besson?"

"Oh, nothing," answered the lady. "I take no stock in unjust laws which directly antagonize pure justice. I am a law to myself, and know the depth of your sins"

"My sins! Oh, how sanctimonious you look just now. If I were as old as you are perhaps I might not be so subject to the snares of women, or if you were as young as I am, perhaps I might not—"

"Oh, stop your nonsense, please do!" broke in the lady. "I never find fault with what you do, and I acknowledge your right to do whatever you think is good for yourself; you are the best judge in the matter."

"Correct!" sneeringly retorted the man. "Keep to your own words and we shall have peace. I am going to Salins and shall not return before two or three days. The servant is just bringing out the sleigh. Goodbye, Madame Ferrier. God bless you," said he, with a bow.

"The same to you, M. Besson," said his wife, bowing to him in return.

[To be Continued.]

---

## SHORT STUDIES IN POLITICAL ECONOMY.

---

BY WILFRED P. BORLAND.

No. 10.

Rousseau truly said, "He who first enclosed a plot of ground and took it into his head to say 'this belongs to me,' and who found people simple enough to believe him, was the true founder of civil society." The immortal author of our Declaration of Independence, in pursuance of his ideal of a civil society which should be an improvement on those then existing, laid down the principle that "the earth belongs in usufruct to the living, the dead have no right or power over it." This principle Jefferson labored hard to have recognized in our constitution; but his effort was of no avail, and, in spite of the fact that we have always enjoyed greater political liberty than any other people on earth, our economic history has been no different from that of contemporaneous nations. In his "Labor Movement in America," Professor Richard T. Ely gives as the reason for the little strength of the trade-union movement in the early years of our history as a nation, the fact that our great extent of practically free land made workingmen independent and relieved them

from the necessity of combining to resist the encroachments of employers. Professor Ely's really valuable services to the labor movement would have been greatly enhanced, if he had pursued this line of thought to its logical termination. In the early years of our history our public domain was immense in extent, and the forces of monopoly were not yet strong enough to keep men away from the land. That fact gave us an approximation to the free competition of equal industrial units, thus making combinations unnecessary. When men are free to accept or reject conditions at will they need not enter into combinations to protect their natural rights. And they can only be free when their equal rights to the soil are recognized and protected. The quintessence of the evil in our present economic system is that it permits, and even compels the wealth created by some persons to flow into the possession of others, without those others having rendered an equivalent for it. All wealth is the product of labor applied to land, and each person is ethically entitled to enjoy the full product of his labor. These are self-evident truths, and their recognition in the economic system of society is an essential condition to the correct distribution of the wealth created by that society. The great German economist, Karl Marx, after an elaborate and exceedingly acute analysis of the capitalistic mode of production, by which he shows that the profits of the system consist of the surplus value created by the wage workers (that is, the difference between the value of what they produce and the value of what they receive as their wages for producing it), comes to the conclusion that all the instruments of labor should be common to all. The land, the tools of all kinds, the means of storing and transport would all appertain to society as a whole. The only things that would be private property are products intended for individual consumption, the tools that one can handle without the co-operation of others, or any mechanical aid—for instance, a needle or an ax—but under the proviso that none of these things would be made use of in order to produce for individual profit. Instead of individual production for profit we should have collective production for use, the results of this collective production to be placed at the disposal of consumers in general storehouses. How would the products thus created get afterwards into the hands of the consumer? or, upon what basis would the distribution of this collectively produced wealth be determined? It is at this point that the socialism of Marx and the old fantastic communism, summed up in the motto of Louis Blanc, "To each according to his needs, from each according to his powers," part company. Under the Marxian economy, consumption is to continue the same as it is to-day—personal, free, limited by the labor of each individual. The only difference being that capital would be sheared of its power to deduct, as its profits, a part of the results of production, thus permitting a more equitable distribution of the products of the collective industry, and allowing each person to retain in his own possession the full product of his labor. Marx's work has great scientific value, and, however one may differ with his conclusions, his great intellectual power and his great service to

the cause of humanity must be conceded. It is not my intention to enter into any criticism of socialism in this place, suffice to say that the end sought, *i. e.*, the equitable distribution of wealth, may be attained without the employment of such elaborate processes as it proposes bringing to its aid, and without sacrificing our individual initiative. Labor is the active factor in production. Capital, like land, is inert and has no power of creating wealth without bringing the active power of labor to its aid; and when the two factors, labor and capital, are combined, there is the further necessity that land must be used before wealth can be created. There is one very self-evident fact: the laborer is able to produce more than he consumes, else there never could have been any accumulation of wealth. It is this surplus, this difference between what the laborer consumes and what he produces, that has always awakened the cupidity of man and furnished the pretext for the exploitation of the laborer for the benefit of others besides himself in all ages of the world. One of the earliest and most deeply rooted sentiments of the human mind was that the land—the great mother of the human race—was the common heritage of all mankind, incapable of being reduced to personal and exclusive ownership. It took man long ages to progress away from that idea, and while it prevailed there was no way of securing the surplus product of the laborer except by appropriating his body and compelling him to work as a slave. Hence, we note slavery as a universal fact in the history of all people up till a comparatively modern period. It is very evident that the slave must be fed; he must be allowed to retain in his own possession sufficient of the product of his labor to maintain him in health and vigor. It is only what exceeded this that his owner could possibly appropriate to himself. The slave's consumption, then, that which was necessary for his subsistence, may be denominated his wages. But the slaves were troublesome; they were not sticks or stones, but human beings, and they sometimes entertained the foolish notion that they ought to be as free as their masters. When this notion became sufficiently developed, the slaves, in their blind ignorant fury, used to rebel against their masters, thus compelling the masters to call out the militia to slaughter a sufficient number of the slaves to furnish the survivors with an object lesson of their weakness, and terrorize them into subjection. These rebellions of the slaves became increasingly frequent and were a great source of worry to the masters because they were always attended with considerable loss of life and property, and entailed upon them the necessity of supporting a large military force for the purpose of overawing the slaves. Under these conditions, the masters were constrained to relinquish their personal rule over their slaves, granting them freedom of action with the stipulation that a certain fixed portion of the product of their labor should be rendered up to the masters as the price of such freedom. The slaves were of course grateful for the concession they had gained, and, under the inspiration of the new feeling of independence engendered by their limited liberty, they worked all the harder that they might add to their own share of their product, and thus accumulate wealth

This did not suit the masters (when slaves become rich they become independent) so the burdens of government were shifted from the shoulders of the masters onto those of the former slaves; they were oppressed by taxes of various kinds, which were so arranged as to absorb their accumulations and leave them, as before, just sufficient of the product of their labor to allow them to live. Finally, the masters came to see that, as it was necessary for the slaves to use land in order to create wealth, they might accomplish the same results by claiming ownership in the soil as by claiming ownership in the men, and, at the same time, relieve themselves of considerable trouble. Thus the idea of property in land gained currency, and the slaves were systematically expropriated from their rights to the soil. The process of transferring the titles to the soil from society into the hands of individuals was carried on with great vigor for more than two hundred years before it was completed to the satisfaction of the masters, and the idea of property in land became sufficiently fixed to be regarded as legitimate. The slaves then acquired a somewhat different status. The land was freed from the burdens of taxation as far as possible, and the slaves were permitted to use it upon the condition of paying rent to their masters for the privilege, the slaves having no rights in the land except as they purchased them from their masters. It was found that this plan enabled the masters to absorb the surplus wealth quite effectually; after paying their rent, supporting the government, and living, the slaves had nothing left. If, perchance, they did accumulate any surplus the masters either created a national debt or doctored the finances so as to absorb it and keep them in subjection. Driven to desperation by their poverty, the slaves have turned upon their masters with terrible fury at various times, here and there, and demanded freedom. At such times they have been quieted with a few loaves of bread to satisfy their immediate necessities, and have been granted larger political rights as a condition that they would only keep quiet and endure their sufferings like good citizens as they ought. They have even been granted the privilege of acquiring a direct interest in the state by purchasing their own property, and this process has advanced so far that the rights of the slave are regarded as co-extensive with those of the master in most modern nations. With the introduction of the steam engine and the advent of machinery, production took on new forms and the surplus created by the slaves was largely increased, so much so that their masters were rather perplexed for a time to know how to appropriate it all. But the difficulty did not last for long; the stock company was invented, and by reorganizing every little while, at which times the stock has been plentifully salted and then allowed to fill up with water to its full capacity, it has been rendered capable of absorbing the surplus product. And here we have the workingmen, to-day, granted all the rights of citizenship, declared to be an absolutely free man, guaranteed by our fundamental law immunity from oppression and tyranny, and yet, only able to retain in his own possession the same proportion of the

products of his industry as did the slaves of old—enough to maintain his existence. Strange travesty of freedom! The invariableness with which wages tend to approach the minimum necessary for the laborer's subsistence has caused the fact to be erected into a scientific dogma, accepted by political economists as an expression of the action of natural law, and denominated by Ricardo and others the point of natural wages, or "the natural price of labor." This is stated by Ricardo, as "that price which is necessary to enable the laborers, one with another, to subsist and perpetuate their race without either increase or diminution." This is now known as the "iron law of wages"—so named by the great socialist Lasalle—and it is all the standard political economy offers to the great body of laborers in exchange for the product of their labor. Is it any wonder that there should be a demand for a change in our economic system? With workingmen theoretically free, with the external pressure of brute force, which formerly compelled them to accept repugnant conditions, removed, how is it that they are still compelled to accept a bare subsistence as the price of their labor? The superficial answer to this question is that it is due to competition in the labor market. There is always a considerable body of laborers, called by Marx "the reserve army of capital," who are idle, and the fierce competition of these idle ones for a chance to earn the means of subsistence inevitably forces wages down to the lowest subsistence point. But, with boundless opportunities for labor on every hand, why should we have these idle ones? Ay, there's the rub? Why? indeed. This army of unemployed exists because it is shut out from the land. Those who own the capital also control the land; they are thus in a position to dictate their own terms to the laborer, which he must accept or starve. Let the principle of equal rights to land be proclaimed and enforced, and the laborer and capitalist are at once upon an equal footing in making a bargain. For land is just as necessary to the capitalist as it is to the laborer, and when the laborer is recognized as having the same right to the land as has the capitalist, he is in a position to demand and receive his just share of their joint product. The "reserve army of capital" must then disappear, as the laborer would always have the right of applying his labor to the land for the purpose of procuring his subsistence, and instead of, as now, being dependent on the capitalist employer for his means of living, he would then be dependent only on his own exertions. The great power which the capitalists now possess to beat down wages would be theirs no more. But, it is not only in the production of commodities that the capitalist is enabled to draw to himself the robber's share; having control of the medium by which products are exchanged, one with the other, he is able to manipulate their value after they are produced, so as to still further increase his share of the wealth produced, and reduce that which falls to the share of the laborer. Some considerations on value will next be in order, after which we shall present an exposition of a financial system which, with equal rights to the soil recognized, shall secure to the laborer the full product of his labor.

# MECHANICAL.

## PRACTICAL TALKS TO YOUNG ENGINEERS.

BY L. B. MOORE.

No. 6.

It is an accepted idea with the majority of engineers that the first oiling—before starting out on a trip—should be a heavy one; after that, at distances varying from twenty to thirty miles, engines should receive a lighter oiling. It is obvious that such a method of oiling is not only unnecessary, but extravagant, and is followed either from force of habit, or else the actual requirements of lubrication are not considered in the light of economical practice. Here is one instance in which the evil effects of example are plainly apparent. In your experience as a fireman, you probably recall the high estimate which you have placed on the ability of the engineer under whom you received your education, for there is always one, among all those whom we have fired for, that we pattern after as our ideal of excellence. His work was generally considered above the average; his engine was always in the best of condition; his running showed that he possessed good judgment and perceptive faculties of a high order, always anticipating bad conditions and ready to make the best of any contingency that might arise. You looked up to that man as superior to the average engineer, and decided to pattern your future after his work. Here is where you made a great mistake, as is always the case when we follow in the footsteps of others instead of reasoning out methods for ourselves and endeavoring to prove them by practice. This engineer's methods might have been excellent in many respects, but it is altogether likely that when he got his hands on an oil can he took a decided drop from his position as an ideal to pattern after. He said it was better to use more oil than was actually necessary than to run the risk of having the engine run hot. There is an element of caution in this idea, but it is essentially lacking in economical method. At the first oiling the quart can was emptied; after a run of twenty or thirty miles there was the same oiling, with the exception that the quantity was slightly reduced, and at the end of the run he had used between two and three quarts of oil, when, if the engine was in proper condition, not one-half of that amount was necessary. Any farmer who greases his wagon before hauling a load of wheat to town, knows that no more grease is required than will at all times cover the face of the axle; but many engineers carry the impression that engine bearings must be flooded. Why should the first oiling be the lightest? Be-

cause, after an engine has stood any length of time, if the packing above the bearings is loose and free from gum, there will be sufficient oil there to run a good distance without any further lubrication. It stands to reason that when the engine is standing the process of feeding does not stop, and the oil that has been put above the driving boxes, trucks, and eccentrics, has gradually fed down to the bearings, necessitating a very slight oiling to keep up the supply. There are other bearings, however, which are not supplied in this way, and great care should be given them. First, the wedges, while they require but little oil, it should be applied not less than once in thirty miles; a long spouted squirt-can is the best for oiling them, and don't neglect the inside face of the wedge, as is usually the case with young runners. The back wedges require special attention because of extra wear; the coal and dirt from the deck continually sifts down on them; a little waste placed at the top of the driving box, next the wedge, will prevent this to a certain extent. The link-blocks should be oiled once in fifty miles; always know that the oil-hole in the center of the block is clear, as it is liable to get stopped up unless it is slotted and packed. The front ends of main rods require but little oil, rocker-arms the same. Always consider the amount of friction on the bearings, and in oiling govern yourselves, not by the quantity used, but by the distance run, remembering that the greater the speed the more friction in a given length of time. There is nothing which causes an engineer greater anxiety than a hot pin. This rarely occurs from a lack of oil, but generally from a condition of the bearing on the pin surface; the butt end of main-rod being the bearing which causes the most trouble. If the bearing is close the heat expands the pin; if it is too loose it pounds hot. Always see that the brass can be moved on the pin in any position; if hot, take out the rod cup, put a little sulphur and valve oil in the strap, put on the cup and go ahead. You will not lose any babbitt if this is done. However, if the pins are properly kept up there is no danger. Always see that the plunger in the cup is working freely; under favorable conditions one cup of oil should run at least five hundred miles. If driving-box collars are properly packed the drivers need oiling but once in a hundred miles. Engine trucks should be oiled once in fifty miles because of greater friction consequent from the greater speed at which the truck wheels revolve; they being so much smaller than the drivers, the weight on them is also generally greater in proportion than it is on the drivers. It is not the extra expense of oil that causes extra expense in the care of your engine when you are at the end of your trip. You have probably noticed, in passing through the engine house, how much more oil is on the drivers, rods, and jackets of some engines than others. If you haven't, any wiper will tell you that so and so always brings his engine in covered with oil while the engineer on the opposite run brings his engine in comparatively clean. "Straws show which way the wind blows," and appearances indicate whether an engineer is extravagant or economical.

## CONCERNING WATER GLASSES.

BY WILFRED P. BORLAND.

Twenty years ago, if one had been asked: is the water glass a necessary safety attachment to the locomotive boiler? he might very properly have answered—No. At that time the water glass was regarded by many with a suspicious eye as a sort of a pesky thing that it wasn't safe to monkey with, while those who did hold a favorable opinion of water glasses considered them rather as articles of luxury or convenience than necessity. Now, however, the case is different. It may be safely said that there is not one engineer out of a hundred but now considers the water glass as a necessary attachment for the safe, economical and successful operation of the locomotive. It is a general rule that the long continued use of a luxury transforms it into a necessity; this rule will apply to the water glass as well as to many other things about the locomotive which have developed into necessities within quite recent years. The vast majority of the engineers of to-day have, as firemen, always been used to the water glass; its use has been an essential part of their education, and it is not too much to say that they would consider it decidedly unsafe to run a locomotive for any considerable length of time without one. Probably there are but few engineers who have not experienced a decidedly creepy and uncomfortable feeling upon being deprived of the water glass, even temporarily, and have felt decidedly unsafe until it was replaced. All this, too, is quite aside from the question of economy. In the past, economy was not considered an essential quality in the make-up of a successful engineer, or at least it was not so highly considered as now. But now an engineer must live up to a certain standard of economy or give mighty good reasons for his failure to do so if he expects to hold his job; and the water glass is a very necessary attachment for the best economy in running. In order to show the best results on the coal pile, the supply of water to the boiler must be regular and uniform with the amount drawn away in the shape of steam; any excess above what is needed to do the work is a source of waste. This is a well understood fact, and it is impossible for the engineer to regulate the supply of water intelligently and economically without the aid of a water glass. The fireman, also, must know where the water is at all times in order to fire as economically as he is expected to, and he cannot know this unless he has a water glass before his eyes. All in all, there are plenty of reasons which might be given to show that the exacting locomotive practice of the present day renders the water glass an absolutely necessary attachment, and we should expect the master mechanics of the country to be emphatic in their recognition of the fact. What must we think, then, of the following resolution which was adopted at their last convention without a dissenting vote?

*Resolved*, That while the Master Mechanics' Association regard the water

glass as a convenience and an additional precaution against low water, we do not regard it as an absolute necessity to the safe running of locomotives.

It may be interesting to note the debate which led up to the adoption of this resolution. The debate took place on the following conclusion which was offered to the convention by the committee on boiler attachments:

3d. Water gauge glasses are not a necessity, while same may be a convenience to engineers and firemen, and that when same are used they should be applied with automatic closing valves.

This drew out the following interesting discussion:

Mr. Sinclair: The committee expresses the opinion that gauge water glasses are not a necessity. In modern locomotive running they have been considered a necessity, and are so regarded on nearly all roads nowadays.

It is not only a convenience to engineers and firemen, but it is a means of better regulation of the water supply than can be done with the ordinary gauge cocks, and therefore the most advanced men in this line consider the water glass a necessity.

Mr. D. L. Barnes: I would like to subscribe to what Mr. Sinclair says. We had 25 engines come on to the elevated railroad in Chicago without water glasses. We had three burnt crown sheets right away, and on examining the men before the board we found that they claimed that the gauge cocks had an unusual sound. The board, being of a semi-scientific practical character, said that if a man could not tell by the sound of the gauge cocks for a dead certainty where the water was he ought not to be discharged, these being small boilers, while the men were accustomed to large boilers. Therefore we could not reprimand the men as we wanted to, but we had to put on water glasses.

Mr. Henderson: On the Norfolk & Western, several years ago, it was decided to omit the gauge glasses entirely. That was followed by a number of crown sheets coming down. After that we put on two glass tubes, one where the fireman could observe it, and since then there has been comparatively little trouble.

Such evidence as this would seem to show that the water glass was a necessity; when a man drops a crown sheet and it is decided not to discharge him for it because he did not have a water glass, it is a very plain admission that the water glass is a necessity.

Mr. Lewis: I have handled engines on roads where it was all the engine could do to make a run of 200 miles and be able to haul a train at all. As soon as the engine was working to its full capacity it would throw a spray of water out of the stack. The moment the throttle was shut off the water went out of sight. The water gauge is not only a safeguard against the burning of the engine, but it enables the engineer to work an engine to better advantage. I would very much dislike to have this association take the stand that the water glass is not necessary, because I think there are localities where it is an absolute necessity.

Mr. Gillis: We have two water glasses on most of our engines, one for the fireman and one for the engineer, and it struck me at first that it was a little unnecessary to have those two glasses; but I was told that it was very necessary to have two glasses, so that in case anything should happen—if the fireman should be hurt—you would have some excuse that he had a gauge which he could see; he was not dependent on the engineer at all. I took that as all right. I investigated the thing a little further. I did not find a single water glass on 40 engines which I examined, on the fireman's end of the boiler, that was in working order. They were all stopped up. Most of them had the glass broken. I found that some of the firemen talked very forcibly about that glass. They didn't want it there, they said; they might be shoveling coal into

the furnace and the glass might break, and they would be scalded. I have no objection to the water glass, but I don't think we want too many of them on the engine. I think it would be a good idea for a master mechanic to find out just how many of his water glasses are operating, especially if he has bad water.

Mr. Lewis: The statement made by Mr. Gillis, that he had found on 40 engines nearly all the water glasses inoperative, does not seem to me to be anything against the water glass. This is a question of discipline on the part of the officers who are responsible for it. I find no difficulty in keeping the water glasses in proper working order. In the examination of our men before promotion we question them about the water glass and we explain to them the necessity of noticing the water in the glass to determine whether or not the cocks are obstructed, and that it is an important matter at all times to observe the motion of the water in the tank. I am satisfied that I can get better results from an engine with the water glass than I can from the gauge cocks.

Mr. Macbeth: It was not the intention of the committee to recommend doing away with water glasses. The water glass is a good thing if it is taken care of. If it is not taken care of, it is a very dangerous article. That has been decided by the courts.

Mr. Sprague: It would be taking a step backward to remove the water glasses. The engineer ought to have every chance to watch the water in his boiler. When I was on a railroad I found that the glasses we used would stand about so long, and I found by changing them in a certain length of time—I think six months—that I hardly ever had one break on the road. I changed them regularly at that time, whether they broke or not.

Mr. R. C. Blackall: I have been connected with the road I am now on for thirty years; we have in the neighborhood of 400 locomotives, and during all that time we have used no water glasses, and I cannot see the necessity for them.

Mr. Setchel: We ought not to put ourselves on record as saying that it was impossible to run a locomotive without water glasses; I have run a locomotive a great many years without water glasses, and there are a great many roads that will not use them at all. But to say that they are not a convenience and an additional safeguard to the engineer, I think would also be a mistake. They are a safeguard, and if the engineer will only take care of his water glass and his gauge cocks he will have double protection for the prevention of low water. On a great many locomotives that are being built now the fireman is removed from the engineer and it is a great help in firing the engines for the fireman to have a water glass. I do not know but that a good water glass will enable the fireman, if he pays strict attention, to save pretty nearly as much fuel as a compound engine.

To an unprejudiced observer it would seem as though the ayes had it; there are no good reasons here given why the water glass should not be regarded as a necessity, and if the convention's action had been determined solely by the merits of the case, there is no doubt that the question would have been decided differently. But the master mechanics were not there to decide the case upon its merits; there was something else to be considered, as the following will show:

Mr. Clark: I do not think this association should put itself on record that it is absolutely necessary to have a water glass put on a locomotive. I attended a lawsuit recently in Buffalo, where an engine had exploded, killing the engineer and fireman. The case was that there was no water glass and no fusible plug in the firebox. A number of master mechanics were there from different roads to testify, and it was finally decided that the water glasses were not necessary. If we put ourselves on record that the water glass is absolutely necessary there will be some suits based upon that.

Of course that put an entirely different face upon the matter; it

is certainly not conceivable that the master mechanics should in-dorse anything as a necessity with the terrible possibility that their action might furnish the basis for a damage suit against a railroad company staring them in the face. The idea of some poor engineer's widow and orphans being able to collect five thousand dollars from a railroad company that was too penurious to furnish water glasses, because they had said water glasses were a necessity, was too serious to be entertained by the master mechanics, so they were compelled to decide the question from its legal aspect rather than its scientific. It is true that one of the master mechanics spoke right out in meeting as follows:

Mr. Sprague: I would like to say one word in regard to the legal aspect of the thing. It has raised in my mind the question whether we are here to give our best judgment as to what is proper and safe for locomotive practice, or whether we are here to evade legal obligations—whether we are here to advance the interests of the locomotive or whether we are here to “whip the devil around a stump” and avoid lawsuits. I do not think that ought to be taken into consideration. If we are satisfied that a thing is an advantage to the locomotive, we ought to advocate it regardless of lawsuits.

But his words had no effect, and the resolution as given above was adopted. Let no one suppose that the master mechanics have any intention of giving up the use of the water glass; it will continue to be regarded as not only a convenience, but an absolute necessity for the proper management of a locomotive under the exacting conditions that prevail on most modern railroads. But, if a man happens to get blown into the great hereafter because the locomotive that went up with him was minus a water glass, the fact will not furnish a basis for a damage suit against the railroad company, for the master mechanics have said that the water glass was not a necessity. That is really all the resolution means; the scientific aspects of the case are made subservient to its legal aspects. In olden days men used to cut their science to fit the dogmas of the church; in these days it seems as though they cut it to fit the possibilities of a lawsuit.

---

## AN INTERESTING POINT.

BY THOS. PRAY, JR.

---

An educated and refined woman, in a recent personal letter to me, uses this curious expression: “without superfluous money,” (you will wonder when it becomes superfluous) and it is a wonder to the writer when some of the things of this life do really become superfluous, but there exist many exceptions to the so-called rules, and it is perhaps one of the exceptions that the writer does not accept the excuses that men so commonly give for not getting up in life. Let

us talk it over,—some of the excuses that have come to me on the question of why the readers of the LOCOMOTIVE FIREMEN'S MAGAZINE don't chip in more.

"The seniority rule," and the fact that "practice has made the boys all lose interest in fitting themselves for anything better," "because" it "will come our way when it is time," and then follows the old and oft told story, "it is no use to study," for there are so many now in it; this and other are the regulation excuses.

When the woman wrote "that superfluous money was not an essential to a happy life" in the home circle, she did not say precisely what she intended to have me understand, and so it was indefinite, although it was my version of her meaning; and when a man says that it is of no use to study and no use to know something, he does not say what he means or thinks, and if he does so, then he is a poor stick and is sure to remain in exactly the same position in life that he now occupies, for the men who run railroads are not fools, and when they want a choice of men for some position, they are not foolish enough to select a man who has neither pluck nor ambition, but they are sure to pick one who has horse sense, and if that is made an apparent fact in any other way than by the use of brains, that have had some advantage in thought or study, will some one please rise out of his silence and make it clear to us in what way a man can get either experience or proficiency, unless he uses his "old brain tank" now and then in his work.

If a division superintendent wants a man to set up a peg higher, does he look for the most ignorant one on the division? or does he look around and take some fellow that does not hang back, but who does occasionally have an idea of his own? The men who run railroads have now and then streaks of sense in their movements, and they do not want, or use, the poorest timber to be found, and such an idea is implied when the usual excuses are tolerated.

But when my woman friend wrote that letter she had a very positive idea that it was not an "inalienable association" that much money was absolutely connected with a happy home, and it was also her intention to say by intimation that if the will existed on the part of both parties, that it was not only possible, but certain, that with a reasonable amount of money and some good sense, it was quite as possible to have a cosy home, and one in which refinement should not be a stranger, with a rational amount of money; and in this way she showed that she was a "womanly woman," as well as that she had ideas of her own. And in this same connection it is true that the excuses for not aspiring higher are as lame as it is possible to make them, and if a man has been stirred by a genuine healthy ambition, it is an easy matter to make him into a different man, to put him into a different place, and all without losing his fondness for the old life, with the exception that he must put out of his old life some of the old drawbacks, such as not studying and not trying. If a man is to step down and out because some other fellow is his competitor, then on no account would any one be successful,

but if a man goes into the fight with a will, then he would come out somewhere, while if he never went in at all he would not come out, and so on general principles, if a man won't try, no one on earth can help him to climb.

A man is what he makes himself to a far greater extent than is usually believed.

#### CURIOSITIES OF "TECHNICAL JOURNALISM."

One of our number has sent to me of late an article on the "Expenditure of Heat in the Cylinder of the Engine," and the space occupied upon the matter was only two columns, and it had neither head nor point, and no reference was made to the proper authority on the subject. If our readers have the Rankine works, it can be found in forty words, and in a perfectly reliable form. The rule is as follows, exactly: Using dry saturated steam, "the initial pressure, multiplied by the ratio of expansion minus the seventeenth-sixteenth power, is equal to the terminal pressure," but while the rule is O. K., where do we give any locomotive "dry saturated steam" to work on? and then we can apply the rule.

The assertion is all right, but the application and the "beautiful mathematics," so nice in the demonstration, is as much out of place as a bull in a crockery shop, for the exceedingly good and common sense rule that we do not work what Rankine calls "dry saturated steam," and it is no use to apply a rule that won't work, and while we have a certain respect for a mathematician, we don't like the way he uses his learning when it is a deliberate walking out of his way to apply his reasoning to a state of things that don't exist, for a rule is not useable unless the state of affairs to which it is applied is in use, and although our reader was misled to the extent of the prattle of the newspaper man, it is a way that won't work either in common sense or in actual practice.

Moderately moist steam is what we use in almost all our work, and Rankine has simplified that into what most of our readers already know, and that is correct, to so small a per centage, that we may use it and rely on it.

"Divide the initial pressure by the ratio of expansion"—that is all there is to what the man undertook to show, and in his attempt he showed what he didn't know.

This is what puzzles so many in their excuses from trying to learn; it is the ignorance of what a man who has not had any chance at an education, wants to learn; and this is not understood by any one who has not had some experience in actual contact with these men; and the men, necessarily turning to such fellows, find no instruction in terms which are understandable to them, and so it is an equally misunderstood matter, neither side comprehending the other, and so the conundrum remains in "in stater kwo," and is likely to do so.

#### ACCURACY OF COMPUTATION.

In a recent article for the use and reference of workingmen, the

writer noticed some statements of which he had and has serious doubts, and so from one of Prof. Rankine's works has copied the limits of accuracy on what all our readers have at some time or other had to deal with. The usual application by the dudes is that it is necessary to use long decimals, or those having many places, and this is another of the bugbears we have to explode for each class to whom it is needed to teach the facts. We all have to deal with the circumference of the circle, and as the ratio of the circumference to the diameter is not capable of being accurately computed, it has been the source of argument without either sense or end, and as it contains a difference that is known to be there or "an error to be neglected," we can refer to it as known to be in error, and to what an extent, is now to be determined. If we use different values of the number of decimals, only with reference to what amount of error or correctness they will afford, it will be profitable to study them with regard to their future use in the work of actual life.

The ratio of diameter to the circumference is usually said to be as 22 is to 7 so is the circumference to the diameter, and this is correct with plus 1 in 2,500; and if we use the not so usually expressed factor "as 377 is to 120," and the error is reduced to 1 in 40,000 and is plus still, the older and more used, as 355 to 113, and the error is reduced to 1 in 13,000,000 and is still plus; and either of these amounts are ready to use at any time and with no college or other fitting but to refer to the so much used ratio of 3.1415926536 and we have an error of 1 in about 300,000,000 and it still remains on the plus side, or it is, if exactly computed, slightly more than the fact result, but it is so near that no measuring instrument has yet been constructed that will or can measure it. It must be noticed that in the last amount used we find ten places of decimal.

To reduce these to six places of decimal, and we have as 3.141593 is &c., and we have a result that is one nine-millionth too large, or still plus in its error; and if we are to drop off another decimal or two and say as 3.1416 is &c., and we have an error of one in about 400,000, and still plus, so that is really necessary for any one to stop very frequently and examine into the correctness of the figures stated by anyone in order to ascertain what is to be the factor of correctness in the results, and it does not call for any high order of education to do this, but it does require a good amount of common or uncommon good sense to find out where the reliability comes in on such statements as are so frequently put into print, particularly for "engineers and firemen" with an especial view of "educating them," while as a rule it is only in too many cases misleading, unreliable and worthless to the men it is said to be intended for.

The especial instances of such matters are entirely too many for the writer's time or the space at his service in the MAGAZINE, and the space is also capable of doing better service for the men who own or pay for it, but these especial instances are called to their attention to show what is being done, and the results of the attempts.

Only a few days ago the attention was led to an article by a man

who claims to have been at some time in his life "an engineer." He is now in editorial service, and satirical often, and he stated in a recent issue that by his computations a difference of 270 h. p. was an impossibility, when in his own figures he had made a blunder of four inches in the diameter of the high pressure cylinders of an engine under discussion, yet he condemned it, and then swore at the man who showed him "the hole he had fallen into."

---

## RUNNING BY AIR PRESSURE.

---

BY WILLIAM WEILER.

---

I am highly gratified to see by the advance sheets of the September MAGAZINE that so many of the brothers have taken an interest in the question I asked in the July number about running a locomotive a mile without fire, steam or water in her, and that they have evinced their interest by sending in the correct answer, expressed in their own way, and with more or less particularity as to details of arrangement on the cold engine while being towed out to the place of trial. I asked the same question, and a few additional ones, in the columns of a so-called higher class journal, over thirteen years ago, and it remained unanswered for so long that for shame's sake, and to save the credit of the organization, I assumed another *nom de plume*, and with the full sanction of the editor of said journal, answered my own question. It was, therefore, with some misgivings about the result that I revived this old question, but I felt sure that few, if any, of our readers had ever seen it in print, and thought I would try the mettle of this "lower" organization to see whether they dare tackle a question which appeared to "stump" the other order, and as a result I am agreeably disappointed in having three such good and intelligent answers as I find in the September MAGAZINE, and it rather revives my hope of our order to find that we have men in our ranks who have pluck and audacity to take hold of this question, under the circumstances attending its previous appearance.

In noting the answers given by the brothers, I find that they all agree on having the cold engine in the reverse motion to the one in which she is being towed, but Bro. Edwards says nothing about opening the throttle to give the air a chance to go where it is wanted, although it seems to have been his idea that the air should pass into the boiler, which is certainly correct, but in order to let it go there you have to open the throttle. Bro. McNaught thinks he would run with the cylinder cocks open, but while it is usual to open the cylinder cocks in reversing, it would not be good policy to open them when it is desired to use the cylinders as an air pump; for, while

it is true that they would admit air to the cylinder while the piston was moving in one direction, it would be equally true that they would let the air escape again on the return stroke of the piston, and while you would be pumping air all the time you would not be able to get any, or at least but very little of it, into the boiler. To get the full benefit of the air pump action of reversing the motion while being towed, it would be necessary to simply open the throttle after reversing. The air would then be drawn from the stack through the exhaust nozzles and the exhaust cavity of the valve into the cylinder, and at the return stroke this air would find that the valve had closed the way by which it entered, and opened another passage for it into the steam chest, and from there to the steam pipe and into the boiler.

Bro. McNaught would like to know something about the distance it would be necessary to tow an engine to get pressure enough to run her a mile or two by air pressure. This would, of course, depend largely upon the size of the boiler and the relative size of the cylinders; but let us for the purpose of illustration and study, assume that we have a boiler  $4\frac{1}{2}$  ft. in diameter with say 180 tubes or flues, each  $11\frac{1}{2}$  ft. long, and that the flues take up enough of the space in the boiler to equal the space around the fire box and over the crown sheet. We would thus, for the purpose of our study, have a space  $4\frac{1}{2}$  by  $11\frac{1}{2}$  ft.; and as a circle  $4\frac{1}{2}$  ft. in diameter gives us an area of 15.9 ft., we find that this multiplied by the  $11\frac{1}{2}$  ft. of length would give us 182.85 ft., or nearly 183 cubic ft. as the measure of contents of the boiler. (I have never seen any calculation on the contents of a boiler, but think that this is not very far from the average size boiler.) Now, if we assume that we have 18 inch cylinders, with 24 inch stroke, we find we have an area of 1.76 ft., which multiplied by 2 ft. would give us a little over  $3\frac{1}{2}$  cubic ft. as the capacity of the cylinder, and as each cylinder would be filled twice for each revolution of the wheel, we would have 4 times  $3\frac{1}{2}$  ft., or 14 cubic ft. for each revolution of the wheel in theory, but as you could not get the full length of the stroke to force air on account of the closing of the valve, and as some would also leak around, it may be best not to assume more than 10 cubic ft. for each revolution of the wheel, and it would thus take about eighteen revolutions of the wheel to fill the boiler once. In order to get pressure from air, the boiler would have to be filled till it contained a number of atmospheres, each one adding about fourteen pounds to the pressure. Now, let us suppose that the boiler is entirely empty, not having even air in it, and let her be supposed to be in tow. At the moment she is reversed the air is beginning to be pumped in, but as we have supposed a vacuum in the boiler, the first eighteen revolutions would simply put in enough air to balance the pressure of the outside air, and would not show on the steam gauge, as that is adjusted so as to show only the pressure above the atmosphere. By the next eighteen revolutions we pump in another atmosphere, and the gauge would then show about 14 pounds, and from this time on each eighteen revolutions would add 14 pounds to the pressure.

A 6 ft. wheel would revolve about 280 times to the mile, or  $15\frac{1}{2}$  times 18, and would thus put into the boiler  $15\frac{1}{2}$  atmospheres of 14 pounds each during a mile of pumping, and should show about 203 pounds on the steam gauge at the end of the mile, provided that her tow had power enough to overcome the force that her pistons would require to keep on putting air in against the pressure then in the boiler. A smaller wheel would make more revolutions to the mile, and would accumulate the pressure in a proportionately less distance. With over 200 pounds of pressure it is safe to say there would be no difficulty in running a locomotive several miles instead of simply one, as Holly agreed. It is to be presumed that he did not get 200 pounds of pressure on his machine, as it would have been an impossibility for the other engine to tow his cold one far enough to pump in that amount of pressure.

I said before that this might be regarded as simply a puzzle, with no practical application, but I did make use of the principle some time ago, and found it to save me quite a lot of work. While hostlering a number of years ago, before injectors were brought to the state of perfection they have obtained now, we had some very poor ones, and often found that the best way we could think of to get water into the boiler, was to take the locomotive out on a side track and fill her by using the pump. We done this one day, but when I tried to get on the turntable up a little grade I found I could not make it for lack of steam. I tried the other side of the table where the grade was not so steep, with no better luck; and the question then was how to get that "consolidation" into the roundhouse without either getting up more steam or using pinch-bars. Another engine stood handy with plenty of steam, so we got her and coupling her up to our dead one and placed the dead one on the table with the live one, and while doing so I had my helper put the "consolidation" in reverse gear, with the throttle open, and watch the gauge. The space over the water being limited pressure ran up fast, and my helper showed by his hands that every turn of the wheel seemed to add 10 pounds to the pressure, and before we got to the table we had 40 pounds of pressure, which enabled us to run her into the roundhouse without further trouble. Now, which was the best; knowing how to do it and using the knowledge, or taking it out in hard work for myself and helper, and expense to the company?

#### MOVEMENT OF THE WHEEL.

Mr. McNaught would like to know something about the distance a spot on the outer edge of a 5 ft. wheel will travel in a given travel. A spot on the edge of a rolling wheel will not describe a circle, as it would if it was simply wheel revolving on an axis, nor does it describe an arc of a true circle. The different points of a rolling wheel describe curves either more springy than a true circle, and then called parabolic curves, or they are flatter than a circle and are then called hyperbolic curves. The curve described by the spot on the edge of the wheel belongs to the former class, being broader at the top than a

true circle would be. There are a number of elaborate rules to calculate the distance of these curves, but for all ordinary purposes it will be near enough to say that a spot on the edge of a wheel will travel four times its diameter in each revolution of the wheel. Take the 5 ft. wheel and say the spot is down at the rail, and roll it along on the rail till the spot touches the rail again. The spot will then be a little over 15 ft. in a straight line from the place it started from but in coming to this place it was at one time 5 ft. above the rail and thus made a detour of that distance and returned to the straight line. If the spot had been obliged to travel straight lines it would be self evident that it would have to travel 10 ft. further, five out and five back, but as it "cut across lots" in its travel it shortens the distance, and by actual measurement (with small wheels) the distance really traveled by the spot will be found to be a fraction over 20 ft., and hence it will be safe to say that a spot on the edge of a 5 ft. wheel travels a curve of a little over 20 ft. in making one revolution on the rail and being then a little over 15 ft. from the place of starting, and that this rule will hold good for any size wheel.

---

### CLINKERS.

---

It is really remarkable how quickly these young fellows become familiar with all the ins and outs of railroading; nine out of ten of them are able to give extremely valuable pointers to the old timers, from the general manager down, after six months' experience as a fireman or brakeman.

If one is after pointers concerning the proper way to conduct the business of railroading, I don't know where he could get more of them in a given time than by attending one of those informal gatherings of firemen and brakemen, which are in continuous session at every division headquarters in the country.

The distinguishing feature of these gatherings is that they are composed mostly of the callow youths of the service, who confine themselves to the discussion of but one order of business, namely: How can we bring the old timers and our general officers to a realization of the fact that they are blockheads, and thus improve the service for the benefit of all?

The ideas advanced are sometimes original, and always startling, and it never seems to occur to the debaters to ask themselves how the old timers have managed to hold their jobs so long without getting acquainted with them and demonstrating their practicability; of course the old timers haven't had the chance to learn much about railroading, and can't be expected to know.

It is a singular fact, that as fast as these youthful critics gain experience and approach the time when they may have a chance to put their vehemently expressed ideas in practice, they forget all about them and join the ranks of the despised old timers, to be in their turn the blockheads of the service.

Ignorant criticism is always to be avoided, and those who so freely criticise the methods of the old timers should first be sure that they know all the facts; there is many a little coolness now existing between engineers and firemen that might have been entirely avoided by becoming acquainted with all the facts before speaking.

Sentiment, now-a-days at least, don't cut much of a figure in rail-roading, and the old timer is generally a man who knows his duty and is competent to perform it, else he wouldn't be able to hold his job; he may have some odd notions about certain things, but they are notions which he has gained by experience, and investigation will show that he can nearly always give good reasons for them.

Before passing judgment on the acts of their engineers, firemen would do well to try and find out the reason for these acts; it may be that the engineer has excellent reasons to back him which the fireman knows nothing about, and he will nearly always be found ready to give those reasons if asked for them in a courteous manner. At any rate, never criticise adversely until you know what you are talking about.

---

## MECHANICAL MISCELLANY.

"I HAVE just been figuring up what it will cost me to have an invention patented throughout the world," said a young Kansas City inventor, "and-I have found out. It will take a fortune. There are on this mundane sphere sixty-four governments that run departments devoted to fleecing the poor inventor, and pretend to give his idea protection. Sixteen of these sharks are to be found in Europe, eight in Africa, four in Asia, twenty-seven are on the two continents of America, and nine are in Oceanica. Of course, the charges differ in every case; some are comparatively small, others are not so small. In the aggregate they average about \$227.35 each, or \$14,550. That's a pretty sum for a man to spend to keep an idea from being stolen, isn't it?"—*National Car and Locomotive Builder*.

CALIFORNIA redwood has several characteristics that make it a remarkably good lumber for car building. It is the only wood known which will neither shrink nor swell on exposure to the weather after being thoroughly seasoned. Tests have been repeatedly made by immersing redwood in water for days, and it was in no case perceptibly changed. This makes it an excellent wood for window sashes and other parts which cause inconvenience and annoyance by shrinkage or swelling. Another point it burns slowly.—*Loco. Engineering*

How THE record of railroad wrecks goes on. Wrecks come about, if we could believe the reports, because men are careless.—*American Machinist*.

THE Pennsylvania Co. have changed their new compound from oil back to a coal burner. She will soon be tried on the New York division, where her seven foot legs ought to make some show at the world's record.—*Locomotive Engineering*.

It is interesting to note that the fast express locomotive on the Lake Shore Railroad which draws the 20 hour Chicago flyer has practically no lead at all on the slide valves of the engine. In full gear the lead is one-sixty-fourth of one inch. For an engine that runs at the rate of fifty miles an hour, this seems anomalous.—*The Engineer*.

RECENT tests of armor plate by the Government appear to demonstrate that American manufacturers are making, if not the best in the world, at least that which is not surpassed. Such plate costs the Government \$575 per ton, and it would appear that it costs \$30,000 to \$40,000 to test a lot, making it an expensive luxury.—*American Machinist*.

The Schenectady locomotives, one compound, one simple, in use on the New York division of the Pennsylvania railroad, are equipped with Leach sanding devices, and are favorites with the men. They say they use less than one-third the amount of sand the other engines do, but it gets to the right spot at the right time, especially on the start.—*Locomotive Engineering*.

THE Shaw four-cylinder locomotive has recently been overhauled at the Baldwin shops and put in condition to run. It was claimed that one fault prevented her from properly showing her speed—a small dry pipe. A new 8-inch pipe has been put in, and it is hoped that this will deliver all the steam that four ten-inch cylinders can use.—*Locomotive Engineering*.

ECCENTRIC keys should be put in solidly and good at first, if never afterward. Some new engines were recently sent west by one of our big works with offset keys clumsily supplemented by strips of iron. Manufacturers should turn out work that is right. The roundhouse gang can be depended upon to do all the cobbling necessary.—*Locomotive Engineering*.

Some idea of what it would cost the United States to keep up with European nations in the way of naval matters may be had from the fact that the French Government will put under construction in 1894 thirty-two vessels, from those of 11,000 tons armed with 11.8 inch guns to torpedo boats, and having speeds of sixteen to thirty knots. It is throwing away a good deal of money, but then it is modern civilization.—*American Machinist*.

THE following questions that are to come before the Master Mechanics at their next convention are worth the consideration of inventors and manufacturers:

Devices to facilitate the oiling of fast passenger engines when on long, continuous runs; and effective cylinder lubrication with high pressure steam.

Special shop tools, either hand, power, pneumatic or electric, applied or applicable to locomotive manufacture and repair.—*American Machinist*.

THE mechanical department of the Chicago & Alton are preparing drawings for a class of heavy engine adapted for the hard work to be done on the steep grades of the western divisions. The engines will be ten wheelers, suitable for freight or passenger service. The cylinders will be 19x26 inches, and the boiler will be made large enough to supply steam freely under the most severe conditions of service. About ten of the engines will be contracted for as soon as the drawings are ready.—*Locomotive Engineering*.

CALIFORNIA redwood has several characteristics that make it a remarkably good lumber for car building. It is the only wood known which will neither shrink nor swell on exposure to the weather after being thoroughly seasoned. Tests have been repeatedly made by immersing redwood in water for days, and it was in no case perceptibly changed. This makes it an excellent wood for window sashes and other parts which cause inconvenience and annoyance by shrinkage or swelling. Another good point about redwood is that it burns very slowly.—*Locomotive Engineering*.

H. Walter Webb, third vice president of the New York Central & Hudson River railroad, has issued an order removing all restrictions to the hauling of cars equipped with the New York air brake and making no difference between that and the Westinghouse. This order is said to have been decided upon after the result of the recent 50-car train test on the Central, in which no practical difference was found in the action of the two brakes, either in trains of their own or when mixed together. This will probably settle a good many little disputes on this question now occupying attention in different parts of the country.—*Locomotive Engineering*.

Those presumably familiar with the matter cite the New York Postoffice as an example tending to show that government employes do not always have easy jobs and big pay. We have before this referred to what we believe from observation to be true, viz., the rather excessive hard work to which the letter carriers are subjected in New York, and not only this, but the advantage sought to be taken of them in the way of withholding pay for overtime. Now we are told that in many instances the clerks are overworked, and not only that, but rather poorly paid. There is no reason in the world why all government employes should not do a fair day's work at current pay, but there is no good reason why they should fare considerably worse in regard to both than the average employes of private parties or firms.—*American Machinist*.

EXPERIMENTS made at Glasgow, Scotland, with lap-welded steam pipes show only a slight difference in the matter of strength between solid plate and the weld. A flange about  $2\frac{1}{2}$  inches thick was screwed on to each end of the pipe to be tested, a recess being cut in this flange, into which the pipe was fitted to form a thoroughly water tight joint. To these flanges again there were fixed blind flanges with close pitched bolts; into one of these blind flanges the pipe from the test pump was screwed, and in the other blind flange a small hole was bored close to the top of the pipe, so that air could be discharged from the water in the pipe before the bursting pressure was applied, the hole being afterward closed up. One pipe of  $11\frac{1}{4}$  inches bore  $13\frac{3}{4}$  of an inch thick, burst under a pressure of 3,100 pounds; and a pipe of 8 inches bore and  $\frac{1}{4}$  of an inch thick burst at 2,800 pounds pressure. Test pieces cut from ordinary stock pipes were broken both when hot and cold—the results showing that there was no difference in strength between the hot and cold pipes.—*The Engineer*.

# WOMAN'S DEPARTMENT.

EDITED BY IDA A. HARPER, STANFORD UNIVERSITY.

## THE SUMMER'S OUTING.

CHAUTAUQUA, August, 1893.

In whatever direction I start for a summer's trip, I am almost sure to find this delightful place before my wanderings are ended. Appealing to the intellectual as well as the physical senses, age cannot wither nor custom stale its infinite variety. One finds here water and woods and hills, and, in the very best form, rest and recreation for both body and mind. In extended travel I have never found air more delicious, water more beneficial or climate more conducive to health. One gets here the sleep of the just, whether his merits deserve it or not. He may be as idle and useless as he chooses, luxuriating in nature's beneficence and revelling in the *dolce far niente*; and then some morning, when he awakes and finds he has been born again and that all the languor and lassitude have been spirited away and he begins to take an interest in the things of the world, lo, all that the mind could conceive or the heart desire is at his command. Does he want music? It peals forth from the organ and the hundreds of trained voices, and is interpreted by masters on the piano and violin. Does he care for art? It is here for the seeking, in its many varied and beautiful forms. Would he study the languages, the sciences, any branch of the learning? He has only to knock at the door of the College of Liberal Arts with its corps of distinguished professors. Or does he belong to that aristocracy which prefers to receive through lectures the results of others' labors? He may choose from the best the world has to offer, which has brought its perfected fruits to Chautauqua. The religious find here an atmosphere of pure delight, of sermons, of Bible study, of sacred music; while the agnostic may revel in an atmosphere of the æsthetic and the transcendental. The sentimentalist may swing in a hammock down by the murmuring waves and read Browning all the long summer day; while the athlete rows and swings and bowls and bicycles from early morn till dewy eve. They do not ask your opinions, watch your actions or criticise your methods at Chautauqua, and you find here that same freedom which obtains in a large city, where the people are too numerous and too busy to concern themselves with any one individual.

The present has witnessed more improvements than any previous season. The amphitheatre, around which are clustered so many

pleasant associations, has been replaced with another, much larger, handsomer and more convenient. It is thirty feet in diameter larger than the old one and is 185 feet long and 160 feet wide, with a seating capacity of 10,000. The roof is supported by steel columns bearing bridge trusses; the seats rise in concentric tiers, facing the great organ and the choir of several hundred seats. On the platform, where have stood the noted speakers of two continents, is a handsome desk made of olive wood from Jerusalem. Opening out on the ravine, spanned by the well-remembered rustic bridge, are reception rooms, offices, piazzas, etc. The sides of the building are left open, as of old, and surrounded by magnificent trees, through which gleam the blue waters of the lake, and at night the whole is brilliantly illuminated by arches of electric lights. The amphitheatre cost about \$25,000, and is probably the largest of the kind in the world.

Chautauqua claims to be almost perfect from a sanitary standpoint. During the past year an entire new sewerage system has been introduced, costing over \$35,000, and said to be the most complete of the kind in the United States. The depth of the main lines is about sixteen feet and there are seven miles of sewers. A thoroughly scientific method is employed, the sewage is disinfected and precipitated by chemicals, the precipitate is pressed into blocks and carted away, and the remainder, transformed into perfectly pure water, flows into the lake. This is said to be the best sewerage system ever yet devised and solves a vital question, for one would hesitate to live even in Arcadia if there were defects in the sewers. Chautauqua obtains her water out of the depths of the lake, 300 feet from the shore. During the past year several miles of cement walks have been laid, new parks have been made, new fountains placed, a new electric power house built and altogether, nearly \$100,000 of improvements have been made. Many new and beautiful cottages have been built and there are few watering places which number so many permanent summer homes.

Mr. Lewis Miller, of Akron, O., the originator of the famous Chautauqua Assembly, still continues as President of the Board of Trustees; W. A. Duncan, of Syracuse, N. Y., has been for the past ten years its most efficient Secretary. Chancellor John H. Vincent, who is so inseparably connected with the institution, is now a Bishop in the Methodist church, and this season was obliged to be in Europe. His place, however, is acceptably filled by his son, the Vice Chancellor, George E. Vincent. Dr. W. R. Harper, the distinguished President of Chicago University, is Principal of the College of Liberal Arts, which owes its world-wide reputation to his commanding ability.

Everybody who is able to take a summer's outing should spend one season at Chautauqua, and, having spent one, he will desire to return again and again.

In speaking of Chautauqua we are apt to think only of the Assembly Grounds, but the lake is surrounded by lovely summer re-

sorts, fine hotels, handsome cottages, club houses and picturesque white tents in cosy nooks. Here, as elsewhere, the present season is very dull. The great World's Fair has attracted the major portion who are able to leave home, and the precarious financial conditions have made it necessary for hundreds to remain at home and practice the strictest economy. It always detracts from my enjoyment of travel to think of the many who must toil without respite all the weary year. History does not record a time when these inequalities did not exist, and there is no reason to hope that all men will ever be equal in the possession of worldly goods. There is, however, a consolation in the fact that in no country in the world are the opportunities for all so nearly equal as in our own. Here there is at least a chance for the poor and humble. The father and mother can say, "Well, there may be nothing for us but toil and poverty, but we will educate our children and prepare them to make something better out of life than we have been able to do." Many, perhaps it is not too much to say the large majority, of the people in the United States who are in comfortable circumstances, are only one or two generations removed from poor and obscure ancestors. The most sacred duty that we owe to our children is to do all that lies in our power to prepare them for a more successful and prosperous life than we ourselves have been enabled to secure. It rests with us to see that they are properly equipped, the rest they must do for themselves; and the one thing above all others for parents to bear in mind is that the foundation of this equipment is an education. The successful men and women of the future must be educated. The day when ignorance can succeed is passing away.

I wish it were possible for every tired man and woman to have a vacation, even though it were a brief one. It has a wonderfully beneficial effect and sends us home with renewed courage to take up the duties once more. The very things and the very people who seemed insupportable because we were so tired of them, take on new attractions after we have been separated from them for awhile. The custom of taking vacations is increasing, as its benefits are becoming recognized, and in the little volume of "Looking Forward" which all of us are writing in our minds, we will put a summer outing for every man, woman and child.

I am writing in northern New York, on the eve of a long journey to the Pacific coast, with the one I love best in all the world. If the trip is made in safety, I hope to be able to describe the interesting points next month for our readers.

---

#### LOVE.

Love is the spring of life,  
Joy never ending;  
Love settles ev'ry strife,  
Sweet peace sending  
To hearts hard as stone,  
Lives black with sin,  
To natures callous grown  
To the misery within.  
SAN ANTONIO, TEX.

Love, a gift from heaven,  
Lightens every care.  
Of all fair blessings given  
To mortals, 'tis most fair.  
Oh, love, sweet love, I praise thee  
And bless thee ev'ry day.  
For what thou art to me  
No heart save mine can say.  
Ida Gregory.

## THE HOUSEKEEPERS' NATIONAL LEAGUE.

Although women have entered largely into business life and are devoted to clubs and occupied with many theories and schemes, there is nothing to indicate that they have lost interest in the old, time-honored occupation of housekeeping. On the contrary our homes never were so beautifully kept as at the present day, and women have a new ambition to reduce the management of the household to a system and conduct it on scientific principles, and, as we have before remarked, nowhere is science so badly needed. As this is a day of federation of forces, of course it is necessary to form an organization, if anything is to be accomplished, and several national associations have been established to study household economics and promote the interests of good housekeeping. One of these, which seems to contain much promise, had its origin at the well-known Jackson Sanatorium, at Dansville, N. Y. Mrs. Emma P. Ewing, professor of household economy, whose work has been often noticed in this department, gives annually a course of lectures and lessons at this beautiful resort, and, as the outgrowth of these the Housekeepers' National League was formed, last September and will hold its first annual meeting in Chicago in October. Its objects are as follows:

1st. The introduction of scientific and economical methods of cookery into our kitchens, and of trained labor into every department of our homes.

2d. The regulation of household labor on a basis of justice to the employer and employed.

3d. The enlightenment of all classes of the community upon the importance of unadulterated food, and the proper care and preservation of food products in the market and the household.

4th. The introduction of Household Science as an important branch of education in all colleges for women, and all schools to which girls are admitted.

5th. The establishment of a National School of Household Science where methods of work may be intelligently tested, and teachers scientifically trained and equipped for giving thorough instruction in the household arts.

The officers are distributed throughout the different sections of the country. No admission fee is charged, as it is believed there will be enough interest to furnish such contributions as are necessary to carry on the work. It is the hope of the association that local leagues may be formed in all parts of the country, auxiliary to the National League, and that, through lectures and lessons and mutual counsel and co-operation, some solution may be found for the many vexing questions that press upon the housekeeper.

After the organization Mrs. Ewing delivered a lecture on "Home Making" which I wish it were possible to reproduce entire. She said among other good things:

It may be deemed a very little thing to trim a lamp, to make a bed, or to prepare a meal, but human happiness is seriously affected by little things. Life is largely made up of them, and the wife, or mother, or sister who sees that in the house under her supervision, each lamp is properly trimmed, each bed carefully made, and each meal skillfully prepared, makes every nook within that household brighter and pleasanter for her care, and exerts an influence for good upon the different members of the family, that widens and expands illimitably.

She says most truly, that where the table is always spread with healthful and well prepared food, and the home surroundings are always cheerful and pleasant, the family are hedged about with barriers that are well-nigh impregnable to assaults from outside foes. She argues that, while the taste for the æsthetic and beautiful should be encouraged, nothing is so vital a necessity as well-prepared food. She pleads for schools of domestic science where girls may be qualified for housekeeping, as they are now prepared for all other occupations in life. Her opinion will be indorsed by all sensible persons when she says:

"If the women who are to be future wives and mothers of our country will qualify themselves thoroughly in these arts, the present reign of slovenly domestic ignorance will give place to a reign of orderly intelligence, 'household drudgery' will become a forgotten phrase, and the brightest, sweetest, most delightful place on earth will be an American home. In that good time the hand that will wield the most potent influence in moral, social, and political affairs will be the hand of the successful home-maker.

Mrs. Ewing has had charge of the summer school cookery at Chautauqua for the past ten years and she says that during that time not less than twenty five hundred women have studied culinary science in her classes there, besides hundreds who have attended free lessons and lectures. These have included many young, unmarried women who are anxious to prepare themselves for the duties of a wife. In addition to her work at Chautauqua Mrs. Ewing is engaged for every month in the year in the different cities throughout the country by various institutions, clubs and classes, which shows the wide spread interest that is taken in this subject. She has been engaged to give lectures and lessons daily in the model Kitchen at the World' Fair during the months of June and October.

These are encouraging signs and promise much for the homes of the future. While women will continue to enter the trades and professions and crowd the ranks of bread-winners, yet the vast majority will marry and become housekeepers. There are over two hundred professional teachers of household science in the United States and it is being introduced into many schools. Although one of the oldest of occupations, modern life has made many improvements possible, and the modern woman will not be satisfied until she has mastered all of them. Let the modern man offer every encouragement, and he will receive his full share of the reward.

---

## PLAGIARISM.

---

In the July number of the MAGAZINE, page 619, is an article entitled "Adrift on the World," signed Mrs. Jessie Hamon, Makanda, Ills. A letter from Mrs. M. Orrell, Murphysboro, Ills., states that the article was written by her daughter Ida, whose sad death we noticed

last month, and published in the *Trainmen's Journal*. It was copied bodily by Mrs. Hamon and sent to the FIREMEN'S MAGAZINE as original. It seems to be impossible to avoid these things, and we can only express our apologies to the real author and our contempt for the plagiarist.

---

The Southern Presbyterians, in session at Macon, Ga., issued the following decree:

The session must absolutely enforce the injunction of Scripture forbidding women to speak in churches (1 Cor. 14:34), or in any way failing to observe that relative subordination to men that is taught in 1 Cor. 11:18, and other places.

Shades of St. Paul! what a dreadful thing to be a Presbyterian woman in Georgia. Is there not some other church which will permit them to speak? It seems hard for a woman to have to give up either her religion or her power of speech. It is not strange that the men have to issue an "edict" to compel subordination, if the above is a fair specimen of the kind they have down there.

---

The Kentucky legislature has passed an act giving a married woman the right to collect and dispose of the rent of any real estate which is her separate property. Hitherto the husband has had the sole right to the use and income of all the wife's real estate, and it could be taken to pay his debts contracted before marriage. But the law has gone still further and granted a married woman the right to make a will. The husband, however, still has the right to his wife's earnings and can collect and spend them at his own sweet will.

---

## NOTES.

---

Frequent inquiries are made by private letter as to the methods of organizing ladies auxiliaries to the B. of L. F. In the August number will be found a list of the lodges, the names of the grand officers, organizers, etc. By applying to the latter our correspondents will receive more satisfactory information than could be given here. The editor of the MAGAZINE has spoken in strong approval of these lodges for woman and the editor of this department adds a warm indorsement. They can be of great benefit to both the men and women, promoting acquaintance, giving pleasant social entertainment, teaching women the dignity, decorum and other valuable lessons of the lodge room and enabling them better to appreciate the value of the lodge to men. The number of ladies auxiliaries is increasing rapidly and we wish them unlimited success.—A number of excellent communications have been edited and sent to the publisher to be used in this department but it has been impossible

to give them the necessary space. We regret this, as it is a disappointment to the writers and a loss to the readers, but it seems to be unavoidable.—It is very seldom that we have to apologize for a typographical error in the MAGAZINE, but a most annoying one occurred in the August number in the Woman's Department. On page 717, in the first line of the last paragraph, the word master should read "mother." We would not like to refer to the wife and mother as the "master" of the household.—Being constantly on the wing for ten long weeks is not conducive to reading, and the difficulty of having one's papers and magazines follow the summer's travel makes it impossible to keep a close record of current events. Although the season has been filled with pleasant things, one rejoices to be quietly settled once more at the old familiar desk and to take up the daily routine of work which one enjoys because it has become so much a part of life.

---

#### CHILDREN.

---

This subject has been discussed over and over again, yet there is room for many more theories.

A good part of life's discipline results from the instructions of the family. Our lives are mainly spent at home; we were born at home, taught to speak at home, trained in habits of life chiefly at home, and tried in a thousand ways in temper and disposition at home, and swayed by home influences in all the relations we sustain in life.

Children in our homes are blessed little ministers. Who can tell of all the sweet life that bubbles up from their hearts? Did you ever notice the introduction of children when they first meet each other? A look and a smile, which calls up a returning look and smile from the little stranger and they are friends. Is it not a joy to think of the sweet trust they repose in us? The gentle mother knows this as she soothes the restless child or sweetly approves of every success.

How many of us revert to our childish days, at the time when all affections bud and bloom in the home of sunshine?

Never forget that children have social rights, make them clearly understand their duties and privileges. A good family government is a glorious arrangement for a child. Order is heaven's first law, and to make them subject to the first law of heaven is to take the first step. Let everything be done decently and in order. The welfare of the household requires time and reason. Take care to be strictly truthful with your children. They learn in their tender years to study our faces and to interpret meaning by our expression. Be deeply sincere with them. If we are not truthful they will observe it; we shall sow the seed of infidelity which, long after we are gone, shall spring from our confined clay and bear fruit unto death. Children may be too strictly reared, but never too deeply impressed with the truth. Let us as parents be careful what we promise and threaten. But when we have deliberately spoken, however costly, however painful, let us fulfill. Let no persuasion, no teasing change our well-considered words. If we lie to our children we injure ourselves, we weaken our authority, and we harm the spiritual character of our children, maybe forever. You want your children to prosper. Guide them then in that way. Every child needs direction, but the highest prosperity does not consist of material treasures. There is something to be desired more than material things. Train up your children in the way they ought to go, and

when they are old they will not depart from it. The training chiefly belongs to you, it is your duty, your responsibility. It is true that the holy spirit can alone give spiritual life to the household, but we can mould and fit the temple for the divine presence. We can build the altar and lay sacrifice in order, and then wait the confident assurance, the promised blessing from heaven.

Christian mothers, have *you* a family altar? If not, I beseech you to erect one. "But," says one, "my husband is not a Christian, and I have'n't the courage." God alone can give you grace, and in so doing it may be the means of leading your husband to Christ. A family thus trained to devoutness is almost sure to receive Heaven's benediction. Mothers have special charge in the religious instruction of their little ones. It is a work which cannot be delegated to others. No friend, however near, no Christian, however true, can do for your offsprings what you, mothers, can accomplish. It is within your province to write lessons on their tender hearts that will never fade away.

*Eva McClure.*

GALION, O.

A CUNNING young man, unmarried, attended a wedding in the country the other evening, and after the ceremony was over he suggested to a young lady present that he and she sing, "More to Follow." The young lady, however, said she preferred to sing "Just as I am." The young man remained quiet the rest of the evening.

MRS. A. J. PYLE, of Richmond, Va., owns and manages the largest dyeing, scouring and carpet cleansing establishment in the south. Left a widow nine years ago, with a family to support, she undertook the conduct of the business formerly carried on by her husband, and has managed it with such success that the custom of the firm has more than doubled. She has moved into a large new building erected for the purpose, and has extended her business throughout the southern states, including Florida and Texas. Mrs. Pyle has received diplomas from several state fairs and from the last state exposition for superior work.

### A RECIPE FOR A DAY.

BY AMOS R. WELLS.

Take a little dash of water cold  
And a little leaven of prayer,  
And a little bit of morning gold  
Dissolved in the morning air.

Add to your meal some merriment  
And a thought for kith and kin,  
And then, as your prime ingredient,  
A plenty of work thrown in.

But spice it all with the essence of love  
And a little whiff of play.  
Let a wise old book and a glance above  
Complete the well-made day.

# CONTRIBUTED

BY EUGENE V. DEBS TO THE WORLD'S FAIR LABOR CONGRESS.

## THE ORGANIZATION OF WORKINGMEN.

I appreciate the compliment of the Labor Congress in assigning me a place in its deliberations.

Standing upon this platform, this mount of vision, surveying my surroundings and contemplating this Labor Congress as one of the auxiliaries of the World's Columbian Exposition, I realize in some measure the gigantic strides of progress the nations are making towards fraternity and federation.

It requires, I confess, a more far reaching vision than I can boast to penetrate the future and determine the date when battle-flags will be furled, when the drum-beats of war shall be hushed to silence and the Parliament of the World shall assemble to deliberate under the sublimating influences of "peace" and "good will toward men." But, if there is anything in the signs of the times calculated to inspire hope, the "medicine of the miserable," then it must be conceded that a Labor Congress as an appendage of the World's Columbian Fair is a token of cheering significance, a blazing signal in the wilderness of doubt and apprehension, a lighthouse on the stormy coast where labor has often been wrecked when seeking a harbor of security and repose.

I accept with diffidence the theme assigned me for discussion, the "organization of workingmen." I know the subject is trite, that it has been on the lips of ten thousand men for a century or more. I know from readings and from observation how toilsome has been the march of labor during all the centuries since Pharaoh's slaves built the pyramids, hewed out the sphynx and reared the obelisks, since other slaves built the seven wonders of the world, aye, the multiplied wonders along the track the nations have traveled.

In all of the ages past the workingman has been doomed to toil and to silence. Born to toil and to drudgery, uncomplainingly he bowed his head and back in token of submission, crawled in the dust at the behest of superiors and accepted his cruel fate as taught by the gods and church, and steeped in ignorance and superstition, had a vague idea that when his bitter task was ended, somewhere a better life was in store for him.

Nor is labor yet redeemed from the blighting curses of the past, nor has it moved anywhere in all of the shining zones that belt the

earth a fraction of an inch towards improved conditions except by the lifting and emancipating power of organization.

In making this declaration I unhesitatingly challenge the world. If it is asserted that here and there, now and then, laws have been enacted for the amelioration of workingmen, the irrefutable truth stands forth that such laws had their origin in the councils of organized labor and were forced upon the statute books by the conquering energy of organized workingmen.

In saying this, I pronounce no undue eulogy upon the organization of workingmen. I am not required to proclaim that labor organizations are immaculate. I know they are human and I frankly concede their errors. I know of the long captivity of workingmen, of the Red seas they have passed, of their wanderings in the wilderness with burning thirst and consuming hunger in search of a promised land. Organized for victory they have often experienced defeat. Their enemies, intrenched in wealth and commanded by generals of consummate abilities, have often been able to demoralize the forces of organized labor and subject the defeated to penalties of harrowing severity. But labor's battles have not all been lost, nor are labor's hosts disbanded or discouraged. On the contrary, organized workingmen were never more confident of success, never more hopeful of the future of labor than now, and for this trust and expectation there are many and cogent reasons.

In the first place, experience has taught organizations of workingmen the supreme value of education, of mental development and intellectual grasp. The great brain of labor has lain comparatively dormant, except as exercised along the line of the chosen field of work. Learning in its best sense has not been in alliance with labor organizations. It has been thought sufficient for workingmen to be skilled in their trades, to hew and saw to lines marked out by others and to be content with the A, B C of knowledge, a species of slavery and degradation which forever held their noses to the grindstone of dependence and kept their feet tramping the same tread-mill journeys in which there was neither development nor advancement. The men who thought controlled those who toiled. As in the academies where Pluto and Aristotle taught, workingmen have been excluded from the benefits and blessings to be derived from science and philosophy which related to their emancipation from conditions imposed by centuries of ignorance and oppression. But the spirit of organization touched them, united them in one vast body, sent the red currents of life coursing through their veins and they stood up and stood forth in a mighty army panoplied for war, proclaiming to the nations of the earth that while the stars shine above them and mind holds sway in the councils of men, labor shall not be enslaved—at least not in the United States of America, while our flag, christened "Old Glory" has a star or a stripe upon its ample folds.

In this emancipation, being wrought out by organized workingmen, if one cares to listen, may be heard welling up from every organization of labor, the demand for more and for a higher educa-

tion. This mind march of labor is phenomenal. Students multiply by the thousands, lodges are becoming school rooms, books are in demand, and a labor literature, daily increasing in power, is among the cheering signs of the times.

This mustering of the mind forces of labor has a majestic significance which ought to challenge the admiration of patriots and philanthropists of every school. If there are those who aver that this work is moving slowly I do not hesitate to admit the affirmation and express my approval of the staid but sturdy character of the march. I am not an advocate of the spectacular. The present is the formative, the educational, the consolidating period of the organization of workingmen, and the work is proceeding in a way, betokening ever-increasing force and strength, and this "Labor Congress" in this "White City" of the world, the focal center of the thought of all the nations, may be cited in support of the declaration.

The time is coming, fortunately, when we are hearing less of the old paternal pharisaism: "What can we do for labor?" It is the old, old query repeated along all the centuries, heard wherever a master wielded a whip above the bowed forms of slaves. It is the language of the slave catcher, the slave pen, the slave block and the slave plantation. We hear it yet, occasionally, along lines of transportation, in mines and shops, but our ears are regaled by another and a more manly query, an interrogatory permeated with the spirit of liberty and independence, which is, "What can labor do for itself?" The answer is not difficult. Labor can organize, it can unify, it can consolidate its forces. This done, it can demand and command. Such are the possible and the practical things labor can do, is doing, and will continue to do until constitutions and courts and laws, based upon principles of eternal justice, make no distinction in dealing with the people.

Such grand achievements I do not doubt can be accomplished and be vastly expedited by the organization of workingmen. I am unable to discover anything in the programme chimerical. It is not a fantasy, a dream, or a creation of the fancy. It is on the contrary, an expression of faith in human attainments, when the mind, no longer fettered by ignorance nor deformed by bigotry, expands to its full orbited power to bless the world.

I would not have it understood that I underestimate the power of the forces in league to circumvent the high aspirations of labor or to defeat the purposes of the organization of workingmen. I appreciate the herculean task that confronts labor, and how long and tedious and dreary will be the march before the hosts of labor will be able to celebrate their full emancipation. But were the obstacles in the way a thousand times more formidable than they appear, I would still have faith in the triumph of eternal justice, though it were but as "a grain of mustard seed" that labor would be able to remove them all and advance, since the converse of the proposition would be that "right is to be forever on the scaffold," and the

"wrong forever on the throne," in which event the duration of the earth has already been ample and its destruction by any of the processes from time to time suggested ought to meet with a hearty welcome.

It ought to be understood and it is conceded by men of thought, by statesmen who can lay any just claim to the appellation, that the supreme welfare of the social fabric depends upon the prosperity, happiness and contentment of workingmen, and since the absence of this great fortune means the opposite, viz: adversity, poverty and want, it requires no seer to foretell social calamities—crime and its attendant woes. Workingmen's organizations, having in view the maintenance of fair wages are doing more for the well being of society than all other agencies combined. I am not unmindful of what is said of the church and the school, nor am I here to wage warfare against either of them, nor against any other human agency for the mitigation of social ills, but dogmas and creeds, the refinements of religion nor the learning of the schools ever did demand or maintain fair wages for workingmen, and the fact that wages have been unjust accounts for a vast per cent. of the ignorance, squalor, degradation and crime that now confront our much vaunted civilization. The shylock policy of reducing wages has been and continues to be the prolific parent of innumerable ills, and against this policy the organizations of workingmen proclaim unyielding hostility.

If such dangers, resulting from persistent injustice to labor, threaten the social fabric, what may be said of the perils that environ our political system consequent upon a policy which seeks to reduce men who wield the ballot to pauperism? Do I cry "wolf" when there is no wolf? We hear on all sides cries of alarm caused by illiteracy. Men declare that ignorance is the one great peril of our institutions and that the school, and only the school guarantees security. It is well. Organizations of workingmen are in active alliance with the school. Their motto is "Education," but in addition they demand just wages and fair conditions for work, because wages reduced to a point which barely suffices to keep soul and body together, blocks the pathways to mental culture, and until the elevating power of honest wages is recognized and established, the state will continue to deplore the demoralizing results of illiteracy.

Wages is one of the supreme requirements of labor in social and political affairs. I am not here as a money worshipper. I know that dollars are called "tokens" and are said to be mediums of exchange, the yardsticks and balances of trade by which we weigh and measure and exchange commodities. Caring little for the technicalities employed in circles where bulls and bears contend for the mastery, I know that wages measure the prosperity, happiness and contentment of workingmen. If wages approximate labor's honest share in the wealth it creates, the homes of workingmen are bright and joyous, and as wages are reduced below that standard, there is gloom and squalor, and organizations of workingmen are animated

by the noble ambition to secure and maintain fair wages which, while providing a suitable living for their wives and children, enable them to meet every required obligation of the state.

Again, it should be said that when labor is honestly paid, communities and states feel at once the vivifying influence; consumption keeps pace with production; trade and commerce proceed on lines of security and wide prosperity, and rewards are equitably distributed. To secure these blessings is the paramount purpose of organizations of workingmen.

Standing amidst the marvelous displays of work and skill concentrated in this world renowned White City from the four quarters of the earth, I am prompted to deal in eulogistic words of work, but the majesty of the theme dissuades me. Had I the imagination, the genius and the eloquence of an Ingersoll, I would make this Labor Congress an epoch immortal in the annals of labor. I would put tongues in workingmen's organizations whose words should echo around the world when this great Columbian Fair takes its place in the traditions of the centuries. Here students may learn how inert and dead is the thing we call capital until it is touched by the vitalizing power of labor—labor of brain and hand. Here the Federal Government might have poured to exhaustion its accumulation of gold and silver—here the states of this mighty Republic might have concentrated their wealth, and here, Chicago, the wonderful inter-oceanic city of the continent might have drained her coffers until the Alpine pile of money amazed the nations of the earth, but Jackson Park would have remained a barren land for the play of the elements. But touched by the hand of labor, behold the transformation! The weird fictions of Aladdin become facts for the contemplation of the world. Palaces, the description of which defies all languages, spring up as if by enchantment and a fairy realm is created by the magic power and genius of labor. And here are concentrated, as never before in the history of all the ages, the products of skilled workers of every clime under the starry heavens, and as the millions come from the North and the South, from the East and West, from continents and islands, the exclamation is made, "Verily, the genius and skill of man is the marvel of the world."

These visiting wonderers may search in vain for something that kings, aristocrats, plutocrats, the rich and titled snobs of the earth have made. As well search for roses amidst the eternal snows of the Arctic zone. No! All things within the White City combine to eulogize labor, and workingmen's organizations, whatever the future may have in store for them, may congratulate themselves that they are animated by the sublime purpose of redeeming their members from the thraldoms which centuries of cruelty and oppression have imposed upon them.

# THE MAGAZINE.

PUBLISHED ON THE FIRST DAY OF EACH MONTH,  
AT TERRE HAUTE, INDIANA.

TERMS—ONE DOLLAR PER YEAR IN ADVANCE.

OCTOBER, 1893.

## A POSTAL CARD CRIME AND SENT- ENCE.

Mr. William MacNair, on April 13, 1893, sent a postal card to a New York State Senator by the name of McClelland, which in a circular, Mr. MacNair, explains as follows:

In the New York Evening Sun of April 12, 1893, I read the following:

Colonel Quigley's bill to make ten hours a day's work on all surface and elevated railroads in all cities over 75,000 inhabitants, except New York, came up in the Senate. The majority of the Senators showed no aversion to voting on this bill. Only 13 votes were cast, 12 for and 1 against the bill, and it was laid over. Senator McClelland said that the bill came from labor tramps, who do not want to work. Senator Coggeshall said that bills like this would pass were it not that corporations can afford to pay their attorneys thousands of dollars, while workingmen cannot afford to pay anything.

As I had been interested in the passage of the Quigley bill, and was unaware of the infamous Comstock Postal Law, I cut out the above extract, and pasting it on a postal card, wrote beneath it:

"Senator McClelland: Attached is a newspaper clipping of the 13th inst., and as an American citizen and honest workingman, which I can prove, permit me to ask you in reply, did you ever earn an honest dollar in your life by honest labor? If you have, you should be ashamed of yourself as a public servant to make use of such language against the unfortunate and honest railroad employes whose interest is centered in said bill. May I ask, 'How much have the railroads promised you for such action?' No doubt you will reply and say, 'It is none of my business.' But later on it will be my business."

WILLIAM MACNAIR, No. 205 Avenue O.  
"New York, April 13, 1893."

Mr. MacNair, being approached by some sort of a court creature, frankly admitted the authorship of the postal card; this was also done in the presence of a United States Commissioner, whereupon he was sentenced to imprisonment for four months and fined \$500. Of this sentence Mr. MacNair justly complains. The sentence was brutal—sim-

ply infamous. Technically, Mr. MacNair, no doubt, violated the law, though the questions he propounded to Mr. McClelland were pertinent and pointed, well timed and eminently proper. The fellow, McClelland, evidently is a flea who lives and fattens in the hair of corporation dogs, but such vermin can claim the protection of vicious laws and corrupt courts, both of which are increasing in this country. When Mr. MacNair is again free and on his native heath, he should find a way to entertain McClelland, beyond the reach of the fangs of United States Commissioners.

The case serves the purpose of notifying workmen that unless they unify and take a hand in preserving their rights and liberties, the time is at hand when they will have no assets of that kind to defend.

ACCORDING to the quarterly report, August 1st, 1893, the balance of the various funds stood as follows:

General Fund—Balance on hand August 1, 1893	\$9,156 30
Beneficiary Fund—Balance on hand August 1, 1893	2,735 75
Special Fund—Balance on hand August 1, 1893	4,605 75

Total balance on hand August 1, 1893	\$66,557 80
Balance in Protection Fund, in the hands of Board of Grand Trustees	\$52,574 80
Membership August 1, 1893	28,681
Increase during the year	2,714

Such exhibits are cheering, and show that the Brotherhood, in money and membership, is in a condition to excite pride on the part of the membership—facts which the MAGAZINE chronicles with the greatest gratification.

LOUIS MITCHELL, a member of East Albany Lodge, No. 215, B. of L. F., is a hero of the best type, and no mistake. At the terrible wreck on the Boston & Albany railroad, near Chester, he suffered to the extent of having three ribs broken, while the engineer was badly injured.

The Albany Times-Union, referring to "the hero of the hour," says:

The hero of East Albany to-day is Fireman "Bob" Mitchell. The story of how he, notwithstanding the fact that three of his ribs were fractured, started to rescue Engineer Horton, carrying him to a place of safety and jumping into the Westfield river and rescuing two women and a man from the ruins was told many times. He worked like a beaver, never giving time or thought to his own injuries. Some of the passengers raised a purse of \$75, but he refused it. Mitchell was around this morning with his side bandaged up, and was closeted with the railroad authorities for an hour. The railroad, it is understood, will reward Mitchell's services in a handsome manner.

Such devotion and daring constitutes the true hero at all times and in all lands where noble deeds are appreciated. The MAGAZINE felicitates Bro. Mitchell upon his heroism, and expresses the hope that the railroad authorities will properly reward him.

## MRS. IDA A. HARPER.

This accomplished lady, at present and for a number of years the editor of the Woman's Department of the MAGAZINE, has removed to California, that she may be near her daughter, Winifred, who, a graduate of the classical school at Indianapolis, has entered the Leland Stanford University to complete her education. Mrs. Harper, as a writer of grace, force and brilliancy, is widely known, and her contribution of "Indiana World's Fair Monograph," shows her familiarity with every phase of the woman question and a masterly ability to fathom and explain its varied complexities. In California Mrs. Harper will be better able to pursue her literary work, and will, in connection with it, study the languages. The readers of the MAGAZINE will wish Mrs. Harper and her beautiful daughter a delightful sojourn in California.

## THE DROP SEAT.

Messrs. Stannard & White, manufacturers of Locomotive Cab Seats, for engineers and firemen, have moved into their new factory and have a fine exhibit at the World's Fair.

The firm has produced a drop seat, which is the one thing needed, as shown by the cut. The seat is calculated to be hung on a half-inch rod on the side of the cab, and be pushed forward or back, and when dropped it takes up but little space, as it shuts up like a jack-knife, the back folding forward. When running, it is held in its place the same as other drop seats, with a rod underneath. The drop seat is a great invention, and is having a wide sale.

"SHOVEL AND THROTTLE, MY FRIEND AND I, WITH HINTS," is the title of a book of 273 pages, by John T. McCall, a practical engineer and fireman, and was written while the

author was clothed in his "greasy suit of blue." The book "instructs firemen by giving all the whys and wherefores; it deals in the trifles that lead to success, trifles which great authors omit. It is composed of the following parts, viz: Hints to Locomotive Firemen, Explanatory Notes on Locomotive, Short Questions and Tongue's End Answers, Hints to Locomotive Engineers, Hints to Railroad Managers, Hints to Master Mechanics, Emergency Hints, Miscellaneous Notes, and Moral Hints." This excellent book can be had for \$1.00, by addressing John T. McCall, 329 Poplar street, Columbia, Pa., and considering what it teaches, should be worth five times or fifty times its price, by men who need to learn.

## THE CLOCK WITH THE REMINDER HAND.

McGrane's locomotive clock meets a "long felt want," and an every day want on the part of locomotive men. It has a red hand which is no "run around," but just stands where it can do the most good by reminding the "runner" when to stop, of meeting points, getting orders, etc. All that is required is to put this red hand so that it will point to the time that you must do something more or less important, and then every time you look at the clock the red hand reminds you of what you ought to do. It is a great clock in its way, and the reminder is just what is wanted in this world of forgetfulness.

## THE EFFECT OF HARD TIMES.

MR. EDITOR:—The present financial stringency is bearing evil fruit, the effects of which will be felt long years after the country has recovered from its depression. Everywhere corporations are reducing wages, and railway companies are apparently endeavoring to keep abreast of the times by declaring they must enforce reductions varying from 10 to 20 per cent., or go under. Telling thousands, who for years have braved every danger, endured every hardship, and paid their well-earned dollars into the various labor organizations in order to place some protective barrier about themselves and loved ones, and to gain a just recompense for their services, must now see all lost at one fell swoop, or step down from the positions they have so long occupied by reason of industry, ability, and sobriety. Did I say lose all? Aye, and more; for even a cut of 10 per cent. in many cases means reducing wages to a lower level than they were before organized effort obtained the present contracts. Many railway companies having discharged one-half of their employees, and sent them to join the vast armies of the unemployed, must now make sweeping cuts in the salaries of the remainder, so when the strong boxes once more

empty their hoarded contents into the arteries of commerce, and stagnated trade resumes its wonted life; stocks that do not pay dividends will have to be well watered indeed. The success of one road in securing the proposed reduction, emboldens many others to make like demands. The propositions are plausibly sugar-coated by the promise to grant a reconsideration in a period of three or four months, or such time as business will permit a restoration of former pay. Existing schedules and contracts are the results of years of struggle, thought, and expense; procured by the unswerving loyalty of men of undoubted ability and integrity, the best in our ranks. Made wary by former experiences, the railroader well knows that once these contracts are broken, the task of replacing them will be a herculean one. Hence the distrust and hesitation so plainly exhibited by the orders on the various lines in accepting a temporary reduction.

The railways of the country have certainly been operated on a paying basis in the past. They have not been constructed, improved, and operated for fun or glory. The truth of this assertion is self-evident; otherwise they would have quit business, and the shriek of the iron horse would have ceased, ere now, to disturb primeval stillness. This being the case, why should they not continue the even tenor of their way without violent disturbance of present friendly relations? Why endeavor to reduce the faithful employes to peonage because bankers and bond clippers are working up a boom in the gold market? What consolation to the ever-watching engineer, the toiling fireman, and in fact all classes of railway wage earners to know that even now, while at the post of duty, their high-salaried superiors are contemplating schemes whereby they may be deprived of some of the comforts they now enjoy. After a brief consideration of the foregoing statements, the beclouded(?) mind of the toiler must arrive at one conclusion, namely: A financial panic is an undisguised blessing to the man of large wealth, however badly the producers of his opulence may suffer in the meantime. Money panics are but hastenings of the process by which the rich become richer, and the poor become poorer. Let us not entertain the deluding consolation that many large fortunes are swept away in these periodical spasms; thus causing great and small to suffer alike. Some one must profit by the disaster, and these shattered fortunes are swallowed up by still greater ones. The middle classes are rapidly disappearing, a few of their number rising to wealth and power such as Cæsus never dreamed of. The remainder being hurled back into the ranks of the unemployed. In their stead is left a yawning chasm, widening and deepening

with every crash; hastening the day when the son must follow in the foot-steps of his father; all gates leading to honorable gain being forever closed against him.

Brethren, conjure up the picture here presented and behold its gloomy aspects!

But to return to the subject, if, indeed, it can be said I have digressed, Shall such a deplorable state of affairs as now threatens the labor world, be tolerated? If so, why? Is it not because of our own weakness and the presence of our idle hosts who must work at any price or starve? While we chant the praises of our noble brotherhoods, let us not shut our eyes to the fact that they are unable to cope with present conditions. They have done grand work in the past. They have placed labor upon its feet and taught it those first steps which will lead to ultimate independence. Conditions change rapidly, however, in this progressive age, and we must trim our sails accordingly, or be left in the rear, we can no longer remain apart, and view each other meeting with crushing defeat, yea, even assisting in the ruinous work, *we must Federate!* Soon the employes of a railway system will have not only their own management to contend against, but the management of other roads as well. When that time comes (and it is almost here) we cannot hope for aught but utter defeat, and complete annihilation under our present plan of adjusting grievances, viz: while one class of employes on a system strike; the others remain at work, the places of the strikers being filled by militia men, who serve for the double purpose of guard and scab. An instance being the Buffalo strike where 500 switchmen were overpowered and defeated, not by a railway company but by 8,000 armed and disciplined soldiers furnished for the occasion by the Governor of New York. All honor(?) to the heroic militia; they performed their mission well. This disgraceful affair is but a sample (with slight variations) of what has been going on in different parts of the country of late years. Defenseless workmen being struck down by soldier, deputies, and thugs, backed by the strong arm of the law. Oh, glorious Republic! where such crying outrages are fostered! Let all the toilers within thy confines, the foundation and bulwark of all thy greatness, arise and sing thy praises in such stentorian tones, the very heavens shall hear of thy fame, and know of thy Justice! Louder, brethren! or thy joyful song will be lost in the wail of oppressed and starving multitudes! Black though the cloud now appears, yet it has a silver lining. Never before has there been such an awakening. Hundreds of able and intelligent publications are springing up all over the land, and engaging in the work of educating the people. Labor is deeply studying the problems given it to solve.

The remedies to existing evils must and will be found; when found they will be vigorously applied, despite the power of wealth and the chicanery of demagogues. The rectification must be brought about by Federation, and an intelligent use of the ballot; since by lack of the former and misuse of the latter we have fallen on evil times. An inherent desire on the part of humanity to cling tenaciously to life-long teachings and prejudices, has ever been the greatest stumbling block to reform. The majority of wage-earners have apparently adopted the motto: "Every fellow for himself, the devil take the hindmost," and have not striven to break down the barriers of separation. Necessity in the near future will compel them to do so. The \$4 per day man, fully realizing that we must "hang together, or hang separately," will clasp hands with his less favored brother; resolving that the errors of the past shall not be repeated in the future. Strikes will be far less numerous than at present, and less disastrous to both capital and labor, as we will then be enabled to demonstrate the fact that one good strike is better than one hundred abortions. With greater power will come increased conservatism (not Esauism and cowardice). No one need fear that labor will abuse its privileges, for workmen recognize the mutual dependency of both capital and labor. The failure of capital to make the same recognition, has been productive of much trouble and ill will. When labor's ranks present an unbroken front we may force acknowledgement of our claims. To this greatly desired end, then, let us strive in thought, word, and deed. Our recompense will be the knowledge that we have been a factor in bringing about the only millenium we perhaps shall ever see on this earth.

*John A. Martin.*

LA JUNTA, COL.

#### LEE YUM'S CAT.

The most amusing specimens of the misuse of the English language come from Asiatic people, to whom the Anglo-Saxon formulas of speech are the most strange and exotic thing in the world. The amusing character of "Baboo," or Hindoo English, is well known. Here is a genuine specimen of Chinese English, in the form of an actual advertisement in a newspaper of Santa Barbara, Cal., which will do to go with the letters of the Baboos:

Notice.—Santa Barbara, May 9, 1892.

I have a tame cat is lost on the 28th of april it is about nine pounds his breast all are white the hands and legs both are white but one his behind leg out side part have a spot Gray Colour and his back are all gray but the back have a white blue spot on it

his muzzle is red and his head is light black.

His nake have an iron ring on it and with six chinese money to tie it tight on the iron ring in his nake.

If any people know where he was bring back to me I will prefer to give him two dollars for reward.

Fang Lee Yum.

31 Canon Perdido Street.

#### THE ROBINSON MONUMENT FUND.

The following subscriptions to the Robinson Monument fund have been received since our last report:

R. G. Emmerson, Winnipeg, Man.	\$ 1 00

## FORGIVE AND FORGET!

A Christian is taught to feel meekly and lowly  
 Whenever he's scourged by a backbiter's rod,  
 That his thoughts at such times must be pure and  
 be holy,  
 And leave his traducers to settle with God,  
 If it's so, then the Lord should have not made us  
 mortals,  
 With hearts full of vengeance to pay every debt;  
 Very few manly fellows will pass heaven's portals.  
 Who know they are wronged, then forgive and  
 forget.

There are reptiles abroad with vile insinuations,  
 To poison the ears of our friends with their lies,  
 Oh! I like for such curs to feel manly temptations,  
 And send my clinched fist right between their  
 two eyes;  
 It would give me more joy than to go on my knees,  
 boys,  
 And offer up prayer for their comfort, you bet,  
 'Tisn't right, but 'twould give our hot temper more  
 ease, boys,  
 Than go by the doctrine, "forgive and forget."

"Forgive and forget!" It is tough on a fellow  
 Possessed of a temper impulsively strong.  
 To shorten his sails of resentment, and mellow  
 His thoughts 'gainst a viper that does him a  
 wrong;  
 To know that a cur can retail his foul slander  
 Amongst your companions and feel no regret;  
 The victim's no man, he is only a gander,  
 Who'll meekly exclaim: "I'll forgive and for-  
 get."

"Forgive and forget." From the mold I was made  
 in  
 I must have been taken before I was chilled,  
 And my hot disposition will last till I'm laid in  
 The grave with my heart beats eternally stilled.  
 "An eye for an eye and a tooth for a tooth," boys,  
 Is doctrine may cause us hereafter regret;  
 Let white liver'd fellows, with breasts full of ruth,  
 boys,  
 Go canting and swaddling "forgive and forget."  
*Shandy Maguire.*

## ADDRESSES WANTED.

FRANK CANFIELD—Is requested to correspond at  
 once with his brother, G. C. Canfield, 611 Austin st.,  
 San Antonio, Texas.

ALBERT E. BOUCH—When last heard from he  
 was working for the Galveston City R. R. in 1884.  
 He was known in New Orleans and San Antonio.  
 His age is about 33 years; height about 5 ft. 8 in.;  
 complexion fair; eyes blue; one foot slightly de-  
 formed. His widowed mother is most anxious to  
 hear from him. Anyone knowing of his where-  
 abouts will please correspond with P. E. Stellwa-  
 gen, Indio, Cal.

Among the many wonderful exhibits at the  
 World's Fair the Great Ice Railway is not by any  
 means the least. To partake of a sleigh ride on  
 real snow in midsummer is a delightful and re-  
 freshing treat. It is one of the attractions on Mid-  
 way Plaisance, located near that other wonder, the  
 Ferris wheel.

The O. R. Extension has made three great strikes  
 or discoveries on their properties in the last thirty  
 (30) days. One an eight (8) ft. vein of gold bearing  
 quartz assaying forty dollars (\$40) to the ton, one  
 a ten (10) inch vein of high grade ore running six  
 hundred and eighty dollars (\$680) to the ton and  
 the other a three (3) ft. vein of ore, a large portion  
 of which shows free gold.

## REDUCED TO \$1.00.

We have on hand a supply of bound volumes of  
 the MAGAZINE for the years 1891 and 1892.

The volumes are artistically bound in a way to  
 withstand wear, and we need not say are intrin-  
 sically valuable, containing as they do, a wide range  
 of topics on subjects well calculated to interest the  
 general reader, as well as those who are the stu-  
 dents of labor problems.

In this connection we suggest that these bound  
 volumes of the MAGAZINE would be a valuable  
 present on birthday occasions, or as tokens of re-  
 membrance, to be presented at any time, and as  
 the price has been reduced to \$1.00 we shall hope to  
 receive sufficient orders to reduce the supply,  
 since no fireman's library would be complete with-  
 out one.

By addressing LOCOMOTIVE FIREMEN'S MAGA-  
 ZINE, Terre Haute, Indiana, orders will be prompt-  
 ly filled. Cash must accompany each order.

## THE COWBOY'S STORY.

Speaking of excitement, I tell you nothing so  
 stirring as all the latent depths of one's  
 imagination as the prospect of seeing your-  
 self a millionaire in a week's time, and you  
 can't stay long in a gold country before the  
 fire gets into your brains and you watch  
 the ground at your feet and the rock cliffs  
 at your side, expecting any minute to pick  
 up the nugget that will be the foundation of  
 your fortune. I was up in the Black Hills  
 not long ago and ran across a little incident  
 in this line. The railroads hadn't been  
 there very long and some of the boys were  
 just in the state of mind I've been speaking  
 about—watching to "strike it rich." Abe  
 Bowers was roundhouse foreman and he  
 had listened to the mining talk till he was  
 sure there was luck for anybody who kept  
 his eyes open; and so one of his machinists  
 laid for him. He saved up his brass flings  
 till he had about a quart and one day  
 when the coast was clear, he raked them  
 well into the sand on the bank of the creek  
 out behind the shop, and then watched for  
 developments. He didn't have long to wait,  
 for Abe's prying eyes soon caught the glit-  
 ter of the yellow particles, and he picked  
 up a handful of the dirt to examine it. His  
 eyes opened! The sand was full of minute  
 grains of free gold! The find was fabulous,  
 for old miners had said free gold never  
 showed to the naked eye unless it was im-  
 mensely rich. His wildest imaginings were  
 to be realized! He trembled in his eager-  
 ness to store away his glittering find, but  
 not till dusk could he begin his willing task;  
 and then just as he was beginning to sack  
 up his fortune, along sauntered the passen-  
 ger conductor, who asked him what he was  
 doing. It was hard, but he must share his  
 secret; so he told the conductor of his find,  
 and by the light of a match showed him the  
 glistening dirt. The conductor was electri-  
 fied, and offered to help him sack and  
 hide it for half. Abe was compelled to ac-

quiesce, and together they filled half a dozen sack, which they carried across the creek to a deserted log cabin for safe keeping. This was no light task and they were two pretty tired men when it was finished: but nevertheless they sat up late planning and making arrangements to be relieved of their railroad duties, so as to give all their time to the development of their fortune, and not until they had washed out a quantity of the filings and taken them to a bank for sale, did they fully realize what "tenderfeet" they were.—*Locomotive Engineering.*

### THE CINCH ON McCORMICK.

"A long time ago," said the old-timer, stopping to tamp down the cut-plug in his cob pipe; "A long time ago, when I was on the South Park road, we were having a good many wrecks.

"Most of these were caused by run-aways; the stock was equipped with straight vacuum, and it wouldn't suck wind for a cent—'cause they didn't take keer of it.

"We had a superintendent then of the name of McCormick, who was a holy terror on the fire; he'd discharge a man just on suspicion; new men came and went on almost every train.

"Every few days there'd be a runaway, and McCormick would fire the whole crew—just to keep up the discipline.

"One night, Sam Black's Mason-Fairlie—we always called 'em 'jim crows'—got away from him on Kenosha hill, and Sam and the whole crew were killed.

"The news came early, and a lot of us gathered at the little depot at the foot of Larimer street, Denver, to meet No. 2 and help carry the remains of the boys home. McCormick was pacing up and down the platform with his hands behind him.

"Whilst we were waitin', sorter quiet-like, each man kinder thinkin' how near it come to him, and feelin' sorter sober, I happened to notice an old Irishman sitting on the edge of the platform smoking a clay pipe and watchin' a little ant hill between the ties.

"Pretty soon another old fellow, of the same nationality, came along with a spike-maul over his shoulder; evidently he did not know the reason of the gathering. He jerked his head cornerways at his friend, and said:

"'Mornin', Jimmy.'

"'Good mornin', Moike; did ye see McKor-mick?'

"'Oi did not.'

"'McKor-mick is cryin' this mornin'.'

"'Sure; phawt's the matter ave him, Jimmy?'

"'There does be folve min comin' in that he can't discharge anny more—bad cess till him.'"—*Locomotive Engineering.*

### DOWN WITH THE MILITIA SCHEME.

Apobos of the monopolistic scheme to nationalize or place under government control the national guard or state militia, it is interesting to note with what ingenuity the monopolistic press applauds the suggestion and the reform press antagonizes the same. What can be the object of maintaining in "the land of the free and the home of the brave" a standing army of the magnitude proposed by this scheme? Does not every American heart beat proud in the thought that this country can marshal in twenty-four hours an army of 5,000,000 of her sons, the hardest and bravest race on earth? There is not one sensible reason why such an army should be maintained, unless it be the fact that the hosts of right and justice are marshaling under the banner of "equal rights to all, special privileges to none," and monopoly sees its doom. The handwriting is on the wall and Belshazzar's feast will soon come to an inglorious end. The eyes of the wealth producer have become open to the fact that for years the sole aim of all legislation has been directed toward fastening tighter and tighter the shackles of oppression on the limbs of the toiling ones of earth in order that the few and heartless might revel in luxury. Men and newspapers are now in existence advocating the doctrine that the Great Creator never intended that a part of His children should have a surfeit of the good things of earth while another part should die of starvation, and that the laws of the country should be so amended as to give all who do an honest day's work an equal share in the world, and thereby banish forever the possibility of making millionaires and paupers at one and the same time. There is something wrong in a country beneath whose flag 2,000,000 tramps find shelter on the rock pile and in the jail. Something is wrong when thousands of our young women are annually forced to the lowest depths of degradation in order to maintain a bare existence. Think of these things, of the thousands of starving children in the large cities and the distressful plight of the wage worker all over our land, and then notice who concocted and now fosters this militia nationalization scheme, and what it means for you—backed up by the monopolistic press and the money power of the land.—*Midland Mechanic.*

If you could only vote now, we would have a good time. I have been an advocate of woman suffrage for twenty years, and I am not ashamed of it. You will never be able to accomplish this grand work you have undertaken until you are allowed the ballot; and if I had it in my power, I would give every one of you the ballot before I left my present position.—*Gov. Ront of Colo.*

## THE OWNERS OF THE UNIVERSE.

Let us corner up the sunbeams  
Lying all around our path;  
Get a trust on wheat and roses,  
Give the poor the thorns and chaff.  
Let us find our chiefest pleasure  
Hoarding bounties of to-day,  
So the poor shall have scant measure  
And two prices have to pay.

Yes, we'll reservoir the rivers,  
And we'll levy on the lakes,  
And we'll lay a trifling toll-tax  
On each poor man who partakes;  
We'll brand his number on him  
That he'll carry through his life;  
We'll apprentice all his children,  
Get a mortgage on his wife.

We will capture e'en the wind-god,  
And confine him in a cave;  
And then, through our patent process,  
We the atmosphere will save;  
Thus we'll squeeze our little brother  
When he tries his lungs to fill,  
Put a metre on his wind-pipe  
And present our little bill.

We will syndicate the starlight,  
And monopolize the moon!  
Claim a royalty on rest days,  
A proprietary noon;  
For right of way through ocean's spray  
We'll charge just what its worth;  
We'll drive our stakes around the lakes—  
In fact, we'll own the earth.

*From Great Thoughts, London, Eng.*

## KEEPING ENGAGEMENTS.

A boy should not make an engagement unless it is a proper one; but, having made it, he should keep it. If an hour has been named, he should be there on time or if not he should have some valid reason to offer for his failure to do so. He may have the liberty to waste his own time, but he has no right to waste the time of another.

The sacredness with which Sir William Napier regarded an engagement, even of a seemingly trivial character, is shown by an incident. One day he met a little girl who was sobbing violently over a bowl which she had broken.

"You can mend it, can't you?" she appealingly said to him.

The bowl was past mending, and, on putting his hand into his pocket, he found that he had left his purse at home.

"Meet me here, at this hour to-morrow, my dear," he said. "I'll give you a sixpence with which to buy another bowl."

When he reached home he found on his desk an invitation to dine with some distinguished gentlemen at Bath the next day. He had to forego the great pleasure because of the engagement which he made with the little girl, and so he notified the host a previous appointment would prevent him from accepting the invitation. His integrity would not allow him to break an engagement that involved but a sixpence which he might have paid at some other time.

President Lincoln had been trained from boyhood to honor every promise that he made. After he was married, and had a

family of his own, he was visited by a gentleman of some distinction, who, unfortunately, made promises more freely than he kept them.

In order to induce one of Mr. Lincoln's boys to sit on his lap the gentleman offered to give him a charm which he wore on his watch-chain. The boy clambered upon his lap, and finally the gentleman rose to go.

"Are you not going to keep your promise with my boy?" Mr. Lincoln asked.

"What promise?" inquired the other.

"You said you would give him that charm," reminded Mr. Lincoln.

"Oh, I couldn't," laughed the visitor.

"It is not only valuable, but I prize it highly as a heirloom."

"Give it to him," Mr. Lincoln sternly said. "I would not want him to know that I entertained one who had no regard for his word."

The gentleman colored, and then undid the charm and handed it to the boy. We do not know whether the gentleman received the charm again, afterward, but he certainly was taught a lesson.

## THE WASTE OF TOBACCO.

"You have been a smoker all your life?" asked the colporteur. "Oh yes," said the traveler with the square sample cases, "ever since I was ten years old." "And so you have smoked say——?" "About forty years," replied the traveler. "And your cigars cost you on the straight average, not less than ten cents a day?" "Why, of course not," said the traveler, looking surprised. The colporteur made a rapid calculation on the back of an envelope. "Then," he said, "see what tobacco has cost you. Without computing the interest it has cost you nearly \$1,500; enough with its interest to buy a lot and build and furnish a home worth ten times that sum. See what tobacco has cost you." "Yes, I know," said the traveler, rising to leave the car as the train stopped, "but see what it's made for me. I traveled for the tobacco house I'm with now for ten years, at \$3,500 a year; then I bought into the concern in a good year, have cleaned up about \$40,000 since I've been a partner and own a house that I wouldn't sell for \$20,000, and am making more money this year than I ever saw in one year before. Tobacco is a pretty expensive luxury though, if you happen to get on the wrong side of the market." So saying, he went up town and skinned a couple of good customers, while the colporteur, riding on his way, looked at the figures on the envelope and ruminated and ruminated and ruminated.—*Brooklyn Eagle.*

He who hath a small office is liable to have a big head; the smaller the office the bigger the head groweth.

## ABLE-BODIED HUSBANDS.

The Oakland, Cal., Board of Education has passed a resolution requesting the resignation of all women teachers with "able-bodied husbands." As the school laws in California declare that teachers holding city certificates, when elected, can only be dismissed for insubordination or for "immoral or unprofessional conduct, profanity, intemperance, or evident unfitness for teaching," the question arises under which of these misdemeanors shall the possession of an "able-bodied husband" be classed, in order to enforce the desired resignations? Also what degree of health and ability constitutes an "able-bodied husband."—*The Woman's Journal*.

## TRAIN ROBBERS.

"Speakin' of train robbers," said an old timer, leisurely crossing his lean shanks, "I never had to do with real, live robbers, but when we were buldin' the U. P. I seen more Indians than a few.

"I jimmed a shifter round the yard at Omaha when I first struck the country, and used to hear the boys tell about the redskins ditching trains, stealing telegraph wire, and 'casionally shooting at an engin', to say nothin' of riding around free, and being mighty over-pompous to everybody.

"But as long as I wer'n't in the immedgiate Indian belt, I didn't worry much.

"One day I got a new Roger, and started fer the front—then all the Injun stories I ever heerd come back, multiplid four hundred per cent.

"All day I was on the lookout for red and green blankets; every bush looked like it might have a Crow or a Wyandotte behind it, but the sun went down without a sign of reds.

"Well, I had a train of material for the front, and would jest about get there for breakfast if I hustled—so I hustled.

"About eleven o'clock I stopped at a little temporary water tank to liquidate and lubricate, feelin' rather sleepy for my long hours. While the fire boy was taking water I did the grease act, going around to the left side.

"As I climbed up in the gangway, and sucked in my breath to blow out the torch, my heart hit the roof of my mouth, for there, in the right gangway, stood a big, fat, greasy Injun; he had on a yellow blanket, carried a rifle, and greeted me with a grunt.

"'Wher goin'?' says I, gruff like.

"'Um Yum,' says he.

"'Git off,' says I.

"'No git,' says he.

"Here my visitor made a move to get up on the fireman's seat, and I don't know what popped it into my head, but I took the long oller by the snoot, and made a lick at

the gauge glass that was then almost in his face.

"Afore you could say Gee-whiz that cab was full of steam, hot water, and muffled whoops; I pulled out the plug to let the old girl make her escape, and about the second turn of her drivers I heard a heavy body hit the sod on my side with a thud, and a sound floated up to us that reminded me of a scar't hog—kinder like 'Wough!'

"Bill and I lay low in the tank for fear of being shot, until we were outside of the range of a Krupp cannon. I often wonder now which was scar't the worst me or the Injun."

A BIG jam of logs at Barrituck Falls, Me., was started July 11th. For thirty days the river drivers have been working on it. The Somerset Railroad runs near the river. A spur track was built close to the bank, and a powerful locomotive, with two inch wire cable, pulled out the last key log, starting the jam. This jam was the largest ever hung up at the falls. It contained 85,000,000 feet of lumber and extended up the river about two miles. The work of moving the jam cost \$12,000.—*The Engineer*.

Two young men, their jaws distended with tremendous quids of tobacco, entered the Salvation Army barracks on Fulton street, Brooklyn, and proceeded to make themselves as obnoxious as possible. Finally a big-six foot member of the Army protested. "We're waitin' t' see some miracles, see!" said one of the tough youths. The six-footer deliberately stooped over, took the two by the back of their necks, and, as he helped them down the front stoop with his foot, remarked: "You wanted some miracles, hey! Well, we don't perform miracles here, but we cast out devils."

An amusing incident occurred in the Circuit Court at West Point, Miss., last Monday. A negro boy being tried for stealing two pairs of trousers, and having no lawyer, Judge Campbell, asked him if he desired to speak. He promptly replied in the affirmative and "fired" "The Boy Stood on the Burning Deck" at the judge and jury.—*Atlanta Constitution*.

The cheapest tax-dodging scheme on record is that of a churchman in Lincoln county, Maine, who has organized a bogus religious and charitable society, has made himself treasurer, and has turned all his personal property over to the treasury of this non-taxable corporation. He defies the assessors, and they don't see how they can get at him.

## WM. D. ROBINSON MONUMENT FUND.

Wm. D. Robinson, who died at Washington, Ind., on November 7th, 1890, was the founder of the Brotherhood of Locomotive Engineers, and in doing this great work, he as certainly laid the foundation of the Brotherhood of Locomotive Firemen and all other organizations of railway employes.

In closing our obituary notice in the December, 1890, issue of the MAGAZINE, we said:

In this hour, when Locomotive Engineers and Firemen stand uncovered at the tomb of Wm. D. Robinson, the question arises, What can be done to perpetuate the name, the fame, the memory of a man who gave the best years of his life for their benefit? Is not the answer, We will build him a monument worthy of his deeds, of his labors and sacrifices? We will believe that such is the response.

If it is, let the good work begin, and let it be carried forward until a granite or a marble shaft shall mark the spot where his dust reposes.

"What hallows ground  
where heroes sleep?  
'Tis not the sculptured  
piles you heap!  
In dews that heavens far  
distant weep  
Their turf may bloom.  
Or genii twine beneath  
the deep  
Their coral tomb.

"What's hallow'd ground?  
'Tis what gives birth  
To sacred thoughts in  
souls of worth!  
Peace! Independence!  
Truth go forth  
Earth's compass round  
And your high priesthood  
shall make earth  
All hallowed ground."

The poet's idea is correct. Where Wm. D. Robinson sleeps his last sleep is hallowed ground, and monumental marble could add nothing to its sacredness. But it is all of that without reference to the living. What can the living do to bear testimony that the last resting place of Wm. D. Robinson is hallowed ground?

We do not believe the name of Wm. D. Robinson is soon to perish and be forgotten. We believe the brotherhood he founded will be his imperishable monument, and that his name in connection with that great order is to increase in lustre as the years flow on. But that does not cancel the debt of gratitude the two great brotherhoods of the locomotive owe his memory, which if not met, will, in the judgment of mankind, cover the living with obloquy.

We believe the Brotherhood of Locomotive Firemen will respond in a way that will bear eloquent testimony of their appreciation of the life work of the man that made their organization fruitful above measure of blessings to locomotive firemen. Alone and unaided, our order, for the small sum of 25 cents each, could do the work. But we prefer doing it in conjunction with the Brotherhood of Engineers; nor would we confine subscriptions to the two orders, but would invite all the brotherhoods engaged in the train service of railroads to join in the great work of gratitude.

In discussing the propriety of erecting a monument to perpetuate the memory of the

dead philanthropist, we said in the April issue of 1891:

The idea of building a monument to perpetuate the name and fame of Wm. D. Robinson, originated with the FIREMEN'S MAGAZINE. The time has come for action. Contributions should be made. We have said that 25 cents each from members of the B. of L. F. would build the monument. But we surmise that other orders would want a place in the splendid work proposed, and we have opened in the Grand Lodge office of the B. of L. F.,

## A ROBINSON MONUMENT FUND.

Every contribution, however small or large, will be acknowledged in the columns of the MAGAZINE under an appropriate head, and when the contributions approximate a sum which gives assurance of success to the enterprise, a commission made up of the members of the various brotherhoods will be constituted to take charge of the fund and prepare for work.

Members of the various orders subscribing should designate their calling, and if they will give their address, it will be regarded as a favor.

Now, let the good work proceed. Wm. D. Robinson, when alive, was the friend of the workingman. He wrote and spoke and toiled to establish a brotherhood and to teach men the power of organized labor. Railroad trainmen had no more ardent and

unselfish friend. Let a monument bear testimony that death did not sever the tie that bound him to the living.

If ever a man deserved the grateful homage of his fellows that man was Wm. D. Robinson. He devoted the best years of his life to the great work of organizing railroad men for their moral and material advancement. He toiled without recompense, he endured privations and made sacrifices, the half of which will never be told. He lived and died

WM. D. ROBINSON.

in poverty, that others might fare better than was his lot. Every man, woman and child who has been, is now, or ever will be the beneficiary of any of the brotherhoods of railway employes, owes Wm. D. Robinson a debt of gratitude that can never be paid. Such a man deserves a monument to bear testimony of the love and gratitude of those for whom he accepted poverty, persecution and all their attendant ills, and every member of every organization of railroad employes should cheerfully contribute his mite, small as it may be, to such a noble purpose. Contributions may be directed to the LOCOMOTIVE FIREMEN'S MAGAZINE, Terre Haute, Indiana, all of which will be acknowledged in its columns.

## GRAND LODGE.

## BENEFICIARY STATEMENT.

OFFICE OF GRAND SECRETARY AND TREASURER,  
TERRE HAUTE, IND., September 1, 1893.

## To Subordinate Lodges:

SIRS AND BROTHERS:—The following is a statement of the Beneficiary Fund for the month of August, 1893:

## BEWARE OF OINTMENTS FOR CATARRH THAT CONTAIN MERCURY,

as mercury will surely destroy the sense of smell and completely derange the whole system when entering it through the mucous surfaces. Such articles should never be used except on prescriptions from reputable physicians, as the damage they will do is ten fold to the good you can possibly derive from them. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, O., contains no mercury, and is taken internally, acting directly upon the blood and mucous surfaces of the system. In buying Hall's Catarrh Cure be sure you get the genuine. It is taken internally, and made in Toledo, Ohio, by F. J. Cheney & Co. Testimonials free.

Sold by Druggists, price 75c per bottle.

## WESTINGHOUSE AUTOMATIC BRAKE.

The WESTINGHOUSE AUTOMATIC BRAKE is now in use on 24,000 Engines and 325,000 Cars. This includes (with plain brakes) 232,000 Freight Cars, which is about 23 per cent. of the entire freight car equipment of this country, and about 80 per cent. of these are engaged in interstate traffic, affording the opportunity of controlling the speed of trains by their use on Railways over which they may pass. Orders have been received for 173,000 of the Improved Quick Action Brakes since December, 1887.

The best results are obtained in freight train braking from having all the cars in a train fitted with power brakes, but several years' experience has proven conclusively that brakes can be successfully and profitably used on freight trains where but a portion of the cars are so equipped.

## EDITORIAL.

### LABOR AND CAPITAL AND THE DISTRIBUTION OF PROPERTY.

The question of capital and labor is not only being debated in congresses and legislatures, in lodge-rooms and in the assemblies of labor representatives, but Mr. Justice Henry B. Brown, of the United States Supreme Court, deems it entirely prudent to give the subject his attention, which he did in an address before the American Bar Association, at its annual meeting in Milwaukee, August 31. We have only a synopsis of the distinguished gentleman's views, but enough of what he said to force the conclusion that he leans up to capital and capitalists, like one who knows and appreciates the difference between a workingman and a millionaire.

The address of Mr. Justice Brown is spoken of as being "lengthy but interesting throughout." In the course of his remarks it is reported that the "distinguished jurist, by way of introduction, reviewed the history of strikes between capital and labor from the days of the great strike of the Israelites, the conflicts between the Roman patricians and plebeians, the feudal lords and the merchants of the middle ages, down to the struggles of the present day."

The ermined orator did not, so far as reported, give any particulars relating to the "great strikes of the Israelites." It is possible that he referred to the straw-strike, at a time when the Israelites were making brick for Pharaoh. This was not exactly a strike, but the brick makers did appoint a grievance committee to go to Pharaoh and tell the general manager of Egypt their troubles. Really, we feel much obliged to Mr. Justice Brown for his allusion to this strike, though it was not, properly speaking, a strike between "labor and capital," but rather between labor and the government. At the time of the straw-strike there were in Egypt 600,000 adult male Israelites. How many of them were directly engaged in making brick, we have no means of knowing, but it was, evidently, a leading industry. The straw required in making the brick was to mix

with the clay to improve its adhesive qualities, and was deemed in those days essential.

It is interesting to state how this straw-strike of the Israelites originated. It appears that God had appointed Moses the leader of the Israelites, for the purpose of getting them out of Egypt, by the way of the "wilderness" into the "promised land," or Canaan. Moses, therefore, asked permission of Pharaoh to let the Israelites go a three days' journey into the wilderness to worship. This three days vacation asked for the Israelites, in the name of the Israelite's God, seemed preposterous, besides Pharaoh neither knew nor cared for the God of the Israelites, and he not only flatly refused the request, but ordered, that, as previous to this request, he had supplied the brick makers with straw, thereafter they should hunt straw for themselves, but in no case was their task to be lightened; they were ordered to make as many brick as when the straw was furnished, and their task masters were ordered to beat them in every case where the tale (count) fell below the required number.

It was this infamous order that resulted in the officers of the children of Israel organizing a grievance committee to lay their troubles directly before Pharaoh. But the effort to have the iniquitous order modified in any regard did not succeed. Pharaoh was obdurate and insolent, drove the grievance committee from his presence, remanded the brick makers to their tasks, taunting them with the remark, "Ye are idle, ye are idle, therefore ye say let us go and do sacrifice to the Lord. Go ye, therefore, now, and work; for there shall no straw be given you, yet shall ye deliver the tale (count) of bricks." At this supreme juncture the grievance committee met Moses, the leader, and said to him, "The Lord look upon you, and judge, because ye have made our savour to be abhorred in the eyes of Pharaoh and in the eyes of his servants to put a sword in their hands to slay us." Times did look blue to the brick makers, as also to Moses, who immediately laid the matter before the Lord, and said to the Lord, "Wherefore hast thou so evil entreated this people? Why is it that thou hast sent me? For since I came to Pharaoh to speak in thy name he hath done evil to this people, neither hast thou delivered them." It was plain talk on the part of Moses. Pharaoh had been enraged, he had imposed heavy burdens upon the Israelites, and things had been made worse, generally. But the Lord assured Moses that he was not done with Pharaoh, but that he would, in the end, make the strike such a success that it would never be forgotten. Certainly, we are obliged to Mr. Justice Brown for his reference to the "great strike of the Israelites." The Lord set the example of doing Pharaoh and all Egypt immense honor, because of his infamous dealings with the brickmakers. In the first place, as a punishment, the waters of Egypt were turned to blood; (2) he filled the land with frogs; (3) he filled the land with lice; (4) swarms of flies filled all Egypt; (5) all the cattle, horses, asses, camels and oxen were stricken with murrain; (6) every man and beast was afflicted with boils; (7) a storm of hail, thunder and fire, was sent so that every

thing was destroyed except the wheat and the rye; (8) locusts came next and devoured everything; (9) then came darkness that could be felt, lasting three days; (10) then came the final plague, when the first born in all the land of Egypt, from the first born of Pharaoh unto the first born of the lowliest in all the land was slain. This done, Pharaoh was willing to give the Israelites a vacation, to let them leave his country, but in a moment of madness he called out his army to slaughter the Israelites, but was caught in the Red sea, when horses, chariots and soldiers all went down to death.

What of it all? Not much, perhaps. Pharaoh treated workingmen unjustly; he would not listen to a grievance committee; his greed obscured all sense of right and justice, and ultimately he paid dearly for his exercise of power over defenseless men. God did not stop to consult public opinion, nor the courts of Egypt. He did not consider the rights of property. He saw the inhumanity of Pharaoh, his tyranny, his purpose to degrade workingmen, to increase their tasks and then beat them for their non-performance. These things aroused the vengeance of Jehovah, and then came the plagues of blood, frogs, lice, flies, murrain, boils, hail and fire, locusts, darkness, the death of the first born, and then the Red sea disaster. After all these things, the children of Israel marched for forty years and finally entered the promised land.

For this wonderful display of divine power and vengeance there seems to have been one cause, and only one cause—the bad treatment of workingmen—and we are told that God is the same yesterday, to-day and forever. We do not know that Mr. Justice Brown spoke either lengthily or learnedly upon the “great strike of the Israelites.” We conclude he did not, because he jumped from the “great strike of the Israelites” to the strike of the brass workers in Breslau as early as 1539, and to the strike of the tailors in Baltimore in 1795, concluding, from his brief historical sketch that “it is apparent (1) that strikes, so far from being peculiar to modern industrial enterprise, as seems to be generally supposed, are as old as *civilization itself*; (2) that they prevail most *extensively* in the most enlightened and wealthy communities, and so far from being an *indication of extreme poverty*, are equally as frequent in times of general prosperity; (3) that the wit of man has as yet devised no scheme whereby they may be prevented or even alleviated.” In saying this, Mr. Justice Brown writes himself down a superficial thinker. It was never claimed that strikes were an indication of “extreme poverty.” What is the signification of “extreme poverty?” It is squalor, degradation, hunger and nakedness. There may be instances on record where such people struck to better their condition, but, as a general proposition, it is not true. Men strike to prevent “extreme poverty,” to prevent squalor and degradation. They strike, as did the Israelites, against inhuman treatment, tasks that kill soul and body. They strike against a reduction of wages and for an advance in wages; they strike for reasonable hours for a day's work and against hours that leave no time for physical recup-

eration and mental improvement; they strike for that which dignifies citizenship and secures liberty and independence; they strike that their "homes may not be huts and dunghills, and their children outcasts from the day of their birth—facts which Mr. Justice Brown never discovered, and would not have appreciated had they been forced upon his attention.

It is not true, as Mr. Justice Brown declares, "that the wit of man has as yet devised no scheme whereby they (strikes) may be prevented or even alleviated." Strikes have been prevented in a vast number of instances and as often alleviated when they have occurred, and beyond the vicious influences prevailing in high judicial circles, hopes are born and nursed into vigorous vitality, that a reign of justice in the world is of possible attainment—and it is widely accepted as a probability that men who now are compelled to strike against oppression will, armed with the ballot, strike against an aristocratic judiciary, and place men upon the bench whose public utterances are not framed to obscure their baseness.

It is not at all surprising that Mr. Justice Brown, in support of his plutocratic theories, should refer to the utterances of some "enthusiasts," who picture an "ideal state of society where neither poverty nor riches prevail," but workingmen who strike, do not indulge in vagaries. On the contrary, they do believe a reign of justice is within the limits of "human character as at present constituted." The distinguished judge doubts if there was neither poverty nor riches in the world that such a condition "would conduce as much to the general happiness, as the inequality which excites emulation and stimulates energy." He can conceive of nothing to "excite emulation and stimulate energy" except money—riches, and he doubtless had his own ambitions in view when he made the statement. He said, "rich men are essential even to the well being of the poor." "It is they," said the judge, "who in a thousand ways develop the resources of our country and afford employment to a countless army of workingmen. One has but to consider for a moment the immediate consequences of the abolition of large private fortunes to appreciate the danger which lurks in any radical disturbance of the present social system." In the foregoing, there is nothing new. It is the rehash of the same old idea, that workingmen are dependant upon the rich—that they live, move and have their existence by the permission of the rich. It is the idea of the slave driver. Its purpose is to degrade workingmen until they are ready and willing to accept the domination of assumed superiors, and obey their orders without complaint. This done, degradation has reached its lowest depths. This done the slave accepts his bacon and corn bread, his dress to distinguish him as a helot, and then things go on swimmingly for the plutocratic masters. Mr. Justice Brown is of the opinion that for workingmen a sort of a millennial era has dawned. He said:

While, in this country at least, private fortunes are larger than they have ever been before, the condition of the laboring class has improved in equal

ratio. There was never a time when the working classes were so well paid, or when their wages could buy for them so many of the comforts of life as now. Not only are the working man's wages higher, but his hours of labor are shorter. He is better housed, better clad, better fed, better taught, reads better and cheaper papers, sends his children to better schools, and enjoys more opportunities for recreation and for seeing the world than ever before. He not only practically dictates his own hours of labor, but in large manufacturing centers he is provided with model lodging houses for his family, with libraries, parks, clubs, and lectures for his entertainment and instruction, with cheap excursion trains for his amusement on Sundays and holidays; and not only absolutely but relatively to the rich is vastly better off than he was fifty years ago.

Thus spoke Mr. Justice Brown to the American Bar, Aug. 31st, 1893, at a time when multiplied thousands of workingmen were out of employment, not knowing where they could secure a meal of victuals. But supposing no clouds overspread the skies of labor and the picture painted by the judge was literally true, then it is seen that during the past fifty years great improvements have been made in the condition of workingmen. The question arises, who brought about this improvement? Not men of Mr. Justice Brown's type. Not rich men, but workingmen by combination, by strikes, by sacrifice, and as labor's emancipation has not yet come, and as the rich are still oppressing, and as the courts are still corrupt, labor has before it herculean tasks to perform. Hitherto the combinations of labor have been on a small scale, and imperfect. Once unified, once redeemed from the fetters of envy and jealousy, once marshalled under one banner, and they will go forth from bondage under a God ordained leader, such as was Moses in the great straw-strike of the Israelites.

---

HUNGARY seems to have hit upon a plan for increasing railroad travel that has worked wonders. It is called the "zone tariff," and reports say that "during the five years preceding its introduction in August, 1889, the returns of the Hungarian railways showed a number of passengers varying between 6,000,000 and 7,500,000. During the first year of the tariff the number rose to 16,200,000, during the second year to 19,000,000 and during the last year to 28,300,000. The receipts have been very nearly doubled in the same time. The essential feature of this plan is that a passenger pays a fixed sum to travel to any point within a given radius of his starting point, and not directly according to the number of miles he travels." If the "zone tariff" plan could be introduced into the United States, there is no telling how many millions of persons would be carried during a year.

---

THE United States boasts of having, of all grades in the civil service, an army of 183,488 persons, an increase in ten years of 58,848. All told, the federal machine requires no less than 250,000 operators.

## THE MONEY OF THE WORLD.

The debates in congress, during the special session, related almost exclusively to money, to gold and silver as money metals, to their production, to the amount there is in the world, and to demonstrate that there is not a sufficiency of either, or of both combined, to answer the business demands of the civilized nations of the earth. As a consequence, the more advanced nations are required to emit paper money, and it is shown that in the United States, with gold, silver and paper currency, the sum total is not sufficient under the most favorable conditions to meet business requirements, and that, when from any cause the currency is contracted, business disasters occur.

Members of congress who have sought to demonstrate the importance of retaining silver as money as a full legal tender coin and who favor the free coinage of the metal, have fortified their arguments by exhaustive tabulated statements, showing the use of gold, silver and paper in twenty-six countries having a population of 1,219,000,000. Of this population 658,000,000 use silver and paper exclusively, and 561,000,000 use gold, silver and paper. The total stock of gold, silver and paper used by these twenty-six countries is as follows:

Gold . . . . .		\$3,582,605,000
Silver, full legal tender . . . . .	\$3,409,100,000	
Silver, limited tender . . . . .	553,600,000	
	<hr/>	3,962,700,000
Paper . . . . .		2,635,878,000
 Total . . . . .		 \$10,181,178,000

The tabulated statement, put in a form better suited for the pages of the MAGAZINE, is as follows:

UNITED STATES.—Population . . . . .	67,000,000
Uses gold . . . . .	\$604,000,000
Uses silver, full tender . . . . .	\$538,000,000
Uses silver, limited tender . . . . .	77,000,000
	<hr/>
	615,000,000
Uses paper . . . . .	412,000,000
 Total . . . . .	 \$1,631,000,000

Currency per capita: Gold, \$9.01; silver, \$9.18; paper, \$6.15; total, \$24.34.

Ratio between gold and legal tender silver, 1 to 15.98.

Ratio between gold and limited tender silver, 1 to 14.95.

UNITED KINGDOM OF GREAT BRITAIN.—Population . . . . .	38,000,000
Uses gold . . . . .	\$550,000,000
Uses silver, limited tender . . . . .	100,000,000
Uses paper . . . . .	50,000,000
 Total . . . . .	 \$700,000,000

Currency per capita: Gold, \$14.47; silver, \$2.63; paper, \$1.32; total, \$18.42.

Ratio between gold and limited tender silver, 1 to 14.28.

FRANCE.—Population . . . . .	39,000,000
Uses gold . . . . .	\$800,000,000
Uses silver, full tender . . . . .	\$650,000,000
Uses silver, limited tender . . . . .	50,000,000
	<hr/>
	700,000,000
Uses paper . . . . .	81,402,000
	<hr/>
Total . . . . .	\$1,581,402,000

Currency per capita: Gold, \$20.52; silver, \$17.95; paper, \$2.09; total, \$40.56.

Ratio between gold and legal tender silver, 1 to 15½.

Ratio between gold and limited tender silver, 1 to 14.38.

GERMANY.—Population . . . . .	49,500,000
Uses gold . . . . .	\$600,000,000
Uses silver, full tender . . . . .	\$103,000,000
Uses silver, limited tender . . . . .	108,000,000
	<hr/>
	211,000,000
Uses paper . . . . .	107,000,000
	<hr/>
Total . . . . .	\$918,000,000

Currency per capita: Gold, \$12.12; silver, \$4.26; paper, \$2.16; total, \$18.54.

BELGIUM.—Population . . . . .	6,100,000
Uses gold . . . . .	\$65,000,000
Uses silver, full tender . . . . .	\$48,400,000
Uses silver, limited tender . . . . .	6,600,000
	<hr/>
	55,000,000
Uses paper . . . . .	54,000,000
	<hr/>
Total . . . . .	\$174,000,000

Currency per capita: Gold, \$10.66; silver, \$9.02; paper, \$8.85; total, \$25.53.

Ratio between gold and full tender silver, 1 to 15½.

Ratio between gold and limited tender silver, 1 to 14.38.

ITALY.—Population . . . . .	31,000,000
Uses gold . . . . .	\$93,605,000
Uses silver, full tender . . . . .	\$16,000,000
Uses silver, limited tender . . . . .	34,200,000
	<hr/>
	50,200,000
Uses paper . . . . .	163,471,000
	<hr/>
Total . . . . .	\$307,276,000

Currency per capita: Gold, \$3.01; silver, \$1.62; paper, \$5.27; total, \$9.91.

Ratio between gold and full tender silver, 1 to 15½.

Ratio between gold and limited tender silver, 1 to 14.38.

SWITZERLAND.—Population . . . . .	3,000,000
Uses gold . . . . .	\$15,000,000
Uses silver, full tender . . . . .	\$11,400,000
Uses silver, limited tender . . . . .	3,600,000
	<hr/>
	15,000,000
Uses paper . . . . .	14,000,000
	<hr/>
Total . . . . .	\$44,000,000

Currency per capita: Gold, \$5.00; silver, \$5.00; paper, \$4.67; total, \$14.67.

Ratio between gold and full tender silver, 1 to 15½.

Ratio between gold and limited tender silver, 1 to 14.38.

GREECE.—Population . . . . .	2,200,000
Uses gold . . . . .	\$2,000,000
Uses silver, full tender . . . . .	\$1,800,000
Uses silver, limited tender . . . . .	2,200,000

Ratio between gold and limited tender silver, 1 to 15½.	

The foregoing figures are immensely interesting to those who are students of the money question which now engages the attention of statesmen and financiers. Those who decry silver as a money metal are confronted with the fact that silver now in circulation throughout the world is in excess of gold only to the amount of \$439,395,000, as follows:

Silver, full tender . . . . .	\$3,469,100,000
Silver, limited tender . . . . .	553,000,000
	<hr/>
	\$4,022,100,000
Gold . . . . .	3,582,605,000
	<hr/>
Excess of silver . . . . .	\$439,395,000

But, deducting the limited silver, which is debased coin, and it is found that gold is in excess of full legal tender, or standard silver, to the amount of \$113,505,000—hence it is folly to assume that silver is likely to displace gold in the money markets of the world.

But there is still another statement relating to gold and silver indicative of the fact that the production of the metals is at war with the idea that silver is liable to displace gold as money. During the past forty-two years, from 1851 to 1892, both inclusive, the world's production of gold has been \$4,834,395,400 and of silver \$3,371,491,000, tabulated as follows:

YEAR.	GOLD.	SILVER.
1851	\$67,600,000	\$40,000,000
1852	132,750,000	40,600,000
1853	155,450,000	40,000,000
1854	127,450,000	40,600,000
1855	135,075,000	40,650,000
1856	147,600,000	10,650,000
1857	133,275,000	40,650,000
1858	124,650,000	40,650,000
1859	124,850,000	40,750,000
1860	119,250,000	40,800,000
1861	113,800,900	44,700,000
1862	107,750,000	45,200,000
1863	106,950,000	49,200,000
1864	113,000,000	51,700,000
1865	120,200,000	51,950,000
1866	121,100,000	50,750,000
1867	104,025,000	54,225,000
1868	109,725,000	50,225,000
1869	106,225,000	47,500,000
1870	106,850,000	51,579,900
1871	107,000,000	61,050,000
1872	99,600,000	62,250,000
1873	96,200,000	81,800,000
1874	90,850,000	71,500,000
1875	87,500,000	80,500,000
1876	103,700,000	87,600,000
1877	114,000,000	81,000,000
1878	179,000,000	95,000,000
1879	109,000,000	96,000,000
1880	106,500,000	96,700,000
1881	103,000,000	102,000,000
1882	102,000,000	114,800,000
1883	95,400,000	115,300,000
1884	101,700,000	105,500,000
1885	108,400,000	118,500,000
1886	106,000,000	120,600,000
1887	105,775,000	124,281,000
1888	110,197,000	140,706,000
1889	123,489,000	162,159,000
1890	113,349,600	172,234,500
1891	120,518,800	186,733,000
1892	130,816,600	186,605,200
	\$4,834,395,400	\$3,371,491,000

It will be observed that during the past forty-two years the production of gold has exceeded the production of silver to the amount of \$1,462,904,400, which demonstrates pretty conclusively that silver is not likely to displace gold by its abundance. It is needless to in-

quire what the stocks of gold and silver amounted to in 1851. Whatever they may have been, the figures show they have practically disappeared from the stocks now held by the commercial nations of the world, as follows:

Product of gold for 42 years . . . . .	\$4,834,395,400
Present stock of the world . . . . .	3,582,605,000

Disappeared . . . . .	\$1,251,790,400
-----------------------	-----------------

Here it is shown that not only has \$1,251,790,400 of the world's production of gold during the past 42 years disappeared, but all previous productions, the total in sight being only \$3,582,605,400.

How stands the silver condition? The production of silver during the past 42 years as shown by the table was \$3,371,491,000, and the amount in sight is shown to be \$4,022,700,000. Hence, we have in stock, all that has been produced during the past 42 years, and \$671,209,000 of what may have been produced prior to 1851. The figures demonstrate what has been stated, that the stocks of gold and silver, held by civilized nations prior to 1851, have practically disappeared, since of such stocks, only \$651,209,000 of silver is now in sight. Notwithstanding such facts, the price of silver has of late years declined; declined because, as the friends of silver declare, of hostile legislation, and to this decline is attributed the widespread business demoralization which now afflicts the country.

The tables relating to the use of gold, silver and paper, ratios between gold and silver, full and limited tender, and the amount per capita including paper, are specially interesting. There are nine countries which use gold and silver, full and limited tender. Of these nine countries the ratio between gold and full tender silver in eight of them is 1 to 15½; one, the United States, the ratio is 1 to 15.98—practically 1 to 16. The ratio between gold and limited tender silver in six of these nine countries, is 1 to 14.38, one, the United States, the ratio is 1 to 14.95—and two, 1 to 15. There are nine countries which do not use full tender silver, only limited tender silver. In two of these countries the ratio between gold and limited silver is, 1 to 14.28; one, 1 to 13.957; one, 1 to 14.08; one, 1 to 13.69; one, 1 to 14.88; one, 1 to 15.1; one, 1 to 15.68, and one, 1 to 14.95. There are six countries which do not use unlimited tender silver; only full tender silver circulation. In these six countries, the ratio between gold and silver is, in three of the countries, 1 to 15½; one, 1 to 16½; one, 1 to 16.18 and one, 1 to 15. Taking the fifteen countries which use full tender silver, we have eleven in which the ratio is 1 to 15½; one, 1 to 15.98; one, 1 to 16½; one, 1 to 16.18, and one, 1 to 15, showing that 1 to 15½ is the prevailing ratio, the United States, Mexico, Japan and India being the exceptions.

In the matter of currency *per capita*, the amounts given in twenty-five of the twenty-six countries have a wonderfully wide range—the lowest, Central America, is content with 84 cents per capita, while France the highest, demands \$40.56 per capita. In the list the United States stands sixth as follows:

France, per capita	\$40.56
Cuba, Hayti, etc., per capita	81.
Netherlands, per capita	28.88
Australia, per capita	26.75
Belgium, per capita	25.53
United States, per capita	24.84

The study of ratios between gold and silver and the amount of money *per capita* to carry forward business are perplexing problems, particularly the *per capita* matter. While France maintains \$40.56 *per capita*, England gets along with \$18.42 *per capita*, and Germany with \$18.54. Referring to the tables we publish, the reader may find data for profound reflections relating to money, the progress of civilization, the happiness of the people, including education, religion, etc.

The friends of silver declare furthermore that the decline of silver has caused the decline of certain staple products of the country which now contributes to the fierceness of the panic—and as an example, wheat and cotton are named to illustrate the fact, tabulated as follows:

YEAR.	WHEAT.	COTTON.	SILVER.
1872 . . . . .	1.47	29.3	1.32
1873 . . . . .	1.31	18.8	1.29
1874 . . . . .	1.43	15.4	1.27
1875 . . . . .	1.12	15.0	1.24
1876 . . . . .	1.24	12.9	1.15
1877 . . . . .	1.17	11.8	1.20
1878 . . . . .	1.34	11.1	1.15
1879 . . . . .	1.07	9.9	1.12
1880 . . . . .	1.25	11.5	1.14
1881 . . . . .	1.11	11.4	1.13
1882 . . . . .	1.19	11.4	1.13
1883 . . . . .	1.13	10.8	1.11
1884 . . . . .	1.07	10.5	1.01
1885 . . . . .	.86	10.6	1.06
1886 . . . . .	.87	9.9	.98
1887 . . . . .	.89	9.5	.97
1888 . . . . .	.85	9.8	.93
1889 . . . . .	.90	9.9	.93
1890 . . . . .	.88	10.1	1.04
1891 . . . . .	.85	10.0	.90
1892 . . . . .	.80	8.7	.86
1893 . . . . .	.72	7.3	.78

Such figures carry convictions. From them there is no appeal. In the insidious march of events, resulting from vicious legislation, a panic has been evolved, and labor, like wheat and cotton, has received a paralyzing blow, and a storm cloud overhangs the country, with only the faintest tracing of a bow of promise on its threatening front.

## WHO PAYS TAXES?

In certain quarters the declaration is made that the few pay all the taxes and that the many escape taxation. As a result the few claim to be citizens par excellence, while the many are regarded as a species of paupers who have no right to be heard in shaping the policy of government from a township to a state. The *Chicago Times*, in a recent issue, discusses the subject and lets in a flood of light which ought not to escape attention. It says:

Who is a taxpayer? It is necessary to have a definition if we would understand any discussion whatever of economics. There is an assumption upon the part of many persons that unless a citizen is the owner of real estate or personality listed for taxation he cannot be regarded as a taxpayer. This is a fallacy. How great a fallacy it is will appear if a little thought is taken. Whence does the general government derive the bulk of its revenue? From the tariff and from internal revenue taxation. It collects the former in the first instance from the importer, in the second from the manufacturer and the dealer. But do these men alone pay the tax? Not at all. They pass it along to the consumer. All consumers, however, are not tax payers. A certain number of dependents have no means—children, for instance. But every producer, every head of a family, be the same man, woman or child, is a tax payer. So much as to federal taxation. Now as to local taxation. Take the people at Pullman for illustration. No one there pays directly taxes on the real property occupied by him, the reason being that he is not an owner. The land and all the houses are owned by a company. But can it be said that the lessees, if their personal property is not listed, are not tax payers? It can not truthfully be said. Why? When the company lets its houses it fixes the rent, and the rent is what? A return upon the investment plus the cost of taxes and insurance and repair. Every tenant of Pullman, though no tenant of Pullman goes personally either to town or county collector with the amount taxed against the tenement he occupies, is a tax payer. The taxes have been taken into account in determining his rent, and the fact that he is a rent payer makes him actually the tax payer on the assessed premises. In one case his landlord is only his agent in paying personally for the taxes assessed against the premises. Every rent payer is a tax payer. Every consumer who settles the obligations incurred by himself or persons dependent upon him is a tax payer. In short, every person, no matter how poor, who is not a dependent or a pauper is a tax payer. He pays local taxes, county taxes, state taxes, national taxes. The indirection in the process amounts to nothing. A tax falls on him.

More than this. The poor man who is a producer pays as a rule more taxes in proportion to his means than the rich man. The rich man has the best end of it. While he extends heavy taxes against tenantry he takes care that light taxes are extended as against himself. Indeed he profits by taxation, adding generally double what he pays to the tenant.

There ought not be any confusion on this important matter. Every occupant of a building who pays rent, every lodger paying for his bed, every man buying a coat, every citizen earning money and supporting himself or others is a tax payer, a payer of local as well as national taxes.

In the foregoing it is shown in a way not to be successfully controverted that all classes of men who live in houses, regardless of ownership, pay taxes, help support the government and therefore are not to be classed with paupers, who do not pay taxes.

To give the matter special conspicuousness, we give an illustration, one of ten thousand instances, showing what a man pays who rents property, land and buildings, valued at say, \$1,500:

Annual interest on investment, \$1,500, at 6 per cent . . . . .	\$90 00
Insurance, say . . . . .	20 00
Repairs, say . . . . .	20 00
Taxes, say . . . . .	20 00
Total . . . . .	\$150 00
Rent, one year, at \$12.50 per month . . . . .	150 00

In this, it is seen, that the tenant not only pays the taxes on the property rented, but insurance and repairs and interest on the investment. This being absolutely true, why should the landlord or others assume that because the tenant does not own the premises, therefore he does not pay taxes, and further, that he should keep silent when questions relating to the public welfare are up for discussion and action? The avowals that only owners pay taxes, have been so numerous and have been made with such emphasis and impudence that it is doubtful if there are not thousands of tenants who believe the debasing falsehood, and who begin to entertain doubts as to their rights to participate in public affairs. It suits the plutocratic class exactly, since to the extent that they can impose the heresy upon the minds of workingmen who live in rented houses that they pay no taxes, the more easily they can carry forward their debasing programme and the more extensively perpetrate their robberies. This clamor about the rich supporting the government is one of the phases of paternalism which so many cranks are ceaselessly striving for, unable to comprehend that paternalism means that the government shall support the citizen rather than that the citizen shall support the government; forgetting that the government can have no revenues of any description that are not drawn from labor.

During the years of slavery in this country—a reign of paternalism—the slave was taken care of by his master, and the poor, degraded victim of paternalism never dreamed that he took care of his master, and that but for him his master would perish. And now, when it is asserted that tenants pay no taxes, the intention is to make it appear that only the rich support the government, in doing which they support all who live in rented houses.

The time is fully ripe to expose such vicious falsehoods and to check the growth of the degrading craze of paternalism and consign it to the limbo of vagaries.

---

In 1873 there was no silver in the treasury of the United States and very little in circulation; there is now in the treasury and in circulation \$490,000,000, and last year the United States produced \$60,000,000 of the metal. Silver has been money for more than 3,000 years.

THE bridge over the St. Lawrence river is 9,144 feet long. The longest bridge in the world.

## THE TEACHING OF CHRIST.

Cardinal Gibbon, in an address, delivered at Chicago at a recent date, among other things said:

The Savior of mankind never conferred a greater temporal boon on mankind than by ennobling and sanctifying manual labor, and by rescuing it from the stigma of degradation which had been branded upon it. Before Christ appeared among men manual and even mechanical work was regarded as servile and degrading to the freemen of pagan Rome, and was consequently relegated to slaves. Christ is ushered into the world not amid pomp and splendor of imperial majesty, but amid the environments of an humble child of toil. He is the reputed son of an artisan, and his early manhood is spent in a mechanic's shop. "Is not this the carpenter, the son of Mary?" The primeval curse attached to labor is obliterated by the toilsome life of Jesus Christ. Ever since he pursued his trade as a carpenter he has lightened the mechanic's tools, and has shed a halo around the workshop. If the profession of a general, a jurist, and a statesman is adorned by the example of a Washington, a Taney and a Burke, how much more is the character of a workman ennobled by the example of Christ. What De Tocqueville said sixty years ago of the United States is true to-day—that with us every honest labor is laudable, thanks to the example and teaching of Christ.

It is always a little difficult to discuss Christianity in connection with what Cardinal Gibbon calls "manual labor." Certainly Christ was referred to as "the carpenter's son," and as "the carpenter," and because he was a carpenter, and the son of a carpenter, the Jews, in his "own country," treated him scornfully, to an extent that "he could there do no mighty works," and from that day to the present, the church, though in some countries clothed with imperial sway, has done no "mighty works" for manual laborers. All along the line, the church has ceaselessly pointed to Christ as "the son of a carpenter" and "the carpenter," but to what extent such references have benefited carpenters, or the sons of carpenters, or manual laborers of any class, it would be difficult to find out. Cardinal Gibbon says, "Christ is ushered into the world not amid pomp and splendor of imperial majesty but amid the environments of an humble child of toil." Has the church emulated the humility of Christ? Is the church free from pomp and splendor? Cardinal Gibbon says, "Ever since he pursued his trade as a carpenter, he has lightened the mechanic's tools." When, where, in what Christian land has the mechanic's tools been lightened (by which is meant, we presume, that his toil has been lightened) by any act of the church? by any decree of the church? The church, like "men of words and not of deeds, is like a garden full of weeds." We give the church credit for every generous word it has spoken.

We are glad to believe the acts and precepts of Christ were designed, as the cardinal says, to benefit manual labor, to elevate and dignify labor, but it so happens that in Christian lands labor has been required to fight its battles alone and single handed. True, in the United States, labor has advanced a little, that is to say, organized labor has shown a determination to move up to a higher plane, but as a general proposition it has moved by virtue of the force of

organization. We doubt if by searching all the records in all the archives of christendom, there will be found so much as the "scratch of a pen," showing that the church ever formulated or formulated a decree informing men that the degradation of labor was a crime and in violation of the precepts of Christ. Something may have been done in the way of emancipating slaves, redeeming them from chattel bondage, but even in this the church has been divided. But we are discussing manual labor aside from chattel slavery and we recall nothing, indicating, even remotely, the obligations of the church to do more than to exhort to patience, to bear afflictions, and vague promises of something better when the tools of toil fell from the grasp of the toiler, and death removed his burdens.

Even as we write we have before us the self-laudations of a divine, in which he tells how many addresses he has delivered before college students, how anxious he has been to have his church in vital alliance with higher education, and how literary and Shakespearean clubs have been profited by his labors, but in all this stilted self-commendation, there is not one word showing that he cared more for working men than he did for working cattle.

We do not hesitate to believe there is an awakening in the church, betokening a livelier interest in "manual labor." We hail it as a cheering sign of the times, but once let organized labor put its trust in anything else than organization and its doom will be recorded then and there.

Every blow organized labor strikes for the emancipation of labor has the indorsement of Christ. It is, reverently speaking, in alliance with Christ to oppose pomp and splendor, always and everywhere designed to degrade labor and fasten upon the world the abominations of paganism utterly regardless of the name it wears.

---

REPORTS have it that the oldest railway in Germany was opened in December, 1835, between Nuremburg and Furth, and notwithstanding the fact that the road in England, between Liverpool and Manchester was then in full working order, the Germans did not care to engage in the business, and it is said that "the greatest difficulty was found in raising the capital for the new line, though only about \$55,000 was required. The most absurd objections were raised, and in 1834 the shares were at 30 per cent discount. However, in 1835, a Bavarian engineer returned from working on American railways, and under his care the line was completed in eight months. The original shareholders were very handsomely rewarded. The traffic increased so rapidly that the stock soon rose to 500 per cent. premium. From 1835 to 1860 the line was worked by horses in the forenoon and by steam in the afternoon, the idea being to save money. The manager was paid only \$500 a year and the traffic inspector \$200. The engine driver, who was sent out by Stephenson, was paid \$625 a year, and thus received more than his nominal chiefs."

# CONTRIBUTED.

## CAPITALISM.

BY JOSÉ GROS.

We are in favor of capital and down on capitalism. We want the working capitalist to thrive. We want the scheming or loafing capitalist to perish. The reformer in economics should make a difference between these two classes of capitalists. He should understand that capitalism, the loafing or scheming capitalist, is but an excrescence in social growth, an unnatural product, just as much so as a baby with two heads.

It is to be regretted that most men, and so most reformers, the socialists included, have always taken effects for causes. Because capitalism rules the fabric of civilization with a rod of iron, shall we endeavor to suppress the capitalist? Because trusts and combines do threaten to control most of the wealth of nations shall we convert nations into formidable official combines or trusts? Is it not far easier and more natural to make trusts and the like unnecessary by seeing that all workers become capitalists?

Capitalism means large aggregations of wealth, or capital concentrated into the hands of the few. Why such a concentration? Because of large concentrations of land in the hands of the few, and most especially of land in strategical points and belts. Remember that there is a great similarity between industrial and military battles. In both you need strategical centers, certain belts of country, direct roads and water courses, bays and seaboard, with its localities for the collection of supplies, &c., &c. It is not the extent of territory over which an army spreads itself that gives to that army the possession and mastery of that country. Oh, no! That mastery is only obtained by the control of certain positions and lines of communication. All military campaigns are successfully carried out by superior strategy, as long as the disparity of forces and resources is not extremely great. And even a considerable disparity is apt to be overcome by superior strategy.

Our socialistic friends don't seem to have any conception of strategy in industrial battles. For instance, they cannot see that a combine, such as that of Carnegie's mills, could not exist for any length of time without the control of enormous quantities of land in the coal regions, in iron mines, in railroads, in vast sections of land improved and unimproved around their mills, when not in the heart of large cities, and even in the latter, sometimes. There is a certain iron concern in Pittsburgh, of the Carnegie species, with the bagatelle of sixty acres of enclosed land worth at least \$3,000,000. And

that value is always rising at a great ratio. From 1860 to 1890, while population doubled in the nation, the land values increased by four, or very near.

And most of our land values, to whom do they belong? To the very stockholders and officers of our corporations, trusts and that sort of cattle. They control not only most of the twenty-five billions monopoly land value of improved land, but also most of the thirty-five billions monopoly land value of unimproved land. We mean, by the latter, what our unimproved land would bring to-day if somebody could buy it at the price asked by the holders.

About six years ago the writer, in his long trip through several states of the Union, calculated that the total land values, improved and unimproved, through the nation, could not be far from fifty-five billions. Such an estimate rested on the asking price of land in cities, towns, villages and hamlets, also within three miles of them, also within seven or eight miles, that is, within three zones. And everywhere he noticed the same story, viz: relatively a few controlled most of the land, improved or not, through direct title or mortgage.

About ten years ago the president of the Southern Pacific railroad plainly stated that 60 per cent. of the land in California was controlled by 100 men. He forgot to add—and the most valuable. Because, you can notice that the shrewd monopolist seldom bothers himself with land not more or less subject to a good rise, or some of it conducive to bring a rise on the rest, by keeping it at a high price. It is just such a loose, gigantic land trust, or combine, or land conspiracy, if you like, principally composed of 100,000 men out of our 65,000,000 population, it is that alone, at the foundation of the industrial compact that makes all other trusts or combines possible.

Just as that cosmical scheme that we call the force of gravitation controls our whole planetary system, so our land monopoly scheme controls all our industries and commerce, all labor and all capital, or wealth, all the machinery of production and exchange. What is land but the central wheel which alone through labor can move all the other wheels, the tool which alone can set the other tools in motion, the instrumentality which alone can vitalize all machinery, call it by whichever name you like.

Take for instance a given machine with 100 wheels, one of them, the largest and most central, imparting, of course, all motion to the rest, because first receiving the action of horse power, water power, steam or electricity. There you have a symbol of the industrial fabric. The grand central wheel is land. The power that sets it in motion is labor. All the other wheels are but labor created tools, created through the materials we find in land, in that land of ours, so insignificant to our socialistic friends. And so you find socialism telling us that a few capitalists can control all labor created tools, even if labor should control the source from which alone such tools can be produced. Suppose that to-morrow a general earthquake should swallow up all our tools of production. We would produce a new set. And it would not be the old capitalists, but the old workers,

that would perform the job. And the latter could only do that provided they were allowed to use land. And they would do it much quicker if they were permitted to use land freely, without monopolistic rents pocketed by a few schemers.

Take, now, the bonanza farms, with 20,000 or more acres, with their steam machinery, &c., producing wheat at \$6 per acre, when the small farmer, with hand and horse tools, can only produce wheat at \$20 per acre. What makes the bonanza farm possible? The multitude of men forced to sell their labor for a song because robbed of their fundamental right, that of free access to land. Suppress that iniquity through any simple process you may see fit to choose, and all bonanza farms shall go to pieces just as all large industrial combinations needing large numbers of slaves—slaves because deprived of access to land—would vanish like a dream, under free access.

Some may say: "But why deprive us of wheat at 50 cents per bushel and force us to pay \$2 per bushel, and why pay double for coal and iron, &c., &c., because of the conversion of large concerns into small ones, the former representing masses of stockholders, the latter limited groups of working capitalists?" Friends and gentlemen, we don't want low prices at the expense of low wages or labor earnings. We simply want low prices at the expense of monopoly profits. There is no greater curse in the social organization than that of low prices when they mean the starvation wages of slavery, or a mere human animal life, with mighty little of that joyful manhood without which life is not worth living.

And now let us suggest a new train of thought. Why have we in the last thirty years invited the development of inventive genius in machines of great cost and colossal power? Because of our vast concentration of land in the hands of the few, placing millions of workers at the mercy of the few. It is then alone that the few are in need of machines of great power, and can afford to pay a high price for them. That alone evolves demand for such machines. Suppress such abnormal concentration of land, in quantity as well as in quality, in area as well as in value, in centers of population or away from them, and that alone shall reverse the course of our abnormal social growth, past and present. We shall then find that subdivision of land is far more profitable than land concentration. That shall force the inventive genius into machines of small cost, because supply always meets demand. We shall then have electric motors of little cost, so that each small farmer may have one for his plow and one for his wagon, and the small manufacturer one for his ten or twenty looms, and so with all other industries and commercial processes. Does that look dreamy or fantastic? Well, such developments would simply correspond to that grand law of nature which increases the product of labor in proportion to the freedom enjoyed by the individual worker.

We all know that servitude and chattel slavery were always less productive than wage slavery, although the latter is but a very small

advance on the former. Suppress wage slavery, make it possible for small groups of coöperative working capitalists to thrive, or even for any individual with a small capital to flourish, all because absence of land concentration has made capitalism impossible, unprofitable, and you would no doubt increase by two, by four, by six, the productive power of labor, because of really free labor for the first time in human history! And that increased production would remain in the hands of laboring men, themselves working capitalists, with no capitalism anywhere in the horizon of the industrial world.

That law of nature in regard to increased production resulting from greater freedom with the worker, alone would make socialism a wretched failure. And the reason is simple enough. Under the socialistic scheme each individual would become a little wheel in a machine with millions of wheels, and no amount of political freedom could change that. Hence low rates in production because of insufficient industrial freedom with the individual.

Another great law of nature is constantly overlooked by socialists. It is as follows: Take two belts of land, A and B, with 20,000 acres each, equally well situated, and have 500 families close to each belt, but not to the other. Place belt A for sale at auction in plots of 2,000 acres each, and belt B in plots of five and ten acres to each family. In both cases sale per annual rent for a few years. The latter will bring much higher prices than the former. The small holder can always pay a higher rent than the large holder. In belt A the whole 20,000 acres shall be sold right off. In belt B only a small portion of the 20,000 acres shall be disposed of, the best situated of all, and each family group shall have a patch of land. In belt A you shall have ten plutocrats and 490 families of industrial slaves. In belt B you shall have 500 families of working capitalists.

In belt A you have the symbol of past and present civilization evolving capitalism and slaves, because of land monopoly.

In belt B you would have a civilization of working capitalists and free men, because—because of free land, free from the demon of monopoly. You would then have an individualistic civilization instead of the past and present ones, all of them more or less socialistic, because failing to respect some of the cardinal, natural, God given rights to individuals. And socialism proper is but the cancellation of the individual as an industrial unit. What right has society to control the products of labor and fix the earnings of each worker? None, if we want to respect God's eternal laws of ethics. Socialism proper is capitalism with a vengeance—industrial despotism.

---

AUSTRALIA has a native animal that is a whole Columbian Exposition in itself. It is the *ornithorynchus paradoxus* and is shaped like an otter, has fur like a beaver, is web-footed like a swan, has a bill like a duck, a tail like a fox, is amphibious and lays eggs.

## THE IRON LAW OF WAGES.

BY WILFRED P. BORLAND.

Ricardo's law of wages—called by Lasalle “the iron law”—is one of the strong points of socialism. Indeed, in the earnestness of their propaganda, the socialists are not at all particular about adhering strictly to facts whenever they set out to condemn the capitalist system from the iron law standpoint. Marx very properly repudiates the silly assumption that the tendency of wages to approach the minimum necessary for the laborer's subsistence and reproduction is the inevitable consequence of the workings of natural law. He shows, rather, that such tendency is thoroughly unnatural, the result of our peculiar social organizations; and it is upon this showing that the principal argument for the complete reorganization of society is based. It is assumed that the capitalist system is responsible for the law, and, therefore, to escape its consequences, the capitalistic system must be abolished. To give effect to this law, we must have this condition: there must be, on the one hand, a sufficient body of laborers who are stripped of all command over any of the means and instruments of production, and who have command of but a single commodity, *i. e.*, their labor-power, which they freely offer for sale in the open market to, on the other hand, the capitalist producer, who has command of all the means and instruments of production, and who is recognized as the exclusive owner of the product resulting from the exertion of the labor-power he has purchased under the conditions here given. Marx is very explicit on this point; throughout his book he emphasizes the necessity for the existence of this condition by numerous expressions like the following:

“The capitalist system presupposes the complete separation of the laborers from all property in the means by which they can realize their labor.”

“For the conversion of his money into capital, therefore, the owner of money must meet in the market with the free laborer—free in the double sense: that as a free man he can dispose of his labor-power as his own commodity, and that on the other hand he has no other commodity for sale, is short of everything necessary for the realization of his labor-power.”

“In themselves, money and commodities are no more capital than are the means of production and subsistence. They want transforming into capital. But this transformation itself can only take place under certain circumstances that center in this, *viz.*, that two very different kinds of commodity-possessors must come face to face and into contact; on the one hand, the owners of money, means of production, means of subsistence, who are eager to increase the sum of values they possess, by buying other people's labor-power; on the other hand, free laborers, the sellers of their own labor-power, and therefore the sellers of labor.”

Marx's analysis of the process by which the surplus-value created by the laborer is absorbed by the capitalist, is exceedingly acute and exhaustive, but he never for a moment admits into his premises the possibility of the laborer being in possession of anything other than his bare labor-power; he must be a free proletarian, stripped bare of everything save the simple power, residing within himself, of applying his labor to the production of commodities. I am inclined to believe, then, that Mr. Stuart has departed somewhat from the teachings of socialism when he gives the workingman his rights in the land, and still subjects him to the influence of the iron law; he has an exceedingly large sized contract on hand when he attempts to prove his assertions on that point by something other than presumptive evidence. Mr. Stuart erred in not adhering to the conditions of the problem; I shall endeavor to show that; also, how the single tax will increase wages. It is easy to give "reasons, not rhetoric or rhapsodies," to support such a showing; and good reasons at that. The capitalist system of production is recognized by the socialists as having only attained its complete development since the introduction of machinery and the organization of industry on a large scale, which process began in England in the latter half of the last century; and it is to this particular development that the critical part of their doctrine mainly refers. The socialist position is stated quite plainly by Mr. Stuart when he says that "under the conditions that obtain with us, the ownership of the machinery of production is the principal means by which surplus value is extracted from labor." And it is funny he did not see that the qualification which he admitted into that sentence, destroyed the force of his assertions concerning the iron law. The above sentence states a truism; it is quite certain that it is his ownership of the machinery of production that enables the capitalist producer to extract surplus value from the laborer, but that little qualification, "under the conditions that obtain with us," leaves room for much honest difference of opinion concerning the organic portion of the socialist's doctrine. When we come to discuss the means to be employed for getting rid of the iron law, we must first discover what produced the law. If history shall show that it is the product of the particular development of capitalism which forms the subject of socialistic criticism, then must their organic doctrine be accepted; but if, on the contrary, it shall appear that there is not a particle of historical evidence to show anything of the kind, then it is certainly excusable to doubt that the socialization of all the means and instruments of production is the just and only remedy for the accomplishment of the desired end. Let us see: Previous to the Thirteenth century the English workingman was a serf, a veritable slave, subject entirely to his lord's will and pleasure. There was then no such thing as wage labor, in the modern acceptance of the term, except in rare instances. By reason of causes which need not be enumerated here, he gradually emerged from this condition, and, according to Rogers, ("History of Agriculture and Prices") by the end of the reign of Henry III., in 1272, the

mass of the English people had passed from the condition of serfs to that of freemen, a small money rent or a fixed and invariable amount of service having been substituted for the right which the lord had previously enjoyed of commanding the services of his dependents at his own pleasure. At first the lords were led to refrain from demanding any labor beyond certain regular fixed services, such as appertained to their serfs' holdings of land, then these services themselves were gradually diminished in amount, and finally they were made commutable into money rent. The commutation, like the service it replaced, was fixed in amount, but at first the lord could exact the service instead of its money equivalent, while the tenant could also insist upon giving the service, instead of the money, if he chose to do so. In course of time, however, the payment of money rents became an established custom, and the exaction of service rents disappeared from the customs of the country. This change in the status of the serf left him in control of his own time, and if he could produce for himself a surplus over what was required to pay his dues to his lord, he was free to do so. Moreover, as the lord could now demand from him nothing but a fixed money payment, if he desired to secure his service as a laborer, he must pay him stipulated wages. Thus there gradually grew up a large body of free paid laborers in the country as well as in the cities, and that was the condition of affairs when the black death burst upon the country in 1348, and swept one-third of the population out of existence. Immediately wages rose to thirty and fifty per cent. above the former figure. The lords resisted the payment of the increased wages by every means in their power; they attempted to assert their old authority over the laborers, but their authority was dead; serfdom was virtually at an end, the serfs went where they would and demanded what wages they would, generally getting what they demanded. The lords appealed to Parliament for relief, and in 1349 was passed the famous Statute of Laborers, which fixed wages at the rates that had prevailed before the plague and provided for the enforcement of its enactments by means of fines and punishment. The statute provided a penalty for employers who should pay more than the established rates of wages, as well as for the working man who should receive them; still wages rose. In 1360 the statute was further strengthened and stronger penalties added; laborers were imprisoned and branded on the forehead for attempting to leave their employment in search of other, and in 1363 the dress of workmen was prescribed by law so that runaways might be more easily apprehended. Yet, in 1376, the House of Commons complains that masters are compelled to give their servants high wages to prevent them running away. The attempt to enforce the old conditions of serfdom led to the insurrection of 1381, when the peasants demanded of the King "that ye make us free forever, ourselves, our heirs, and our lands, and that we be called no more bond, or so reputed." The peasants were put down; but it is a matter of history that their condition continued to improve, and, in spite of

successive Acts of Parliament, loaded with penalties against workmen, wages in all occupations continued to rise and remained high all through the Fifteenth century. Under Henry VI justices of the peace were empowered to fix the price of labor every Easter and Michaelmas, by proclamation; but they might as well have kept their proclamations to themselves as they had no appreciable effect on wages. The law of supply and demand was stronger than the law of Parliament, and it was working naturally for the workingman's benefit. This period of the Fifteenth century has been very appropriately termed "The Golden Age of the English Workmen." Now, what power had the workingman at that time that, in spite of the fact that he was utterly destitute of political influence, and in spite of the laws which were continually directed against him, enabled him to influence the rate of wages to his own benefit? Let that eminent socialist, W. D. P. Bliss, answer. "The Fifteenth century is the Golden Age of English labor. Why? Not solely, but mainly, because the distribution of land was carried to almost all. A landless man was an outlaw, one registered in no manor. Land ownership may not have been universal, indeed theoretically never existed at all, but every man, even the poorest, had a little land for use, and so long as he paid due tax in the way of feudal service, he had for that use of land an actual fixity of tenure. \* \* It compelled high wages. When the laboring man could not obtain wages he thought sufficient, he could simply live upon his little allotment, and paying a slight feudal service, maintain a humble yet not impossible existence. He was not compelled to compete for wages. The employers were compelled to compete for workmen. This is the great fundamental difference between mediaeval and modern times. \* \* \* When the laborer is not compelled to sell his working strength for what he can get, he can begin to sell it for what it is fairly worth. The Golden Age was golden because each humblest Englishman was rendered to some extent financially independent by the right to the use of a little land."

Up till the beginning of the Sixteenth century there is no indication of the existence of Ricardo's wonderful, natural, law of wages, although the Malthusian conditions upon which the law is founded had been actively present for a century and a half; but we shall soon see it. Fortescue, Lord Chief-Justice to Henry VI., thus describes the condition of the English people in his time:

"They eat plentifully of all kinds of flesh and fish. They wear woolen cloth in all their apparel. They have abundance of bed covering in their houses, and all other woolen stuff. They have great store of all implements of household. They are plentifully supplied with all instruments of husbandry, and all other things that are requisite to the accomplishment of a great and wealthy life, according to their estates and degrees."

When Henry VII ascended the throne he set to work to break the power of the nobles who had caused his kingly ancestors so much trouble. With this end in view he discouraged the practice of keep-

ing up the private bodies of retainers which was such a feature of the feudal system; he imposed a fine of £15,000 upon the Earl of Oxford for having greeted him with 5,000 of his retainers, in livery, while on one of his tours through the kingdom. These retainers had the same feudal rights to the land comprising the manorial estates as the lords themselves; however, they were now turned adrift without those rights being recognized; the lords, for the first time, claimed their estates by right of *possession* instead of by right of *use*. This was the starting point in the creation of that vast industrial proletariat that was soon to appear. The general substitution of money rents for personal services had brought about the result that the lords were no longer interested in the preservation of the small tenant, since it was more convenient for them to draw the same amount of rent from a smaller number; it was also advantageous to them to diminish the number of claimants to rights in the manorial pasture as far as possible. Consequently, when they had once claimed their estates by right of possession, they began to evict the small tenants and turn their combined holdings into single larger ones. These enclosures and evictions went on rapidly; the evicted ones, thus deprived of their means of living, were thrown into the ranks of the proletariat. The high price of wool about this time made it more profitable to keep sheep on the land than men, and large districts were entirely depopulated to make room for flocks of sheep, and the lords did not stop at turning their tenants off of the manorial estates for this purpose, but seized and enclosed the common lands also. An act passed in the reign of Henry VII in the year of 1488, recites "that many houses and villages in the kingdom are deserted, the arable land belonging to them is enclosed and converted into pasturage, and idleness (the cause of all evil) is therefore generally prevalent. Where, formerly, two hundred men supported themselves by honest labor, are now to be seen only two or three shepherds." We have now the first appearance of the iron law. vast numbers are driven from the land and forced into the ranks of mere wage-earners, and wages began to decline. It only wanted the crimes of Henry VIII, in confiscating the lands and revenues of the guilds and monasteries, to force wages to the barest subsistence point and bring forth the iron law in all its rigor; we see its operation continually from that time on. It is not necessary to recount the miseries of the workingmen during this period of transition from the old conditions to the new, they are matters of history.

In the words of Rogers, "In the fourteenth and fifteenth centuries the laborer secured increased wages in the midst of decreasing prices. In the sixteenth the reverse which he suffered was far more considerable than the advance which his forefathers had gained." "Increased wages in the midst of decreasing prices" is something which the followers of Ricardo would hardly admit as a possibility, for any length of time. If they did they would have to give up their belief in the iron law. Marx says "the capitalistic era dates from the sixteenth century." The iron law also dates from

the sixteenth century, and the capitalistic system is its complement. Marx does not pretend to deny that the system of capitalistic production for profit antedates the sixteenth century. What he means by the capitalistic era is the point of time from which the wage-worker becomes absolutely dependent on the capitalist producer for his means of living. What he means by the capitalistic system is the system we have to-day, wherein, when the capitalist refuses to produce the workingman must beg or steal in order to live. The position of the workingman in the pre-capitalistic era is admirably stated thus:

"The class of wage laborers which arose in the latter half of the fourteenth century formed then and in the following century only a very small part of the population, well protected in its position by the independent peasant proprietary in the country and the guild organization in the town. The subordination of labor to capital was only formal, *i. e.*, the mode of production itself had, as yet, no specific capitalistic character. Variable capital preponderated greatly over constant. The demand for wage-labor grew, therefore, rapidly with every accumulation of capital, while the supply of wage-labor followed slowly. A large part of the national product, changed later into a fund of capitalistic accumulation, then still entered into the consumption of the laborer." And he rightly says that "the expropriation of the agricultural producer, of the peasant, from the soil, is the basis of the whole process." (By which the capitalistic system is perfected.)

The expropriation of the laborer from the soil creates a relative surplus population, which forms an "industrial reserve army"—an absolutely necessary factor to the formation of the perfected capitalist system. Marx shows this quite plainly: "Capitalist production can by no means content itself with the quantity of disposable labor power which the natural increase of population yields. It requires for its free play an industrial reserve army, independent of those natural limits." This reserve army can only come from the land; capital must first deprive the laborer of his rights in the land before it is able to create that reserve army which, fiercely competing for the means of living, forces wages down to the lowest subsistence point and creates the iron law. Instead of the capitalist system being responsible for the law, the law is the condition precedent to the establishment of the system. The system, of course, creates its own conditions for the maintenance of the law, after it is once on its legs, but it can by no means get on its legs until after the laborers are completely deprived of their rights in the land and the iron law becomes a fact. How necessary it is for the laborer to be completely divorced from the land in order to keep the reserve army of capital up to the proper point to correspond with the needs of capitalist accumulation, is capable of historical proof in England. The agrarian movement of the sixteenth century, although it created a reserve army more than sufficient for the needs of capital at that time, did not completely divorce the laborer from the soil; there still remained

vast stretches of common land which the newly created capitalists dare not touch. In spite of poor laws and laws of settlement, concocted expressly for keeping the reserve army in harmony with the needs of capitalist accumulation, the common lands formed a lever by which the laborers were able to raise themselves out of the condition in which they had been plunged, and by the middle of the seventeenth century wages began to rise. The nascent manufacturers of the period required a greater reserve army than was set free from agriculture, and in 1680 a member of the House of Commons remarked that "the high wages paid in this country makes it impossible for our textures to maintain a competition with the produce of the Indian looms."

During Cromwell's time, Parliament did not trouble itself about the laborer, and wages continued to improve. In 1704 Defoe said that it was incontestable that there was "more labor than hands to perform it." After the restoration a course of legislation was undertaken to keep wages down, and in 1709, in the reign of Anne, was passed the first of the enclosure acts whereby the people were robbed of their common lands. During the fifty years between the passage of the first enclosure act and the end of the reign of George II., there were passed 244 acts, converting about 350,000 acres of common land into private property, and the reserve army was kept within proper limits.

The reign of George III began with the era of machinery, in 1760; the new mode of production required the services of a reserve army that could be depended on and enclosures now began in earnest. Three thousand, four hundred and forty-six acts, enclosing 3,500,000 acres, were passed during the reign of this sovereign, and during the

period from 1760 to 1843 nearly seven millions acres of land were stolen from the English workingmen by their capitalist masters in Parliament. Who, that has paid any attention to the horrors that called forth the factory acts in England, can bring himself to believe that workingmen could have been forced to endure such sufferings if they had not been so entirely alienated from the land? Socialists condemn single taxers because they devote their attention exclusively to the monopolization of land, and ignore the great evils which have been brought about by the monopolization of machinery. Single taxers do not ignore the evils which spring from the monopoly of the machinery of production, but they hold these evils to be secondary effects of land monopoly; they claim that it would be impossible to place the workingman in subjection to the machinery lord if he were not first deprived of his rights to the land, and in making that claim they stand upon solid ground.

Take the course of events in our own country. It would seem as though the United States presented an inviting field for the exploitation of labor by machinery in the early part of this century; abundant and cheap raw material, cheap land, good government, everybody anxious to have capital take hold and develop our resources. Surely, here was an inviting field for English manufacturers, where they

might plant their machinery and exploit labor to the full rate of surplus value, unhampered by obnoxious factory legislation. But they didn't do it, and many a capitalist went broke in those early days in the attempt to establish the capitalist system before the conditions were ripe for it. Those who have read Cooper's novels will remember the passage in "The Pioneer," where, in describing the ancestors of Marmaduke Temple, he says: "It is, however, a subject of curious inquiry, at the present day, to look into the brief records of that early period and observe how regular, and with few exceptions, how inevitable were the gradations, on the one hand, of the masters to poverty, and on the other, of their servants to wealth. This is a very common course of things, even in the present state of the union; but it was peculiarly the fortunes of the two extremes of society in the peaceful and unenterprising colonies of Pennsylvania and New Jersey." In his chapter on colonization, Marx quotes Wakefield, as follows: "What is now, according to Wakefield, the consequence of this unfortunate state of things in the colonies? A barbarizing tendency of dispersion of producers and national wealth. In Europe, capital invests, without hesitating a moment, for the working class constitutes its living appurtenance, always in excess, always at disposal. But in the colonies, Wakefield tells an extremely doleful anecdote. He was talking with some capitalists of Canada and the state of New York, where the immigrant wave often becomes stagnant and deposits a sediment of supernumerary laborers. Our capital, says one of the characters in the melodrama, was ready for many operations which require a considerable period of time for their completion, but we could not begin such operations with labor which we knew would soon leave us. If we had been sure of retaining the labor of such emigrants, we should have been glad to have engaged it at once and for a high price, and we should have engaged it, even though we had been sure it would leave us, provided we had been sure of a fresh supply whenever we might need it." Wakefield here shows how necessary is the reserve army of proletarians to the success of capitalist exploitation; and Marx emphasizes the need of the capitalist system when he says: "In the colonies, property in money, means of subsistence, machines, and other means of production do not, as yet, stamp a man as a capitalist if there be wanting the correlative—the wage-worker, the other man who is compelled to sell himself, of his own free will. There the capitalist régime, everywhere, comes into collision with the resistance of the producer, who, as owner of his own conditions of labor, employs that labor to enrich himself, instead of the capitalist."

In the early period of our history it was impossible to exploit the laborer, because he simply refused to be exploited. If the wage conditions did not suit him, why, there was plenty of land, and he took advantage of it and went to producing for himself. Thus it was impossible to bring the reserve army up to the needs of capitalistic exploitation. This difficulty has been overcome in recent years by the rapid monopolization of the soil, and the consequent divorcement

of the laborer from his means of escape from the capitalist régime. With the single tax in force, the laborer would be in a much better condition, even, than he was when we had an abundance of land still unmonopolized. For, in addition to the fact that all the present unused land would be thrown open to him, he would be a participator in the benefits which arise from the used lands, the value of such lands being distributed over the entire community in the benefits of government. Under such conditions, where does Mr. Stuart find his authority for the assertion that wages must still remain at the barest subsistence point? There is no authority, either in historical fact or economic theory, for any such assertion. How is the reserve army, which the great master of Socialism has so ably shown to be an absolutely necessary factor of the capitalist system, to be controlled, with the single tax in force? Marx has conclusively shown that the great mass of the laboring population must be absolutely divorced from the soil and compelled to rely upon their labor power as their only means of income, before the capitalist system can be a success.

I fear Mr. Stuart will have to drop the wages question from his category of single tax fallacies; otherwise, he runs great risk of impeaching reasoning which he considers unimpeachable. In many respects Mr. Stuart's reasoning is childish. He says: "Did you ever notice that the Jews, the greatest financiers of the world, rarely own land?" Yes, we have noticed that. We have also noticed that no financier, either Jew or Gentile, ever gobbled up a great deal of other peoples's wealth unless the great mass of the people, the workers, were either bond slaves or free men divorced from the soil. Who shall own the greater part of the wealth stolen from the workingmen is determined solely by a contest of wits; the surplus value abstracted from the earnings of workingmen forms a fund for the toploftical members of society to gamble with, and the keenest and most successful gamblers run away with the biggest piles. That superior gamblers sometimes obtain control of immense portions of this fund without owning any land, is an argument that in no wise touches the basic fact that *somebody* owns the land so effectually that the great body of workingmen are unable to utilize it except *mediately*, through the intervention of an employer of labor. Mr. Stuart surely knows this; and a person of his evident intelligence ought to know that the citation of these great commercial trusts, not directly based on land ownership, as an argument against the single tax, is a work of supererogation. It is not his duty to show that such trusts *do* exist without being directly based on land ownership; but it is his duty to show that such institutions *could* exist in the absence of a great mass of exploitable labor-power; exploitable because its owners are deprived of their rights to the land. I am not insensible to the Socialist's argument that the great improvements in agriculture have made the system of small farming unprofitable; but the implication that the single tax could only succeed with a system of small farming in force, is unwarranted. The success of agricultural

exploitation by machinery depends upon precisely the same conditions as the success of manufacturing exploitation—a sufficiently disposable reserve army—and, to again quote the words of Bliss, “When the laborer is not compelled to sell his working strength for what he can get, he can begin to sell it for what it is fairly worth.” There is no reason to suppose that laborers would be compelled to forego the advantages which arise from the use of modern machinery; being in possession of the field, they would be in a position to command the use of the proper machinery to work that field. Workingmen are as well aware of the benefits of coöperation and proper division of labor as are the capitalists, and single taxers are as insistent that they shall be allowed to fully utilize these benefits as are the Socialists. We have no wish to return to the system of isolated production, that prevailed in the old handicraft epoch, before the era of machinery was ushered in; nor do we believe a return to that system to be among the possibilities. The success of the Rochdale Pioneers, and other voluntary coöperative societies which have successfully maintained themselves in spite of the capitalist system, is quite conclusive proof that workingmen know how to coöperate for their own benefit as well as for the benefit of capitalists; and when once given a fair field there is no reason to believe that this system of voluntary coöperation will not be so vastly extended as to embrace all industries, thus bringing about coöperative Socialism instead of State Socialism. Instead of asserting that the single tax will perpetuate the evils of the capitalist system, it would be more rational, and more in consonance with reason, to admit—what is a fact—that the capitalist system, which Marx has so graphically pictured and so acutely analyzed, would be utterly annihilated by the single tax.

---

## AN ECONOMIC PROBLEM.

BY W. H. STUART

---

Under the caption, “The Iron Law of Wages,” Mr. W. P. Borland, in this number of the MAGAZINE, presents an able defense of the single tax from certain arguments and deductions of the “Iron Law” that I have urged against that theory in previous articles in this MAGAZINE.

And first let me express my sincere pleasure in meeting, for the first time, with a single tax opponent who has not merely heard of Karl Marx, but who has actually read that author's great work, “Capital,” and who appears to have an intelligent conception of that masterly analysis of capitalist production; to whom the terms “sur-

L F M 3 Nov 98

plus value," "constant" and "variable" capital, etc., are presumably not Greek and Sanscrit; who is able to quote Marx intelligently—nay, who quotes him as apparent authority in his defense of the single tax. This is carrying the war into Africa with a vengeance.

Mr. Borland has stated his case clearly and intelligently. If the arguments are weak and insufficient, the fault is not his, but must be ascribed to the real cause; the inherent weakness of the theory which he attempts to defend.

To my claim that under a single tax régime—the wage system being retained—wages would still remain at the minimum upon which the laborer would consent to reproduce; he replies, by quoting Marx, to show that "the expropriation of the mass of the people from the soil forms the basis of the capitalist mode of production," or, in other words, that "the capitalist system presupposes the complete separation of the laborers in all property in the means by which they can realize their labor."

Mr. Borland points to the fifteenth century as the golden age of the English workingmen, and quotes excellent authority to show that these conditions were due, "not solely but mainly because the distribution of land was carried to almost all. \* \* \*

The golden age was golden because the humblest Englishman was rendered to some extent financially independent by the right to the use of a little land."

The contention of Mr. Borland is, therefore, that under conditions that would make land accessible to all upon equal terms, that the golden age would reappear. This he claims would be accomplished by the adoption of the single tax.

I have in previous articles shown the utter absurdity of this contention, and I have to express both my surprise and regret that Mr. Borland has not made the slightest attempt to answer or disprove my arguments.

True, he says: "I am not insensible to the socialists' argument, that the great improvements in agriculture have made the system of small farming unprofitable," yet he utterly ignores arguments that nine men in every ten would consider conclusive.

Now for the sake of making the case as strong as possible for the single tax theory, let us suppose that agricultural land was absolutely free of all rent; that the site value of cities produced sufficient revenues for public purposes. Under such conditions Mr. Borland would claim that the capitalist system of production would be impossible, and the "iron law" of wages inoperative. Yet I offered a concrete illustration of capitalist production under similar conditions; and challenged single taxers to show why with both rent and loan interest abolished, surplus value, in the shape of profit, would not continue to absorb all over the cost of the average standard of living.

I have pointed to the fact that the agricultural areas of the New England States are almost depopulated for the admitted reason, that they can no longer compete with the bonanza farms of the north-

west. I have shown on the authority of the Hon. D. A. Wells, that on the great wheat fields of the Dakotas, the labor of one hand is equal to the production of 5,500 bushels of wheat. This is ten times as much as the hand could produce on free land cultivated by himself, *i. e.*, his subsistence wages of \$20 per month is more than his labor power is worth to himself on free land.

I have shown that in this state the staple cereals are produced by the capitalist farmer at one-third the cost of the small farm; that horticulture is fast coming under the dominion of the capitalists; even truck farming is tending in that direction. Senator Casey claims that he can produce wheat in Dakota, on his bonanza farm, at a cost of \$6 per acre. In Michigan and Ohio it costs \$18 per acre. How long, think you, will the latter named states continue to compete with the northwestern states and California? It is claimed that when the cotton picker is fully introduced it will displace the labor of 80,000 workers in the southern states. One machine and four men doing the work formerly done by 200 pickers. Does Mr. Borland think that with free land, the wheat raisers of the middle states and the small farmers of the south will be able to compete with the bonanza farm and the large cotton plantation under capitalist modes of production? And does he really think that under such conditions there is any immediate danger of the "industrial reserve army" falling under the numbers required for the full development of that system of production?

I want to ask Mr. Borland another question. Suppose the adoption of the single tax would bring about conditions as favorable to the workingman as obtained in England during the fifteenth century, with the additional advantage of the revenue derived as rent of valuable land applied to public purposes. Is this the ideal towards which the single taxer looks with enraptured vision? If so, let me tell him plainly, his ideal is a contemptible one, beneath the attention of any well wisher to the human race. For look you, since the fifteenth century the productivity of labor has probably increased an hundred fold; that is to say, owing to the advances made in the sciences and arts, the invention of labor saving machinery, and the application of steam and electricity as motive power, the laborer of to-day is able to produce one hundred times more wealth than his ancestor of the golden age. How long, think you, will the heirs of this civilization, and the creators of this ever-increasing wealth, consent that the wealth so created shall form a fund for "the toploftical members of society to gamble with?"

To whom does that fund belong? To society that created it, or to a few drones, who by superior cunning, unscrupulousness, or the accident of birth, are enabled to skim off, in the shape of surplus value, all the advantages of centuries of civilization, leaving labor, who creates it all, less than it received four centuries ago.

This fund, by the way, is composed of rent, interest and profit. The single tax proposes to reduce the fund by the elimination of rent, say one-fifth of the plunder, leaving only interest and profit

for the "toploftical to gamble with," or, as the "greatest living economist" would put it, leaving interest as the "just return" to the capitalist for "aiding production." The socialist, on the contrary, would give each producer the full product of his labor; free from rent, interest or profit.

Under such conditions, if labor was able to produce an hundred times more wealth than it did during the golden age it would be one hundred times better off; not a little better off, as under the single tax ideal, nor actually worse off, as under present conditions.

Socialists admit that under primitive methods of agriculture, such as obtained during the fifteenth century in England, where every peasant had his plot of four acres, capitalist production was impossible; but that century had not expired before capitalist farming had got its start. For note, that under conditions where the cultivator of land can only engage labor by giving its full proportion of the product, capitalist farming is impossible. But the first peasant who by improved agricultural methods, or by improved appliances is enabled to hire labor at less than its full proportion of the product, is the first capitalist farmer. As improvements are effected, and machinery comes into use, making the hiring of labor profitable, the small capitalist farmer is continually replaced by the larger one.

Much as we must deplore the horrors resulting from the forcible expropriation of the peasants from the soil during the last four centuries, it must be admitted, as Toynbee has pointed out, that force and fraud only hastened the process, the result was inevitable owing to changed economic conditions. Small farming simply became unprofitable. Under modern conditions, mere access to land ceases to be a "means by which they (the laborers) can realize their labor." They are as effectually divorced from the means of an independent living—such as obtained during the golden age—as if the land was inaccessible to them.

Even small farming under present conditions, to be moderately successful, presupposes the possession of a reasonable knowledge of the business of farming, and sufficient capital to make that knowledge effective.

To suppose that under modern conditions, free access to the land would avail the man without experience or capital, is the rankest nonsense, and is only maintained by your single-taxer; the exigencies of that school of economics requiring its disciples to deny that agriculture can ever come under the domain of capitalism.

A few years ago the "Standard" maintained that large farming would never be profitable. Now Mr. Middleton is willing to admit that the production of cereals has come under capitalists control, but he laughs to scorn the idea of horticulture following suit. When that industry does follow, as it inevitably will, he will point with undiminished confidence to the truck farm. Your single-taxer will never acknowledge any change in economic conditions that conflict with his peculiar theories. I had an illustration of this some time ago. In a private correspondence with an eminent single-taxer of

New York, whose name is familiar to every single-taxer, we discussed Trusts, which he claimed were the result exclusively of our protective tariff. I mentioned to him the fact that although the duty of two-and-a-half cents per pound had been removed from certain grades of sugar, that the price of sugar in this state had not declined; that Claus Spreckles and the sugar trust were evidently pocketing the duty. I really thought I had made a point, but his answer disabused me of that impression. His reply was, "When the last vestige of duty is removed, the price of sugar will fall, but not till then." Admit nothing until you are forced to, is good single-tax doctrine.

In no country in the world is the capitalist system of production so thoroughly developed, and so strongly entrenched as in this one. Notwithstanding the fact, that millions of acres of fertile land can yet be bought outright for a less price per acre than the yearly rental of similar land in Great Britain. Hundreds of trusts control every necessity of life, as well as the luxuries. Competition is completely eliminated. We have carried sub-division of labor, and coöperation in production and distribution nearly to the ideal of the socialist state. But all the advantages of this system of production continue to be absorbed by the capitalist class, which we permit to control the means and instruments of production.

Even single-taxers are forced to admit that under a single-tax régime, certain industries are, what they are pleased to term, "natural monopolies," and must be brought under public control. This distinction is purely arbitrary. As a matter of fact, all industries—from raising wheat to making coffins—where economies in production are possible by employment of capital on a grand scale, are all, equally, the "natural" prey of the capitalist system of production.

However, with an instinctive conception of the weakness of the single-tax theory, Mr. Borland is forced to take refuge as a *dernier resort* in socialism, voluntary coöperation, as he is pleased to call it, as opposed to state socialism. By the way, where is the socialist or nationalist who looks to state socialism as an ideal? what we demand is the collective ownership of all the means and instruments of production and distribution. "*L'état c'est moi*," said *Le Grande Monarch*. Under socialism this will be changed to "We are the State."

Let me warn Mr. Borland that he has a very hazy idea of coöperation when he points to the Rochdale pioneers as an example of its benefits. The pioneers are merely joint stock companies organized for the purpose of saving the profits that usually go to middlemen. As individuals they are benefited, but they do nothing to raise their class. Should those companies extend until they include all English workingmen, wages would fall to correspond to the benefits obtained by such coöperation. Henry George has clearly shown this in "Progress and Poverty." The American workmen's wages are comparatively high, because they insist on spending one billion per

annum on liquor and tobacco. Let them forego these luxuries, and wages will decrease a like amount, and go to swell the "just returns to capital," *a la* George.

So, too, with voluntary coöperation in agriculture under a capitalist régime. The coöperators will be obliged to support families all the year round on the profits of their farm; whereas the capitalist farmer will have no families to support, and only "hands" when he needs them. The saving in expense to the capitalist will enable him to "survive" as the "fittest" under capitalism.

There can be no doubt, in my mind, that the adoption of the single-tax would give an enormous impetus to capitalist agriculture, with the result, that the industry would be concentrated in sections of the country specially adapted to the different products. This again would result in practically depopulating various agricultural areas of the country, as the New England states have been affected. Such concentration would also enable the capitalist producer to obtain land at a nominal rent, for the reason that the average man would not be able to compete.

Furthermore, the concentration of agricultural operations would undoubtedly result in the expropriation of that large class of small farmers, who are now barely eking out a precarious existence, who would be utterly unable to compete with the mammoth farmer.

To conclude, it must be evident that the single-tax theory offers no solution to the economic problem. Society must control collectively all the means and instruments of production. We must substitute production for use instead of for profit. Mr. W. D. P. Bliss, in his version of "Work and Wages," says:

"There has been two great falls in English wages. The first occurring in the latter part of the 16th century, was due to the monopolization of land; the second occurring in the latter half of the 18th century, was due to the monopolization of machinery. It is the fault of the single-tax that it ignores this great cause. Yet, the fact of the fall, and the cause no man can deny. \* \*

\* So long as most of the great industries of life can be carried on on a large scale, with expensive plants, and with ramified branches, so long must those who monopolize these plants have the control of industry. If every man had the use of a little land, he could sell his working strength at fair price to an employer; but under competition, the owner of the small farm would be unable to compete with the large farm carried on with machine power. He who owns machinery, plant and capital must eventually rule over the man who has not. Lords of industry are inevitable. The dollar man and the millionaire can not live side by side."

In a word, and here is the case in a nutshell, while the machinery of production remains in private hands, it must of necessity be the property of a small—and as the concentration of wealth progresses—a constantly decreasing minority, who have only to combine to have the masses at their mercy. The nationalization of all industry is the only possible remedy.

In the August issue of the MAGAZINE, Mr. Gros, commenting on a statement of mine regarding the probable revenue derived from the confiscation of economic rent under a single-tax régime, arrived at

the extraordinary amount of 6 billions which he assumed as a necessary deduction from my statement. Of course I repudiate the deductions of Mr. Gros, am quite confident it would not be one-tenth of that amount. In quoting his figures in my September article I made the unfortunate error of changing the amount to 60 billions. This error, my friend Mr. Gros, has drawn my attention to in a very courteous note. I regret very much the error occurred, and hope the readers of the MAGAZINE readily detected it.

## MARGUERITE.

*A Historical and Philosophical Romance.*

---

BY MARIE LOUISE.

---

### CHAPTER VII.—JEAN MORIN.

On the departure of her husband, Madame Ferrier resumed her usual calm. Going to the window, which looked toward the pine forest, she sat down and gazed at the falling flakes of snow decking with diamonds the dark green leaves of the pine trees.

"How beautiful the forest looks," she thought; "how magnificent everything in nature appears to be when we strive to find the whys and wherefores of all we behold around us. Yes, all is right and all is good—even pain—even agony. Nothing happens uninvited. Events, though sometimes unwelcomed, are, nevertheless, unavoidable and timely occurrences. Were it not for that perception of the perfect arrangement of things in nature, could I have borne and outlived all the bitter trials to which I have been subjected, or rather, have created for myself?"

Madame Ferrier's flight into philosophic meditations was interrupted by the arrival of a man, who slowly entered the room.

At the sound of the irresolute footstep, her face flushed, and, running towards the visitor, she took his hand in her own and gently led him to an easy chair by the side of the fire-place.

"Sit down, Jean Morin," she said; "give me your hat and let me brush the snow off your coat. Sit close to the fire and dry your feet."

"Thanks, Marie Louise," said the man. "You are always so kind to me. Since I have become blind you have bestowed upon me unceasing kindness and care."

"Ah, Jean," replied the lady, "the kindness has not been one-sided. Have you not given me proofs of sympathy and attachment?"

"Yes, Marie," answered the blind man, "for you I have sympathy

and attachment. In childhood we were companions. Side by side, we have grown physically and developed mentally. Both of us are cast out of the general routine and conventionalism of our society. I am too helpless to be of any use to people, and too strong-minded to be their humble servant. Hence, no one has need of me. You, Marie Louise, are too strong to require protection, and too stout-hearted to be led and tossed about as women generally are, so society rejects you as unfit to be among its docile throng."

"Aye, Jean, it is even so," replied the lady; "the human mind is a strange production. Yet, such as it is, it is the product of our environment. Superstition has so entwined its coils around our hearts and our consciences, that all things natural and true appear to us incongruous and false. He, or she, who loves truth, and is free-minded, receives bad treatment at the hand of the community. This is, indeed, the Kingdom of Satan, the era of darkness. Fain would I die, and leave behind me miserable conditions created by the ignorance of man."

"Marie," rejoined the blind man, gravely, "your words are bitterly hopeless, and unworthy a correct thinker like yourself. Do not believe that night endures forever. Piercing the clouds, the dawn of day is advancing and darkness receding, slowly, it may be, but surely. Reflect on the rapidity with which events succeed one another in this nineteenth century of ours. Reflect awhile, Marie, my comrade, and rejoice. You and I, it is true, have suffered much from the bigotry to which the inhabitants of our mountains are addicted. But what are we, you or I, that we should consider our own sorrows. In the history of the human race, the grief or joy of one or two individuals is of no moment. Progress now and then, may slacken its step, but it soon resumes its onward march, and makes up for delay. Think of the marvelous discoveries of our time. Here we have railroads propelling wagons by steam power and carrying passengers and freight with wonderful rapidity to fabulous distances. The *Constitutionnel* of Sunday last gave an exhaustive article on the origin of railroad transit and its progress to our own time. Gaspard Ledoux read it me. It related that in, or about 1602, the miners of Northumberland and Durham, in the north of England, conceived the idea of fixing in the ground two wooden beams in parallel lines, to run their coal wagons from the mines to the place of shipment, on the Tyne and Wear. The wooden beams were furnished with flanges to prevent the wheels from slipping aside. The miners soon discovered that while one horse could draw seventeen hundred weight on a common road, forty-two hundred weight could now be drawn with equal facility. These tramways were made across fields and a specified rent was paid to the owners for the use of their fields. But from the beginning of the seventeenth century to the beginning of the eighteenth no important improvement took place in these tramways. In 1700, or thereabout, the wooden beams were clothed with long slips of iron, to prevent excessive wear and tear. In 1745 the wooden beams

were replaced by iron rails. With this last innovation the idea of coupling several small wagons, instead of running a large vehicle, was conceived, and this was the germ of the modern train. The next improvement consisted in putting flanges to the wheels of the wagons instead of to the rails. The rail became encased inside the wheel instead of the wheel being enclosed inside the rail. In this way great facility of transit was obtained. But it is only in the beginning of the nineteenth century that steam, instead of horses, was used to draw the cars of railways. To Richard Trevethick is due the honor of having introduced the locomotive in its early stage, the improvement of which has made railroading so wonderful and gigantic an enterprise. Rapid transit, Marie Louise, is destined to level down frontiers and boundaries, to bring nations together in friendly intercourse and to do away with war. The same influence that will sweep away war will also sweep away kings and priests—yes, Marie, priests as well as kings—one tyrannizes over the body of man, the other over his soul. Both tyrants stand and fall together. Printing struck a mighty blow at despotism, but rapid transit will deal the last and definitive stroke. Victor Hugo, in 'the Hunchback,' makes his priest of Notre Dame say of a book on the table before him and of the church towers opposite: 'This will kill that!' Still, printing could hardly kill the church, but the two powerful agencies of printing and rapid transit have sealed the doom of political and religious despotism. Marie Louise, give not way to pessimism, do not doubt the immutability of truth—for it must survive in spite of all obstructions. Truth is the Alpha and the Omega."

"I am not a pessimist, Jean Morin," replied Madame Ferrier, "the pain which wrings my heart at the sight of human ignorance is not caused by any doubt regarding the ultimate triumph of truth. I know that it is eternal. But the thought of the sufferings and agonies through which our race must pass in order to wash off its deep layer of corruption, is that which freezes my blood within my veins. It is useless for us to deceive ourselves by raising before our eyes a bright falsified picture, while the original itself is dark and foreboding. That progress during this century has advanced at a wonderful speed, tends but to prove that social cataclysms must also take place with appalling acceleration. It is as you say—nations are becoming united, for boundaries and frontiers must crumble away before the flood of friendly invasions and brotherly greetings. But while Béranger sings, '*Peuples, donnez-vous le mani*' (peoples, join hands), he also sings, '*Les rois se n vont*' (kings are passing away). Do you not see, Jean, that for the warfare of nations is substituted the warfare of a people against their own kings and aristocrats? The masses have discovered at last that they have been fooled and misled—that they have bled and died, not for their own interests but for the cruel ambition of rulers. In the presence of this discovery they turn against their oppressors with all the savage ferocity developed in them by a former system of slavery. To wash off the

crime of international warfare, a war, thrice as bloody, a civil war, is necessary. Just for a moment carry your thoughts back to the great Revolution of 1789-93, which our own parents witnessed. Think of the guillotine casting its grim shadow on nearly all corners of important thoroughfares. Think of the streets of Paris—Paris which we love so intensely without having seen it—Paris the beautiful—turned into a human slaughter-house! Picture to yourself the horrible work of the Septembriseurs, these frantic butchers standing in parallel lines in the prison yard of l'Abbey, striking down every unfortunate man or woman thrust out of the inside of the prison to fall under the thousands of swords and weapons raised over their heads by an infuriated and diabolic looking populace! And yet, in spite of all the horrors connected with that great revolution, who can say that it was not a deserved retribution and a long step towards human liberty? No, Jean Morin, I am not a pessimist, but I know that an effect is related to its cause, both as regards complexion and intensity. I know that outraged nature will avenge herself upon man down to the third and fourth generation."

"Marie Louise, you are right," rejoined Jean Morin, "signs of the times bespeak terrible coming events. The Bourgeoisie made the Revolution of '89-93. Their hands are red with the blood of their fellow men. The people, or working classes, are awaking to the fact that these bourgeois have monopolized the benefit of the great revolution at the expense of the lower classes. These are preparing to strike at their old companions in servitude, who have become their masters through their cunning in monopolizing political power and wealth. The King, Louis Philippe (*le roi bourgeois*, as they call him) sits on the edge of a shaking throne and must soon topple over. Discontent and misery stir the mind of the people. Oppression they would stand mutely, like sheep, but hunger awakens them. Socialism has boldly perched itself on the fence and crows defiantly. Louis Blanc, in publishing his "Organization of Labor," in 1840, aroused the workingmen to a sense of their rights, and Pierre Joseph Proudhon, in publishing in the same year his thunder-bolt, "What is Property?" has thrown the money class in a defensive attitude. Proudhon, and his followers, will minimize the power of the government; Louis Blanc, on the contrary, will magnify that power. Both these theories herald the popular movement, and both are arrayed against the church, the throne and capitalism. Oh, Marie Louise! what an infernal pandemonium, what a confusion! The tower of Babel was but a play compared with the uproar we hear from all parts of Europe. *Les rois s'en vont* (Kings are departing) sings the great poet lyric Béranger. Yes, they depart, but what a mighty and vicious kick they give before leaving—they shake the whole universe. But, Marie, I must leave you. So engrossing was our conversation that time passed unnoticed. I will soon call again; good-bye, dear friend, let hope cheer you, let your mind forsee the great realization. *Au revoir.*"

"*Au revoir, Jean.*"

## CHAPTER VIII—LE COMTE DE VERCHERES..

At about two miles from the small village into which I have mentally introduced my readers, a beautiful promontory rises from the rugged level of the mountain.

Crowning this majestic elevation stood the huge manor-house in which, for upwards of a thousand years, lineal lords of the east of France had resided.

At the epoch of my narrative, the chateau did not appear to be in the best of repair. Time had flown and times had changed since the feudal lord, Monseigneur de Vercheres, proud and haughty in his impregnable stronghold, disputed with the lords of Burgundy the precedence of power and honor.

Strong and indomitable these de Vercheres had been. The roar of their cannons had filled the summit of the Jura mountains, and had echoed and re-echoed in the long and narrow valleys below. Serfs had stood in cringing attitudes, hat in hand, brow inclined towards the ground and eyes dazzled by the august majesty of their master. The lord, with head erect and protruding chest, had passed along those lines of human slavery and gazed into vacancy, ignoring entirely the abject slaves around. But the end of the eighteenth century arrived, and 1789 sounded the tocsin. The people rushed out to enquire into the causes of this great moan of distress. A whirlwind of startling new ideas filled the vastness, and arms seemed to rise together to strike a blow at the power which originated the storm. Destructive bombs whizzed through the air and struck right and left, bringing down spires of churches and battlements and turrets of manor-houses.

One of these bombs came down heavily on the Castle de Vercheres. The entire building was shaken and ruins appeared where order and symmetry had hitherto reigned. The serfs gazed on the wreck, smiled with scorn, shrugged their shoulders, French fashion, and coolly departed from the soil on which they and their ancestors had been fettered.

At the time of the birth of little Marguerite, the Chateau de Vercheres had lost all its imposing outlook, and the Seigneur, the Count de Vercheres, all the bloated impudence which had characterized his forefathers.

On a bright and cold March morning, a man, wrapped in a heavy overcoat, his head carefully concealed under a dark fur cap with long earlaps attached to it, slowly ascended the snow-cleared path leading to the Chateau. As he neared the gate, a beautiful white and brown spotted pointer bitch rushed out of the stable, barking furiously.

"Hallo," said the stranger. "Have you forgotten me, Diane?"

At the sound of his voice the dog wagged her tail and then wagged her entire body with a graceful and sinuous motion, as if it had not even the rudiment of a spinal bone. The stranger stooped and patted the demonstrative animal, which returned his caresses by licking his hands.

While the man and dog were engaged in exchanging affectionate greetings, the proprietor of the manor-house advanced to receive his visitor.

"You and Diane are on very friendly terms," said he, taking the extended hand of the stranger. "You come very early to-day, Monsieur le Curé."

"Yes," answered the Curé. "Madame de Vercheres was so weak when last I left her that I could not wait any longer without news of her condition. Has she improved somewhat?"

"Now, Monsieur le Curé, she is weaker and fainter. I do not think she will see next month set in."

"Let the will of God be done, Monsieur le Comte. She has been a good and gentle mother and wife. God will receive her into his paradise."

"Yes, she has been gentle," said the lord of the manor; that is, if you understand submission to be gentleness."

"Nay, Monseigneur, this is hardly the time to discuss her merit. That she was submissive proves one thing, namely, that she had a master to be submissive to."

"Monsieur le Curé," suggested the Comte, "it is too cold to stay long out here—pray, let us go to my library, there no one will disturb our conversation."

"Very well, Monseigneur, I follow you."

The two men entered the lofty archway leading to the inside of the castle, turned to the left and ascended the massive stone steps conducting to the private apartments of the Comte. The lord of the manor opened the door of the library, and stepping back to allow his visitor to enter the room first, he said, with a respectful bow: "Enter, Monsieur le Curé, pray be seated. This is the first time I have introduced you to my library because books are to be found here which might arouse your apostolic anger. To-day, however, I have shaken off all fears and mean to stand before you as I am, as my ancestors have pro-created me, as your predecessor has unfolded me, and as you, yourself, have furthered and maintained me. For many years you have upbraided me for assuming too high a degree of authority over my household and not having been entirely faithful to my marriage vows. I admit that you censured me in a gentle and friendly manner. You never used against me all the power with which the Church has invested you. You remonstrated, but did not damn me. Now and then I have felt a strong desire to debate the subject with you on an equal footing, but, somehow, the sight of your gown has always kept me silent—yes, silent, although when listening to your reproof my blood rushed hotly through my veins and on to my brain. To-day, however, on the eve of the death of my wife, as we happen to broach that subject, let us ventilate it. Will you patiently listen to me, will you answer my questions without flinching? I am prepared to stand the blame for all I may have done. Will you do the same?"

"Monseigneur," said the priest, "I am listening. If I have sinned

in any way, you will find in me no obstinacy or false pride. I love truth beyond all earthly things."

"Agreed, then," returned Monsieur de Vercheres, "let us now proceed. It is true, Monsieur le Curé, that but too often I have shown symptoms of authority and arrogance towards the members of my household. There, the very words I now use, 'my household,' tell of undue conceit. I have been a successful tyrant for two powerful reasons; first, because I was born a man, and second, because I was born a lord. Does that surprise you, Monsieur le Curé?"

"Yes, it does," replied the priest, "for a man is supposed to be generous, and a lord is expected to be merciful."

"Aye, Monsieur, you have struck a major chord and have just turned against yourself the argument you but half an hour ago used against me, namely, that submission tacitly implies the existence of a master. The church, you know, teaches men that they must be generous and lords that they must be merciful. What do the words 'generous' and 'merciful' suggest? Do they not imply the existence of a master and of a being dependent on that master's generosity and mercy? In the time of my boyhood your predecessor, Monsieur le Curé Gaudet, used often to tell me: 'Arnold, remember that God commands lords and masters to be merciful and just towards their subordinates.' By this admonition, did he not mean specially to impress upon my mind not only that I was born a lord but also that by the will of God I was appointed a ruler over my inferiors? When you, Monsieur le Curé, performed the ceremony of my marriage, what were the expressions you used to bind my bride and myself by an oath? Did you not exhort me to cherish, protect and support my wife, while you commanded the trembling girl by my side to serve and obey me. What a ridiculous distinction! She must love and obey me, while I am requested merely to cherish and support her! With a cold solemnity you took the ring I held and slipped it on my bride's finger in order to seal her promise to be subservient to her husband. The ring was allegorical of the chain which you were throwing around her body and soul. Ah! Monsieur le Curé, does not that two-sided code of matrimonial ethics declare that one of the contracting parties is created by God to rule, while the other is created to serve—in other words, a master and a slave? Can you deny this, or can you give the matter a different signification?"

"No," answered the Curé, "I do not deny. I even acknowledge the force of your indictment. But although a husband is, as St. Paul expresses it, the head and master of the wife, it does not follow that he is justified in being cruel in his treatment of her. The man is to the woman what Christ is to the church, and our Saviour died on the cross to redeem the sins of men and consequently of the church."

"I admit this, Monsieur le Curé, but Jesus was a God, was he not? Man is not a God, is he?"

"Monsieur, man may be saved from eternal punishment only by imitating the life of our Redeemer."

"You are fencing, Monsieur le Curé. Please give my question a direct answer."

"Most assuredly, Monsieur le Comte, Jesus was the eternal God, the creator of all things, while man is but a mortal creature."

"Well, then," resumed Monsieur de Vercheres, "your theory is exploded and your position untenable. No human master can love a slave, and no human slave can love a master. To perform such an unnatural act, one must be a God. If it be true that Christ died on the cross to save his servant, man, nothing more forcible can be adduced to prove His supernatural character."

"God commands us explicitly to love our fellow men," replied the priest. "We must obey his commands or be damned forever."

"We must, you say!" excitedly retorted Monsieur de Vercheres. "Ah, Monsieur le Curé, is a priest foredoomed to have no conception of rational principles? If a man must do unnatural things, then he must become supernatural. If he cannot become such, then God never commanded him to love his slaves and servants. We can love only equals."

"Stop, Monsieur le Comte, do not blaspheme. We have the holy Scriptures to warrant us that God gave such commands."

"It is you who are blaspheming, Monsieur le Curé, when you attribute to God dictations so paradoxical. Either God did not enjoin man to love his depending servant, or he did not understand the quality of love. If he ignores the true character of love he is no God."

"Ah, Monsieur," said the priest, crossing himself and rising from his seat, "it is painful to me to listen to your aberrations. Have you descended so low that you deny even God?"

"I do not deny Him," answered the Comte, "I merely deny the intentions which the church attributes to Him. The doctrines of human depravity, of salvation, and of hell, have been manufactured for the benefit of churches and priests in all ages. These false and mischievous doctrines have stunted the growth of human intellect and divided mankind into two factions, namely, the powerful and the weak, the rich and the poor, the master and the slave. They have made of man a fool, and of God a mockery. If there is a God, He created all men alike in rights and responsibilities. He never doomed one sex to be the chattel slave of the other sex. If there is a God, He knows that love is the all-pervading principle of the universe, and He would create nothing but what is lovely and loveable. How could He produce the unlovable slave and the unloving master?"

"Monsieur de Vercheres," said the priest, "your philosophy is human, not divine."

"Is it not divine, Monsieur le Curé? Well, then, it contains in itself all the divine features that man's philosophy requires. Supernatural philosophy is the property of anointed priests and is inscribed in breviaries. But man needs human thoughts, human hopes, and human ethics. Had I in my youth been able to grasp the ideas I have just laid before you, I would never have been arro-

gant to my servants, for I would have had none. Neither would I have been despotic and unkind to my wife, for I would never have married a woman brought up in the church and imbued with the doctrine of sexual inferiority and dependency. I married my wife at a time when religious teachings were my guide and I imagined that I could love her. Subsequently I discovered that I liked her simply as I would any other woman, and that her submissive attitude awoke in my soul nothing but repulsion. In a day of supreme happiness, I met a woman whose eyes did not cower in my presence and whose voice did not falter in fear. I was born a lord, she a plebeian; but before me she stood like my equal; a woman whom the teachings of the church had been unable to corrupt; a woman as natural as that perfection is attainable under our present social and religious despotism. You may hurl your anathemas at me, Monsieur le Curé, and damn me, if you please. My soul soars above all your clerical thunderbolts, for love is the only redeemer. Love is God. Hence God is love!"

"Monsieur le Comte," said the Curé in a tremulous voice, "so long as you worship love, God is with you and will bless you. Do not condemn the church, she has fulfilled her mission well. In the past, mankind proved itself unfit to abide by the rule of love. The intellectuality of man was so circumscribed that his animal instincts were overpowering him. Animalism is the parent of brutalism and violence. For that reason, something that appealed to man's fear was required to keep him under restraint. But as soon as intellectuality becomes the principal factor in man, servility and violence vanish to make room for self-reliance, liberty and love—love, the crowning perfection of organism! Were all our villagers impressed with the true ideal of liberty, as you seem to be, I would at once ascend my pulpit to bid them farewell as a priest, descend and sit down on the benches with them and sing Hosannah to the dawning of the era of truth. Free men need no restraint. Reason and love are the beacons lighting their path and guiding their steps. But, Monsieur le Comte, our people are blinded by ignorance and no amount of reasoning can open their eyes. Time alone can bring opportunity. Until then, religious teachings, and even superstition, are necessary to bridle their brutal instincts. But, Monseigneur, I must bid you good-bye and hasten to the bedside of Madame la Comtesse and give her the consolation for which her soul is yearning."

"*Au revoir*, Monsieur l' Abbé," said the Comte, "our next meeting will, I hope, be more harmonious than that of to-day."

"I do not hope, Monsieur, I know that it will be so," replied the priest, bowing respectfully.

(To be continued.)

It requires sixty-four processes to make a knife, hence, strictly speaking there are no knife makers, as each one learns only a sixty-fourth part of the trade. Fortunately for them they can learn that much.

## GOVERNMENT OWNERSHIP OF RAILROADS.

BY JAMES L. EDWARDS.

I read with no little satisfaction Mr. Cyrus Field Willard's "rejoinder" to my brief article in the March MAGAZINE captioned, "Shall the People Own the Railroads," called forth, if not called for, by Mr. Willard's two articles, appearing in the January and February issues of the MAGAZINE.

I am not aware of a discourteous expression on my part in the treatment of Mr. Willard's paper, but it appears that Mr. Willard discovered in what I said, or omitted, something to disturb his equanimity, as, for instance: "I think Mr. Edwards' paper is about as shameless an exhibition of either ignorance of the matter to be criticised, or perversion of the facts, as one could expect to see from that side of the case, and that is saying much."

Again says Mr. Willard: "Either Mr. James L. Edwards, who has an article in the March number, is incapable of understanding the English language or he has not read the articles he presumes to criticise. \* \* \* It is a very easy matter to introduce a barrellful of figures into an article, especially as was done in Mr. Edwards' article 'Shall the People Own the Railroads?'—which figures prove nothing."

Leaving out of the discussion my ability to understand English "as she is writ," I may boast of having read Mr. Willard's papers, and felicitate myself upon the patience and fortitude displayed in the performance of the Herculean task, and, while I did not fail to detect a few sentences voicing anarchistic vagaries, I concluded they were not dangerous, and deemed it well enough to let them maintain their obscurity and sweet repose, but, since Mr. Willard invites a change of tactics I concede the point and offer for himself and the readers of the MAGAZINE a few "dots and dashes" in the line of requirements.

In my article appearing in the March number of the MAGAZINE I did use some figures, supplied by the Inter-state Commerce Commission, and basing an argument upon them I introduced a few figures of my own just to clinch the argument. Not having the honor of being a member of the American Statistical Association I did not suppose the figures I used amounted to a barrellful, but I did suspect they weighed fully a ton, or so much, at least, as would pretty effectually flatten out to remarkable thinness Mr. Willard's propositions, and his "rejoinder" in the May MAGAZINE satisfies me that I was not mistaken.

In Mr. Willard's May article he says: "He (Edwards) says that the only way that the people could own the railroads would be to confiscate them—order out the army and take possession of them," and this Mr. Willard pronounces "sheer rot and nonsense." In this connection it is only fair to the readers of the MAGAZINE that

I should here reproduce the entire paragraph which embodies that "sheer rot and nonsense" Mr. Willard discovered. I said:

The interstate commerce commission state that for the year ending June 30, 1891, the gross earnings of all the railroads amounted to \$1,096,761,395, and that the operating expenses were \$781,887,893, showing a difference of \$364,879,502. Suppose the government, that is, the people, should say to the owners of the roads: "We will take the roads and pay you, annually, the surplus earnings, in which case it will require about thirty years to liquidate the debt." In reply, the railroad owners might say, "All right, but in the meantime you must pay us interest on \$10,646,192,000 at 4 per cent. Here would come into prominence the fact that the interest on the debt would exceed the earnings, \$60,968,178; as a result the people, that is, the government, instead of paying off the debt, would be going into debt annually, to the amount of \$60,968,178. *As a result, the only way the people could own the railroads would be to confiscate them; order out the army and take possession of them.* In that case the people would violate the constitution, the republic would disappear and an odious autocracy would take its place.

It is now in order to introduce for the delectation of the readers of the MAGAZINE a paragraph or two showing Mr. Willard's idea of gaining possession of the railroads. Mr. Willard, though "a member of the American Statistical Association," has no use for figures, not so much as a thimbleful, to say nothing of a "barrelful" of the article. He just lays down his policy, and, I assume, never so much as dreamed that it is tinctured with "rot and nonsense." In his February article, page 127, he says:

When we think of the millions of dollars that the people of the United States have been compelled to pay in passenger and freight so that the railroads could "earn" a dividend on fictitious or "watered stock," *is it not enough to make a few Anarchists, even of old New England stock like the writer?* The men of 1776 picked up their muskets and fought against taxation without representation. Here, not only do we have taxation without representation, but have robbery barefaced and impudent on the people, victims bound hand and foot by legal enactments passed by the tools and agents of the corporations in the several law-enacting bodies of the states and nation.

*This brings me to the question, when the people do take the railroads, and it is only a matter of time, whether it would not be simple justice to take them away from their present holders without compensation in the same manner as one takes his property away from a thief when he finds it in the thief's possession.* "The innocent third party" does not cut any figure if I find him in possession of my watch. The railroads have had their actual value paid for over and over again by the people, in the shape of dividends. The question will arise sooner or later, "How many times over do the present owners of the railroads want to be paid for the railroads before they will let go?"

Here we have Mr. Willard's plan. I have italicised the beauty spots of the plan. It is confiscation out and out, and Mr. Willard is clearly of the opinion that the policy pursued by the railroads suffices "to make a few Anarchists, even of old New England stock, like himself."

Mr. Willard may have a generous contempt for "rot," but is manifestly in favor of riot. He would take the railroads, if he could, as

"The devil clapped his paw  
On the little tailor  
With the broad-cloth under his arm."

I assume that Mr. Willard is an Anarchist made out of "old New  
L F M 4 Nov 98

England stock," an educated, thoughtful Anarchist, grim as a Yankee stone wall—and though he is of the opinion that "the people will probably have to pay" for the railroads, the idea is repulsive to Mr. Willard's views of righteousness.

I could, with propriety permit Mr. Willard to escape further criticism, and allow him to stand where I have placed him, with both feet in his mouth, simply inviting him, as he is a member of the American Statistical Association, to devote more attention to figures, to arithmetic, and less to anarchy and the diabolical schemes of Anarchists which seem to be running riot in good old New England and playing the very devil with the "old New England stock."

It is well understood that New England breeds isms for sale, just as old Virginia used to breed "niggers" for the block. It has its Edward Atkinson tirelessly engaged to reduce the cost of a workman's daily rations, which he has, I believe, cut down to 5 cents for three square meals, a process which may eventually bring forth a large brood of Anarchists in a land once famous for law and order, but which, of late years, is going rapidly back to a primitive wilderness.

It is refreshing to hear Mr. Willard assert that he is "opposed to paternalism in government," and yet refer with approval to certain paternalistic lands where governments own railroads and virtually own the men who operate them.

---

## MR. STUART'S SINGLE TAX FALLACIES.

BY JAMES MIDDLETON.

Nos. 8 AND 9.

Before taking up the consideration of socialism, which Mr. Stuart offers in place of the single tax plan, I wish to call attention to a few of the most glaring errors in his eighth and ninth articles.

I do it partly on his account as well as on account of the reader who has not access to the old economists; for it is a pity so earnest a reformer should be so careless in his mental work. It behooves one who aims to instruct to take the greatest pains to be exact and fair. Take, for instance, his attempt to establish his definition of capital from the "old economists."

He says: "Mr. Middleton says Adam Smith defines capital as 'that part of a man's stock from which he expects to derive income.' Add, without personal effort—which Adam Smith assumed—and you have the same definition."

Unfortunately for Mr. Stuart, Adam Smith did not add the words,

but he enumerated various forms of fixed capital in such a way as to preclude such an assumption. He says:

It consists chiefly of the four following articles:

First. Of all useful machines and instruments of trade which facilitate and abridge labor.

Secondly. Of all those profitable buildings which are the means of procuring a revenue, not only to their proprietor who lets them for rent, but to the person who possesses them and pays that rent for them; such as shops, warehouses, workhouses, farm houses, with all their necessary buildings, stables, graneries, &c.

Thirdly. Of the improvements of land. \* \* \*

Fourthly. Of the acquired and useful abilities of all the inhabitants or members of the society. The acquisition of such talent by the maintenance of the acquirer during his education, study or apprenticeship, always costs a real expense, which is a capital fixed and realized, as it were, in his person — *Wealth of Nations*, Book II, Chapter I.

How can "acquired and useful abilities" be classed as "that part of wealth used for the production of an income without personal exertion," or as "accumulated unpaid labor?"

Another remarkable assertion is that "agriculture is no longer the principal industry." Over forty per cent. of all the workers in this country are engaged in agriculture.

In regard to values of roadbeds of railroads, he thinks I was not criticising him. He compared the value of the road bed with broken strips of land adjoining belonging to many individuals. I tried to make clear that the value of the road bed consisted in its being a continuous long strip between commercial points, and that this continuity, or right of way, given by the general government constituted the franchise. I tried to show that it was absurd to claim that a detached piece of land adjoining and parallel would have the same value as a corresponding part in the continuous road bed.

Again he says:

Mr. Middleton makes the singular statement that "it is true as Mr. Stuart and Mr. George have both shown, present monopoly rent would be largely diminished." This statement so far as Mr. George is concerned is not true. There is not a line in "Progress and Poverty" that would indicate the faintest conception on his part of the difference between monopoly and natural rent. He ignorantly assumed that present rent was economic rent. His failure to see the difference reduces his theory to an absurdity and "Progress and Poverty" to a mere pot pourri of poetry and platitudes.

In answer to this I will quote from "Progress and Poverty" and leave it to the reader to determine whether it is Mr. Stuart or myself who tells what "is not true."

We have hitherto assumed, as is generally assumed in elucidations of the theory of rent, that the actual margin of cultivation always coincides with what may be termed the necessary margin of cultivation—that is to say we have assumed that cultivation extends to less productive points only as it becomes necessary from the fact that natural opportunities are at the more productive points fully utilized. This probably is the case in stationary or very slowly progressing communities, but in rapidly progressing communities, where the swift and steady increase of rent gives confidence to calculations of further increase it is not the case. Book IV., Chap. IV.

In the preceeding chapter I have shown that the speculative advance in land

values tends to press the margin of cultivation or production beyond its normal limit. \* \* \* \* Within a few miles of San Francisco is unused land enough to give employment to every man who wants it. I do not mean to say that every unemployed man could turn farmer or build himself a house if he had the land; but that enough could and would do so to give employment to the rest. What is it, then, that prevents labor from employing itself on this land? Simply that it has been monopolized and is held at speculative prices based not upon present value but upon the added value that will come with the future growth of population. \* \* \* \* The normal rent line and the speculative rent line are being brought together: (1.) By the fall in speculative land values which is very evident in the reduction of rents and shrinkage of real estate values in the principal cities. Book V., Chap. I. on panics.

I think I can well afford to rest the question of veracity here.

He claims "all rent" to be exploitation of labor yet bitterly opposes a tax which he claims would diminish that rent "90 per cent." and raise the margin of cultivation; upon which George has shown wages largely depend.

Mr. Stuart brings in another charge against the single tax, which I looked for before, but which comes with doubtful propriety from a socialist; the charge of "the contemptible scheme of robbery and confiscation proposed by Henry George." Greater economists than he have raised this objection, men like Ricardo, Mill and Walker, yet it seems to me it has been fully met by Mr. George in "Progress and Poverty."

In taxing only the annual rental value of the land and exempting all improvements and movable products of labor, all who own such improvements and movable products would be directly compensated by that exemption. For the man who is holding unused and valuable land vacant, playing "dog in the manger," I, for one, have no care when I think of the terrible amount of poverty, crime and suffering that comes from our present system of taxation, which favors him at the expense of the industrious. Unjust taxation, favoring monopoly and speculation, is robbery and must be swept away.

The tax on ground rents did not stagger Adam Smith, who said "ground rents and the ordinary rent of land are, therefore, perhaps, the species of revenue which can best bear to have a special tax imposed upon them." Turgot, the greatest of French statesmen, was not staggered by it. Thomas Chalmers, one of the world's greatest preachers of righteousness and one of the greatest workers for better social conditions, was not overcome by the objection. A host of able men, noted for their love of right, have considered the tax just. The Roman Catholic church, upon careful consideration of Dr. McGlynn's statement of the single tax, a statement as bold and unflinching as the most ardent devotee could wish, has formally taken back its objection and removed the ban of excommunication from the great priest of the "new crusade."

In view of all these considerations, how paltry and absurd, for a socialist who proposes to take possession not only of rent but of all land and capital at a price fixed not by the seller but by the buyer, under penalty of crushing out the capitalist by the direct competi-

tion of the state, how paltry and absurd, I say, for a socialist to object to a tax on the annual rental value of land in place of the various forms of unjust taxation which now exist.

Space forbids continuing these criticisms at present, as I wish to consider socialism, as embodied in the statement of Mr. Stuart.

The people, collectively, and not merely the small capitalist class, must control all the means and instruments for the production and distribution of wealth.

Fortunately in considering socialism, we have, in addition to the writings of socialists, many historical illustrations to shed light upon the results that will probably ensue if "the nation itself shall control all the means of production and distribution of wealth in the interests of all the people."

The history of ancient Peru affords a most striking example of what may be termed complete imperial state socialism. All production and distribution of wealth was completely controlled by the state. It is true that there was neither poverty nor idleness, any more than there is in a well regulated reform school, some governed, some tended to religious affairs, some taught and the many did the manual labor. "Prescotts' Conquest of Peru," Vol. I. page 170, edition 1880, says:

Under this extraordinary polity, a people advanced in many of the social refinements, well skilled in manufactures and agriculture, were unacquainted, as we have seen, with money. They had nothing that deserved to be called property. They could follow no craft, could engage in no labor, no amusement, but such as was specially provided by law. They could not change their residence or their dress without a license from the government. They could not even exercise the freedom which is conceded to the most abject in other countries, that of selecting their own wives. The imperative spirit of despotism would not allow them to be happy or miserable in any way but that established by law. The power of free agency—the inestimable and inborn right of every human being—was annihilated in Peru.

Page 176.

The facility with which they yielded to the Spanish invader, after every allowance for the comparative inferiority, argues a deplorable destitution of that patriotic feeling which holds life as little in comparison with freedom.

Of course our socialistic friends will say that it is not imperial socialism they want but democratic socialism where the majority shall rule. But majorities may be more tyrannical than Inca, Pope, or Kaiser. Majorities are usually controlled by the few.

A striking practical illustration may be found in *Twentieth Century* for April 6th 1893, regarding Mr Owen's Socialist colony in Mexico. E. J. Schellhaus, endorsed by A. Butterfield, writing from Villa de Memoria says:

Mr. Owen had instructed his agent here, Mr. Wilber, to withhold all supplies from those who did not work for Credit Foncier Company credits (although all the old colonists here have from one to three thousand dollars in these credits) and turn the products of their labor into that company. Mr. Wilber, by instruction from Owen, taking advantage of authority claimed under the colonization concessions, seized all supplies in the name of the Credit Foncier Company and distributed them to "good colonists only," leaving Mr. Wilber to be judge \* \* \* and all "bad colonists" were denied sugar, lard and other

supplies by order of Mr. Wilber, even when cash was offered in payment. The word was "starve them out."

And this is a socialist colony started in hopes that civilized people would follow the example.

We find but little hope in the way of individual freedom, even when we turn from practice to theory, as exemplified in socialistic writings. I quote as follows from Ely's French and German Socialism :

No private individual is allowed to trade with foreign countries, and all merchandise used in such trade is confiscated for the benefit of the community. All intercourse with outside countries is carefully watched to prevent the importation of erroneous ideas and disastrous customs. Even within the country only such publications are allowed as teach the unqualified blessings of equality.—Page 37 Baboeuf's Scheme.

Speaking of Cabet's scheme, p. 52 :

Science and literature were held in high esteem and encouraged though publication was not free. Any one might write books, but only those could be printed whose publication had been authorized by law.

But that I may not be ancient, I take the following from the *Co-operative Commonwealth*, by Lawrence Gronland, the greatest exponent of socialism in this country :

Next in the nature of things family supremacy will be absolutely incompatible with an interdependent, a solidaric commonwealth, for in such a state the first object of education must be to establish in the minds of the children an indissoluble association between their individual happiness and the good of all. To that end family exclusiveness must be broken down first of all.

I quote also from the most popular exposition of socialism, Belamy's "Looking Backward," p. 62 :

"The moment the nation assumed the responsibilities of capital, those difficulties vanished," replied Dr. Leete. "The national organization of labor under one direction was the complete solution of what was, in your day and under your system, justly regarded as the insoluble labor problem. When the nation became the sole employer, all the citizens, by virtue of their citizenship, became employees, to be distributed according to the needs of industry."

"That is," I suggested, "you have simply applied the principle of universal military service, as it was understood in our day, to the labor question."

"Yes," said Dr. Leete, "that was something which followed, as a matter of course, as soon as the nation became the sole capitalist."

Page 63 :

"Service, now, I suppose, is compulsory upon all," I suggested.

"It is rather a matter of course than of compulsion," replied Dr. Leete. "It is regarded as so absolutely natural and reasonable that the idea of its being compulsory has ceased to be thought of. He would be thought to be an incredibly contemptible person who should need compulsion in such a case. Nevertheless, to speak of service being compulsory would be a weak way to state its absolute inevitableness. Our entire social order is so wholly based upon and deduced from it that if it were conceivable that a man could escape it, he would be left with no possible way to provide for his existence. He would have excluded himself from the world, cut himself off from his kind, in a word, committed suicide."

That such things will follow, the nationalization of all production and distribution, whether by imperialism or democracy, is also shown by religious history.

In the middle ages it seemed as though state and church were indissolubly united. The result was disastrous to the state, to the church, and to the individual. Whether Catholicism or Protestantism prevailed, the result was the same.

In the reign of the Protestant queen Elizabeth, it is said more Catholics were executed for their religion than there were Protestants executed in the reign of the Catholic queen Mary.

French Huguenots are said to have made feed troughs for their horses from the bodies of Catholic priests, while Catholicism is responsible for untold atrocities.

In the intensely democratic Massachusetts colony, those who dared differ from the will of the majority in matters of religion were subjected to persecution, banishment, and even death.

The separation of state and church and the introduction of voluntary co-operation in religious matters has proved of untold benefit to religion and morality.

Cannot our socialistic friends, who want to have one organization, whether imperial or democratic, control all production and distribution, learn a lesson from religious history as well as economic history?

Finally, so long as human nature remains, to a large degree, selfish, the results that I have shown forth will follow wherever the majority controls all.

To the extent that the majority is selfish, or is controlled by selfish leaders, it will try to crush out opposition.

To the extent that the majority believes itself right, or is controlled by leaders who believe they are right, they will endeavor to control the minority.

Majorities, moreover, are often wrong—minorities are often right.

Roger Williams was nearer right than his puritan persecutors, and his is a happier model than theirs for the industrial world.

Sad, indeed, will be the day when Kaiser or majority shall dictate to every workman his hours of work and his recompense therefor; to the farmer just what he shall do; to the teacher what he shall teach; to the preacher what he shall preach; and to the editor and writer what shall be published.

Though poverty were abolished, such a state would be worse than the present. It would be "Looking Backward" with a vengeance.

Sad, indeed, would it be for humanity if national control of all production and distribution were the only escape from poverty, ignorance, and crime.

Fortunately, the single tax platform follows the same path in industrial matters that our country has already followed in religious matters—opening the way for freedom of production, and for freedom of exchange, and for freedom of distribution, so that each may receive the full value of his toil. Nothing to be done by the state that can as well or better be done by individual effort, or by the voluntary co-operation of individuals.

Under its benign influence true voluntary co-operation will for the first time have full play.

# MECHANICAL.

---

## COMPOUND ENGINES.

---

MANY EXPANSIONS ; SOME CONSIDERATIONS.

---

BY THOMAS PRAY, JR.

---

The subject of multiple expansions, has for some years now, been of more than usual importance in the minds of users of steam power, in every direction, more especially has it been of vast importance to the owners of vessels, on many accounts, but there has been and still is, quite a leaning towards the "Compound Locomotive," and to examine some of the advantages as well as some of the disadvantages we will look at the facts, and in such a way as to apply to locomotives, in particular, and to all multi-cylinder engines, as well.

We have already in this series of articles referred to the Carnot cycle, which is the basis of all theoretical basis from which the computations are made to show what are the gains of many expansions, and this law is correct in theory, but never has been, nor will it ever be realized in practice, for the simple reason that it is not a physical possibility to realize the theoretical heat units in any combustible, as we are able to apply its heat to any substance in actual use—but the law is all right, only we are not able to get the theoretical heat units into realized ones on account of leakages and losses, the nature of which has been discussed in this MAGAZINE in past numbers.

As the range of temperature is the measure of efficiency in the use of steam, it follows that the range can be increased if we increase the number of expansions, and to do this, it is the only known way to use several cylinders, and do a part of the expanding in each cylinder, allowing the size of each to be so proportioned that the back pressure of the higher one is capable of doing the proper work in the next lower, and so, by a careful computation from known laws we can do the work in two, or three, or more cylinders, in equal amounts, so as to work the machinery to the best advantage, and by utilizing the heat units to save in the amount of coal used, for the reason that we expand in each cylinder some number of times, and in each case to a lower temperature, and then, by condensing at the end, add to the terminal pressure still another expansion that carries the range of the temperature to the lowest limit, so far as we have progressed in our knowledge of the use of the heat units, and there is another element in the matter to be carefully considered, and that is, that as we increase the number of cylinders we must

also increase the pressure, or we shall not have range of temperature sufficient to allow us to expand to an extent that will afford us gain.

As the temperature of steam increases with the pressure, it is easy to see that it is necessary to get a high pressure, to use even two cylinders, but in the case of three, it has been very clearly demonstrated, that it is necessary to carry nearly two hundred pounds, and this if expanded to the limit in properly proportioned cylinders for the load, shows a great gain over the ordinarily used engine of two cylinders, and here it is necessary to call attention to another fact in comparison, from which we are to form some modification of the law as usually applied, and that is this: The load of a compound engine if not adapted to its size and range of working, is not a matter of advantage, but a positive loss to use it as compared with the two-cylinder engine, and this is frequently lost sight of in actual use; and another fact is, that Mr. George H. Corliss, some time before his death, found that in his system of using cut-off valves and proportioning the cylinders, that with 125 pounds pressure (gauge) or 140 pounds absolute, and by condensing he could do an hour's work for an horse power with an amount of coal that has not as yet been surpassed on any steamship up to to-day, with any number of cylinders or any pressure by actual and careful test, showing that there is a limit of conditions as well as of proportions; but we must remember that the Corliss valve gear has not, except in a single instance, ever been adapted to any steamship, although as a matter of history, there has been, in more than one instance, some traps made that had not in fact any relation to the real G. H. Corliss valve gear, except that the designer called it a "modified Corliss" gear, and these rat traps have been most signally deficient in lasting qualities and utter failures so far as any economy has resulted, but they are now and then referred to as Corliss gear on steamships, to the amusement of the few engineers who are familiar with the actual conditions. Then it is safe to say that the record Mr. Corliss has left is not to be compared with the engines used on ships in respect to economy, but his record stands now, October, 1893, and proves that we have quite an element of loss in the piston or slide valves as used on the ship usually when compared with Corliss' valves and results.

This applies with more force to the locomotive for the reason that unalterable conditions are affixed to the machine as we must use it that forbid the use of releasing gears on the valves, so that here is another obstacle to our getting the benefit of the added cylinders on a locomotive, or the compounding, as it is called, and in addition to this we have another element over which it is so far utterly impossible to attain is the condensor: We cannot carry either the water or the air pump on the moving machine, so that in a compound engine we have obstacles over which we are not to attain, unless some new method is found of condensing without water, and two have now been tried, but are not worth mentioning, from the simple fact that both are failures.

The next element of consideration is the addition of pieces or parts, for in any consideration, starting with a machine made of the fewest possible parts, we know that the addition of any piece calls for added cost, as well as care and skill, for no man is capable of doing with ten pieces the same work with the wear that accrues to five pieces, nor can the machine maker build such a machine with added pieces for the cost he can with less pieces. The repairs other things being equal, is as the number of parts, and repairs are costly. These are the prime considerations for the railroad man to consider with care, so far only as the making money by adopting the new machine goes.

The consideration of all these problems calls for some pretty close figures, and it is a somewhat curious fact to-day that the warmest advocates of the compound locomotive are the patentees in each case, and while the writer has not the remotest relation to any patent on earth, unless it comes into his hands to be tested, he has noted with care in the reports of tests that the most important actual facts are in each case missing, and some approximations made with something or other, but in no case from positive actual weights, measures, or observation of amounts and service, but he has not time or space to incorporate them here, leaving it to the final adoption or rejection of the machine to settle the question, and it is properly none of our business here now.

If we take the possible strength of boiler plate to-day, and its limit of fire service, or the thickness which is permissible in connection with its economy, then we cannot get a pressure above two hundred pounds absolute, and as we cannot condense, we must work inside of the temperature due to that pressure as the limit of highest, 200 pounds absolute, and stop some where inside the atmospheric pressure, 14.7 pounds absolute, or release our steam at a higher pressure than that of the atmosphere, usually some pounds higher, as it calls for quite an addition to that in the highest speeds for the back pressure, and here is the whole case, so far as the efficiency goes, we cannot get outside of the range of about one hundred and forty to fifty pounds of pressure, and the temperature due to that range of pressure, and it is not the slightest difference what the patentees or promoters say as to what they can or will do, for it is as impossible to get over a certain duty out of a certain number of degrees as it is to do it on no coal at all, and it is not the slightest matter whose system of compounding it is, or which way it is done, for  $2 \times 2$  is four, and not a bit more.

Then we have another conundrum: The first requirement to-day is speed. Why do not the compounds show their "gait" in the flyers? and why do the best men on the railroad service call down the compounds from the flyer trains and put them into the freight?

If a thing is so good, why is the old one better? Give us a reason that will wash or own up. It is an expensive way to demonstrate the great gain to run in new ideas and then quietly put the old fellows back, yet it is a fact in many cases now only certain of the record.

But to return to the reasons we are to discuss, and in which we are to try to see if the theoretical gains are possible of realization, we find:

1st. The steam engine of to-day has many inaccuracies of construction, and lacks very much of attaining the theoretical, even in the percentages that are possible, and although we are supposed to have been improving, we find now, in 1893, that we are only utilizing in the whole about one-seventh of the possible heat units at the best, and the lacks of mechanical perfection in the engines of to-day make it nearer one fourteenth, as a rule, that is realized in commercial use, as a matter of fact.

2d. Steam is a very uncertain factor in its physical properties, for as a matter of practice, more attention has been paid in all generators to the *amount* of water to be evaporated than to the *quality* of heat units in their relation to being used with the least loss, and what is supposed to be steam, is usually containing from three to ten times the amount of water that it is *supposed* to carry, in theory, and this contributes to the losses of the engine in result, and in no one place is this encountered more than in the locomotives, where the conditions are so constantly changing, and where under any circumstances the expansions are limited by the conditions under which the machine *must work*, and from which there is no possible improvement to be made.

3d. The higher the initial pressure or temperature the higher the first cost, and so is the cost of maintainance and the liability of accident to the working parts, and also a greater percentage of losses from unavoidable leakage, and as we have not so high a range, owing to no condensation on locomotives, we are increasing cost and leakage with parts, and diminishing the range to some extent, as compared with large single cylinders, of the temperature in the using of the steam, multiplying parts, and loosing, as all know who have run the compound, the regulation, from the action of steam in both of the cylinder, and loosing the starting from a stop, where some extra mechanism is needed, and an engineer who has seen a compound "wallow" when starting from a station has had a smile on his face for the next ten miles, if *he* was not on her.

4th. The losses from single cylinder working in the heat units, lost and restored too late for useful effect, are made use of in the compound by being swept from one to the next cylinder, and so a saving to some extent is possible over a single cylinder, but multiplied cylinders are of increased cost for the same power capacity, requiring larger number of parts and are liable to more derangements in same time and work, and call for a higher class of skill to operate them as well as for more space on the frame.

5th. The steam engine that *we must use* to do our work is limited to: No great possibility in the range of the speed of the piston; clearance space is not to be done away with, and in the compound is usually greater than in the single engine; valve gears are not capable of being made to work much quicker, and certainly are not

simplified in the compound locomotive, and a multiplication of valves to do the same amount of indicated horse power means more leakage, more losses, more repairs and more skill to operate, and the factor of friction, which cannot be avoided, is as certainly increased as the parts are multiplied, and this is not an insignificant matter.

6th. The compound is not so useful unless it is loaded pretty nearly with the load for which it was designed, and is less adapted to great changes of load than the single cylinder, or to changes that are within the reach of the capacity of the machine.

While the statements here are not exactly in the line of the claims of some of the makers of such machines, they are gathered from pretty clear observation, and not from any single road or machine. It is a well-known fact that if we could make pretty close use of the heat units, we would be able to do a trifle over five indicated horse power with one pound of coal, with steam at 150 pounds absolute, and an engine of one cylinder (condensing) properly proportioned, but it has not come to the knowledge of the writer that any of the new compounds are quite up to that mark yet, nor any of the ocean racers, although each one tries to tell a bigger story than its latest predecessor in the same line.

It is also well known that if we could do it, there are only a veriest trifle over two and one-half pounds of water required to be evaporated to make an indicated horse power, but with all the skill and improvements there are still required from thirteen to seventeen. Allowing that the figures are really correct as claimed, and in many cases taking the above for the compound condensing, it has proved the same non-condensing compounds have called for from twenty-three to thirty-eight pounds of water, simply a fact, and in one of the very best of the full compounds of the newest locomotive lately tried, and some allowances made for errors, it was found that twenty-one pounds was actually used, while an old machine, with no new wrinkles, did its work with twenty-six, and ran faster with the same train than the compound could do on three trials, over the same track, same miles and from same station to same station, with same train and in same direction.

What railroad men are after now is something to save money in the operation of the train mileage, not after ideas or oh dears, when in the shape of an expensive man, who can do so much that "aint so." It is not a question of the size of a man's assertion, but it is "what can the man accomplish?" that is the question, and there is "lots of room up stairs."

This compound question is one that it is not easy to settle, and it is not at the moment making any great progress, for with the retrenchment now absolutely necessary, it is easy to make observations on the produced facts, and in a few months it will be seen that some of the now much vaunted machines will be in the market to the highest buyer, if not at his own price; it looks that way in some quarters that the writer is not at liberty to point out, and the deductions that lead to this decision are the result of *careful trials*, in

which the whole number of factors have been measured, not guessed at.

There is now room for any man who is big enough to save coal, but he must *do* it, and not tell *what* he can do "with his mouth;" a "mouth organ" is a good thing to have, but it is a good thing not to carry with you at all times.

---

## THE PROBLEM OF THE FUTURE.

BY WILLIAM WEILER.

---

A writer in one of the prominent New York city dailies solved a problem, which he himself asks in the first part of his article, greatly to his own *satisfaction* and to the *instruction of the uninitiated layman*, but in a way which is contrary to all previously conceived ideas of railroad management. After startling the "dear public" with the fact that locomotives burn a great deal of coal, and that as a consequence a great lot of ashes were produced as the result of this combustion of coal, he asks, "What becomes of these ashes?" According to the question, it would seem to be something of a mystery to account for their disappearance, but the writer was equal to the self-imposed task and solved the "mystery" of the ashes, for with the skill of a trained detective he followed up the "clews" and found that the ashes were disposed of by *simply opening the ash pans while crossing bridges over streams* and allowing the water to carry away and dispose of the ashes in their own fashion. Perhaps it did not strike this writer that the stream might be navigable, and that some craft on pleasure or business bound might be passing under some bridge, and be made the receptacle for a lot of hot ashes, to the extreme comfort (?) of all on board, or that by a series of long continued dumpings from a large number of locomotives there might be a serious interference with the flow of the water and that in time a bar might be formed, until at last it might become an embankment instead of a bridge across the stream. It might perhaps be a good plan for our railroads to thus dispose of their ashes, for they might thus be able to dispense with bridges in the near future, but the average master mechanic of the period does not seem to favor such a disposition of the ashes, being anxious for the safety of their bridges and trestles, which are to a great extent built of wood, or have to have ties and floors of wood even if the spans are of iron, as is the case in most of the recent structures on our best

roads. Wilfully dumping ashes on bridges is therefore not in vogue among our railroad men, but the orders are against it, and it is only at a few designated points that the firemen on well regulated hard coal roads are allowed to dump the ashes collected in the pan. These ashes are then shoveled from the track and help to build up the embankments which are generally chosen as dumping grounds, or are removed at suitable times to help fill in or ballast at other points, and the item of getting rid of the ashes thus forms no inconsiderable amount of expense.

Some time a notice appeared in the press of a new brake device by which trains running at fifty miles an hour were to be stopped instantly, but as the passengers were not especially mentioned, and it is to be presumed that they would not be bolted, nailed or screwed fast, it is likely that when the train stopped so quickly when running at a high rate of speed, the passengers would go on, at least as far as the end of the car, and it is to be feared that they would not insist upon the order of their going, but ignoring all rules of etiquette and polite breeding, would arrive at the end of their car in a sadly demoralized condition. The majority of trained travelers and railroad men would prefer a much slower stop, as they are in full sympathy with the man who declared it was not the height of the fall that hurt him, but the sudden stop at the end of it.

It is to be presumed that much of the "gush" we see in the papers about the marvels of electricity and its application to transportation of persons and goods emanate from the pens (not brains) of "penny a liners," who, under the pangs of hunger, get up a few hundred lines for a couple of dollars, to instruct (?) the public about things of which they are themselves as ignorant as the two above quoted. Electricity has made vast strides since "Father Franklin" first coaxed a stray spark from the clouds, and we dare not as yet set a limit to its possibilities, but when we are gravely assured that all our locomotives are soon to be relegated to the scrap heap as so much rubbish, having outlived their usefulness, we may well call a halt to consider the probability of the assertion. A locomotive, it is true, has to use up a great proportion of the power given it by its steam in moving itself, and is in this respect a consumer of power, which is a loss of just that much useful effect for other purposes, and is that much in favor of a system by which power is furnished from stationary engines, whether it be by an endless cable or by the equally endless current of electricity in a wire. While it is evident that much power can be saved in this way, it has also been made painfully plain in only too many instances, that a system depending on one central machine or one means of connection between the central power and the vehicle to be moved, is apt to "prove a delusion and a snare" at the most inopportune moments. That masterpiece of human constructive ingenuity—the East River Bridge, connecting New York and Brooklyn—has its cars moved by a cable, which is very apt to give out at the busiest time of the day, and to thus stop traffic at once and completely. Recourse is then had to

the steam locomotives, of which there are a few on the structure for switching purposes, to take the place of the cable and its motors, and it is a matter of record that these steam locomotives never yet failed to do their duty. The cable on Broadway has in its short life furnished convincing proof of failure by giving out and interrupting traffic, and this is apt to be the case with any scheme depending upon its power upon some remote central station. Perhaps there is not so great an interruption in the currents of electricity except by broken wires or electric storms as there is in cable transmission, but that the interruptions do come has been amply demonstrated in the past, and when they do the road is blocked effectively. Now we do know that a steam railroad is never blocked while the tracks are clear, and even while a part of the road is blocked the other parts of the road, even in close proximity to the block, may be kept open and free for business.

A great deal is said about the proposed electric air line between Chicago and St. Louis, which is to run at the rate of one hundred miles per hour, and a great deal of credit is given to the new power for the speed. Taking it for granted that it *might be possible* to achieve what its most sanguine promoters promise, let us see what might be expected from steam under like circumstances. In the first place, it is to be an air line, with no grades or curves worth mentioning in it from one end to the other. Next, there to be no grade crossings or draw-bridges, consequently no slow-ups at all. Then especial attention is to be paid to the form of the cars so as to reduce the resistance of the air to a minimum. Next, the cars are to be as light as possible and consistent with strength, with the largest possible wheels, so as to reduce axle friction. Taking the acknowledged record of over eighty miles per hour now to the credit of the steam locomotive, and give her the special advantages of an air line without grades or curves, with no grade crossings or other slow-ups, with special attention given to the air resistance in the make-up of the train, and it is not to be doubted that there are lots of locomotives now built and lots of engineers and firemen now living who could fire and run them even to exceed the one hundred mile per hour limit. All "the boys" need ask is equal advantages and no favors, and they need not fear the boasts of the electrician who would "knock them out" if he could, and bring in a new order of things in which he would be chief ruler. Without some radical and new feature to increase the tractive power the limit of motive power to be derived from the light electric motors would soon be reached, and then the new roads would be confronted with the problem of how to move heavy trains which has been solved by the steam roads by increasing the weight in proportion to the demands of the service. If this would have to be done on electric roads the prime advantage of not having so much unproductive weight to handle would be given up and the contest would then be nearly equalized, and the only question to be settled would be whether it is good policy to depend upon one motor or have each motor independent of every other one, and

this is not by any means a hard question to answer, and would beyond doubt be decided in favor of the present steam locomotive, for they have ever been able to keep up communication along their lines as long as there was a track left to run on.

---

## THE BEST THING TO DO IN EMERGENCIES.

BY WILFRED P. BORLAND.

---

About the first thing an engineer thinks of doing in case of an emergency is to reverse his engine; indeed, this act is performed instinctively, and most engineers generally have her in back before they have time to begin to think. But, is there anything gained by reversing an engine at high speed when brakes are fully applied? Any of us who have been in a tight place—on an engine that was skating into the rear end of a train, for instance—have had chances to notice what effect reversing an engine has on reducing momentum, and there are but few of us who have not remarked that reversing the engine had no appreciable effect in reducing her speed. I have been in one or two of such mix-ups, and I have noticed that after the engine was reversed she just seemed to take a new hold and make for those red lights at an increased speed, if anything. Of course, we have all noticed this peculiarity of the iron steed, but we have referred it to a defect in our own imagination; it is so natural to put her in back when we want to stop real bad that it seems the proper thing to do under all circumstances, and the man who went into a collision with his engine hooked in ahead would be looked upon as having failed to put forth proper efforts to avert such collision; but if we reason a little about the matter we shall be able to see that reversing an engine under the circumstances which are generally present about collision time does very little good. The power to stop a train which is secured by reversing is exerted only while the wheels are rolling; after there has accumulated enough pressure in the cylinders to block the wheels the engine is transformed into a huge skate, and she might as well be in one motion as the other as far as any practical effect in reducing the momentum of the train is concerned, and now that the use of driver brakes is to become a universal fact it would be well for engineers to get rid of that old instinct that impels them to put her in back every time an emergency confronts them. I read an interview with one of the prominent engineers on the New York Central, a few days ago, in which he said, in answer to the question as to what measures he would take to avert a collision, that he would apply the air and that he wouldn't reverse

his engine. He explained that by reversing, the wheels were slid and the power which the driver brakes could exert in stopping the train was thus rendered useless. His idea was that when the air brakes were fully applied an engineer had taken the most thorough and effectual measures to avert collision that could be taken, and that it was an entire mistake to reverse an engine under such circumstances as the very danger that it was desirable to avert was thereby increased; and I thought his views and reasons were eminently correct. But it is an awful hard thing for a man to stand up in the face of an inevitable collision and not reverse his engine, and then there is another phase of the question which must be taken into account. The general public have been educated to believe that it is just the proper thing for an engineer to reverse his engine in such cases. The noble engineer who went down with his engine reversed has been held up to the public gaze for years as a hero who did all that mortal man could do to avert catastrophe, and is it not possible that this fact has had some sort of a psychological effect in determining the action of engineers in such cases? An engineer who was so fortunate as to come out whole from a collision that had resulted in loss of life might have some terribly hard explaining to do to the representatives of the public in order to satisfactorily convince them that he had done just the proper thing by leaving his engine hooked in ahead, and it is not a pleasant thing to be pointed out as a man who has failed in any way to adopt proper measures to avert disasters of this kind. In cases of inevitable collision it is desirable to reduce the force of impact to the lowest possible point, as anything gained in this way represents less destruction of property and may represent a saving of life as well. It seems, then, as though there ought to be some clearly defined rule for such cases made and provided which should be based upon scientific facts that could not be disputed, and which an engineer might follow with full confidence that he was doing exactly the right thing. It is easy enough to secure scientific data from which to construct such a rule and the point is one that ought to authoritatively settled. Another point is the proper use of the emergency feature of the air brake. Bro. Garaghty has favored us with some very interesting remarks on that subject, and it is one that has received considerable discussion in different technical journals. The consensus of authoritative opinion seems to support the conclusion presented by *Locomotive Engineering*, as follows:

Some harm has been done by too fine haired theorizing on this subject, and too many chances are being taken when the recharging plan is used, or attempted to be used.

With a short train a quick throw to full release might increase the auxiliary pressure some, but the time is too short to get much past the feed-port, and besides this, the distance between the train and obstacle is lessened very much. It would have been far more effective to have had a lower braking pressure for the longer time. In an emergency time is everything. If you recharge you lose what air you have in your cylinders; you release your brake entirely and lose valuable time in the uncertain hope of getting a better hold when you do apply.

L F M 5 Nov 98

Every man can not calmly sit in front of an emergency and figure this out—*don't fool with it, but go to emergency at once.* You may have reduced your pressure in service application so much as to prevent the quick action valve from working, but rest assured that the brake is full on *from the start.*

We want this lesson impressed on all young runners who are so interested in every detail of the brake, and who are striving to be expert with it. You may try to be "too fine" with it in a case of this kind. An emergency stop should call for the engineer to slam his valve-handle into the emergency notch and leave it there. You might save some of the train-line pressure, if the brake was fully charged, by causing the quick-action valves to act by a quick reduction of twenty or thirty pounds, and then bringing the valve to lap. This would be advisable in making a water tank stop or where emergency has to be used to prevent running by a station, where failure would simply mean inconvenience; but where there is a real emergency, no matter what you are doing with the brake, don't take any chances; go to the emergency stop instantly. It's sure, safe and correct.

The *The National Car and Locomotive Builder* complains that engineers in this country are not as generally disposed to recognize the immense advantage of running with wide open throttle and short cut off as they ought to be. The claim is made that but a small proportion of the engineers are disposed to give heed to the great economy which may be attained by this method of running, and the company's net earnings might be increased by a very respectable figure if engineers were only impressed with the necessity of following economical methods, running with wide open throttle being the chief factor in the problem. Some very interesting figures showing the saving that may be attained by proper management on the part of engineers are presented, and I reproduce them here:

In long time tests of one compound and nine simple locomotives on the Chicago, Milwaukee & St. Paul Railway, reported by the Committee on Compound Locomotives to the late Master Mechanics' Convention it is shown that the average fuel economy of the compound (run by two different engineers) over the simple locomotives for the eleven months of the test was 10.7 per cent; and that while in charge of one engineer for five months the economy over the simple engines reached 17.5 per cent., and while in charge of the other engineer for six months the economy over the simple engines was lowered to 4.3 per cent., which the conditions strongly indicated was due to inferior management by the second engineer. We have known of a normal economy of 15 per cent. due a compound locomotive over a simple engine, being reduced to 2 per cent. by superior management of the simple engine. If there is a possible fuel economy of 15 per cent. to be gained by simply having the engineers perform their duties properly, why is there not a general and determined movement made to bring about the improvement? The fact is that a larger fuel economy than 15 per cent. is possible on most railroads by perfecting the methods of running and firing locomotives. Long and short cut-offs constitute but a factor of the problem, although the chief. There are other factors of almost equal importance such as regulating the feed water and firing. There is a general apathy in regard to the matter that is hard to understand, but that, nevertheless, is responsible for waste that continuously and industriously eats into the net earnings of railroads.

If it is true, as stated, that a fuel economy of more than 15 per cent. "is possible on most railroads by perfecting the methods of running and firing locomotives," then the point is one that is certainly worth looking after. Fifteen per cent. is a big saving in so

large an expense account as that which goes for the purchase of fuel on railways.

Reading Mr. Pray's remarks on the "curiosities of technical journalism," and reading an editorial which appeared in the *Railway Age* recently, one might very properly make some remarks on the discrepancies of partisan journalism. The *Railway Age* is notoriously the partisan of the railway stock and bondholder—as it has a perfect right to be—and it is never at a loss for an argument calculated to present the iniquities of railway management to the general public in the most favorable light possible. Its premises are not always correct nor its conclusions always logical, but it generally manages to adhere closely enough to facts to save itself from appearing ridiculous, and there are times when its arguments rise to the height of sublimity. But sometimes, when it discusses the science of comparative deleteriousness, it is inclined to sacrifice facts in order to secure harmonious illustrations, and when it produced the editorial referred to was one of those times. Here it is:

Excessive capitalization is sometimes alleged, and in some cases with reason, against American railways, but none of them compare in amount of capital per mile with the London & Northwestern company, which on 1,890 miles is capitalized for \$529 200,000, or about \$280,000 per mile. Yet this costly property yields its semi-annual dividends with regularity, because British railways manage to obtain living rates. At the rates to which American roads have been reduced even the London & Northwestern would soon be bankrupted.

Surely, I thought, there is something wrong about that. It isn't possible that Americans would allow those English duffers to outdo them on a little point like the capitalization of railways, and I turned to the report of the Inter state Commerce Commission for the year ending June 30, 1890, and found quite a number of roads capitalized for more money per mile of line than this English road. The commission reports the Central New Jew Jersey capitalized for \$370,157, per mile of line; the N. Y., L. E. & W. for \$325,549; the P. R. R. for \$477,244; the P. & R. for \$581,826; the C. & W. I. for \$283,639 per mile of line, besides a vast number of subsidiary roads, small independent roads, bridge, transfer and terminal companies which are capitalized for vastly greater sums than this English road. The Inter-state Commerce Commission has gone to a good deal of trouble to present misleading figures or else the *Railway Age* is mistaken. Which is it?

---

### NOTHING GAINED BY RE-CHARGING.

MR. EDITOR:—In answer to the article on "Air Brake Practice," I want to say something in regard to the action of the triple valve. The point at issue is whether or not it would be of any benefit to re-charge the train pipe before applying the brake in emergency after a partial service application is on. There is nothing whatever

to be gained by this method; on the contrary there is a positive loss of power as well as a waste of time and air. For, it is necessary to reduce the train line pressure below that contained in the auxiliaries in order to get any action on triple valve, and by re-charging train pipe the brake partially on is reduced and that power is lost by passing from brake cylinder to atmosphere. Suppose, for instance, that we are carrying seventy pounds pressure in train line and auxiliaries and we made a partial application of, say, ten pounds. We have but sixty pounds left in auxiliaries, and no matter how much air is put into train pipe it must be drawn below that contained in auxiliaries at least twelve pounds in order to get the emergency action of the triple. Besides, we have released the brake which was already on with a pressure of twenty-five to the square inch in the brake cylinder, consequently losing over one-third of our original power; for a twenty pound reduction in train line in service application will cause the two pressures to equalize in auxiliaries and brake cylinders. So we have lost half of our power by releasing that we could have had in brake cylinders by applying the brakes in their fullest capacity in service action; and as we increase our power only 20 per cent. above service application by the emergency application—which would only make a difference of ten pounds per square inch in brake cylinders—and lose twenty-five to the square inch by releasing our partial application of ten pounds. I think it will easily be seen that there is no gain, but rather a positive loss of power and time by re-charging train pipe.

Now, in case our brakes were partially applied and the occasion should arise for an emergency application, if we move hand e to extreme emergency, allow it to remain there a short time, and then bring it back to lap position—but slowly, so as to prevent the surge of air from the rear of train from releasing the head brakes—we will be doing the best braking possible under such circumstances; and we will no doubt be stopped before our brakes would begin to work were we to re-charge train pipe first, as the reaction of air in train pipe would take time, and time in an emergency stop means something, sometimes saving of both lives and property. Of late I am beginning to think that most of those wrecks caused from automatic air not working—as the engineer says in making out his statement of the wreck—are the result of just such theories as Mr. Garaghty mentioned in his article; because any one who understands the action of the automatic brake knows that if they have air in their auxiliaries and train pipe it will never fail to work if applied right. If not, it seems strange that whenever there is anything left of a wreck to permit an examination, they always work all right. And when the officials of the road on which the wreck happened know the exact action of the automatic brake they can easily locate the cause of the accident; and I do hope that it will never occur to any of the readers of this MAGAZINE that they shall be running the engine and after an accident happens have their brakes tested and find them all right, and if they will only study it will not.

Now, I shall ask a few questions :

1. Why is a triple valve called a "triple valve?"
2. In what relation does the main piston in the triple act with that of the equalizing piston in the brake valve?
3. What is wrong with triple when it works in emergency with a reduction of six to eight pounds in train pipe, and it applies in service action all right when a reduction of not over five pounds at a time from train pipe is made?
4. What is wrong with a quick acting triple when there is a continual blow-out of the pressure retaining valve, when the valve is in release position?

SAN ANTONIO, TEX.

---

### THE AIR BRAKE.

---

MR. EDITOR:—In conversation with an engineer recently, upon the air brake, he wanted to know what was the reason of air surging in the train pipe, or "concussion of air," as it is sometimes called. With the old form of brake valve, or three way cock, we were troubled to a considerable extent in that way, caused by reducing a considerable amount of air from train pipe and then suddenly closing the valve, which would first set the brakes on the front cars and the air surging forward from the rear cars—caused by a too sudden closure of the valve—would release the forward brakes. This surging could be reduced to some extent with the three way cock, if the engineer, instead of closing the valve suddenly, would close it gradually; then a partial equalization would take place in the train pipe. With the new valve we are using now there is no more surging of air in train pipe, or at any rate the evil has been greatly reduced, and it was this valve that was designed to overcome it. I will try to explain my reasons for so thinking: The piston in the engineer's brake valve is governed in action by air pressure, the train pipe pressure underneath it, and the equalizing reservoir, in connection with the brake valve chamber pressure above it. When an application is made we first reduce the pressure from the equalizing reservoir and brake valve chamber through the preliminary exhaust port, which is above the piston, and as soon as this pressure becomes slightly less than the train pipe pressure, which is underneath the piston, the latter will rise; train pipe pressure will then escape, and will continue to escape until it becomes less than that remaining above the piston, when it will re-set itself. So it can readily be seen that with the brake valve we are using to-day the discharge of air in train pipe is governed by air pressure, with which the discharge must equalize in applying the brakes; and no matter how quick a reduction is made, afterwards turning the handle to lap position, the train pipe pressure will escape until it equalizes with that remaining

above the piston. For this reason the brake valve we are now using practically prevents the surging or concussion of air in train pipe, and it has received the most appropriate name of "Engineer's Brake Valve, with equalizing discharge."

BALTIMORE, MD.

*Walter C. Garaghty.*

### ANSWERS AND ADVICE.

MR. EDITOR:—Mr. J. E. House says that "engineers who say a certain wedge is stuck are correct." I claim the wedge is not stuck; it is the box that is stuck. For this reason: The wedge is rigid; it is held tight by the wedge bolt and the keeper bolt through the pedestal jaw of the frame. Strictly speaking it the box that is stuck.

2nd. Bro. Weiler's account of an engine running without steam or water is correct. The circumstance happened on the Baltimore & Ohio, I believe; the engine was reversed while being towed. I remember reading an account of it a number of years ago.

3d. Ira McNaught wants to know how far a spot on the outer edge of a wheel five feet in diameter will travel in going a given distance. In one revolution, it will travel five times 3.1416, or 15.708 feet.

4th. Allow me to give some of the younger brother firemen a little advice. When you are around the engine house, or in fact anywhere, don't tell about the fast runs made, and close runs to meeting points; it will do you no good and may get to the ears of those in authority who will make it warm for your engineer. Do your railroading out on the road; that is the proper place for it. This advice was given me when I began railroading, over eighteen years ago, and I have always found it sound.

SAN ANTONIO, TEXAS.

*Henry D. Cook.*

### A FIREMAN'S EXPERIENCE WITH EXTENSION FRONTS.

MR. EDITOR:—I have often been asked what I did to the 249 to make her steam so well, and as I think your readers will be interested in my answer to that question, I will tell them what I did to her. In 1888 I was assigned to engine 249, an eight-wheel Blood engine, 17x24, just out of the shop and a regular beauty. I was proud of her as she went puffing through the yard with a heavy train behind her, but how do you think I felt when I discovered that she would not steam? When we got to the end of the division my engineer reported her not steaming; they did some work on her, but she steamed no better than before. We had her diaphragm plate raised, but with no result. Then we had it lowered, and whatever way we

had it there was very little change in the way she burned her fire. Well, I tried her another trip and it was the same old story; we got about half over the division when we had to clean her fire. I went at her with the slash bar and hoe, and when I got through I was tired out and my hands were pretty well blistered. I said to old Bob (everybody knows old Bob, my engineer), "What do you think is the matter with her?" "Damfino," was the only answer I got to my question. I thought I would have to do something to make her steam or old Bob would have my hide hanging on the bell cord before another week was over, so with Bob's consent I secured the help of the boiler maker, and we went after the front end. We found a half-circle diaphragm plate, which in my opinion was the cause of her burning her fire around the edges of the fire box and throwing the coal up in a dead heap in the center; her front end would also fill with cinders. We removed the half-circle and put a straight plate in its place. We raised this plate thirteen and a half inches from the bottom of the smoke arch and placed a wing plate on each side of the arch, five and a half inches wide. That gave a center draft, and the change it made in the steaming of that engine was simply wonderful! She burned a nice, level fire, steamed well, and saved from fifteen to twenty per cent. of coal. I am not able to say by what per cent. she lightened the burdens of the fire boy.

### WHY THEY PULLED THE FIRE.

---

MR. EDITOR:—In answer to Mr. Weiler's questions, I will say that in the first place we ran out of water on account of having a hole cut in our water hose while we were running at a high rate of speed, but we managed to get to a water station with the light engine. After drawing the fire we had thirty pounds of steam and about one inch of water on the crown sheet. After filling the tank with water we put the injector on, closed the heater cock and turned on the blower. The injector worked until we had three gauges of water when it was shut off. The tank holds 3,600 gallons, and when it is full the water level is eighteen inches higher than the check, and six inches higher than the injector, and, as I said before, I think the weight of the water in the tank had a good deal to do with the injector working, as with the heater cock shut, the hose and tank valves air tight, and the blower turned on the weight of the water in the tank was enough to overcome the resistance at the check, and water will always find its level. Perhaps Mr. Weiler does not consider an engine with thirty pounds of steam and an inch of water on her crown sheet a dead engine? There is a little life in her, but not not enough for service. Furthermore, it is not absolutely necessary to have steam to kindle a fire with, and I do not think it a

good plan to fire up an engine with less than three gauges of water in her boiler. Mr. Weiler will no doubt think it strange that we drew the fire at the water plug? As soon as I got water started in the tank we tried the injector and it would not work; then we draw the fire so as to be on the safe side. When the tank was full the injector worked as before stated.

### CONCERNING TRIPLE VALVES.

---

MR. EDITOR:—Mr. J. C. House, in answering Bro. Harvey's question concerning stuck wedges, says: "Engineers who say a certain wedge is stuck are correct." I think Mr. House is mistaken. A driving box wedge forms a part of the pedestal and is always stuck to it, that is, held in an immovable position. There is no movement of the wedge, and a thing that sticks must be something which has motion. According to Webster, to stick is "to stop; to be arrested in a course." Should we slam a door which fits closely in its casing and discover that it was difficult to open, would we think it was the casing that had stuck? Rather, would we not think the door was stuck? Here the door represents the driving box, which has motion, and the casing represents the wedge, which has no motion; therefore it is the box which sticks and not the wedge. Bro. Garaghty, writing of "Air Brake Practice," asks: "When a partial application is on and occasion should arise for an emergency application, would it be better to push the handle to the emergency notch, or first release the brake just long enough to recharge the train pipe and then make the emergency application? Bro. Garaghty states that this question has been asked and a considerable discussion has grown out of it. I agree with him in his views on the subject, but would call his attention to one thing which he seems to have overlooked. If train pipe was equipped with the quick action triple valve it would require a different application than if equipped with the old style valve. Should we make an ordinary application with the old style triple and occasion should require us to use emergency, there would be nothing but a waste of air and a loss of braking power to release brakes; under these conditions the engineers' valve should be pushed to emergency position, when the triples would travel their extreme distance in the direction and upon graduating spring and give all of the auxiliary pressure, or rather, about fifty pounds of it, to the brake cylinder. With this triple, no train pipe pressure would combine with auxiliary pressure; a sudden and instantaneous application would not give any greater braking power than a gradual application, but only a quicker application of the same power. But with the new triple the action is different. A quick application with the new triple gives twenty per cent. more

braking power than with the old style, by combined auxiliary and train pipe pressure; but the reduction of train pipe pressure must be sudden in order to trip the emergency valve in quick action triple, and also, if the reduction in train pipe be gradual the air will all be discharged from the pipe through engineer's valve, and none pass through emergency valve to brake cylinder. I wish to ask two questions, as follows:

Why does the smoke arch, or extension front, heat more when the spark cap and spark hopper are left open, than when closed?

Why is it that some triples will release after application is made, without releasing engineer's valve?

AMORY, MISS.

*James Carey.*

### CLINKERS.

---

Recently I met one whom I had known in former days, and pleased was I to find him in prosperous circumstances; he sported a diamond in his shirt front, he carried an elegant chronometer, he pulled the throttle on an engine that was just a hummer, he carried a roll right with him in his inside pocket and he was otherwise pretty well fixed, although he was a workingman.

I found that my friend had grown some since last I met him, and that he had acquired some rather exaggerated notions of his own importance. In our conversation we drifted around to the labor question, and here I found that my friend had developed into an aristocrat. He had a sort of contempt for common laborers. His clear cut enunciation of the doctrine that the four dollar a day man has nothing in common with the one dollar a day man was highly edifying, and his argument on that point was well sustained.

In retrospect I traveled back to the time, long since past, when I had first met this aristocrat, and in my mind's eye there arose a picture of a lank sort of pumpkin husker, with patches on the seat of his pants, callouses on his hands and a cow's breakfast on his head; who didn't know a lazy-cock from the proverbs of Solomon, and who had strayed in from one of the back counties and secured a job of wiping the engine on a work train I was connected with. After some little mental effort I succeeded in identifying the original of this picture as the aristocrat before me, and I was forced to the conclusion that there might be some truth in the theory of metempsychosis after all.

It is gratifying to see a man who has risen by his own efforts from a position of obscurity to one of responsibility and financial independence, remembering the rocky places in the road he has traveled, and placing himself in sympathy with the struggles and aspirations of his less fortunate brothers; but it is inexpressibly sad to see a

man who has thus risen forgetting that he himself was once a fireman, or perhaps a section hand, a farmer or a ditch digger. It is evidence that there is something wrong with his mental apparatus, and such a man is to be pitied.

To note the expressions and actions of some of these aristocratic engineers one would almost be led to suppose that engineers grow on trees, to be picked when ripe, like any other fruit, that they had never been subjected to the common old hard knocks which most workingmen have to endure, and that they were so secure in their position as to be quite certain that they would never have to mix with the common herd in the army of labor at all.

If these aristocrats would pay some attention to political economy they would be able to see that the wage earners are all in the same boat and that the position of the high priced workers can only be maintained by maintaining the position of those below them. Even throwing all truism entirely on one side and trying the case by the canons of pure selfishness, the high priced workers are doing the proper thing when they doff their aristocratic prejudices and unite on the broad platform of the solidarity of all labor.

---

PLANS have been drawn up for what, when finished, will be one of the world's greatest bridges. This new structure is to cross the river Mersey at Liverpool. It will be of arched suspension type in three spans, the roadway being suspended from an arch. Each span will have a clear waterway of 1,000 ft., the center span having a clear headway of 150 ft. above high water of ordinary spring tides. The bridge will allow for a roadway 40 ft. in width, sufficient for at least four lines of wheel traffic, and two outer footways, each 7 ft. 6 in. wide, the roadway being laid with wood and the footpaths with granolithic pavement. In addition to the provision for ordinary wheel and passenger traffic, an overhead electric tramway is to be constructed along the center of the road.—*American Engineer*.

A SCHEME to utilize the World's Fair buildings when the Exposition is ended was recently suggested by Maj. J. G. Pangborn, President of the American Exhibitors' Association. His idea is to make Jackson Park the union station for all the railroads entering Chicago. The great building now devoted to manufactures and liberal arts would be the central station, the largest and finest in the world. The advantage of the lake frontage for water traffic, the many hotels in the vicinity, the easy communication with the elevated and cable lines, and the fact that the terminal facilities already provide for every trunk railroad were dwelt upon.—*National Car and Locomotive Builder*.

THE extremely uniform covering of foreign passenger cars, which many visitors to the World's Fair notice as being remarkable, is due to the siding being of steel about one-eighth of an inch thick. This practice of using steel for covering is followed because the material is cheaper than good wood siding, and the claim is made that it takes a better polish than wood and wears longer without revarnishing. Those who have had experience with iron cars in this country agree that the outside finish is more easily maintained, as there are no nails to work out and no cracking to damage the paint and varnish.—*Locomotive Engineering*.

# WOMAN'S DEPARTMENT.

EDITED BY IDA A. HARPER, STANFORD UNIVERSITY, CALIFORNIA.

## FROM THE CENTER TO THE CIRCUMFERENCE.

STANFORD UNIVERSITY, September, 1893.

From Chicago to San Francisco is a great distance. Even with the splendid system of limited trains and all the conveniences of modern travel, it is a long and fatiguing journey, and the traveler feels a sense of relief when he steps from the ferry at the City of the Golden Gate. I think, possibly, the reader may feel some interest in a condensed account of our overland trip, before we settle down to our usual discussion of the practical questions of the day and age.

Two weeks were spent very pleasantly at Terre Haute, our old home, visiting relatives and friends, and receiving many cordial wishes for a safe journey and a pleasant sojourn in our new home. People always feel an especial interest in those who are going to live in California or any of the states on the Pacific coast. It is so far away and so much in the nature of an experiment. We were disappointed to learn that Mr. Debs was in Wyoming and we should not have the pleasure of seeing him. We called several times on Mrs. Selby and tried to speak an encouraging word which might help a little in the brave struggle she is making to rise up out of her great sorrow, but at such times words are always weak and inadequate.

We left Chicago on a beautiful Sunday in August, via the C. B. & Q. R. R., and made our first stop at Colorado Springs. After a refreshing night's rest at "The Antlers," an excellent hotel, we started early the next morning for Manitou. I had visited this place before but was desirous that my daughter should see its beauties. We drove through the Garden of the Gods, which has a world-wide fame. There is nothing like it on the globe. On a smooth and easy carriage road one winds in and out among great rocks of red sandstone that tower hundreds of feet upwards and assume many fantastic shapes. There are castles and towers, gateways and sentinels; some in the form of huge toadstools, anvils, sea lions, buffaloes, stage coaches—indeed, with but slight effort of the imagination one can find striking resemblances to an infinite variety of objects. Some of these huge boulders are so perfectly balanced it seems as if a touch would send them crashing down, but there they have stood for centuries. What convulsion of nature placed this wilderness of mighty monuments within this limited space, as smooth as if wrought with a chisel, standing in the midst of a barren desert? This is a question which has puzzled the geologists of many countries, who have studied these

peculiar formations. On their sides are curious tracings resembling the human form, the heads of animals, etc., but nowhere the faintest hieroglyphic to tell their own history, and, apparently, it will remain an unsolved mystery to the end of time.

There are many most interesting points at Manitou, among them a drive along Ute Pass, the ancient Indian trail, which formerly was a narrow ledge on the side of the mountain, but by blasting and filling has become a wagon road, which winds up to the summit of the mountain and brings the traveler to the Grand Cavern. This is only one of several immense cavities in the sides of the mountains. Hundreds of people could enter it at one time, it is cool and dry and has many stalactites and stalagmites. In one place, away up in a dark and gloomy dome, these take the form of long, thin segments, from three to eight feet in length and several inches wide, fastened securely in the sides of the cave. By means of a ladder, a young man climbs up into these dark recesses, and placing his lantern on a projecting rock, he strikes these crystal notes with a little mallet, and plays any tune desired. To hear "America" or "Nearer my God to Thee," played upon this great natural organ seemed strangely appropriate, but when "After the Ball" sends out its flippant notes, one feels that it is a sacrilege. The register shows that 20,000 persons visited this cave last year. The attractions about Manitou are endless. There are mountains and caves, falls, glens, picturesque drives, natural parks, diversified mountain scenery, fine mineral springs and the purest air in the world. There are a number of fine hotels and it is one of the most enjoyable pleasure resorts in the country. The visitor, of course, will go to the top of Pike's Peak, which he can do at his ease in a comfortable car, while a locomotive does the work, and there, with his head in the clouds, he can forget for a brief moment that he belongs to the earth.

#### THE CAÑONS OF COLORADO.

The traveler who can spare the time and submit to the inconveniences will so arrange his trip as to travel by daylight through the unparalleled scenery that lies along the route of the Denver & Rio Grande railroad. He will be many times repaid. It is not equalled in this country and I doubt if anywhere abroad can be found such a spectacle. There is every variety of natural scenery and, in addition, an exhibit of as wonderful feats of engineering skill as ever were performed by man. We left Colorado Springs at ten o'clock in the morning and a ride of a few hours brought us to the thriving little city of Pueblo. It seems to have risen up out of the desert, as, indeed, it has. All roundabout appears barren, and yet experience has shown that only water is needed to produce the most excellent results. The water is in the mountains, and how to get it to the sands is the problem which man is considering and gradually bringing to a solution. At Pueblo are the great Colorado Coal and Iron Works, one of the largest of the kind in the world, and many large smelters for gold and silver ore. It has numerous mills and manufactures and is a prominent thoroughfare for western travel.

From Pueblo we turn our faces westward again. The first point of interest is Cañon City, situated at the entrance to the largest cañon ever penetrated by a railroad. At Hot Springs, a mile away, we enter the "Grand Cañon of the Arkansas River," one of the wonders of the world. This river here breaks through the mountains, following the pathway of the cañon. The narrowest part of this is called the "Royal Gorge." Visitors come from Europe to traverse this Gorge, and it does not seem possible that any should ever experience a disappointment. At first sight it would seem incredible that the wildest imagination would ever conceive of building a railroad through these rocky recesses where there was scarcely room for the river to find a tortuous pathway. The road was needed, however, and the wonderful brain of man found the way. The granite sides of the mountain were blasted away and the road bed was literally forced from nature. It follows the contour of the cliffs, with the swift and muddy river so close that one could step from the ties into the water. For seven miles the road runs between these cliffs of solid granite, from 1,000 to 2,627 feet in height. As the train rushes through this awful fissure, only a faint strip of blue sky can be seen over head, and the roar of the train mingles with that of the river as it foams and dashes over the great boulders. At one point where it was impossible to gain the necessary space from the masses of unyielding rock, an iron bridge is suspended from the overhanging walls. The spreading of a rail, the breaking of a girder would mean—eternity. Man seems but an atom, a speck upon the face of nature, and yet—it was his master mind that triumphed over nature and wrested from her the pathway she denied.

After passing through this mighty chasm we follow the winding path of the river for many miles through the mountains. Sometimes they are high, rugged and rock-crowned, sometimes gently sloping and covered with verdure. Occasionally, in a tiny valley, one sees a little house, with a garden patch, a cow, a dog, and children standing in the door, and he speculates on the fate that places them in this spot of utter isolation and wonders what manner of life they lead. And then he looks at the immense spaces of mountains and valleys, solitary and uninhabited, and he thinks of the tenement houses of cities, whose inmates have scarcely a place to lay their heads or a cubic foot of air to breathe. And again he ponders, helplessly and hopelessly, upon the terrible inequalities of life.

Toward evening we reach Salida, and here we must stop and remain over night, if we would see the rest of this gorgeous panorama by daylight. It is always a relief, when making a long journey, to stop off and sleep in a Christian bed. After several nights on a sleeping car it is difficult to have any respect for one's self or one's fellow passengers. The sun was hardly above the tops of the mountains the next morning when we boarded our train for the famous ride over Marshall Pass. From the moment of starting, there is a steady ascent, accomplished by a series of bewildering curves and convolutions. The great mountain range must be crossed and it can

be done only by following the windings of the gulches in an intricate maze. Weaving in and out, the road creeps upward, terrace above terrace, doubling upon its track. The accent is by an almost spiral pathway and, at one point, the traveler looks down upon four lines of road which he has traversed. Far up on the mountain side we come to a freight train which has proved too heavy for its motive power of three engines. We join our force to theirs and our train, with five engines, proceeds slowly upward. At times we can look out of the car window and see both ends of our train. We pass beyond the timber line and look down upon the peaks of many mountains. Like great billows of a mighty ocean they roll away into the illimitable distance. There is no sensation in the world so inspiring as that of riding on and on upon these mountain crests. There is no scenery on earth so magnificent.

At length, we come to Marshall Pass, on the summit of old Mount Ouray. We are in the clouds, nearly 11,000 feet above the level of the sea. It has been gradually growing colder and, all of a sudden, at noon on this August day, we find ourselves in the midst of a snow storm! From Marshall Pass we begin the descent into the beautiful and fertile valley of the Gunnison. Down a winding road, along the edge of precipices, following the course of Tomichi creek, we come down the mountain sides and into the meadows watered by the Tomichi and the Gunnison. The town of Gunnison is beautifully located in the heart of the gold and silver mining country, and the hills and streams in the neighborhood, abounding in game and fish, make it a favorite locality for tourists. The Gunnison river and valley are the most picturesque and beautiful that the imagination can conceive. In a little while, however, the meadows and wooded hills and crystal lakes are left behind, the scenery becomes more rugged, the stream grows narrower and swifter, the cliff grow steeper, we are approaching the great "Black Cañon." This is twice as long as the "Grand Cañon of the Arkansas" and, although not so narrow and so awful in its aspect, it is more interesting. For fourteen miles we ride in an open, observation car through its dark and gloomy recesses. The cliffs are diversified in appearance, some of black granite and other of red sandstone, they rise to a height of 2,500 feet. It requires no stretch of the imagination to see castles and fortresses, pyramids and cathedrals. On the sides grow cedars and pines, and waterfalls dash down the cliffs. We cross and recross many times the swift, dark river, where the sunlight never falls; we gaze in silent awe at that gigantic pinnacle, the Curraenti Needle, and when we emerge from these vast depths, at Cimarron, we feel that all else which nature ever may present will seem dwarfed and small by comparison.

For many miles, after leaving Montrose, the scenery is peculiarly interesting. Across a wide expanse of desert are seen great groups of red sandstone formations which so startle the traveler by their resemblance to castles and churches and cities, that he is confused and bewildered by the illusion. Seen in the warm glow of a declining

sun, they are bathed in a mist of purple and rose and gold that baffles all description, and this scene forms a fitting finale to an experience which would amply repay the traveler, even though it had cost him infinitely more time and money and inconvenience. Evening brings us to Grand Junction, 425 miles from Denver, at the junction of the Grand and Gunnison rivers, on the western border of Colorado. The early morning finds us passing through Castle Gate, two huge pillars five hundred feet high, of a deep, red sandstone, guarding the entrance to the "Price River Cañon." For many miles are wonderful cliffs and beautiful river and mountain scenery. In a few hours we enter the rich and fertile Utah Valley, the garden spot of the west.

#### SALT LAKE CITY.

Through the pretty town of Provo and past that lovely body of water, Utah Lake, flowing through the river Jordan to join its waters with those of the Great Salt Lake, we come at last to Salt Lake City, which we consider worthy of a visit. We find it to be a thriving town which has improved wonderfully within the past few years. The town was beautifully laid out by the original Mormon settlers. The streets measure a hundred and thirty-two feet from curb to curb, and are finely shaded by large trees. Under Gentile administration they are being extensively paved with asphalt, and there is an excellent system of electric railways. To a stranger the interest centers in the associations connected with the Mormon dynasty. The old Tithing House, where a tenth of all the products were taken to be sold for the church, is the first spot to be visited. On the same square is the famous "Bee Hive," or city residence of Brigham Young. All of these are enclosed in stone walls, very high and thick, but through the open gates (for mystery is no longer desired) we get glimpses of a number of houses, apparently divided into apartments or suites of several rooms. The street is spanned by a splendid arch surmounted by great bronze eagles, built by President Young. Across the street is the pretentious residence occupied by "Amelia," the favorite wife. All of these wives and their numerous children are scattered now, and it would be useless to repeat any of the marvelous tales that are told in regard to them.

Occupying an entire block, which includes ten acres, are the grounds containing the Temple and the Tabernacle, and surrounded by a very high wall. The latter is the ugliest building imaginable, resembling a great ante-diluvian turtle, and yet it is one of the most wonderful structures in the country. It seats several thousand people, its arched roof has no visible support, and its acoustic properties are so perfect that a whisper on the platform can be heard distinctly in the farthest corner of the gallery. The Temple is one of the beautiful buildings of the world. It is built of gray granite, covers an area of 21,850 feet and rests upon a foundation wall sixteen feet wide and sixteen feet deep. It is 99 feet wide and 186 feet long and has six towers, rising into the air 222 feet, and the central one is surmounted by a magnificent statue, twelve and a-half feet high. It

represents the angel Moroni, blowing a trumpet, and is made of hammered copper gilded with pure gold leaf. It was completed and dedicated April 6th, 1893, just forty years from the day it was commenced. The story of its building would cover the remarkable history of the Mormon people during this period. The interior of this Temple is said to be magnificent in finish and decoration but only a chosen few are permitted to enter. "The general public will be admitted at five dollars a head, before a year," said a scoffing Gentile. We visit the Great Salt Lake, the noted Garfield Beach and the new resort, Saltaire, with their pavilions, their bands of music and their fine beaches. A chapter might be written of this interesting place, but space forbids.

It is with something of reluctance we take the Southern Pacific, at Ogden, and start on the long, hot and dreary journey across the Nevada desert. Wide, arid wastes of burning alkali sands, bare and blinding stretches of mountains in the distance, the scorching sun shining out of a brazen sky—there is nothing to relieve this terrible trip except an occasional oasis where the train stops for water and the passengers rush from the cars for a sight of green grass and a breath of fresh air. The desert comes to an end at last, and Reno, which marks its termination, will ever remain a name blessed in memory. We begin the ascent of the Sierra Nevadas and the cool mountain air rushes in like a breath from heaven. Rocks, rivers and mountains form a magnificent panorama of natural beauty. Truckee is "roofed like an Alpine village" and suggests the snows of winter, and two great engines bring us to the highest point on the road, Summit, on the very top of the "divide," which separates the waters of the mountains and sends them to the east and the west. Over 7,000 feet above the sea, we can still look upward to the mountain peaks 3,000 feet overhead.

It would be idle to attempt a description of the scenery. The mountain pass, Cape Horn, has an international fame. The road bed is carved from solid rock and the passenger may look straight down into a chasm 2,500 feet in depth, as his train apparently clings to the rocky mountain side. Through tunnels, past abandoned gold fields, we reach at last the fertile plains of California, the unsurpassed farming regions of the Sacramento Valley. Sacramento is the capital, the geographical center, and the great distributing point of California, and a beautiful city. Only those who have experienced it, can know the enjoyment of riding through these superb valleys, rich in all the most bountiful products of nature, after the long journey through barren mountains, rocky cañons and desert wastes. It is paradise after purgatory. The heart thrills with joy and overflows with thankfulness, and every tree, bending with its weight of fruit, every vine heavy with its wealth of blossoms, seems to utter a welcome to the weary traveler.

We breathe the pungent odor and bracing air that come over salt water, and the great bay of San Francisco rolls before our enraptured gaze. Oakland, set like Rome on her seven hills, greets us from her

wind-swept cliffs. We are carried over the great ferry and precipitated into the bustle and confusion of that most cosmopolitan of all cities—San Francisco. Glad, indeed, are we to find ourselves in one of her spacious and comfortable hotels, where, after a bath and a dinner, we may forget in sleep all the fatigues and discomforts of the past week. Another bright, Sunday afternoon finds us wandering through the lovely walks of Golden Gate Park, a masterpiece of landscape gardening, reclaimed from the sands of the sea. Bands are playing, elegant carriages are rolling by, thousands of men, women and children are strolling along the shaded walks or sitting in the radiant sunshine. After awhile we go down to the sea-shore and listen to the great waves as they roll and break upon the beach, and find infinite amusement in the antics of the seals which cover the huge rocks. In the distance are the mountains; nearer, the Golden Gate, leading into the most perfect harbor in the world; ships of many nations; the frowning batteries guarding the entrance; the old Mission houses, a picture that repays one for crossing mountains and deserts.

The next morning, nine days after leaving Indiana, we take our train, and an hour's ride down the charming Santa Clara valley brings us to our destination—the great Leland Stanford, Jr., University, which shall be described at some future time. After nearly eleven weeks of travel, extending from the far east to the extreme west, we were glad, indeed, to reach the end of our journey. We had packed and unpacked our trunks nine times, and had slept in twenty different places. In all our travels not an accident, not a train missed, not a piece of baggage delayed; and so it was with thankful hearts that we set about to put in order and make comfortable our new home.

---

#### WHEN LIFE'S JOURNEY IS O'ER.

When life's fitful dream is over,  
And our last farewell been said,  
When loved friends are gathered 'round us,  
And tears of grief for us are shed;  
Will the parting be eternal  
When life's journey shall be o'er?  
Or shall we be re-united  
To be parted nevermore?

When our hands are calmly folded,  
O'er the breast so cold and still,  
When the heart's deep, strong pulsations,  
Shall in slumberous rest be still;  
When the silence brooding o'er us,  
Tells of a home more bright and fair,  
Where we've gone to greet our loved ones,  
Shall we meet and know them there?

WEST OAKLAND, CAL.

When we've crossed the cold, dark river,  
To a brighter, fairer shore—  
When the joys of heaven, celestial,  
Shall be ours forevermore,  
Will loved friends now gone before us  
Meet us as we cross the tide?  
Shall we know them in that haven  
Where with Christ they now abide?

When we leave this world of sorrow,  
And our souls shall be at rest;  
When we wear a crown of glory—  
Our hearts no more with grief oppressed;  
When our weary feet shall enter  
Heaven's gate that stand ajar,  
May we meet and know our loved ones,  
Where sorrow ne'er can come to mar.

Mrs. Nellie Bloom.

## WOMANS RIGHTS.

I shall ask for a small space in the columns of the MAGAZINE to say just a word on woman suffrage, which we see discussed in our journal and daily press. I am in favor of woman's rights, because she is entitled to them, although she has failed to secure them, as yet, and I hope the day will not be far distant when woman will be given her rights. Some say she would neglect her home, children and husband. I think not more so than men will, and not so much, for she takes more interest in her home. Others say she is not educated or qualified to vote. Look, if you will, at those men who cast their votes every election. Many of them know no more what they vote for than a babe would, only their fathers voted that way. Some men will sell their vote for the almighty dollar; others for a drink. Few women would do this, and few would not know what or whom they were voting for. We all know that as a class women are better educated than men. Look at our women and girls who are holding positions of responsibility. The census of the United States, of 1890, shows that we have 2,700,000 bread earning women, outside of domestic service. Out of 100,000 in New York city, three-fifths of them support families on small wages. Cash girls receive from \$1.00 to \$2.50 a week, sales women from \$3.00 up to \$16.00 or \$18.00, and if a minute late are fined 30 cents. Can you be surprised at the unfortunate girl who loses all? What would you do if you had no home or friends and were compelled to work in a city at \$1.00 or \$2.00 per week. You could not pay your board and only one way was opened—starve or sell your honor. And yet they have no influence in regulating wages. It seems to me that men want to hold women as slaves, but the days of slavery are passed. Again, look at our liquor bill. The United States, with 65,000,000 people pays annually \$700,000,000, or about \$10.00 to every one person, for liquor. I would not say a word on this subject if the one that partook of the cup only suffered, but it does not stop there. It reaches out to the homes, the wife, mother and children. It comes to the innocent ones. It is the wife that puts the children to bed hungry; the wife that sits waiting for the foot steps of a drunken husband; the wife and children that are brought to disgrace, and yet she has no right to a voice in making the laws for her protection. In other words, she is a slave. You call and she comes. Tell her to go and she goes. Some men think that a wife is only given for a companion at home. She has no right at all without asking her lord and master (husband). And again, some say she is too weak, she would allow her feeling to rule instead of just evidence. But I believe you would see a reform if women were given their rights. I do not think you would see our trains running on the Sabbath, as they do now. We brothers would know when Sunday came, and get a little rest. We would not see the liquor sold that is sold to-day. We would not have had the hard times and the present financial condition of our country to-day if women could have voted last fall.

## HOME INFLUENCE.

There is music in the word "home;" to the old it brings a bewitching strain from the harps of memory; to the young it is a reminder of all that is near and dear to them.

I once read a story of an Englishman who had left his home and native land to view the splendors and enjoy the pleasures of Paris, that bright center of the world's follies and pleasures. He had beheld with delight its paintings and wonderful works of art; yet in the midst of his enjoyments temptation assailed him. Sin was presented to him in one of its most bewitching garbs. He drank wildly of the intoxicating cup until reason was overwhelmed; he reached out not knowing where he went, the cool night air lifted the damp

locks from his heated brow, and swept with soothing touch his flushed cheeks. Strains of music from a distance met his ear. Going in the direction the sound indicated, he at length distinguished the words and air; the song was well remembered it was "Home Sweet Home." Clear and sweet the voice of some English singer rose and fell on the air. Motionless the wanderer listened till the last note floated away and he could hear nothing but the ceaseless murmur of a great city. Then he turned slowly with no feeling that his manhood was shamed by the tear which fell as a bright evidence of the power of song. The demon which dwells in the wine had fled as the soft notes of "Sweet Home" floated to his ear; memory brought before him his own sweet home. He saw his gentle mother and heard her speak while honest pride beamed from her eye of her son in whose nobleness and honor she could always trust; and his heart smote him as he thought how little he deserved such confidence.

He remembered her last words of love and counsel, and the tearful farewell of all those dear ones who gladdened that far away home with their presence. Well he knew their pride of him and a tide of shame swept over him as he felt what their sorrow would be could they have seen him an hour before. Subdued and repentant he retraced his steps; and with the vow never to taste of the draught that could so excite him to madness was mingled a deep sense of thankfulness for his escape from further degradation. The influence of honor and the thought of a tender mother had protected him, though the sea rolled between.

None can tell how often the commission of crime is prevented by such memories. If then the spell of home is so sweet, how important it is to make it pleasant and lovable.

Many a time a cheerful home and smiling face do more to make good and noble men than all the eloquence that can be used.

It has been said that the sweetest words in our language are mother, home and heaven, and one might almost say the word home embraces them all; for who can think of home without remembering the gentle mother who sanctified it by her presence? and who can picture a happy home without a mother? and is not home the sweetest name for heaven?

We should make our home the center of all our joys; so that the tired ones on returning from the weary cares and perplexities of life, may meet nothing but bright faces and kind words. Then if they are not good and happy, we know we have done our duty and are not to blame.

LEADVILLE, COLO.

### ECONOMY AND STYLE.

It is quite possible to secure for oneself a very stunning outfit, such as jewels and a handsome rig, at least long enough to make some calls, and by not paying a cent for it. Mrs. So and So, being a good customer, can have what she wants sent home "on approval," and she may keep it two or three days if she likes. The firm may know very well that she uses the things meanwhile. Indeed, perhaps she stops at the store with something on that is designated "on approval" at that moment on account, but then she wears things very carefully and they are returned in perfect condition. Mrs. So and So gets the heavenly little poodle she carries in just the same way. The dog fancier knows her to be a woman of means. Sometimes she will buy a dog. She takes the best care in the world of them, and if she wants one to keep a few weeks and find out whether she likes him, on the whole he does not lose by it, for she will send him custom. The florist is just as generous. Even a horse, coupe, harness and private driver can be had in just this way on trial and by no dishonesty. It is a part of the first-class tradesman's business to do this kind of thing, and you must not think that the woman who has so many things has more money than you. Likely as not it is merely that she has more brains.—*Ex.*

NOVEMBER, 1893.

## REDUCTION OF WAGES.

Railroad corporations have formed a national organization for purposes which it behooves employees to notice with special concern. One of the ends aimed at by the combination is to reduce wages, while the organizations of railroad employees are animated by an intention to maintain wages when an equitable rate has been reached, and to obtain an advance when wages are less than reasonable and fair.

The corporations have seized upon the disturbances in business affairs to put forth their ultimatums which require employees to surrender at least 10 per cent. of their wages. And thus it is seen that the corporations intend to make their employees, generally overworked and underpaid, suffer, and by their sweat and toil make good all their losses resulting from business depression.

Railroad corporations, when business on their tracks declines, at once take off trains, reduce the force, retire men to idleness, to wait until business revives; but not content with this they demand of those who are and must be retained, a 10 per cent. reduction, and notwithstanding profit and loss have been equalized by the discharge of men and the general reduction of the train service, their greed can be satisfied only when those who are retained are made to yield up a portion of their wages.

In this connection it is proper to state that the corporations make no reduction in rates that is not designed to swell the sum total of the receipts, as for instance, World's Fair rates, to induce travel, whereby one cent a mile reduction increases the travel from fifty per cent to a hundred per cent.

Under such circumstances what ought em-

ployes to do? We have no hesitancy in saying that they ought to resist by every means in their power the reduction of wages. They will find that wages once reduced they remain reduced for long periods, and probably will never, except in rare instances, be restored. Corporations make money by reducing wages, the reduction of wages meaning millions to them, while it means sacrifices to the employee. Corporations do not believe that the advance in wages is the way to make money, and they have no other mission in this world but to accumulate riches. We advise railroad employees to resist a decline in wages. The present business depression will soon have passed away to be succeeded by business activity, but if wages are reduced long years will intervene before the demands of justice will gain a hearing.

## THE BROTHERHOOD AT THE WORLD'S FAIR.

The grand lodge having received an invitation from the World's Congress Auxillary of the World's Columbian Exposition to send representatives to the Labor Congress, to be held at Chicago during the week of August 28th, 1893, Bros. Wm. F. Hynes and Charles W. Maier, of the Board of Grand Trustees, who had just completed their annual examination of the grand lodge books, were delegated by the grand officers to attend the Congress as the representatives of the brotherhood, and in pursuance of such appointment, they attended the Congress, and at the close of its deliberations they filed the following report and address with the grand lodge, to which we cheerfully give space in the MAGAZINE:

DENVER, COLO., September 2, 1893.

Mr. F. P. Sargent, Grand Master B. of L. F., Terre Haute, Ind.:

DEAR SIR AND BROTHER:—We herewith submit our report of the World's Labor Congress, held in Chicago, August 28th, 1893, as delegates appointed by you on August 23d, to represent the Brotherhood of Locomotive Firemen at that Congress, and also to prepare a paper and present the same to that body:

On the opening of the Congress we presented our credentials to the Secretary, Mr. Lloyd, who received us very kindly and gave us a place for the delivery of our paper, on the published programme for Wednesday, August 30, at 11 o'clock. Afterwards, in the course of his remarks before the Congress, he complimented the Brotherhood of Locomotive Firemen very highly, that we need hardly mention, was most gratifying to us.

Mr. Charles C. Bonney opened the Congress on Monday morning, in the Art Institute, in connection with those of the department of social and economic science, before an immense audience representing organized labor from every civilized country in the world. On calling to order, the presiding officer read a short paper on Co-operation.

M. Victor Delahaye, the well-known political economist, and member of the French Institute, and also of the Superior Council of Labor, in Paris, gave a brief address. Then came the German and Belgian representatives, who were followed by Mr. Herbert Burrows, of London, in a short but powerful speech on the deplorable condition of the wage workers in England. He recited the wonderful

improvements that have been made and are being made by organized labor in that country.

Miss Kate Field, of Washington, D. C., read a very entertaining and instructive paper that was written and forwarded to her by Lady Dilke, of England. Other prominent ladies of Europe and the United States presented interesting papers on woman's place in the labor world.

Of course, the Congress management gave, and very properly, the first place to the representatives from foreign countries.

Wide and liberal Australia was represented with great depth of thought and energy of purpose to strengthen the hands of labor and elevate humanity, as was also liberty loving Switzerland. Even Syria was represented, and strangely enough, by a woman, Mme. Hanna Korany, of Beyrout, who read a paper on Women and Children in the Orient.

Those papers were disposed of in this manner: When a paper was read, each person, on sending their card to the chairman, was allowed five minutes to discuss its contents. This gave an opportunity to every one, and resulted in bringing out much valuable information.

The two great speeches of the session were made, one by Henry George and the other by Dr. Edward McGlynn.

This report could be continued for many pages, mentioning the prominent labor leaders and teachers of labor's school that participated, and giving extracts from their able papers, but we are of the opinion that you do not desire it. However, we deem it our duty to mention the fact that the Chicago press failed to recognize in the Congress its great importance and value to organized labor, or recognizing it, perhaps were anxious to depreciate it by their very meagre and indifferent reports of its proceedings. In our opinion, it has been of incalculable value to the cause of labor.

The Brotherhood of Locomotive Firemen was the only railroad organization that was represented by its own members.

Attached, please find a copy of the paper that we had the honor to present in the name of the Brotherhood of Locomotive Firemen, to the Labor Congress, and trust that its expression will meet with your approval. We also enclose a copy of the published programme. We remain,

Yours fraternally,

W. F. HYNES,  
CHAS. W. MAIER.

The following address was delivered by Bro. W. F. Hynes as representing the Brotherhood of Locomotive Firemen:

#### ORGANIZED LABOR AND THE REPUBLIC.

This is a period unprecedented in the history of organized labor.

When we consider the occasion and the great events and thrilling memories that are associated with and leads to its culmination, and seeing gathered in this mighty assemblage from every clime the distinguished and learned of Church and State, all in the great and noble cause of labor's elevation, I feel what must be a spark of that enthusiasm that fired the patriotic soul of Roger D'Isle when first he touched the inspiring keynote of his ode to liberty.

"Come children of my country, come!  
New glory dawns upon the world."

And after all what is of more vital importance to the destiny of the Republic than the solution of the labor problem? It has been asserted and oft repeated that to settle the labor question, you must first settle the woman question. I desire to add that before any satisfactory solution can be given to either, you must restore to childhood and to youth their simplicity and innocence, return to the schools their rights and prerogatives, give back to the family and home the objects of their most cherished affections, that has been so cruelly torn from them, the sunlight and music of childhood's laughter; reduce the dividends and profits of the factories if you will, but preserve the well-springs of the nation's manhood and womanhood.

Labor has by its organization secured that res-

pect so long denied by ignorance and prejudice. It has in its wide and liberal school of philosophy emphasized the truth that no man can hold a position so humble that he cannot exalt it, nor so exalted that he cannot degrade. It has inspired and encouraged the student of political economy, and elevated and embellished contemporary literature. As if anticipating the present deplorable condition, it has for years urged the importance of the reduction of the hours of labor. This one reform alone would give employment to thousands that now roam the streets in idleness and classed with the wild and irresponsible mobs of the unemployed.

I am convinced that the greatest and most powerful weapon in the hands of the labor of the United States is the ballot-box. Here obnoxious and unjust laws can be repealed and wise and prudent measures enacted. Through it an unworthy servant of the people receives his severest punishment and the faithful his highest reward.

Whatever complaints may be made against it, they are of our own making. The ballot-box is the voice of the people and through it those great economic propositions will be placed in actual operation. The great service that it can be made to perform for the cause of labor is not fully realized at present. The power and influence of the ballot for good, advances with the intelligence of the voter, and there is where organized labor will make its greatest gains.

Let us look for a moment at some of the conditions that surround the toilers and harrass their patience until such ominous murmurings are heard that even now have reached our doors, for indeed,

"The variegated jade will wince whose  
Harness rings so much into the raw,  
As quite to wrong her beyond the rules of posting;

And the mob at last get tired of imitating Job."

Those who build colossal fortunes and permit their workmen, who have so materially aided in the success of their business, to live in constant dread of poverty's wolf, that ever watches at their doorsteps, harbors a brutality that may be understood or even expected under governments of monarchy and steel, but is nevertheless a crime wherever permitted.

Marie De Medicis luxuriating in her pomp and voluptuousness, had erected the magnificent and now historic palaces of the Louxembourg, forgot, if she ever knew, that David D'Anvers under the inspiration of his dawning genius, had beautified their walls with his matchless skill and ingenuity for sixteen cents a day. The enormities of 1793 had followed. To-day thousands of families can be found, without the use of a search light, whose income does not exceed this, and we who have lived to see the eye lit up by the fire of indignation, or grow soft and tender under the dew of pity's tear, can understand and appreciate Goldsmith's warning:

"Ill fares the land, to hastening ills a prey,  
Where wealth accumulates and men decay."

Labor protests against that alleged charity made possible by the denial of justice. And those patronizing gifts that are periodically heralded over the land reminds one of the bandit who first robs you and then returns a fractional portion of the spoil, that you may bless his generosity and magnanimity. If we had more justice, we would have less need for charity. I sometimes think it would be better to take the bandage from the eyes of Justice and place them upon those of Charity.

The great fundamental truths upon which the whole fabric of this government is constructed, are the very essence of those studies in economics that is agitating the world to-day, and to whose schools of thought, organized labor has given its greatest number of pupils, questions that underlie the social evils of our civilization and must be met and solved sooner or later. True, human nature cannot be changed. From out its natural imperfect state, perfection can never emanate, but I feel that man's social condition can be wonderfully improved. The democracy of the American people has set the pace, and the world rejoices in rosy hopes of emancipation.

### "I'M HUNGRY."

At a meeting of the unemployed of Chicago, held August 22, a workman by the name of C. N. Reed, a piano finisher, made a speech reported in the *Inter-Ocean*, as follows:

"We would like to hear from any brother who hasn't spoken yet," he said. "I haven't eaten a bite for two days, and my wife lies at home sick and starving. I've looked for work until I'm worn out, and where is it to end?"

Mr. Reed's speech contains, for its length, a wonderful amount of pathos. It is particularly pathetic. He tried to say more, but choked, and tears streamed from his eyes and ran down his cheeks. No food for two days. No wonder his first words were "I'm hungry." Probably Mr. Reed is one of those sturdy, law abiding working men who would rather starve than steal, would rather see his sick wife die than keep her alive on food dishonestly obtained; one of nature's noblemen, one of those who constitute the "salt of the earth and the light of the world." But how long can the most heroic resist the pangs of hunger in a land where food is in boundless abundance. What must result when thousands of men and women parade the streets, exclaiming in unison "I'm hungry."

Why this state of affairs? Why this army of idle men, this menacing peril? The banks have locked up the currency. Proprietors have shut down factory, mill, forge and mine. Railroad managers are reducing forces. The army of the idle increases, and in midsummer the cry is heard, "I'm hungry." Will it be heard when the mercury is down to zero?

THE *Switchmen's Journal* has an editorial article, captioned, "Turn about is fair play" in which reference is made to the wide spread discharge of men by railroad corporations. In the course of the article the editor says:

Already a reduction has been put into effect in such branches of the service in which the men are not organized, and hence were not able to resist any such attempts as are the organized men in the operating branches. The companies, having no resistance to fear, simply announced a reduction and the employees had no option but to submit to the cut or give up their positions. In the transportation department the existence of the various organizations made it necessary for the companies to proceed with greater caution. What we mean by the transportation department is the engineers, firemen, conductors, trainmen, switchmen, etc.

It would be interesting to name the corporations that have failed to put into operation their reduction policy, because of "the existence of the various organizations;" our observations lead us to conclude that it is practically impossible to get the various organizations to act as a unit, no matter what the cause may be. There is always a large number voting the way the corporation would like to have them. The discussion of the

reasons why the corporations demand a reduction of wages has little or no effect upon a large body of employees, they simply vote to submit, setting forth as a reason, if they strike the corporation can promptly find men to take their places, and hence, instead of a reduction of wages, they would be out of employment and have no wages at all.

Early last spring the switchmen employed by various railroads made an application for more pay. A great howl went up that they were taking advantage of the corporation by means of the increased traffic caused by the World's Fair. The metropolitan press severely denounced this movement, and the railroad corporations were harsh in their criticisms. The public got an impression that the men were trying to take an undue advantage. The companies refused to accede to the request and the men let the matter drop. Now that the men are placed at a disadvantage some of the railroads are inclined to do precisely the same thing for which they denounced the switchmen so severely last spring. Many of the men are out of work, and those who have employment know that with so large an army of the unemployed their position is not so strong as usual. The organizations are under large expense and loss owing to the great number of men out of work. Thus the men are placed at a disadvantage, and it does not seem that the railroads have any scruples now about taking advantage of this condition of affairs.

The foregoing quotation from the *Journal's* article indicates that the switchmen were more alive to the influence of public opinion at the time they demanded more pay than the corporations now are in demanding a reduction. "Public opinion," so called, is always a manufactured article and can be had as demanded by the use of money; and as the corporation has always had a larger bank account than the organization could boast of, public opinion has been on the side of the corporation. The "turn about" and the "fair play" of which the *Journal* speaks will come when men can be taught that "an injury to one is the concern of all." When that good time will come the Lord only knows; it is not yet in sight.

THOMAS A. LYNCH, of Watertown, N. Y., has been placed in nomination for Member of the Assembly of his state and it is to be hoped that all men who are in favor of having labor represented in our legislative halls will support him at the polls. Bro. Lynch is a member of the Brotherhood of Locomotive Firemen whose record bears ample testimony that his heart throbs responsive to every interest of workmen. The *Globe* says of him:

While a conductor he was injured in an avoidable accident which unfitted him for that position, and he became a fireman. In due course of time he was made a locomotive engineer. After handling the throttle for two years his injury compelled him to give up railroading, and he found employment in a carriage shop in this city where he has since been at work. While railroading he realized the necessity of organization and labored to make the railroad men more harmonious. He induced the firemen to organize the local lodge in Watertown and he also took an active part in organizing the carriage-makers' organization. He has been elected four times as delegate to the convention of Brother-

hood of Locomotive Firemen and represented the carriage and wagon workers of this city in their annual convention held in Chicago last August. He is a member of the Trades Assembly and several of the labor organizations of this city.

Mr. Lynch is an able representative of the laboring classes. He stands high among the labor organizations of the city, and has many friends among workmen. Mr. Lynch is emphatically the workingman's candidate, and he ought to receive the votes of all who desire to maintain the dignity of honest labor.

THE MAGAZINE heartily endorses what is said in commendation of Bro. Lynch whom it knows to be an honest, conscientious man who could be relied upon under all circumstances to faithfully represent his constituency. Every workingman should regard it a privilege as well as a duty to cast his vote for such a man.

THE *Railroad Trainmen's Journal* for October, has a well written article on "Railroad magnates in their true colors," in which the purpose of the reduction policy is fairly outlined. Referring to the policy of the railroad magnates, the *Journal* says:

Not satisfied with a fair return he reduces working forces about one half and then notifies the remainder a reduction in wages is necessary that he may conduct the business. The force reduced and with two men for every position the reduction is easy of accomplishment. As soon as the reduction is fully in operation the men are taken back by degrees until all are at work, but at a reduction. The railroads adopted this plan. Men were laid off in large numbers and the wages reduced. They will all have to be taken back for no road can be operated without having the attention given to maintenance that the business demands and men are necessary and sooner or later will all be re-employed. The same plan of reduction was applied to the men in the train service. While business is dull the men are not all needed; the number of crews is reduced and then the companies use the large number of unemployed to intimidate the remainder to an acceptance of their terms without any hostile demonstration.

What did the various brotherhoods conclude would remedy such a state of affairs? The answer is, system federation. It has been tried on the Big Four system, and produced a first-class fizzle. The brotherhoods whose members received the largest pay, and could stand the reduction of wages, voted to submit to what the *Journal* esteems a great outrage, and those who could barely keep soul and body together, realize what a charming thing system federation is to the corporation, but the men who voted to submit, talk lustily of what they are going to do later on, when spring chickens turn up their legs and ask to be fried.

#### THE DANGER OF PROCRASTINATION.

MR. EDITOR:—The death of my brother-in-law, Mr. George P. Wright, in the recent terrible accident on the M. & G. railroad, was attended by circumstances which forcibly illustrate the danger of delay, and will show to other firemen the supreme importance of uniting themselves with our order as

soon as they are eligible, thereby protecting their loved ones in case they should be suddenly called away. George had put in his application, it had been favorably acted upon and he had been duly notified of his election. But as he was supporting his aged mother, as well as two brothers and a little sister, he was compelled to wait until the 29th inst.—pay day—to furnish us with his initiation fee. Alas! pay day never came for him! and now, as he had no insurance, his dear ones are left penniless and will have to be separated. Procrastination certainly is the thief of time. Had he only gotten in with us what a help it would have been to his dear ones. George's death was a great shock to me; I have not felt like the same man since it occurred, but coming home to me as it does, and illustrating what a slender margin separates time from eternity for us, I deem it my duty to point out to firemen who may be surrounded by circumstances similar to his, and who have delayed joining our order, the danger they incur by following such a course. I have labored hard to build up our lodge, and have been put to no little trouble, often being forced to borrow money to meet assessments in order to keep from expelling members, but I love the order and I never lose the opportunity to praise it up, and to show our MAGAZINE which is read and praised by some of the most intelligent and ablest of our writers and scholars.

COLUMBUS, GA. GEORGE E. WILHELM.

#### SIGNS OF THE TIMES.

Those ten per cent. off boys are at it again, They are cutting and slashing with paper and pen; All along the whole line with a will they advance, Just the first glimpse they get of a plausible chance.

They're been watching and waiting impatiently long

To assail us with vengeance decidedly wrong. How they gloat in their joy like the very old deuce Taking ten per cent. off with flimsy excuse.

When the traffic was heavy and coaches were full, Just as much as the engines could manage to pull, When the stockholders gloried in dividends high, And reserve funds could please the most miserly eye,

During years that are passed, not a movement was made

To advance us a dime in such booming of trade. Till we went and insisted, but boys, just discern. How rapidly down come the dollars we earn.

What a problem's confronting our people to-day, Who can solve it, this problem of labor and pay? Many men think they have the solution at hand In that weary old chestnut, "supply and demand;" Many more think that strikes if successfully fought Are the tollers' best weapons, while others long thought

Arbitration the only sure cure for our pains, But the problem continues to worry their brains.

Here is one fact we have to afflict us to-day: All the ten per cent. off boys are cutting our pay; And they don't seem to care if we like it or no. For they jointly decreed down our wages must go. It is starve or submission; God pity the poor, There is only of one thing on earth we are sure, It is death, and I also might add by the way, We are sure of a grave once our bodies decay.

Shandy Maguire.

## WM. D. ROBINSON MONUMENT FUND.

Wm. D. Robinson, who died at Washington, Ind., on November 7th, 1890, was the founder of the Brotherhood of Locomotive Engineers, and in doing this great work, he as certainly laid the foundation of the Brotherhood of Locomotive Firemen and all other organizations of railway employes.

In closing our obituary notice in the December, 1890, issue of the MAGAZINE, we said:

In this hour, when Locomotive Engineers and Firemen stand uncovered at the tomb of Wm. D. Robinson, the question arises, What can be done to perpetuate the name, the fame, the memory of a man who gave the best years of his life for their benefit? Is not the answer, We will build him a monument worthy of his deeds, of his labors and sacrifices? We will believe that such is the response.

If it is, let the good work begin, and let it be carried forward until a granite or a marble shaft shall mark the spot where his dust reposes.

"What hallows ground  
Where heroes sleep?  
'Tis not the sculptured  
Plies you heap!  
In dew that heavens far  
Distant weep  
Their turf may bloom.  
Or genii twine beneath  
The deep  
Their coral tomb.

"What's hallow'd ground?  
'Tis what gives birth  
To sacred thoughts in  
Souls of worth!  
Peace! Independence!  
Truth go forth  
Earth's compass round  
And your high priesthood  
Shall make earth  
All hallowed ground."

The poet's idea is correct. Where Wm. D. Robinson sleeps his last sleep is hallowed ground, and monumental marble could add nothing to its sacredness. But it is all of that without reference to the living. What can the living do to bear testimony that the last resting place of Wm. D. Robinson is hallowed ground?

We do not believe the name of Wm. D. Robinson is soon to perish and be forgotten. We believe the brotherhood he founded will be his imperishable monument, and that his name in connection with that great order is to increase in lustre as the years flow on. But that does not cancel the debt of gratitude the two great brotherhoods of the locomotive owe his memory, which if not met, will, in the judgment of mankind, cover the living with obloquy.

We believe the Brotherhood of Locomotive Firemen will respond in a way that will bear eloquent testimony of their appreciation of the life work of the man that made their organization fruitful above measure of blessings to locomotive firemen. Alone and unaided, our order, for the small sum of 25 cents each, could do the work. But we prefer doing it in conjunction with the Brotherhood of Engineers; nor would we confine subscriptions to the two orders, but would invite all the brotherhoods engaged in the train service of railroads to join in the great work of gratitude.

In discussing the propriety of erecting a monument to perpetuate the memory of the

dead philanthropist, we said in the April issue of 1891:

The idea of building a monument to perpetuate the name and fame of Wm. D. Robinson, originated with the FIREMEN'S MAGAZINE. The time has come for action. Contributions should be made. We have said that 25 cents each from members of the B. of L. F. would build the monument. But we surmise that other orders would want a place in the splendid work proposed, and we have opened in the Grand Lodge office of the B. of L. F.,

## A ROBINSON MONUMENT FUND.

Every contribution, however small or large, will be acknowledged in the columns of the MAGAZINE under an appropriate head, and when the contributions approximate a sum which gives assurance of success to the enterprise, a commission made up of the members of the various brotherhoods will be constituted to take charge of the fund and prepare for work.

Members of the various orders subscribing should designate their calling, and if they will give their address, it will be regarded as a favor.

Now, let the good work proceed. Wm. D. Robinson, when alive, was the friend of the workingman. He wrote and spoke and toiled to establish a brotherhood and to teach men the power of organized labor. Railroad trainmen had no more ardent and

unselfish friend. Let a monument bear testimony that death did not sever the tie that bound him to the living.

If ever a man deserved the grateful homage of his fellows that man was Wm. D. Robinson. He devoted the best years of his life to the great work of organizing railroad men for their moral and material advancement. He toiled without recompense, he endured privations and made sacrifices, the half of which will never be told. He lived and died

WM. D. ROBINSON.

in poverty, that others might fare better than was his lot. Every man, woman and child who has been, is now, or ever will be the beneficiary of any of the brotherhoods of railway employes, owes Wm. D. Robinson a debt of gratitude that can never be paid. Such a man deserves a monument to bear testimony of the love and gratitude of those for whom he accepted poverty, persecution and all their attendant ills, and every member of every organization of railroad employes should cheerfully contribute his mite, small as it may be, to such a noble purpose. Contributions may be directed to the LOCOMOTIVE FIREMEN'S MAGAZINE, Terre Haute, Indiana, all of which will be acknowledged in its columns.

## JUDGE ALTGELD AND THE ANARCHISTS.

MR. EDITOR:—While looking over the pages of our MAGAZINE for the present month, I was surprised to notice the stand you take in defense of the Chicago anarchists, and not that alone, but you seem to so highly indorse the governor's action in liberating them. You also agree with him in saying these men were not given a fair trial because of the judge being prejudiced and the jury "packed."

However, be that as it may, they are "anarchists." Now, in the face of the fact that they are anarchists, do you think you are justified in pleading that these men were not guilty and should be exonerated from all blame for the murder of those men sent to "Haymarket Square" as defenders of the peace? I say it is entirely wrong of you as a member of the B. of L. F., and have no hesitation in saying your sentiments will be ignored (or should be) by every member of the order, and more especially when you set yourself up as the "exponent" of socialism and use our MAGAZINE as a means of sending broadcast your views.

I certainly understand our MAGAZINE is a paper through which mostly any topic can be discussed, "especially the rights of workmen." But when its pages are used to advocate the principles of anarchy and speak for the rights of men whose very hands are steeped in gore, I consider it entirely wrong and should be denounced by every member of the brotherhood. Anarchy we should and must shun as we would a rabid canine.

And when the editor of our MAGAZINE contaminates its pages by trying to establish the innocence of such lawless characters as Fielden, Neebe and Schwab, he should be made to feel a sense of incongruity. I wonder what the members of our brotherhood think of it, or do they believe in having a man at the head of our editing department who will sympathize with such men? And shall we stand by and look calmly on while he unfurls to the breeze the red flag of anarchy? We must admit that to do so would be absurd indeed, and such despicable demagogues should be silenced forthwith and never allowed to swell the ranks of our organization. Our brotherhood as it stands to-day has been and is recognized amongst the foremost in the land, and I think it would be unwise for us to link ourselves with anarchy. And I now ask you, Mr. Editor, do you think you have taken a wise step? I feel that in doing so you have done something that will have a demoralizing effect on our order, and should we sympathize with members of such a society, we must make up our minds that the respect and recognition we have gained in the past will be converted into disrespect. The ennobling principles of our brotherhood are not to be dis-

persed with for those of a murderous mob whose only desire is to throttle the law and crush justice to earth.

Our banner, on which is inscribed the fear of God and the highest love of man, we will never forsake; the principles of our brotherhood, which have gained for us the esteem of the public, we will never part with. Will we adopt the mottoes of "anarchy," which are nothing less than rapine, murder, lawlessness and bomb-throwing? For these we will not give in exchange protection, sobriety, charity and industry, for sure as we do we will lose the respect of the community and the confidence placed in us by railroad officials. I say again, the stand you have taken is to be deplored and not an insult only to our magnanimous brotherhood but to the United States as well.

The action of J. P. Altgeld, governor of the state of Illinois, was denounced by the press all over the country, and why do you, as editor of our MAGAZINE, indorse it. If you have a desire to expose the wrongs inflicted on workmen, it is right to do so. But do not extend the hand of cordiality to those red fisted monsters of social depravity.

W. H. Gray.

AUBURN PARK, ILL.

[We are inclined to express satisfaction in giving the foregoing communication a place in the MAGAZINE, since by doing so, we are able to expose its stupidity and malignity towards the editor of the MAGAZINE.

It is proper that we should reproduce in these notes certain choice expressions of the writer, as follows:

"Now in the face of the facts that they were anarchists, do you think you are justified in pleading that these men were not guilty and should be exonerated from all blame for the murder of the men sent to Haymarket Square as defenders of the peace?"

The MAGAZINE never, since we have had control of its pages, has uttered one word in justification of anarchical acts, principles, or policy. The MAGAZINE, with such ability as it could command, has always, at all times and under all circumstances, demanded for all men charged with the violation of the law, a fair, honest trial, by a jury of their peers, and it has denounced as best it could the infamy of an unjust trial which, in itself, is a damnable crime not only against its unprotected victim but against the whole community—a crime that bludgeons law, honor, justice and truth to death, in the temples dedicated to justice, compared with such infamous trials, of which the murder of Christ is a conspicuous example, all crimes which men perpetrate, sink to soundless depths of contempt. Governor Altgeld, of Illinois, says the Haymarket anarchists did not have a fair trial, and he proves it by the record. He does not extenuate anarchism; he makes no apology for anarchists; nor do we. He en-

thrones the American idea of a fair trial; so do we. He would take the halter from the neck of a man unjustly condemned, and the MAGAZINE would applaud the act, but we infer that Mr. W. H. Gray would do nothing of the sort, but would hang and imprison, scourge and crucify, burn and break upon the wheel, utterly regardless of a fair trial, and this he would do, in this high noon of our boasted Christian civilization, and in defiance of all constitutional provision, that any man charged with any violation of the law *shall have a fair trial*. The MAGAZINE has sown "broadcast" its views regarding fair trials—trials according to law, not in flagrant violation of law. When workmen charged with being anarchists (for the term is exceedingly popular with plutocrats), whether at Buffalo, at Homestead, Pittsburg, Toledo, or elsewhere in the United States, have been arrested, manacled and imprisoned, the MAGAZINE has pleaded for a fair trial, nor has it been less loyal to law, when such a monster of iniquity as Frick has been charged with murder, and a purpose to murder by wholesale, to murder by scalding water, volts of electricity, and by Winchester rifles in the hands of hired Pinkerton thugs. We would not have even Frick sent to hell or to prison without having a fair trial. Not so with Mr. W. H. Gray, who advocates judicial murder regardless of a fair trial, who says "Isn't the condemned an anarchist?" and answering the interrogatory to satisfy his own nature, exclaims, as did the high priests, "Crucify him!" and then applauds Pilate or the courts for the condemnation, and chuckles as he hears the neck snap, or sees the victims of unjust trials wearing prison stripes and fetters.

It is one of the misfortunes of labor, when its press is pleading for justice and fair play in courts, in legislation and in all industrial affairs, for free speech and a free press, that some workingman deems it his duty to vault into the ring and denounce the press for advocating fair trials, and clamor for judicial murder. Mr. W. H. Gray says:

*"I certainly understand our Magazine is a proper through which mostly any topic can be discussed, especially the rights of workmen, but when its pages are used to advocate the principles of anarchy and speak for the rights of men whose very hands are steeped in gore, I consider it entirely wrong, and should be denounced by every member of the order."*

Certainly, when the MAGAZINE advocates the "principles of anarchy," or apologizes for murder, whether by anarchists or courts, it should be denounced, but, so far it has simply advocated fair trials, denounced packed juries, perjured testimony, and verdicts produced by means well calculated to make devils blush. And if the law punished asses for braying, and one was on trial for the of-

fense, the MAGAZINE would insist upon his having a fair trial, and if it appeared that the verdict, though it did no more than reduce the length of his ears eight or ten inches, was secured in defiance of justice, the MAGAZINE would protest against such a finding and denounce the illegal proceedings, in which case, though Mr. W. H. Gray might denounce the MAGAZINE, we should pursue the even tenor of our way, as we now propose to do, entirely regardless of what Mr. Gray considers the proper thing to do, when law, justice, fair play, and all else worth considering in civilization, is assailed by debauched courts, packed juries and plutocratic combinations.

In pursuing this policy we do not wonder, as does Mr. W. H. Gray, "what the members of the brotherhood think." We never heard a member of the brotherhood applaud an unjust trial of any man. We never heard a member of the brotherhood advocate either the hanging or the imprisonment of a man who was convicted and sentenced by a verdict black with fraud and obtained by processes which render the lives and liberties of all men unsafe. Members of the brotherhood have seen too many workmen sacrificed to gratify the thirst of plutocratic tigers and above all men, they love justice and fair play, and it affords us great pleasure to appeal to the brotherhood to join the MAGAZINE in the redeeming work of securing honest trials for men charged with the violation of the law. The brotherhood, we think, is respected by the public, and to the extent that it is respected, the good opinion has been secured by the exhibition of courage in denouncing wrong and in upholding the right, never by a cowardly indorsement of injustice, no matter by whom advocated or inflicted. We are a close reader of the labor press of the country, and our observation is that at least 99 per cent. of the labor press is absolutely in line with the MAGAZINE in denouncing unjust trials, and in the indorsement of Gov. Altgeld's courageous message pardoning men whom he knew, by the records which accompany his message, had been the victims of an outrageous trial. The plutocratic press, the subsidized capitalistic press of the country denounces Gov. Altgeld, and had there been such a press in Jerusalem at the time Christ was crucified, between two thieves, it would have applauded Judas Iscariot for betraying him.

We ask that those who are at all interested in this matter read our article in the August MAGAZINE. If they find one word indorsing anarchy we shall be glad to have them point it out to us. If they do not, they will be the better able to form a correct opinion of Mr. W. H. Gray, who, with more venom than reason, has evidently mistaken his mission in the world.—EDITOR MAGAZINE.]

## THE INTERDEPENDENCE OF LABOR.

MR. EDITOR:—Sitting upon my porch one lovely August eve, shielded from the rays of the evening sun, by the dense foliage of the trellised vines, I perused the pages of the August number of our beloved MAGAZINE. The surroundings were conducive to drowsiness, and as I pondered over the matter I was reading, fell into a doze. The paragraph read and over which I was pondering was as follows:

Instead of winning immortality by such a speech, he repeated the old chestnut, that "I have opposed the B. of L. E. forming into any alliance with any other class." He need not have repeated the stale assertion, but he could have said, that "the B. of L. E., in spite of my opposition, did adopt a plan whereby such alliances can be formed," and this is true. Engineers know the value of alliances, have sought and obtained them, as the Firemen's Brotherhood knows to its cost, and notwithstanding the B. of L. E. in convention sat down upon the Grand Chief, we find him still repeating the asinine platitude that he "does not believe it possible to place all men upon the same plane." What plane? Does he believe that all railroad employes cannot be placed on a plane of justice and fair play? And does he assume to place the great brotherhood of engineers in position of antagonism to such a manly policy? Manifestly so.

It was while trying to imagine just what Grand Chief Arthur was driving at that I fell asleep. It is not claimed that there was anything peculiar about my falling asleep—but I dreamed a dream. Not that that was very peculiar, either, but the dream itself was *very* peculiar.

I dreamed that there suddenly appeared before me a female personage, august and majestic, yet fair withal. Clothed in white and flowing drapery, she seemed, with her countenance of dignified sorrow, the personification of purity and grief. Placing her hand upon mine, she said, "Come hither." Controlled by some indefinable impulse, I arose and followed her. Travelling with amazing speed space appeared to be annihilated, while soaring upwards, the law of gravitation seemed set at naught.

In an inconceivably short time we reached the summit of a lofty peak, beneath which lay stretched a wide expanse of vapory clouds of snowy whiteness. Waving her wand in the direction of the valley, she commanded "Look!" I obeyed, and as I looked the vapory, fleece-like clouds seemed to dispel and float away and the surface of the plain revealed itself.

And what a spectacle was there. Drawn up in battle array were two mighty armies, and from all the indications I realized that I was about witness a conflict at arms. The first thing that riveted my attention was the enormous disparity in the numerical strength of the opposing hosts, one army seeming to be of many times the strength of the other. The next thing that I noticed was a strange difference in the maneuvers and tactics of the two forces. The smaller army moved with precision as one man.

Splendidly drilled and officered, each man seemed to be but a part of an automatic machine. Marches and countermarches and movements by the flank and rear were executed with the regularity of clockwork. A moving mass of humanity, the smaller army seemed a homogeneous body with one controlling will and mind. Truly and indeed it seemed "one body and one spirit."

Not so, however, with the other army. Divided into many battalions, regiments and brigades, each seemed to be working at cross purposes, and confusion reigned supreme. No two regiments seemed to have studied the same tactics, and all attempts to perform evolutions but ended in seemingly inextricable confusion. An effort to present a solid front resulted in as many fronts as there were regiments, and an essay at a hollow square resolved itself into a struggling mass of confused men.

When I remembered their overwhelming superiority in numbers, however, I thought they will undoubtedly overwhelm the smaller army with sheer weight and force of numbers.

Soon the battle began. Imagine my astonishment when I saw not the whole force of the larger army, but two of its regiments, march out to give battle to the opposing force. My astonishment grew as I noticed that the residue of the larger army, not engaged in battle, seemed utterly oblivious to the warfare raging around them, and were variously engaged in drilling, cleaning arms, cooking, eating and sleeping.

The battle raged furiously. The engaging forces fought desperately, and the two regiments, though opposed by overwhelming odds, made a gallant assault and returned again and again, fighting hand to hand and fighting with the desperation of despair. Forced at last to surrender to superior numbers, those who were not killed or maimed made a masterly retreat and halting in the rear of their main force, re-formed and again engaged in drill.

And so the battle raged. Sometimes one, then two, now three, then again one regiment marched out to give battle to the opposing army, always to be beaten, and with decimated ranks make a retreat, leaving their dead and wounded on the field. Some regiments went into the engagement twice, thrice, but always to be defeated with terrible loss.

And yet the conflict raged. Apparently utterly unconcerned for the fate of their comrades the bulk of this splendid army rested upon their arms while small detachments of their force engaged the enemy and marched to certain defeat and fearful carnage. And through it all they kept up their aimless maneuvers and drilled and marched, each regiment a law unto itself and having its own tactics and manual of arms.

And now the conflict deepened. More of the regiments marched out to battle and, *mirabile dictu*, other regiments of their own army engaged them in the rear and flank, speedily demoralizing them and causing their retreat in disorder. Strange to relate, however, the regiments that thus attacked their own forces and aided the enemy, did not desert to the enemy's ranks or fraternize with them. Instead, they marched back to their own forces and all were upon the surface, as friendly as before. And then they drilled and maneuvered and marched and played the bands.

Soon those regiments which had thus traitorously attacked their comrades in the rear marched out to give battle to the enemy, and behold! the regiments they had thus strangely and traitorously attacked fell upon them in the rear and flank, utterly routing them and causing them to flee. And yet on getting together in the main body they all fraternized and drilled and marched together and followed the same bands and kept step to the same music. And so the battle continued to rage. Always the same tactics were pursued with the same result. Fighting in squads they were whipped in detail, and the magnificent army, which properly handled and drilled and fighting together, could have overwhelmed and captured the smaller army, never won a single battle.

Grieved at heart and perturbed in spirit I said, "Let us go hence. But first tell me, I pray thee, what doth signify that which thou hast shown me, and who and what are these contending forces?" And my mysterious guide made answer: "The small and well drilled army is that of Capital—the other, the hosts of Labor."

"What are you doing there asleep, Pa?" and awakening, I looked upon the face of my better half.

And then I re-read the article from the magic pen of the gifted editor of our MAGAZINE, in which under the caption "Some Labor Leaders," he lays bare to the gaze of American manhood the character and accomplishments of a labor leader who has ever counseled labor's forces to engage in battle one regiment at a time, under a banner inscribed "Every order for itself, the devil take the rest of them."

One or two truisms worth remembering are these: (1.) Though some may receive better wages than others, a wage slave is a wage slave for a' that, and a' that. (2.) Though some may receive poorer wages than others, a mon's a mon for a' that and a' that. (3.) The standard of humanity never remains stationary; it either progresses or retrogrades. (4.) If wage workers upon the highest "plane" make no effort to raise those on lower "planes" to their level, those below will inevitably drag them down to their level. (5.) Intrinsic worth

and merit, not any special "plane" forms labor's aristocracy. If you want to kill a college graduate shoot at a street car driver. (6.) The man who stands in the way of the consolidation of labor's forces is an enemy to civilization and stands opposed to human progress. (7.) If labor continues to divide its forces and allow itself to be whipped in detail, it willfully violates the first law of nature and may blame itself for all consequent disasters. (8.) Labor might have the earth and the fullness thereof if it only wanted it and would reach out and take it.

Let federation be the watchword.

KANSAS CITY, Mo.

### ALL AROUND CRITICISM.

MR. EDITOR:—Having the September MAGAZINE at hand, reading its contents with pleasure, and somewhat arousing my brotherhood sentiments, I feel it my duty to drop into the debate. I do not join in the arguments as a tutor, but simply as a pupil who is willing to "let the good work go on." If, in expressing my ignorance, I shall cause the wise to divulge any portion of their knowledge, I shall consider it a most gracious exchange. Either proper or improper, such arguments and suggestions as those of Bros. Arnold, Krebs, Breen, Keebler, Barnett, and W. P. Borland, are not only emblematic of their interests, sentiments, and love for our flag, but are instructive and elevating to all who hear and heed. I infer that the above brothers are of this ticket: "Anything is good enough, but improvement is demanded." For one, I am somewhat abashed at the personality, and razor-like argument contained in the late correspondence between Bros. Carpenter and Arnold, and, for harmony in the household, I am not alone in asking them to relax debate and await patiently the decision of the judges. I agree with Bro. Carpenter in this view: that there are as many well meaning and patriotic men in the firemen's ranks to-day, as there ever were before; perhaps fewer with renown or reputation, on account of lack of opportunity to express their ability. Bro. Arnold perhaps does not realize the weight of his argument; he is probably under the impression that Bro. Carpenter was urging mutiny, or rebelling against our own interests. I can never agree, with Bro. Arnold, that an engineer is, in mental capacity, any more able to proclaim, protest, or protect a fireman's interests, than when he himself was a fireman. Promotion does not improve a man's coal burning faculties. Now, there is no doubt or dispute that, since having had the experience in certain legislation, the work of an engineer would be at par with that of any inexperienced man, and superior

to most. I would scorn the day that I should fire over a division for an engineer—even be he my own brother—and not be able to realize my own grievance and best interests, and be compelled to request his highness to proxy my afflictions. It would surely be a very dumb man who could not realize his own misfortunes, and a most eloquent one who could express himself in full, and tell the whole truth and nothing but the truth. Here is the point where arises the disturbance: An engineer is our neighbor; and quite often, persons who are somewhat doubtful of their own abilities will solicit their neighbors to transact business, and if expectations are not fulfilled, the neighbor is, in their estimation, to be accused and persecuted.

In behalf of Bro. Borland's suggestion, I, for one, say Amen! and I hope it will have a hearing in '94. I will ask pardon for the inference, Bro. Borland, but if you were never a tourist, I will say that you have been very intimate and closely associated with them, as your knowledge of the brotherhood and the burdens of its members, is quite efficient and correct; and was your attention ever arrested in this direction? That, in times of prosperity, the brothers who realize, donate and express themselves least to the welfare of the order, are, 99 in 100 times, the greatest of spongers and the very heaviest of burdens in times of reversed circumstances. Bro. Borland, the word "unprotected" is one that should not exist, and we should all look forward to the time when it will be unknown. Can it be that the different trades, professions, and occupations, are declining and decreasing in their points of importance, skill, and technicalities? If not, why are the different trades being constantly abused by a never ending stream of short termed apprentices? Who is responsible for this enormous surplus of tradesmen? To be sure, the various unions are responsible, through their indifference and lack of interest for their own welfare. If we think and wish well of our fathers and older brothers, we should not rob or deprive them of a trade in which they have served an honored apprenticeship; nor should we support, or permit any source of growing danger to exist. Who has wrought ruin upon the various trades, viz: telegraphers, stenographers, carpenters, brick and stone masons, iron and coppersmiths? Did you, or I, or any other one who never served an hour at the trade, overstock the labor market of the above trades; demanding a position even if compelled to scab? No! Where lies the fault? With each individual whose trade is a sea of idleness, is where the fault lies. And the first dose of the remedy will be to consume the surplus of experienced men, by each organization having an agreement with their respective cor-

porations or employers giving the experienced men a greater per cent. than the apprentices. Railway construction for the past few years has been stagnant, but on the other hand the promotion of the "novice" has been rapidly increasing; and the game of "ring out the old and ring in the new" has been universal. When every workman acts as his own John Q. Adams, and realizes that he has the same privilege, right, and power to set and adjust rules and prices governing his labor, as has the capitalist his rate of interest, or the grocer, gardner, or butcher, the right to sell by the pound and at so much per pound; when such is universally acknowledged and individually practiced, perhaps there will be startling revelations in the interest of the workingman.

*Ira D. Mayhall.*

LA JUNTA, COLO.

#### SWITCHTENDERS AND SIGNALMEN.

MR. EDITOR:—I desire through the columns of your MAGAZINE to say a few words regarding the Switchtender's and Signalmen's Mutual Aid Association. A grand lodge has just been organized with headquarters here, and the undersigned was elected Grand Master. It is our desire and aim to establish subordinate lodges all through the United States and Canada and the Grand Master is now prepared to start for any point where the organization is desired. The wheel has at last started to roll, may it not stop until every city within the Union can boast of a lodge of the S. T. & S. M. M. A. A. It is not only for the welfare of Switchtenders and Signalmen to be organized, but for the interest of all railway employes now organized, especially firemen. We received good encouragement from the firemen when we organized one year ago, and success has crowned our every undertaking. Financially we are in excellent condition. We have but three lodges as yet; in Milwaukee, Chicago & St. Paul. We hope when these few lines are read by firemen all over the country, they will see the advantages to be gained by our being thoroughly organized, and will assist us by urging those in their localities to organize at once. A kind and brotherly feeling has also been extended to us by the S. M. A. A. With the right hand of fellowship extended to us by these two great organizations and with the right men at the head of affairs, success will crown our labors. Having once put our shoulder to the wheel, we are determined not to stop until the Switchtender's and Signalmen's order gains the top of the ladder. The address of the Grand Master is F. L. Krieger, 416 20th st., Milwaukee, Wis. A word to the wise is sufficient.

F. L. KRIEGER.

MILWAUKEE, WIS.

## AN ASSISTANCE FUND.

MR. EDITOR:—In the September MAGAZINE there appeared a communication under the above caption, treating of how to assist our unemployed members so that the burden would not bear so hard upon a few. In my opinion, the idea expressed in that communication is a grand one, and worthy of the consideration of every brother. But there is one question: how will we guard against the chronic employment hunter? It would be well to make some suggestions on how to overcome this evil. Suppose the grand lodge furnish each lodge with a monthly statement of those holding vouchers, that the Receiver might examine when a voucher is presented to him and note if the person holding such voucher is continually on the list. Further, that the lodges grant vouchers only to members who are out of employment and actually in need. I am of the opinion that the system would be imposed upon only for the watchfulness of our grand lodge officers. We are always liberal with our money when we have any, so that the system should be well guarded by those who are not directly interested in the vouchers issued.

L. A. Ogden.

GRAND RAPIDS, MICH.

## A SUGGESTION CONCERNING DISABLED FIREMEN.

MR. EDITOR:—I think it would be a good idea for every member to pay \$1 a year for his MAGAZINE and use the fund thus obtained to establish a weekly benefit of about ten dollars a week for disabled firemen. I think that would be much better than building a home. It would at the very lowest bring \$25,000 a year, and think of the good brothers who need that money to-day. Again, there are not enough brothers who have no home to go to in case of sickness to make it an object to build such a home; those brothers who have no home, nor people to go to, might very easily be taken care of by the brothers of their own lodge; and they might get along very nicely on \$10 a week. I may be wrong in my suggestion, but I think it much better than building a home. If none of the brothers had homes to go to or friends to take care of them, then a home like the one suggested would be the thing.

T. F. Green.

CEDARTOWN, GA.

KICKERS are unpopular. About 117 years ago a lot of kickers in this country got together and criticised King George, who was having altogether too much to say. George didn't like kickers and tried to chastise them, but the kickers kicked too hard, and George was put out. As a result we have been healthy, wealthy and wise ever since. Don't kick at kickers, they accomplish great things sometimes.—*The Engineer*.

## A WAY OUT OF THE TROUBLE.

"I remember," said Gleason, thoughtfully, "when I first went running on the Lackawanna. I was stuck on my job, loved my engine, and was twice as jealous of her as I am of my wife. We had a trainmaster that got a notion that we were pulling trains far too light, and he commenced putting on cars. After a hard trip—doubling, running for water and the like—I went to see Bill Halstead.

'Mr. Halstead,' said I, 'I've come to see you about these heavy trains. They are just pulling the stuffing right out of my engine; I can't take care of her this way. I've got the best engine on the road, and I don't propose to see her overloaded and abused without a kick.'

'I'll tell you,' said he, 'the best way to fix that—lemme see, which engine is yours? The 'Anthracite?' Oh, yes. Well, as I was saying, the company want a few engines; supposen you sell her to the road, they'd just as lief pull all the cars with her as not—how much do you want for her?'—*Locomotive Engineering*.

A VERY curious inquiry undertaken by some French scientists seems to show a certain relation between railroads and the average height of the people. From the statistics collected in connection with the conscription, to which all young men in France are subject, it appears that in certain communes and departments there has been a notable increase in the average height of the men in the last 30 years, or since the building of railroads in those departments. This is attributed to the fact that the railroads have offered better paying work to the people, both directly and indirectly, by the introduction of manufactures; this has improved the condition of the people, who are now better housed and fed than formerly, and consequently grow to a greater height. The reasoning is carefully worked out, and the connection seems to be well established.—*Railroad and Engineering Journal*.

UNDER the direction of the Lighthouse Board some interesting experiments have lately been made at Long Beach to determine the relative visibility of white and colored lights. While there is some difficulty in securing uniform results, it was decided that a white light of one candle-power could be seen one mile distant; two candle-power, two miles, and thirty candle-power, five miles. Red and green lights required four candle-power to make them visible at one mile, and forty candle-power for two miles. The great difference is due to the adsorption of light by the colored glass.—*American Engineer*.

THE metropoliton journals with their 30 and 40 pages have set the pace for rural papers, and we find journals which make any pretense to being alive following hard after. What is in them? Nothing chiefly; the local news occupies possibly a page, the advertisements are spread over two or three pages, the rest of it is syndicate matter, stereotyped stories of the blood and thunder type, miscellaneous matter compiled from magazines and metropoliton journals, and machine-made jokes. It it all very dreary and nobody whose time is worth anything, or who has any money to spend, pretends to read it. The press of to-day is retrograding, and distinctly behind as a representative of public opinion.—*The Engineer*.

THE engineers on the New York Central Railroad are complaining that the road is often so badly blockaded that they are laid up on side tracks for periods of time varying from a few hours to twelve days, during which time they must keep their engines alive in anticipation of a call to proceed. They consider that they ought to receive some compensation for this time which is lost through no fault of theirs—a contention which would seem to be founded in reason, to say the least of it.—*American Machinist*.

SPURTS of 97 miles an hour down hill may be all right for advertising railways, but it is a great risk to the passengers. The running gear is not built for any such speeds, and flying over switches at this rate will result in a serious accident if the practice is continued. A railway superintendent severely censured an engineer who ran at this speed lately.—*The Engineer*.

#### REDUCED TO \$1.00.

We have on hand a supply of bound volumes of the MAGAZINE for the years 1891 and 1892.

The volumes are artistically bound in a way to withstand wear, and we need not say are intrinsically valuable, containing as they do, a wide range of topics on subjects well calculated to interest the general reader, as well as those who are the students of labor problems.

In this connection we suggest that these bound volumes of the MAGAZINE would be a valuable present on birthday occasions, or as tokens of remembrance, to be presented at any time, and as the price has been reduced to \$1.00 we shall hope to receive sufficient orders to reduce the supply, since no fireman's library would be complete without one.

By addressing LOCOMOTIVE FIREMEN'S MAGAZINE, Terre Haute, Indiana, orders will be promptly filled. Cash must accompany each order.

#### CHARTS.

To whom it may concern:

Bro. W. J. Hugo announces that he has completely exhausted his stock of charts and will not have any more.

Fraternally,  
F. W. ARNOLD, G. S. and T.

## GRAND LODGE.

#### ASSESSMENT NOTICE FOR NOVEMBER.

OFFICE OF THE GRAND LODGE, B. OF L. F.,  
TERRE HAUTE, IND., November 1, 1893.

ASSESSMENT No. 41, \$2.00.

To the Receivers of Subordinate Lodges:

SIRS AND BROTHERS:—You are hereby notified of the death and disability of the following members entitled to all the benefits of the order, viz:

CLAIM No. 1086. Daniel Gorman, of S. S. Merrill Lodge, No. 188, was declared totally disabled by Pulmonary Tuberculosis, August 24, 1893.

CLAIM No. 1087. Robert Buxton, of Regina Lodge, No. 276, died of Congestion of Lungs, April 30, 1893.

CLAIM No. 1088. Frank Strub, of Custer Lodge, No. 191, was killed in a Railway Accident, May 8, 1893.

CLAIM No. 1089. C. T. Huckaby, of Macon Lodge, No. 246, died of Hemorrhage of the Lungs, July 27, 1893.

CLAIM No. 1090. Wm. E. Nye, of Las Animas Lodge, No. 344, died from injuries received in a Railway Accident, July 28, 1893.

CLAIM No. 1091. Eugene D. Keller, of Las Animas Lodge, No. 344, died of Peritonitis, August 13, 1893.

CLAIM No. 1092. Augustus Friday, of Orphans' Hope Lodge, No. 468, died of Consumption, August 18, 1893.

CLAIM No. 1093. M. J. Gerron, of Loyal Lodge, No. 207, died of Typhoid Fever, August 21, 1893.

CLAIM No. 1094. F. T. Wilson, of Resurrection Lodge, No. 489, was declared totally disabled by Loss of Arm, August 22, 1893.

CLAIM No. 1095. A. J. Hart, of Walnut Valley Lodge, No. 369, was declared totally disabled by loss of Hand, August 23, 1893.

CLAIM No. 1096. R. H. Wood, of Pike's Peak Lodge, No. 218, died from injuries received descending Pike's Peak, August 25, 1893.

CLAIM No. 1097. Wm. L. Best, of Metropolitan Lodge, No. 363, was killed in a Collision, August 26, 1893.

CLAIM No. 1098. W. S. Chamberlain, of Yougheny Lodge, No. 302, died of Typhoid Fever, August 27, 1893.

CLAIM No. 1099. Samuel R. Wild, of Evening Star Lodge, No. 112, died of Apoplexy, August 23, 1893.

CLAIM No. 1100. Joseph B. Lemmons, of Mayflower Lodge, No. 415, was declared totally disabled with Bright's Disease, September 2, 1893.

CLAIM No. 1101. Edward Griffin, of Mayflower Lodge, No. 415 was declared totally disabled by Paralysis, September 2, 1893.

CLAIM No. 1102. Robert F. Hill, of Front End Lodge, No. 345, died of Acute Nephritis, September 3, 1893.

CLAIM No. 1103. R. E. Sherrill, of Red River Lodge, No. 8, died of Urethral Fever, September 4, 1893.

CLAIM No. 1104. Edward O'Neil, of J. M. Raymond Lodge, No. 49, was declared totally disabled by having Arm Crushed, September 11, 1893.

CLAIM No. 1105. Perry Unser, of A. G. Porter Lodge, No. 141, was killed in a Railway Accident, September 11, 1893.

CLAIM No. 1106. W. A. Scherfe, of Nauvoo Lodge, No. 391, was declared totally disabled by Paralysis, September 11, 1893.

CLAIM No. 1107. Edward F. Venner, of Adopted Daughter Lodge, No. 3, died of Typhoid Fever, September 24, 1893.

CLAIM No. 1108. Wm. S. Allison, of Cherokee Lodge, No. 428, was declared totally disabled by Pulmonary Tuberculosis, September 25, 1893.

CLAIM No. 1109. Willis E. Sage, of Blooming Lodge, No. 40, was declared totally disabled with Tuberculosis, September 26, 1893.

CLAIM No. 1110. John W. Lynch, of High Line Lodge, No. 286, was killed by a Railway Accident, February 10, 1893.

CLAIM No. 1111. Wm. F. Hite, of Taylor Lodge, No. 175, was killed in a Railway Accident, June 20, 1893.

CLAIM No. 1112. Francis M. Kelley, of Eel River Lodge, No. 164, was declared totally disabled by loss of Leg, August 2, 1893.

CLAIM No. 1113. H. E. Roseboom, of Friendship Lodge, No. 375, died of Typho-Malarial Fever, August 12, 1893.

CLAIM No. 1114. Frank Treackle, of St. Joseph Lodge, No. 43, died of Typhoid Fever, September 6, 1893.

CLAIM No. 1115. Wm. H. Lambert, of Vandalla Lodge, No. 405, was killed in a Railway Accident, September 12, 1893.

CLAIM No. 1116. Harry D. Attick, of Provident Lodge, No. 220, was Run Over and killed, September 14, 1893.

CLAIM No. 1117. Abraham L. Ramsey, of Eureka Lodge, No. 14, was declared totally disabled with Paralysis, September 15, 1893.

CLAIM No. 1118. Chas. H. Stroh, of Provident Lodge, No. 220, died of Typhoid Fever, September 22, 1893.

CLAIM No. 1119. Peter Young, of Wilson Lodge, No. 272, died from an Abscess on Lungs, September 24, 1893.

CLAIM No. 1120. Rush Clawson, of Buckeye Lodge, No. 239, died of Typhoid Fever, September 29, 1893.

CLAIM No. 1121. Chas. F. Robertson, of Frisco Lodge, No. 51, was killed in a Railway Accident, September 30, 1893.

CLAIM No. 1122. Henry Jerome, of Frontier City Lodge, No. 92, died of Obstruction of Intestines, October 3, 1893.

CLAIM No. 1123. August P. Euler, of C. J. Hepburn Lodge, No. 160, was Run Over and killed, October 4, 1893.

CLAIM No. 1124. Joseph Sammis, of J. A. Logan Lodge, No. 470, was declared totally disabled by Injury to Spine, October 5, 1893.

CLAIM No. 1125. Richard J. Wyatt, of W. Craig Lodge, No. 467, was killed in a Railway Accident, October 7, 1893.

CLAIM No. 1126. John Weaver, of Bald Eagle Lodge, No. 418, was declared totally disabled by Paralysis, October 9, 1893.

CLAIM No. 1127. Geo. W. Lyons, of Midland Lodge, No. 147, was declared totally disabled with Consumption, October 10, 1893.

CLAIM No. 1128. Lewis C. Rickabaugh, of Anchor Lodge, No. 54, Fell from Engine and was killed, October 10, 1893.

An assessment of TWO DOLLARS (\$2.00) has been levied for the payment of the above claims, and you are required to forward said amount for each member whose name appears on the rolls of membership NOVEMBER 1ST, 1893, (also for all members having taken a withdrawal (limited or final) after NOVEMBER 1ST, and for all members who died or were totally disabled since that date), said remittance to reach the Grand Lodge not later than NOVEMBER 20TH, 1893, as provided in Section 50 of the Constitution. Any lodge failing to make returns as above provided will stand suspended from all the the benefits of the order, as per Section 52 of the Constitution.

Yours fraternally,

F. F. SARGENT, G. M.

F. W. ARNOLD, G. S. and T.

#### ADDRESSES WANTED.

JAMES SMITH.—Formerly served as brakeman and fireman, and was located at Straubville, N. D., but has not been heard from for more than a year. His parents are exceedingly anxious to hear from him, and will be grateful to receive any information in respect to his whereabouts. Address John W. Smith, Box 249, Elwood, Ind.

W. H. SULLIVAN, a member of Davy Crockett Lodge, No. 145. Was last heard from in Prescott, Arizona. Anyone knowing his whereabouts will please correspond with his lodge.

Vol. XVII — 1893 — No. 12.

## EDITORIAL.

### DECEMBER.

"The chill rain is falling, the nipt worm is crawling,  
The rivers are swelling, the thunder is knelling  
For the year.

The blithe swallows are flown, and the lizards each gone  
To his dwelling.

Come, months, come away;  
Put on white, black, and gray.

Put your light sisters play—

Ye follow the bier

Of the dying old year.

And make his grave green, with tear on tear."

Since we wrote our "Farewell" to 1892, this terraqueous world, on which we live, move and have our being, has been turning on its axis at the rate of a thousand miles an hour, and at the same time has been tramping along the same old trail around the sun, making the journey in 365 days, 6 hours and a fraction of an hour, at the rate of 1,130 miles a minute, or 67,800 miles an hour—a speed that would distance Nancy Hanks, if she were a cannon ball instead of very superior horseflesh.

Who that loves the starry night, or the full orb'd day, who that loves the coming of the seasons in their order, is not glad that the world rolls over every twenty-four hours and completes its orbit around the sun once a year? In a word, who does not rejoice that this world of ours continues to do business at the old stand? Who is not glad to see Luna, the queen of night, increase her store of silver every month, from a mere intimation that she has struck the "white metal," until her stock of bullion is coined into a "dollar of the daddies," 6,540 miles in circumference, a guarantee, we think, that the man in the moon is no gold bug—cares nothing for "ratio" or "parity"—but having an abundance of silver, throws it down upon the earth and the sea with such a lavish hand that the whole heavens seem to rejoice over the benediction.

But, really, we did not grasp our faber to eulogize this mundane

sphere, or the beautiful satellite that attends it on its journey around the great central luminary. The earth, it is said, weighs two thousand trillions of tons, and anything we might say, complimentary or otherwise, would neither add to nor subtract from its incomprehensible ponderosity. It is able to take care of itself, Lieut. Totten to the contrary, notwithstanding. It is sometimes surmised that it may eventually be caught by a tramp comet at some crossing, but should such a casualty occur, we surmise there would be one comet less in the world of space, and thereby hangs a tail which we shall not discuss at this writing; our reflections are headed in another direction.

Our interest in the movements of the earth, our planet, relates to the year of which December is the closing month. In this latitude, December is a frigid month. With the last vibration of the pendulum, December 31st, at night's high noon, the year 1893 expires, and 1894 is ushered in. We are not a mourner at the bier of 1893. We have no tears to shed over his demise. There is no resurrection for him. He will not come back. What he has been we know, what his successor will be is mere conjecture. We value 1893 only as we value his predecessors, for the lessons of experience he has taught. If we have learned nothing, then the year has been a blank. True, it brought us seed time and harvest. We have ate and drank; so have the cattle on a thousand hills. If eating and drinking is all of life, if there is no growth in knowledge, if the mind has remained passive and inert, if we have been like blind horses on tread mills used for sawing wood for the pecuniary benefit of others, we had better been dead and buried in the Potter's field. If we have not taken cognizance of passing events, if we have been mere sign posts on the highways, silently pointing the way but never moving, silent as clouds, we have been sleeping, really of less use than dead people, since the dead do fertilize the earth and help to tassel the corn, beard the wheat and paint the lily.

The year 1893 has given the world an abundance of food for reflection—at least, that portion of the world known as the United States of America. The people are sometimes called the world. We refer to the people—particularly to working people, wage earners—the real "salt of the earth," and inquire what has 1893 done for them? Do they feel like decking his bier with flowers? Do tears of regret dim their eyes as they contemplate his departure? Let us be practical. We need not delve for facts. These are on the surface—cold, inflexible and relentless. We need not deal in metaphor, al egory nor hyperbole. What are the terrible lessons which 1893 has taught workingmen, railroad employes, the grand army to whose credit there are more victories than Cyrus, Alexander, Cæsar and Napoleon, combined, could boast, and every one a benediction?

The seasons came. The earth, responding to sunshine and shower, made the fields fruitful of food. There was enough and to spare. The outlook was cheering, hearts beat high with hope. In ten thousand humble homes there were banquets of peace and joy. *Presto!* Suddenly the industrial heavens were overcast with storm clouds;

darkness overspread the land, mines were closed, forges ceased to roar, the shuttle stood still, the anvils ceased to ring, implements of industry fell from the nerveless hands of toilers, until multiplied thousands, stricken and powerless, contemplated these changed conditions with feelings of despair. Poor old Job, in the hands of Satan, having been robbed of property, home and children, and covered all over with boils, wanted the day on which he was born stricken from the records. He could not be accommodated, nor will the record of 1893 be obliterated. Why this record? Well, congressmen and United States senators, under the sanctity of their oaths, declare that the calamities that have overtaken the country are the result of conspiracies formed by men who control the money of the country—deliberately entered into to bring about wrecks and disaster—which for suddenness and far reaching grasp, are unparalleled in the history of the world. We hear of the mills of the gods, which grind continually and grind “exceedingly small,” and it appears that every plutocrat in the conspiracy controlled a grind stone of Ferris wheel proportions, and to gain their ends, were willing to fill the land with lamentations. We paint no fancy sketch. The average railroad employe will concede the truthfulness of the picture, indeed, will be quick to declare the coloring is too demure.

The year 1893, though it afforded conspirators an opportunity, or a thousand opportunities, to discharge workingmen and shroud their homes in gloom, make their larders strangers to food, and fill their stomachs with hunger pangs, it did also, be it said, afford organizations of railroad employes opportunities to say: “We cannot prevent the discharge of our associates when the employer says they shall be exiled from work, but, when the demand is made to reduce the wages of those who remain, whose burdens and responsibilities are increased, we can and will say, no.” Did they do that thing? Did they expand to the full proportions of men knowing their rights and daring to maintain their rights? Nay, verily. The organizations, boasting of their individual and system-federated strength, yielded to the dictation of the corporations. It was a grand opportunity for the organizations to have presented to the world a spectacle of federated force. What was it that workingmen beheld? An exhibition of system-federated feebleness—at once a sham and a shame. To analyze it is to drag forth an entire brood of human infirmities, a condition of things so humiliating that were 1893 a vagabond dog, with a tail as long as a comet, he would quickly get it between his hind legs, and with a yelp of shame and with a bound equal to that of the fabled cow that jumped over the moon, scale any barrier, happy to get out of sight.

Here we put the question: What have organizations learned during the year 1893, which now at its close, they can recite in a spirit of honest boastfulness? Which of the officials of the organizations, as he travels to hold communion with the rank and file, expects the hands to play, “See, the Conquering Hero Comes?” What battle flag can he display bearing upon its ample folds so

much as one victory won for railroad employes? If there have been no victories, what can be said of defeats? In every struggle the organizations have gone down. Still worse, they have gone down without a struggle—deliberately voted to surrender, when every heroic impulse demanded that, like the Spartans at Thermopylæ they should have chosen to be taken home on their shields, rather than surrender without an effort to resist oppression.

If that were all of the humiliating record, 1893 might stand up in the presence of the centuries gone and plead the cause of degeneracy, something after the following fashion:

"O, centuries, since time began, hear me in defense of weak knees and chicken hearts. I bear you a message from men living in the United States of America, boastful of their rights and their independence, of their courage and self-reliance. I come to you with a full report of the deliberations of men in council who solved the mighty problem of strikes—in which it was decided, if one organization voted to wear fetters, bow in humble submission to wrong and degradation, all the other organizations, dumb as camels, should in the presence of their masters kneel down and receive their burdens. O, centuries, I know not what spectacles of degradation you have witnessed since the slave master first began to wield his lash and whip slaves into line; it is only for me to report to you that during my stay in the United States, I heard enough system-federation bravado, had it been thunder, to have shaken the stars out of their silver sockets, and the back-out and back-down machinery in operation was adjusted with such nicety and run so smoothly that unless something is done my successors will report to you, O, centuries, that organizations of railroad employes, of their own free will and by vote, will be saying to corporations, 'When you want to ride, straddle us, and when you feel tired, you will find our prostrate forms as soft and yielding as an easy chair, or a Vanderbilt sofa.'"

Is all lost? No! Have all yielded? No! The great body of railroad employes will not shave off their whiskers, nor do any unseemly thing at the bidding of Nebuchadnezzarian corporations. They will not emulate reptiles and crawl in the dust; they will not lick the boots of their oppressors, nor kiss the rod that smites them, and don't let it be forgotten, 1893, in his address to the centuries, will report a mighty host of men, who, though adverse circumstances have environed them, have resolved to change circumstances, and that 1894 will find these men larger, more fully developed, stronger, more confident and defiant, getting nearer together for the purpose of resenting wrong and of overcoming defeat brought about by bonds made of straw, and of tender footed generalship which administers beef steak to corporations and "rough on rats" to the rank and file.

Farewell to 1893. May its like be seen no more while the earth turns on its axis and revolves around the sun. Palaces of the millionaire ablaze with light, homes of workingmen shrouded in deep-

est gloom. Feasts of fat things on the one hand, with Bacchanal songs and revelry as the wine foams and the toast goes round, while in the gathering darkness on the outside men and women nurse their hunger pangs and gather about them their tattered clothes to shield them from the merciless storms.

We shall hail 1894 in a spirit of hope. We shall trust in the conquering power of education gained in the rugged school of experience.

Christmas bells are chiming and the voice of the humble Nazarene is heard saying: "As ye would that others should do to you, do ye therefore to them, for this is the law and the prophets."

---

## "THE COMMERCIAL AND POLITICAL CONSIDERATIONS INVOLVED IN SYMPATHETIC RAILROAD STRIKES."

---

Mr. Joseph Nimmo, Jr., is the author of a pamphlet in which he discusses the subject indicated in the caption we have reproduced from his pamphlet. Mr. Nimmo was statistician of the United States Treasury Department for many years, and for aught we know to the contrary, may still be occupying that responsible position.

Mr. Nimmo deems it advisable to come to the rescue of Messrs. Taft and Ricks, the United States judges whose judicial jugglery with the law in the case of men *vs.* the corporation in the Toledo, Ann Arbor & North Michigan Railroad was such as to remind one of cuttlefish tactics, so that when they had exploited their erudition the case became utterly incomprehensible to lawyers, to say nothing of laymen. It was very kind in Mr. Nimmo to come to the rescue of the judges for the purpose of rendering clear what was exceedingly inky, and if he has not succeeded in his self-imposed task, he has by the exhibition of intentions, doubtless secured a *free railroad pass*, and possibly more substantial rewards from railroad corporations, for his *sympathetic* contribution.

Mr. Nimmo deplures "sympathetic railroad strikes." In the fierce struggle which workingmen experience to obtain and maintain their rights against the rapacity of corporations, Mr. Nimmo would eliminate all indication of sympathy, which means fellow feeling, an agreement of inclinations, kindness towards one who suffers wrong and injustice, and which embodies to the fullest extent, the golden rule of doing unto others as you would have others do unto you; to that sort of flapdoodle Mr. Nimmo is opposed with all the heart he has at command.

Mr. Nimmo, and men of his ilk, explode with the force of a shoot-

ing cracker when dealing with the sacredness of commerce, particularly "inter-state commerce," the sum total of which he estimates at \$40,000,000,000 a year. It is to him what Nebuchadnezzar's golden image was which he set up and then demanded that nations and tribes and tongues should fall down and worship, and in the frenzy of his idolatry and self-importance, human rights were totally obscured. Mr. Nimmo lifts up his voice and shouts, Commerce! commerce! corporation! law! He would have trains move though every man employed in the work should be ground to powder by the wheels of commerce.

Mr. Nimmo admits "the right of the employes of railroad companies to organize for their mutual advancement as a class," but this "protection" must not include the slightest inconvenience to commerce. If, however, the corporation strikes for protection against employes and discharges a hundred or more of them, neither Mr. Nimmo, Messrs. Taft and Ricks, nor any other free pass advocate of justice, utters so much as one word in regard to the "inconvenience of commerce;" their fees do not invite to such argumentative gymnastics; there is no butter on such cornbread—but, when it comes to the railroad employe, then law, logic and lucre, mingle and flow together in a resistless tide; it is the one tide in the affairs of the corporation that leads on to fortune, and court and corporation straddle it while the entire tribe of Nimmos, shout as the pageant passes along and distributes nickels for their support.

Mr. Nimmo quotes the law to show how the railroads of the country are tied together endwise and the tremendous obligations imposed upon them by statute, and then endeavors to show that Messrs. Taft and Ricks by their decisions have pretty effectually welded the railroad employe to their inter-state tracks and machines. Have they done it? That is the real question before the country—all else is quite immaterial. The question is going to the Supreme Court of the nation. It is vital, it is far reaching. In some of its aspects it is terrible.

Mr. Nimmo thinks there is a vital "political question involved," in which he is right. Nothing less than the enslavement of men by statute to guard commerce to protect the corporation. "It is a question," says Mr. Nimmo, "which involves the integrity of our political institutions." What is this overshadowing question which startles Mr. Nimmo? This, a "sympathetic strike of railroad employes"—and Mr. Nimmo says, "this is no exaggeration; for the power to stop every wheel on the great trunk lines of the country, time and time again asserted, is evidently a much more strenuous exercise of power than that which the National Government has ever seen fit to exercise under the constitutional authority of regulating commerce among the states."

If then it is determined by the supreme judicial power of the nation, that the law ties men to the machine, makes them a part of the rolling stock of the corporation, strikes down one "inalienable right" of the citizen, it may come, and it should come as a last re-

sort, to maintain the rights of citizens, to "stop every wheel on the great trunk lines of the country." But before such a calamity befalls the country, Congress will be required to banish such an infamous law from the statute books of the nation—and it will be done. Mr. Nimmo, if he has the leisure, should write another pamphlet and introduce his fancies, indicative of the task which would be performed of reducing to bondage the railroad employes of the country, and further, to intimate the ways and means by which the sympathy one workingman has for another may be successfully crushed out.

Mr. Nimmo proceeds to discuss "concrete facts which have an important bearing upon the matter" to which he refers. He says:

There are employed on the railroads of the United States about 35,000 locomotive engineers and 36,000 firemen—in all about 71,000.

The total number of persons employed in gainful occupations in the United States is about 21,000,000.

The total population of the United States is now about 65,000,000.

The total number of persons employed as locomotive engineers and firemen therefore constitutes about the  $\frac{3}{100}$  part of one per cent. of the persons employed in the United States in gainful occupations, and about the  $\frac{1}{100}$  part of one per cent. of the total population of the country.

The wages paid annually to locomotive engineers and firemen in the United States amount to not far from \$76,500,000, this being about one-fifteenth of the total disbursements of all kinds by railroad companies annually.

The value of the railroad property of the country is not far from \$10,000,000,000.

The value of the commodities transported annually on the railroads of the country exceeds \$40,000,000,000. The aggregate sum paid annually in wages to locomotive engineers and firemen amounts, therefore, to only one-fifth of one per cent. of the total annual value of the internal commerce of the country.

There are transported on the railroads of the United States about 530,000,000 passengers annually.

During the year ended June 30, 1890, each passenger locomotive engine hauled 58,735 passengers.

The foregoing serves an important purpose in the discussion—since but for the railroad employes, not a wheel would turn and the entire establishment would go to ruin, and since the employes play such an important part, are those who seek to oppress and degrade them entitled to more consideration than any other class of tyrants may claim? We are quite willing that Mr. Nimmo should here have a hearing as to his estimate of locomotive engineers and firemen. He says:

The locomotive engineers of the United States are engaged in an exceedingly important occupation, involving peril, and full of heroic fascination. They perform an essential function in the conduct of the grandest system of transportation ever seen on this planet—the American railroad system—a vast and complex organization formed by the co-ordination of many elements, personal, commercial, financial, and mechanical, and sustaining vitally important relations to the commercial and social life of the nation. This system of transportation, with its multiform relationships, constitutes the business environment of the locomotive engineers and firemen of the country, an environment with which they must live in harmony in order to secure their own well-being,

and in order that they may be useful in the great work of internal commerce. This is beyond all question.

Read the foregoing and then ask if it is to be presumed that the men Mr. Nimmo eulogizes are likely to submit without resistance to statutes or decisions which reduces them to degrading vassalage that commerce may be prosperous among the states? The men who work on railroads are the friends of commerce, progress and prosperity, quite as devoted and sincere as an average judge, corporation, president, bondholder, merchant, princely manufacturer, or even Mr. Nimmo himself—but they do not propose to be enslaved—nor will oceans of panegyrical adulations quiet them while judges of the Taft and Ricks style or any other model are applying the branding iron. This country has had quite enough of slavery and if the shackles struck from the limbs of negroes are to be riveted by court decrees upon the limbs of white men, then there will be trouble, which will be a Vesuvian volcano compared to an ordinary smoke stack. Enslaving statutes will not stand, decisions of judges will not stand the onset. But the form of American government as the fathers made it, will not pass away in the struggle—not much—but it will be wrested from the grasp of plutocrats and their aiders and abettors—and with its pristine beauty and glory reinstated it will stand and the “gates of hell” shall not prevail against it, and the Nimmos, Tafts and Ricks may as well take notice.

---

## RAILWAY STATISTICS.

---

The fifth statistical report of the Interstate Commerce Commission, prepared by its statistician for the year ending June 30, 1892, was recently made public.

The total railway mileage of the United States on the date named is given as 171,563 miles, capitalized at \$10,226,748,134 or an average valuation per mile of \$59,609.

It will be universally admitted that to place the average cost of railroads, including all equipments, at \$30,000 per mile is sufficiently extravagant to silence all objections. It is seen, therefore, that the amount of water in the capitalization is \$4,479,858,563.

To account for the creation and the maintenance of this colossal fraud upon the public paralyzes the ordinary intellect. It is a fact that makes fiction blush, a central crime, like the sun in our solar system, around which ten thousand other crimes revolve and are vitalized. Since Jehovah “repented” that he had made man, because of his wickedness, no fraud in business affairs of which history gives so much as a hint, forms even a remote parallel to this water capitalization fraud of American railroads. It is the one Chimbor-

zian peak in the Andean chain of frauds that defies characterization. And, strange to say, grand, and peculiar as it is, challenging as it does the amazement of men, if not of angels, it has its comical side, and never appears more ludicrous than when the men who own the roads plead poverty and assure their hard worked employes that they must reduce their wages to prevent bankruptcy, and the employes, imagining themselves caught between H——alifax and the deep sea, vote to accept the reduction and really sympathize with the corporations which are trying, under many difficulties, to assure their employes that their wind, water and cash are exceedingly difficult to handle.

The report says that "the gross earnings from the operation of railways during the year ending June 30, 1892, were \$1,171,407,343. The operating expenses were \$780,997,996. From this it appears that the net earnings from the operation of railways were \$390,409,347. The income to the railways from investments was \$141,960,782, making, with the net income from operation, an aggregate of \$532,370,129."

Here we have a net income of \$532,370,129, which is 5.2 per cent. on the capitalization of \$10,226,748,134, which includes \$4,979,858,536 of water. If we draw off the water we find the amount of cash in the capitalization to be \$5,146,890,000, and the net earnings being \$532,370,129 shows that the net earnings upon the cash invested, was 10.3 per cent. Thus it seems that, whether we include the water or expel it, the net per cent. of earnings is sufficient, one would think, to warrant an increase instead of a decrease of wages paid employes.

Referring to equipment, the statistician says: "The total number of locomotives on June 30th, 1892, was 33,136. Of these 8,848 were passenger locomotives, 17,559 locomotives were assigned to the freight service, 4,355 were switch locomotives, and 2,374 were unclassified and leased. The increase in passenger locomotives during the year has been 130 and of freight locomotives 680. The total number of cars reported by carriers as their property was 1,215,092. Of these 966,998 were in the freight service, 36,901 were assigned to the companies' service, and 35,978 were assigned to fast freight line service. In addition to the above cars owned, the companies report 146,339 cars leased. It should, however, be remembered that these figures are exclusive of cars owned by private companies and leased to shippers for the purpose of transportation. The average number of locomotives per 100 miles of line is 20, the average number of passenger cars per 100 miles of line is 18, the average number of cars used in the freight service per 100 miles of line is 708. These figures show a decided increase in density of rolling stock over the previous year. The number of passengers carried per passenger locomotive was 63,399, and passenger mileage per passenger locomotive was 1,510,273. The number of freight cars per 1,000,000 tons of freight was 1,627. This is a decrease of thirty-nine, as compared with the previous year. There has been an increase during the year in the number of locomotives and cars fitted with automatic couplers and train brakes. The report shows a total increase in equipment of 27,139, and an increase

in equipment fitted with train brakes of 68,537, and an increase in equipment fitted with automatic couplers of 75,299."

The foregoing figures indicate the immensity of the railroad enterprises of the country, to carry forward which, required 821,415 employees, an increase of 37,130 over the previous year. The report says that "assuming an increase in the total number of inhabitants during the year of 1,250,000, it appears that the ratio of increase in railway employees to the increase in population was 1 to 34. The ratio of total railway employees to total number of inhabitants was 1 to 79. The railway industry makes each year larger demands upon the labor of the people. It is significant, however, to notice that the most of the increase in railway employment is confined to the territory east of the Mississippi and north of the Ohio rivers and to the Pacific slope." It is stated that the total operating expenses amounted to \$780,997,996, and that the number of persons employed was 821,415, if, therefore, "operating expenses" meant simply the wages of employees, their average earnings would be \$950, or an average of \$3.16 a day for 300 days. It is safe, however, to say that the average of wages paid does not exceed \$2.75 ranging all the way from 80 cents a day to \$17.50.

That portion of the report relating to casualties involving death and disability will attract attention. It is as follows:

The number of railway employees killed during the year covered by the report was 2,554, being less than the number killed during the previous year. The number of employees injured, however, was in excess of the number injured during the previous year, being 28,267. The number of passengers killed was largely in excess of the number killed during the previous year, being 376 in 1892 as against 293 in 1891; while the number of passengers injured was 3,227 in 1892, as against 2,972 in 1891. An assignment of casualties to the opportunity offered for accidents shows one employee to have been killed for every 322 employees, and one employee to have been injured for each twenty-nine men in the employ of the railways. A similar comparison shows one passenger killed for each 1,491,910 passengers carried, or for each 35,542,282 passenger miles, and one passenger injured for each 173,833 passengers carried, or each 4,140,966 passenger miles. The largest number of casualties to employees resulted from coupling and uncoupling cars, 378 employees having been killed and 10,319 injured while rendering this service. Of the total number killed in coupling and uncoupling cars 253, and of the total number injured 7,766 were trainmen. The accidents classed as "falling from cars" were in this year as in previous years responsible for the largest number of deaths among employees, the number killed in this manner being 611. Of this number 485 were trainmen. Collisions and derailments were responsible for the death of 431 employees. Of this number 336 were trainmen. This class of accidents is responsible also for the largest number of casualties to passengers. Thus 177 passengers were killed and 1,539 were injured by collisions and derailments during the year. Collisions alone were responsible for the death of 286 employees and 136 passengers.

It is here shown that there were killed and injured during the year 30,821 employees, and of them 10,697 were killed and injured by coupling and uncoupling cars at which rate the entire army of 821,415 employees would be killed and disabled in twenty-five years, but as the men who are killed and injured are chiefly train men, and as their number constitute about one-third of the number of the em-

ployes, or say 275,000, the killing and maiming at the rate of 30,821 a year, would kill and disable the entire force in about nine years. It is a frightful outlook to contemplate but in the horrifying figures before us showing the number killed and maimed during the past ten years the sum total would doubtless amount to 300,000, and yet it is a fact that railroad corporations are ceaselessly engaged in trying to reduce the wages of their employes, who day and night are working where death and disaster are forever lurking.

---

## EUROPEAN MILITARY, MONEY AND MISERY.

---

Nations are no longer isolated. Electricity and steam have made them near neighbors. The concern of one is becoming more and more the concern of all. Thoughtful men in the United States cannot contemplate the steadily increasing armies of Europe with composure. Our attention is called to a recent article in the New York *Herald*, in which it is stated that at the date of the Crimean war, 1854, the aggregate strength of the armies of the great powers of Europe did not exceed 3,000,000 in round numbers, while to-day, after the lapse of thirty-nine years, it is more than 20,000,000, an increase of 700 per cent.

The people of the United States, at least a great majority of them, treat with indifference figures relating to European military affairs, growing out of the fact, perhaps, that they regard with quite as much indifference the military affairs of their own country. Here we have what is called a regular army of about 25,000 men, costing annually, say, \$30,000,000, an establishment so small that it seldom occupies the attention of the average citizen. We notice, because the facts are forced upon our attention daily, that Europe is annually sending vast armies of immigrants to our shores, and workingmen complain because the influence of these arrivals is to reduce wages, but we do not stop to consider why such vast numbers come to us. We have tabulated figures relating to wages and production, with an occasional statement showing the deep degradation of the subjects of monarchies, but too seldom do we seek to know the real cause of the sad condition from which these wretched people would escape.

It is stated that in 1869 the fighting force of Europe was 7,000,000 of soldiers; the number in 1892 was 12,500,000, but as everybody anticipates war, laws have been enacted, which as soon as they take effect, the armies of Europe will show the sum total of 22,448,000 soldiers armed and equipped for war, costing annually \$1,000,000,000, as follows :

Germany . . . . .	5,000,000
France . . . . .	4,350,000
Russia . . . . .	4,000,000
Italy . . . . .	2,236,000
Austria-Hungary . . . . .	1,900,000
Turkey . . . . .	1,150,000
Spain . . . . .	800,000
England . . . . .	692,000
Sweden and Norway . . . . .	338,000
Switzerland . . . . .	489,000
Roumania . . . . .	280,000
Belgium . . . . .	258,000
Bulgaria . . . . .	200,000
Holland . . . . .	185,000
Greece . . . . .	180,000
Servia . . . . .	180,000
Portugal . . . . .	154,000
Denmark . . . . .	91,000
Montenegro . . . . .	55,000
<b>Total . . . . .</b>	<b>22,448,000</b>

The population of Europe, in round numbers, is, 300,000,000; if the United States should determine to have a standing army based upon population, equal to that of Germany, it would number 6,500,000 soldiers, and this military establishment would cost annually, at the wages now paid for soldiers, not less than \$650,000,000, to say nothing of equipments.

Taking such a view of the subject, it is at once seen why it is that Europeans fly from their country to find homes in the United States, free from military despotism, and where their scanty earnings are not taken by the authorities to maintain in peace the pomp and circumstance of war.

---

## THE COLUMBIAN FAIR.

---

In writing of the great American Exposition, held in Jackson Park, Chicago, at once the mind relaxes its grasp upon the magnificence of the Exhibition, its cost, its national and international importance and its historical significance and while the heart beats like a muffled drum, enters the house of mourning, where, cold in the embrace of death lies Carter Harrison, slain by an insane wretch. During all the months, from May to the closing days of October, Carter Harrison, as a citizen, and as the chief executive officer of the great metropolis of the west, had in a thousand ways given eclat to the Columbian Fair. On all occasions, his great intellect, his wide information, his profound knowledge of men and affairs had given to the great undertaking of the United States and of the nations of

the earth embellishments which only great and cultured mind forces are capable of bestowing. In the midst of royalty and titled aristocracy the Democratic Mayor of Chicago, the untitled American sovereign, the exponent of Republican simplicity towered aloft, the peer of the highest and the superior of all snobdom, regardless of titles and self assumption of superiority.

To murder such a man at any time, is a national calamity; to strike him down at the time when the crime was perpetrated, defies, we care not how gifted the pen, adequate characterization. We shall not attempt it. The President of the United States touched the button that set the machinery in motion on the day the fair opened, and the booming of cannon was heard around the world. Flags were unfurled to the winds, and the grand celebration of the four hundredth anniversary of the discovery of a new world began. Six months sped by, the day approached for closing the great celebration in a manner worthy of the event—when the finger of a crazy assassin touched the trigger of a death dealing weapon, and in twenty minutes the soul of Carter Harrison had taken its eternal flight—and gloom, like a pall, fell upon a great city and upon a great nation and the fair passed into history blotched with blood. As we write there is not a capital in all Christendom, nor scarcely in pagan lands, where the untoward event is not commented upon with sorrow.

It were folly to discuss theories relating to cranks. Insanity is often methodical, and to such an extent that experts find it difficult to trace the dividing line between reason and madness. Insanity in its mildest forms is dangerous and the time has come to beware of cranks, creatures who brood over fancied, as well as real ills—bigots, who imagine themselves the ambassadors of Heaven and who stand ready, if not restrained, to light the fires of hell upon earth, and satiate their cannibal thirst with a brother's blood. Carter Harrison owes his premature and awful death to the murderous insanity of a crank, who had become melancholy over a fancied wrong.

In writing of the great Columbian Fair, it scarcely suffices to say that from first to last, as an enterprise, it was a splendid success. Ordinarily, such a statement might be accepted as referring to finances. We speak of the Fair in a far broader sense. It was a success financially. From first to last, the paid admissions amounted to 21,458,910, as follows: May, 1,050,037; June, 2,675,113; July, 2,760,263; August, 3,515,493; September, 4,658,907; October, 6,799,107, and the total revenues, from all sources, aggregate about \$10,500,000.

Such figures illustrate the financial side of the Fair. But when we attempt to estimate its educational influences upon the American mind, figures, whether numerals or the figures of rhetoric, become almost expressionless. To say that the Columbian Fair was grand, wonderful, unique, conveys to the mind no adequate conception of the enterprise. It stands out the latest of the wonders of the world. We make no attempt to accomplish the impossible. To have seen it was to have made the voyage around the world—the acquaintance of the nations of the earth, in their own climes and environments,

"from Greenland's icy mountains to India's coral strands," from the homes of the Esquimaux to the homes of the Dahomeyans—Christian, pagan and savage—all were grouped in Jackson Park. Costumes, houses, huts, and customs, with products of field, farm, mine, factory and studio, requiring days and weeks to enable the mind to grasp the alpha of the Fair, the task of reaching its omega being of such a herculean character that not one visitor in a thousand accomplished it.

The Fair, after all, was the sublimest testimony the world has ever heard or seen, in all the centuries, of the civilizing, elevating, liberalizing force of labor. Everywhere, from the turn-stiles through which the millions passed to review the wonders of the Fair—over all, above all, surrounding all, the imagination, without an effort, could see written, as vivid as electric light, the announcement that the Columbian Fair is monumental of the achievements of labor.

We make no objection to the claim capitalists may set up that behind it all was money. We are quite willing to admit the alliance between money and labor in the accomplishments of great undertakings, but this must be said, because it is true that the greater credit is due to labor, because, it is the creator of the capital with which, where justice holds the scales, it is in ceaseless harmony.

Referring again to the close of the Fair, October 30th, 1893, we repeat that but for the tragic death of Mayor Harrison, the Columbian Fair would have passed into history as the grandest achievement the nations of the earth have known since Pharaoh built the Pyramids.

---

A CONSTANTINOPLE morning paper, under the caption of *Pour les Dames*, referred to the Sultan's harem in a way that displeased his highness, whereupon the editor was relieved of his head and the Censor was reduced to a eunuch and morning papers were at once suppressed. Later on, they were permitted to proceed, but now each paper has a Censor, and *powerless dames* is not one of their features.

---

THE tomb of Noah has been discovered, and it will soon be in order to organize a pilgrimage to the sacred spot to enable sorrowing relations to *Whereas* and shed a few tears in recognition of the Grand Old Man's success in saving the human family from death by drowning.

---

THE New York *Herald* proclaims a labor jubilee, when "any grievances which workingmen may have will be easily redressed and every wrong easily righted." Why not predict, a time when rattlesnakes will hunt a dentist to have their fangs extracted?

---

It happens at last, that a private citizen of France, can sue a member of the Legion of Honor, and drag him into court, regardless of his trappings.

# CONTRIBUTED.

## MONOPOLY FUND.

BY JOSÉ GEOS.

Civilization has, so far, been but the constant clashing of two elements, labor and monopoly. The latter is essentially a human institution. The former is essentially divine. It constitutes God's primary law at the very inception of civilized man, if by that we mean man with certain perceptions of duty to a higher power than himself. We can trace all human disasters to the fact that labor, that primary law of God, has always been treated as a secondary force in the councils of all nations. What we call legislation has been nothing but a perpetual coquetting with monopoly in all possible forms. No wonder that the path of civilization is strewn with disasters. No wonder that all progress has been saturated with tears and despair. It has been a naked human progress, with hardly any substantial elements of the divine, with hardly any precise conceptions of duties to each other, much less of duties to a higher power than ourselves, or to the basic laws that preside over the universe, and hence over human acts, individual and collective.

And yet, men have been religious enough, after a fashion. The only trouble is that religious sentiment has strangled the ethical principle, without which religion is but a mass of negations. We don't need to quarrel at all with that sentiment in religion, and each man, or set of them, should exhibit it in any form they see fit, but why divorce it from ethics? Without such a divorce we would never have had any infidelity, nor any fanaticism, much less any religious disagreements. Without such a divorce we would all have easily perceived that the hereafter would be all right, if we only took care of the present on high, noble conceptions of life. And life is but joy, because of duties performed. That is what life shall be under a correct civilization. And we shall have that as soon as we raise the lowest of the low on a level with ourselves. Nothing shall be done until that is done. Let us now drop to the task we have undertaken.

We propose to estimate what monopoly absorbs out of the net annual earnings that labor creates. Let us rest our estimates on 12½ millions family groups in 1890, at an average net product of \$900, total 11½ billions. Statisticians call the total average product \$1,000 per family group, but we prefer to allow at least \$100 per family as necessary to meet the wear and tear of our tools of production, and

that includes the keeping of our working animals. We shall have a million family groups as representing the wealthy non-producers, or pretty nearly so. That would leave us twelve millions of real working family groups, the labor power of the nation.

What is the sum that that labor power did receive in 1890, out of the 11½ millions annual net product? First, let us divide the workers in two general groups. We shall call them inferior and superior workers, although we don't like such adjectives at all. By inferior workers we simply mean those who perform the labor requiring less intelligence, in opposition to those engaged in labor requiring greater intelligence. But, could the latter exist without the former? The artists who decorate all palaces, monuments and cathedrals, what would become of them without the humble, inferior workers that dig the ground to make room for the foundations, and those who simply cut the rocks and cart it from yonder hills, and so on?

Take the orator, the poet, the painter, the writer, up to a Cicero, a Virgil, a Velasques, a Fenelon, where would they be if somebody had not raised the food and all other needs of life they had to consume while forming themselves, and while giving to humanity their own productions?

The fact is, what we call inferior workers are the most indispensable of all, the ones without whom no high human productions are possible, in any line or sense. It looks, then, as if we were entitled to assert that, in the order of nature, on the plane of ethics and moral sense we should not have any great discrepancy between the labor earnings of the inferior and superior workers, as general averages, and under equal conditions of fidelity to the work performed, with mighty few exceptions, anyhow. We mean that a correct civilization would give to the humblest faithful worker a full enjoyable living. Also that such a civilization would breed men who would seldom care for any more than that full enjoyable living and could not very well have any more, because unable to crush anybody.

Suppose that out of our 12 millions working families we have 10 millions falling under the classification of inferior workers, and 2 millions under that of superior workers. The average annual earnings of the former are not over \$450. Four hundred and fifty, extremes from \$350 to \$600, after deducting periods of sickness, absence of work from industrial disturbances, or climatic conditions, etc., etc.

Now, what about the average for the 2 million family groups of superior workers? We mean what they really obtain from their labor, on an ethical social basis, and not what they may obtain now and then, as small fry monopolists, or because of salaries more or less tinged with the monopolistic element of our present industrial conditions. Suppose that we call that average \$800, extremes from over \$600 up to \$1,500. We already allow a great deal, nearly double the average earnings of the mass of workers without whom most of the superior workers would have to do the inferior work, with the inferior wages, because of our inferior civilization.

On the above averages, our 12 millions family groups received, as

labor earnings, \$6,100,000,000, out of the 11½ billions total net product in 1890. That leaves \$5,150,000,000 for the monopoly fund, but that is not all. Most of the 12 millions working families pay land rents and house rents to private individuals, the house rents being but a corollary of land rents. Add to all that the immense inflation on prices, due to gambling or scheming combinations in certain articles of general consumption. All that may approach the sum of 3 billions of dollars, but call it two billions, that the bulk of our working families have to drop into the monopoly fund out of what they receive as labor earnings, on the above estimates. We don't really see how the monopoly fund can be less than 7 billions out of the 11½ billions total net product, and that as the lowest figures of our statisticians.

And we shall not have much trouble in distributing that monopoly fund of 7 billions. Take, for instance, 50,000 families with an average income of but \$40,000, extremes from \$20,000 into \$2,000,000 and over. Take again, say, 200,000 families, with an average income of but \$15,000, extremes from \$6,000 to less than \$20,000. There you already have 5 billions in monopoly fund, on but 2 % of our population, what we may call our wholesale monopolists. Below that 2% we certainly have about 8% in retail and small fry monopolists, some of them being part workers and part monopolists. Well, an average of but \$2,000 monopoly income on about that 8%, 1,000,000 of families, would give us the balance of the 7 billions total monopoly fund.

We shall welcome any proofs showing which one of our different above estimates fails to correspond to actual facts, as well as to the impressions we are justified in having on the whole subject.

Let us now return to that double conception with which we have commenced this article. We said that labor and monopoly constitute the two constantly clashing forces of civilization so far. They have always represented two armies in the field; monopoly, a small army well organized, labor, a large army with no organization at all, and so forever crushed by the small army. And only a little organization, resting on a few basic sound conceptions of life, would enable labor to dig the grave in which to bury the whole monopoly army.

We all know that the most effectual way with which to victoriously close up a campaign is to take possession of the basis of supplies on which the opposing army depends, to carry on the war. Take that whole monopoly fund of 7 billions, or less if you like, because our argument would not suffer from any mistake on the subject. Where is the basis that supplies that monopoly fund and feeds our army of monopolists? Yes, where is it? In the clouds, in the skies, in those perishable tools we call capital? Of course not. It is in land, as natural wealth, and in land values, as social wealth; in land, the store house of all that labor can produce; in land, forever about the same, while capital passes away when at work, and more rapidly yet when not used, generally speaking. Let that army of

labor, even if poorly organized, fall upon that basis of supplies, that is, let labor take hold of that land and the land values, and our monopoly army would be, in no time, scattered to the four winds, forever losing all power of cohesion, because of no rallying point, no land on which to rest, no imperishable source from which to replace those constantly perishable tools, that capital, the eternal scarecrow of our socialistic friends. Yes, the whole monopoly army shall soon come to a sad end when labor sees fit to control all land and land values.

The process in question would stop that power by which the few have always kept the many under tribute. Without land monopoly, no one could be evicted from the home or business place he occupied. And no one would need to be evicted, because, with free land all would gradually have the power to own the buildings they needed to use. While that was taking place, all house rents would be gradually falling. For a while we would yet have house lords, but they being landlords no longer, they would have to take the house rents fixed by labor, because labor, in possession of the land, would soon control all land products, and so all buildings.

The mere stopping of monopoly land rents would take from the monopoly fund and transfer to the labor fund the bagatelle of 2 billions of dollars per annum, that being the total annual monopoly land values in 1890, according to Fred C. Waite, census agent, on "True Wealth," in letter to the Secretary of the Interior, say, over 1 billion in rents and 1 billion increased capitalized land value for the year, as stated by Mr. Waite.

That item alone would give to labor, in less than ten years, over 20 billions capital, to compete with whatever capital our loafing capitalists had been able to retain. And they would have retained mighty little, unless they had used it in full, by paying good wages to those yet willing to sell their labor, rather than to employ themselves, on free land, with a few hundred dollars, saved or borrowed for a while from any friend.

A little quiet thought on that subject will, no doubt, reveal to any unprejudiced mind that without land monopoly capital could not fail to rapidly lose all power for evil, and be soon left with but power for good, at the mercy of King Labor. King because controlling the imperishable source of all wealth. Is there any thing more axiomatic than those shall control the perishable, all capital, who control the imperishable, all land? To be sure, God gives nothing without some labor, physical or mental, or both, and that applies to truth with its resulting joys. Hence our principal advice to all workers is, don't trust anybody's brains. Try to think with your own!

---

## MR. STUART'S "ECONOMIC PROBLEM."

BY WILFRED P. BORLAND.

Notwithstanding that the conditions by which they have been brought about are the result of fraud, brutality, and wholesale robbery of the masses, ethically indefensible and brazenly, impudently at variance with all rules of right and justice, it is quite the fashion with a certain class of good people to refer to the several pernicious economic movements of our time as the result of "inevitable tendencies," "evolutionary progress," etc., *ad infinitum*, after the same line of reasoning. The Bourgeois economists are adepts at this sort of reasoning; they admit that force, fraud, cunning expedients, and wholesale expropriation of the masses is at the base of our present economic development (which, being a matter of history, they cannot deny), but they enter the plea that our present inequalities would in any event have been brought about by the force of "economic necessity," and that force and fraud only hastened the process, causing the ultimate distribution of wealth to rest in the possession of somewhat different persons than would otherwise have been the case but not affecting the general result. M. Naquet, one of the most scholarly opponents of the Marxian theories, in attacking Marx's theory of the "primitive accumulation," lays great stress on this point; he advances the hypothesis that, supposing society should restore to the masses all the rights of which they have been robbed, the result of proved economic tendencies go to show that it would not be long until the distribution of wealth would be fully as vicious as it is at present, the only difference being that the personnel of such distribution might be altered. And this is advanced as an argument in favor of the existing order. And now comes my good friend Stuart, with: "Much as we must deplore the horrors resulting from the forcible expropriation of the peasants from the soil, during the last four centuries, it must be admitted, as Toynbee has pointed out, that force and fraud only hastened the process, the result was inevitable, owing to changed economic conditions."

I am not at all surprised when I meet with such puerile arguments as this from the defenders of the present system, but I am surprised that socialists should find it necessary to repeat such arguments in defense of their theories; and I did hope that Mr. Stuart might have something better than this to offer in opposition to the points I raised concerning the "iron law."

To me it seems the very extreme of vicious logic to admit that the expropriation of the masses from their rights in the soil was a necessary condition to the establishment and maintenance of the capitalist system (I here use the term "capitalist system" in the socialist sense), and then to assert that the capitalist system is the result of an "inevitable tendency," and would have appeared whether the masses had been robbed or not. I cannot understand how it is that persons

of common sense should point to historical developments and economic tendencies which have appeared under a régime of private property in land, as being valid arguments against a system which implies the very negation of private property in land. In tracing the historical development of capitalist accumulation, Marx has assumed that the capitalist system was a necessity for the development of those social economies in the productive processes, and the scientific co-operation of forces which we now know. It was the capitalist, in his anxiety for the creation of surplus-value, who introduced those economics, and organized and directed the labor-power he had purchased into the most economical channels of production. The capitalist introduces division of labor and scientific co-operation for his own benefit, and Marx rightly says: "The transformation of the individualized and scattered means of production into socially concentrated ones, of the pigmy property of the many into the huge property of the few; the expropriation of the mass of the people from the soil, from the means of subsistence, and from the means of labor; this fearful and painful expropriation of the mass of the people forms the prelude to the history of capital." But, why the assumption that the particular development we are familiar with was the only possible one? Why assume that the expropriation of the masses, either forcibly or otherwise, was the condition precedent to the establishment of these economics which are to become social property in the future? It must be evident to any thinking person that there is not a particle of historical evidence to support such an assumption. All the arguments which are advanced to support that assumption are deduced from tendencies which have appeared *since the masses were expropriated, since private property in land became a fact.* Where shall we go for evidence to show us what form the social compact might have taken had the rights of the masses been preserved and private property in land never existed? But, for the iron law. I produced historical evidence to show that the iron law was not a consequence of the capitalist system, but of the one single fact of the land robbery which made the capitalist system possible; it is fair to presume, then, that if the cause is removed the effect will disappear. Mr. Stuart answers this by quoting well known tendencies which are all the time taking place under our régime of private property in land, and, Yankee fashion, asks, "and does he really think that under such conditions there is any immediate danger of the 'industrial reserve army' falling under the numbers required for the full development of that system of production?" "Under such conditions." No, I do not. But under single tax conditions, most assuredly—yes, else I would not have went to the trouble of producing an argument which leads irresistibly to that inference. Adopting socialist terms, the complete application of the single tax would first bring about a radical change in the "technical composition of capital." Much of that which is now locked up in the land, forming an element of "constant capital," would be released, and transformed into an element of "variable capital." "Variable capital" would thus prepon-

derate greatly over "constant," thus bringing about results, the first, a relative decrease in the numbers of the "industrial reserve army," and, by consequence, an increase of wages. The area of free land would be vastly extended. The recent mad scramble for the possession of the relatively free land in the Cherokee Strip is sufficient to give us an inkling of what this means. There are thousands and thousands of persons who would take advantage of such a condition to become self-supporting and independent producers, thus bringing about result the second: an absolute decrease in the numbers of the "industrial reserve army" and a further increase in wages. One of the most important elements for the transformation of "variable" into "constant" capital—the land—would be lost to the capitalist class, and they must then depend upon machinery alone for the exploitation of the laborer. All historical evidence goes to show that capital must control both land and machinery in order to successfully exploit labor; it is not rational to assume that such exploitation would continue after capital has been deprived of its control of the land. But the socialist argument is that because the machinery of production is now in the hands of a small class, this class must continue—unless the people assume control of both land and machinery—to control the land, *solely by virtue of its present control of machinery*; yet, the history of capitalism proves conclusively that capital's control of machinery is a circumstance contingent upon its control of the land. If the socialist argument on this question is true, it certainly presents the spectacle of a paradox in logic. Mr. Stuart quotes Bliss to show that there has been two great falls in English wages. "The first, due to the monopolization of land; the second, due to the monopolization of machinery." Although Mr. Bliss calls attention to the fact, he fails to mention the other fact that the monopolization of machinery was only rendered possible by the previous monopolization of the land, and that a very vigorous movement of land monopoly was carried on contemporaneously with the monopolization of machinery and rendered such monopolization effective. In this connection I want to call Mr. Stuart's attention to another circumstance which "Toynbee has pointed out."

"An agrarian revolution plays as large a part in the great industrial change of the end of the eighteenth century as does the revolution in manufacturing industries, to which attention is more usually directed." This is the enclosure movement to which I called attention in my previous article. Perhaps if Mr. Bliss had been willing to estimate it at its true value his conclusion might have been somewhat different. To Mr. Stuart's second question, I can say that my ideal of a correct civilization is fully as exalted as anything which nationalism presents to us. I thought I expressed myself on that point in my previous article with sufficient emphasis to preclude the possibility of the application of the term "contemptible," even in the qualified sense in which Mr. Stuart uses it.

In discussing the degrees of exploitation, I would advise Mr. Stuart, in the interests of accuracy, to drop the terms "rent," "interest"

and "profit." The tautology lurking in these terms—especially the two latter—render them dangerous things to monkey with. Stick to the term "surplus-value," friend Stuart. It is more scientific and accurate.

Now, let me warn Mr. Stuart that my idea of co-operation is not at all "hazy" or indefinite. Did I consider co-operation, under present conditions, of any value as a general solution of the economic problem I should not be a single taxer, but would content myself with propagating the teachings of Cairnes, Pizzamiglio, and other prominent advocates of a superficial theory. I know what co-operation now means. I have not studied the history of the waves of Owenism and Fourierism, which swept over this country in the two decades between 1826 and 1846, movements which were upheld and engineered by such men as Charles A. Dana, Horace Greeley, Albert Brisbane, Robert Dale Owen, W. E. Channing, and a host of others equally noted, in vain. The study of anthropology teaches that man is a natural co-operator. The first advance which primitive man makes from the anarchic horde which marks the beginning of all societies is in the direction of co-operation with his fellows for their mutual benefit. As society advances, this tendency to co-operation advances, but the introduction of counter-forces causes it to take on perverted and unnatural forms. Capitalist co-operation is one of those perverted forms. Nationalism professes to be co-operation without perversion, or natural co-operation. In my mind there is a doubt on that latter point. If Mr. Stuart will remember, I introduced the Rochedale Pioneers as an example of a natural tendency of man, and my investigations lead me to believe that the society of the future will be a co-operative one, based on the promptings of this natural tendency. The thousands and thousands of attempts to establish co-operative societies in the past have been but attempts to realize a natural desire of the human mind. Capitalism has repressed them, murdered them, that it might continue its own perverted form. Remove the *conditio sine qua non* of capitalism and natural co-operation springs into being of its own volition. To imagine that without capitalism we should never have made any advances from the "golden age," or that, to utilize the benefits of common property in land, we should have to forego the benefits of associated industry, is to repudiate all the teachings of science. I am quite aware that socialists and nationalists repudiate "State Socialism," but I do not draw my conclusions as to the results of the application of those doctrines from the highly colored accretions of individual propagandists. I assert that the sober logic of nationalism and Marxian socialism points irresistibly to "State Socialism," and I shall be happy to demonstrate that assertion for Mr. Stuart's benefit, at some future time. In this connection I may say that I place no value on the clever skit of Eugene Richter.

## A REJOINDER.

BY W. H. STUART.

A word in reply and in conclusion.

Mr. Borland still clings to his argument that, as the expropriation of the laborer from the soil formed the necessary and admitted prelude to the capitalist system of production, to remove the cause the evil effects of that system would disappear; that, in fact, the operation of the "Iron law of wages" is not an effect of the capitalist system, but of "the single fact of land robbery, which made that system possible."

The weakness of this argument consists in ignoring the recent changes that have been effected in agriculture by the use of labor-saving machinery.

Agriculture is the latest industry that has been attacked by the capitalist. Long after the capitalist system had conquered nearly all other forms of industry, agriculture remained in a comparatively primitive condition. The introduction of the power loom increased the productive power of labor a thousand fold, and reduced the hand loom weaver to a condition of wage slavery to the owner of the huge factory. No such remarkable change occurred contemporaneously in agriculture. The introduction of machinery was slow; improvements mostly consisted in increasing the efficiency of the tools already in use, or in the use of small machines, displacing labor to a limited extent. Every increase, however, in the use of labor saving machinery, made it more and more difficult for the man of limited means to make an independent living by agriculture. The smaller farmers were continually forced into the condition of hired laborers either on farms or in the factories.

The census reports for the last thirty years show that farms have been continually increasing in size. This change was observed long before the U. S. government free lands had become exhausted. The cause must be found in the increasing use of machinery, making small farming less profitable.

Recent economic changes have, however, completely revolutionized agriculture. And here let me suggest to Mr. Borland that it is mere waste of time to indulge in vague speculations as to what form production might have taken had not the expropriation of the English peasantry been so largely effected by force and fraud. He has only to observe the economic changes taking place under his eyes that are causing the expropriation of the American farmer, to understand thoroughly that expropriation of the English peasantry was inevitable; that force and fraud merely hastened the process.

The expropriation of the American farmer is being effected, not by force, but as the result of economic causes that are as inevitable and persistent as the laws of nature. Nothing in the history of agriculture in England approaches in economic importance the depop-

ulation of the agricultural areas of the New England states; accomplished, not by centuries of force and fraud, but in less than a decade by the competition of "bonanza" farms of the northwest. Within sight and sound of the New England factories can be obtained hundreds of improved farms for the mere value of the improvements, *i. e.*, the land can be obtained free, by paying the value of the improvements. What more does the single tax offer?

I have before referred to the cotton picker, which, when fully introduced, will, it is estimated, displace the labor of 80,000 cotton pickers in the southern states. Here is another item showing the rapid advances made by the capitalist farmer in the same region. An official circular, issued by the S. P. R. R. Co., referring to the use of machinery in the production of rice, says:

It has made it possible for a few men from the northeast to capture the rice industry. It has enabled one man with a machine and four mules to do the work of 80 to 40 men in harvest, which lasts three months of the year. The 3,000 twine binding (rice) harvesters in use represent for three months an unseen population of 100,000 men, who never strike, ask for no holidays, never hunger, thirst, or get tired. *It gives to one man the productive capacity of thirty.—Twentieth Century, Oct. 12.*

Thus is the rice industry lost forever to the small farmer.

Within the last thirty days an English ship, at a neighboring harbor, has taken on 2,000 tons of wheat, equal to ten train loads, for Liverpool. This wheat was taken from a ranch of 5,000 acres, which was plowed by steam traction plows, and the ripened grain cut, threshed and sacked by a machine that cost \$7,000. This wheat was never under cover, was loaded from the ground on wagons, and taken directly on board ship. This is capitalist agriculture. No profits wasted on useless middlemen, no intermediary between the capitalist and the labor he exploits. At 75 cents per bushel the capitalist farmer will make enough profit to pay for his land in five years. In the same time, and at the same price, the small farmer will lose the value of his farm and be reduced to poverty.

In the wheat raising counties of the state of California the rural population is steadily diminishing; the size of the farms and the aggregate product as steadily increasing. The very same changes, according to the census reports, are taking place in New York state. In what way would the adoption of the single tax prevent this "transformation of the individualized and scattered means of production into socially concentrated ones, of the pigmy property of the many into the huge property of the few," or make it more easy for the man without capital to make a living?

When the capitalist system dominates agriculture as completely as it does other forms of industry it will be a matter of indifference to the capitalist under what system land will be held. To change from private ownership to the single tax would enable him to withdraw the fixed capital invested in his land and invest it in more machinery; increase the area of his holding, and thereby increase his surplus value. With free land he would be still better off, because the continually increasing extra surplus labor, not needed as an

"industrial reserve," might procure a bare existence from the soil, instead of being a burden on him for subsistence, and a dangerous menace to the stability of the capitalist system.

In view of present economic conditions, it is no wonder the single tax mind is archaic and retrospective; much given to quoting ancient authorities, whose opinions or theories, in the face of present economic conditions, are absolutely worthless. The present certainly offers no encouragement to the single taxer; with still less confidence can he look to the future.

I have before pointed out the impossibility of small coöperative farms succeeding under a capitalist régime. It might be urged, however, that if all farmers formed themselves into small coöperative associations there would be no labor for the capitalist to exploit. This, of course, assumes that all surplus labor could find remunerative employment in agriculture, a very rash assumption, indeed. There is a limit to the demand for agricultural products, which can not be greatly exceeded without reducing prices below a remunerative basis. But, admitting for the sake of the argument, that there was really no limit to the number who might profitably engage in coöperative farming, what would be the result? This: that competition would continually tend to the elimination of the smaller and weaker associations. The 10,000 acre coöperative farm could not compete with the one of 100,000 acres. So that in self-defense the farmers would be forced to form a "Trust" that would control all agriculture, which would be socialism, *i. e.*, national coöperation in production. Extend the system of coöperation until it includes all industry and we would have the coöperative commonwealth.

To this end are all things tending. Every "trust" that is formed and every "bonanza" farm is merely adding another nail to the coffin of capitalism, and brings us nearer to national coöperation. It is coming whether we wish it or not. It is inevitable. There is no other alternative. Capitalism and the competitive system is a mere passing phase in the economic history of the world. It has served its time and will soon give way to a nobler, grander system, one founded on Justice, Equality and Fraternity. In reaching this ideal of fraternal coöperation, we will, no doubt, pass through stages of state socialism; government ownership of railroads, telegraphs, telephones, coal mines, etc. The transition will probably be gradual; government ownership extending over one industry after another until, finally, all industry will be nationalized. State socialism will be a passing phase in the evolution from the competitive to the coöperative system. But while state socialism is not our ideal, it presents no terrors to a democratic system like ours, for "we are the state."

A word in conclusion with Mr. Middleton. In a former article I pointed out that the taxing of railroad franchises, which he advocated, formed no part of the single tax theory. That theory proposes that all public revenues shall be derived from a tax on land values, and the abolition of all other forms of taxation. That land is to be taxed "irrespective of improvements," which is intended to prevent the

holding of land out of use, or, as single taxers express it, force the owners to "improve it or abandon it to those who will," under the idiotic delusion that all valuable land would be utilized under a single tax régime.

It is this singular delusion that made the *Standard* assert that under a single tax régime every vacant lot on Manhattan Island would soon be occupied by a factory, and that made the editors of the *Detroit Evening News* and *Baltimore Critic* declare that the adoption of the single tax would cause a demand for every foot of land in their respective cities! I pointed out to Mr. Middleton that according to the single tax theory the bed of a railroad would have no more taxable value than a parallel strip of vacant land. I have to again assure him that in showing the absurdity of this proposition, he is criticising the single tax theory, not me.

He is still worried about the "old economists," and the definition of "capital." He quotes Adam Smith's four principal forms of capital. 1st, Useful machines which facilitate and abridge labor. 2d, Profitable buildings which produce a revenue, etc. 3d, Improvements of land. 4th, The acquired and useful abilities of all the inhabitants or members of society, etc. That machinery and profitable buildings should produce a "profit" i. e., "an income without personal exertion," is too ridiculous for Mr. M. to discuss. But he asks confidently, "How can 'acquired and useful abilities' be classed as 'that part of wealth used for the production of an income without personal exertion,' or as 'accumulated unpaid labor'?" The answer is simple: Under our competitive system the cost of the production of wealth is merely the cost of subsistence of labor; all over that goes as surplus value to the capitalist. Consequently, all the "acquired and useful abilities of society" is exploited by the capitalists and landowners. He will admit, I presume, that labor is more skillful, that technical knowledge has increased, and that labor is more effective now than during the 15th century, and yet, according to Prof. Rogers, the English workman is not so well off as his ancestor of the "golden age." Who, then, has profited by the "acquired and useful abilities of society," unless the capitalist, in the shape of an "income derived without personal exertion?"

To my assertion that: "there is not a line in 'Progress and Poverty' that would indicate the faintest conception on his (George's) part, of the difference between monopoly and natural rent. He ignorantly assumed that present rent was economic rent. His failure to see the difference reduces his theory to an absurdity, and 'Progress and Poverty' to a mere *pot pourri* of poetry and platitudes."

To this he replies by quoting passages from "Progress and Poverty," regarding the holding of land for speculative purposes; the effect of panics on land values, etc., matters that have no relevancy to the question at issue, and which is only intended to impress the careless reader with the idea that I am fully answered. I assert, that probably 90 per cent. of present rent is solely due to land monopolization, which the adoption of the single tax would eliminate, leaving about

10 per cent. as natural or economic rent that would be available under a single tax régime. George ignorantly overlooked this important effect that would inevitably follow the adoption of his theory. In answer to a correspondent asking what constituted economic rent, George replied in the *Standard* of May 20th 1891, giving an illustration, explicitly showing that present rent is what would be confiscated by the single tax. And now, Mr. Middleton, admitting that my contention, that 90 per cent. of present rent may represent robbery, pure and simple, of labor, coolly proposes to continue the robbery under a single tax régime by government monopoly of the land, a proposition that I fitly characterized as: "the most contemptible proposition ever offered by anyone assuming the role of a reformer."

Mr. Middleton winces under my reference to the single tax as "the contemptible scheme of robbery and confiscation proposed by Henry George." He asserts that in taxing only the land, leaving improvements exempt, that the owners would be fully compensated. This statement discredits either his intelligence or his sincerity. I assert on the contrary, that in the case, say of a mechanic who invested the savings of several years, say \$1,000, in a lot for a home site, that the adoption of the single tax would rob him of the value of his lot as fully as if a burglar had taken the \$1,000. For it is admitted by all single-taxers that upon the adoption of that theory the selling value of land would entirely disappear.

He compares this scheme of robbery to the Nationalist proposition to pay the owners of railroads, telegraphs, industrial plants, etc., the full value of their property based on the cost of reproduction. For while the owners of industrial plants are not guaranteed against competition, either private or public, the owners of land, on the contrary, have been guaranteed in their rights of possession by statute law.

Let me suggest to Mr. Middleton that if our present laws requiring all land, vacant or improved, to be assessed at actual value was put in force, that one-fourth of present land, both urban and agricultural, would within two years be thrown on the market at probably one-fourth its present value. Here is a reform that is practicable, and that would satisfy the moderate ambition of single-taxers of the "limited" variety, whose color blindness in economics enables them to see only one form of robbery. I am greatly amused and entertained at Mr. Middleton's vivid exposition of the prospective horrors of socialism. Among the many authors he quotes I miss the masterly (?) attack of Herr Eugene Richter on socialism. Get it Bro. Middleton by all means, you can't afford to do without it in discussing socialism. The graphic description of the long line of socialists eating out of the public trough, the women and children at a separate trough, all dressed alike; all getting up and lying down at exactly the same hour, is, I assure you, "worth the whole price of admission." Assuming that Mr. Middleton expects his criticism to be taken seriously, I reserve its consideration, by permission of the editor, for a future number of the MAGAZINE.

---

## GRISELDA.

BY ELIZABETH MORGAN.

It was Christmas Eve, and though it was in Virginia, the weather was raw and cold, with heavy grey clouds that threatened snow. Theresa did not want it to snow. She lived with her father on a forlorn old plantation called Canebrakes, far out in the country. Their nearest neighbor lived a mile away, but as they were not on friendly terms with him, they considered the distance cause for congratulation rather than otherwise.

It was very desolate, but Theresa had lived there nearly all her life. Dr. Tracy had been among those who thought, when the war was over, that southern land would be a good investment for his money. His wife was dead and Theresa only a baby when he first went south. He left her in New York in his sister's care until she was fifteen, when he purchased Canebrakes, and sent for his daughter to join him, much to the indignation of her aunt and cousins.

All this was a long time ago, but still the fortune that had been sunk in the worn out land failed to re-appear; efforts at farming had resulted in greater loss, and now if one could get something to eat and to wear, and a fire for the cold weather, surely one ought to be thankful.

Theresa, standing alone by her parlor window this Christmas Eve, thought one could be very thankful, indeed, if they were sure of all that. Her stock of wood was so small, and if the snow came and covered everything how could she find any more? and the weather was so bitterly cold. She did not dare to think how little there was in the house to eat, and there was no money. Her father practiced his profession since his farming had failed, but his patients were poor and seldom paid their bills; when they did the money was spent long before it was earned.

"It does not seem much like Christmas Eve, Griselda," said Theresa, as she looked across the dreary landscape. "If only we were not so far away from everybody. If we could see the town in the distance, or catch a glimpse of the sea, it would be pleasanter; but one can't have everything."

Theresa went over to the sofa where her friend was sitting and put her arms round her. Griselda had been with her all these years. Without her she was sure she would have died of loneliness.

"If I didn't have you, I *should* be miserable!" she said. "Let me put a corner of my shawl round you, there are so many draughts, and we'll have a long talk here in the twilight. Did I tell you papa will not be back again to-night? He's gone away over to the other side of the town to take care of somebody who is ill, so we won't light the fire, if you don't mind, and we'll have all the more wood to-morrow, for it's going to snow."

There was silence for awhile in the great, bare parlor, and then Theresa began again suddenly.

"I remember one Christmas Eve when I was at my aunt's. It was the last one Jack was there. He wasn't exactly a cousin, you know, but we always called him so. I thought him the most wonderful boy! He was so big and so clever, and I was only a little thing. I wonder what he is like now—Griselda, if you were any one else, you would shiver and complain because it is so cold, and cry, perhaps, because you were hungry—I'm not crying! But I think we'll have to get up and walk round—I never knew this room so chilly!"

The cold, grey light from the snowy clouds fell through the great uncurtained windows and showed a little shadowy figure flitting up and down. She stopped suddenly, her heart beating thick and fast. What was that sound that was echoing through the great empty house?

"O, Griselda! Someone is knocking at the front door! Who would come out here such a night as this? Something must have happened to papa!"

She flew to the door and threw it open. A stranger was waiting outside.

"Is Dr. Tracy in?" he asked, and with a little breath of relief, she answered no.

"Then will you please tell Miss Tracy that Jack Lowden would like to see her?"

"Jack Lowden!" In an instant the door swung wide open and he saw the little grey figure in the darkness, holding out her hands to him.

"O, I am glad to see you, Jack!" she cried. "How good of you to come!" Two icy hands closed tightly on his and he was drawn within the gloomy portals, and the door swung together behind him.

"Just wait a minute while I fasten the door," said Theresa, "then I'll show you the way into the parlor. How are my aunt and cousins? What made you think of coming to see us after all these years? I thought you were all so angry at papa you'd never notice us any more."

"How many years is it?" asked Jack, and she thought his voice sounded remorseful.

"Since you saw me last? You can count for yourself," she said, taking his hand again to lead him into the parlor. "I was eight then, I am twenty now. Do you think you'll know me?"

Jack did not answer, he was too horrorstruck at the cold, dark room into which he was being conducted.

"It's rather dark," Theresa said, apologetically, "but I'll light the fire in an instant." She was scratching a match as she spoke and the flame leaped up, revealing a poor little pile of sticks and an eager little girl on her knees, arranging them to the best advantage.

"Now, please come and let me see if I know you," she cried starting up. "No, I don't, a bit! You've just grown up and changed altogether."

"I'm afraid you must have a bad memory. I should have known you, Miss Tracy."

"Should you?" she cried. "And yet you have not thought of me for twelve years."

"You are mistaken there," said Jack, "I've thought of you many times."

Down tumbled the last little stick and only a bed of coals remained.

"Can I bring in some more wood?" he asked, but Theresa turned away her face.

"There isn't any more!" she said, under her breath, but Jack received this startling intelligence as if to be without wood in mid-winter was a matter of course.

"I've some boxes out here," he said, "that I brought down with me, you know—Christmas things, from your aunt and cousins. They're all in the porch; I'll bring them in and split up their covers. They'll burn nicely."

It seemed impossible that Theresa's eyes would ever regain their natural size again, such delightful surprises appeared in those boxes, displayed by the light of the fire Jack soon had blazing on the hearth. The fire improved the appearance of the great, bare room, wonderfully.

"It's like a fairy story!" said Theresa, kneeling on the rug before it. And then as the room grew light Jack saw sitting on the sofa in the corner behind her, in a delicate, faded satin gown, with a white lace fichu crossed on her breast and a dainty cap on her flaxen hair, a large French doll! Theresa followed his eyes and colored up to the roots of her hair.

"It's Griselda," she said, with a wistful glance up at him. "Aunt Susan gave her to me so long ago. Of course you'll think me very childish, as papa does. I never bring her down when he is here, but she isn't like a doll to me, you know. She's all the company I've had for so long!"

Jack bowed to the little Marquise low and gravely, as if he had been formally presented. "I don't wonder you like to have her with you," he said; "she's awfully pretty."

And so was the glance he received in return for his sympathy, and then starting up, Theresa became suddenly mindful of her duties as hostess. Had he had any supper? He must be perfectly starved! And he must share the contents of the wonderful boxes, "For we have nothing in the house half so nice to offer you," she said, and she flew around setting her little table daintily, and boiling her tea-kettle over the fire. But considering the appetite to which Jack pleaded guilty, it was surprising how little he ate. Theresa enjoyed her supper to the utmost, and chattered away gaily, asking all manner of questions about her aunt and cousins, questions that he seemed inclined to pass over much more carelessly than she could have wished, and always he brought the conversation back again to herself, and her life in Virginia.

"It is very lonely here, of course," she said. "I would rather be in New York with you all, but it wouldn't be such a dreadful place

if only we had any friends. Papa knows people, of course, through his practice, but they never come out here, it is too far away, and we have no neighbors—except one whom we would be thankful to dispense with.”

“Why?” asked Jack, with some curiosity.

“O, he makes papa trouble,” she answered. “He wanted Canebrakes and he’s always trying to get it. Papa thinks he would not hesitate to do him a personal injury, if he had a chance. I am often frightened at night when he is late about coming home, for fear something might have happened.”

“Have you reason to suppose your neighbor to be a Ku-klux?” asked Jack. “You should not frighten yourself like that for nothing.”

“It isn’t for nothing!” said Theresa, indignantly, and she had little difficulty in convincing Jack that whatever worried her was of consequence.

After their supper was over she pushed their little table back into a corner and they sat in the firelight and talked till the hours grew late, while for the first time Theresa appreciated the advantage of having a companion capable of sustaining a share in the conversation. It was twelve o’clock when Jack rose to go.

“I ought to be ashamed of myself for keeping you up so late,” he said. But Theresa cried out in dismay, surely he would wait to see her father. She thought he had come to spend Christmas with them. A wave of such loneliness as she had never dreamed of seemed waiting to overwhelm her.

“I’m sorry enough to go,” said Jack, “but I can’t help it this time. I’ll come again, if you’ll invite me. Good-bye, and a merry Christmas, St. Theresa,” and with a clasp of her hand he was gone, and Theresa locked the door once more on the cold, dark night outside, and went back to the parlor where Jack’s fire was blazing brightly. She threw herself down on the rug before it and hid her face in Griselda’s pink satin lap and cried and cried.

The snow clicked against the windows and the firelight danced and flickered. The wind was rising and strange sounds echoed through the old house. Theresa did not notice; she was used to the rats and the wind. Griselda’s waxen hands were resting on her curly hair, but—Griselda was only a doll, after all.

The first thing Theresa saw the next morning when she looked from her window, was a man coming into their yard with a big load of wood all chopped and ready for burning. Dr. Tracy had given him a large order and paid for it in advance, he said, he would get it to them as fast as he could. All this was surprising enough but when her father came home, he was even more astonished. He had ordered no wood, he said.

“It was Jack!” cried Theresa instantly with quick recognition of the kindness which meant that there should be no more cold dark evenings for her and Griselda. If they sat alone, at least they should have warmth and light.

"You must write at once to your aunt," Dr. Tracy said, "It may be they regret the course they've been taking, but be careful you do not make your letter more grateful than the occasion requires—they have not hurt themselves, all these years!"

Theresa wrote a letter of which her father would have been very certain to have disapproved had he read it, but the result was a most affectionate reply from her aunt, full of self-reproach and remorse, for she knew nothing about Jack and his boxes. He was supposed to be traveling somewhere in the west, and must have taken a sudden fancy for a turn through the south and a visit to Theresa, and had given the credit to her aunt to save himself the embarrassment of thanks, but she was indebted to him, for the sweet letter she had so little deserved. Another great box came with this missive, containing undreamed of luxuries, for to do her aunt and cousins justice, they had never guessed such things could be needed, till her pathetic gratitude had revealed to them the truth. In fact Jack had set a ball rolling that soon altered the whole course of Theresa's life, for her aunt, having her conscience thoroughly awakened at last, came suddenly down to pay a visit, and deep was her horror at the poverty, and loneliness she discovered, and she gave Dr. Tracy no rest, till he promised to make some other arrangements for the future. He did this the more readily, that his neighbor had succeeded in spite of all his opposition, in running an electric road through the best part of his land, and wrathful though he might be at being thus defeated, the value of his property had risen to a height that compensated in a measure for the pain of parting with it, inasmuch as it effectually proved the wisdom of his investments.

And so, to Theresa's delight the forlorn plantation was sold and they moved into a sunny little house in town, out of the vicinity of their obnoxious neighbor, and where there were so many lights at night, it could never be lonely however late she and Griselda might watch. In the summer Theresa spent two months with her aunt at the north, and the pleasure of her visit was only marred by two things. Jack Lowden was still away on his travels and when one of her cousins who seemed to take a particular interest in him—showed her his photograph, it failed so lamentably in point of resemblance, that Theresa was forced to exclaim, "That isn't a picture of Jack!" in tones of deepest disappointment.

"It's a very good picture of him!" said her cousin in a tone clearly implying her competency to settle that question.

"But this looks as if he was so much fairer," insisted Theresa, studying the picture intently. "Jack's brows were straight and black, and his eyes were very bright and dark. He had a moustache but it was short and brushed up and back and his mouth and chin were not a bit like this. Oh, he's not in any way like this picture!"

"Then it was not Jack Lowden," said her cousin firmly, and Theresa said no more.

Having only seen him by the uncertain light of the fire, it was possible she might be mistaken, for of course it was Jack—it could not be any one else.

When Theresa reached home, another blow awaited her, Griselda had disappeared! Dr. Tracy knew nothing about her, she was probably stolen. It was in no way an occasion for exaggerated grief, he said, and most certainly he would not allow Theresa to advertise. She would simply be making herself ridiculous. It was quite time she gave up playing with dolls, and turned her attention to something more useful, and appropriate to her age. Theresa hid her grief as best she could, but she dreamed at night of her poor little friend, in the remorseless hands of some cruel child, her satin dress soiled and her laces torn. It might be silly to care but she could not help it all the same.

So when Christmas Eve came round again, it found Theresa sitting alone in the twilight, with no need for Jack to come to bring her a dinner, or light her a fire. Indeed she was dressed for a party, all in white with a rose in her hair, only waiting for her father and the carriage.

"It is like a different world," she was thinking. "How lonely that old house must be to-night, with the wind sweeping across the bare fields, and moaning in the chimney! But it's no colder or darker than it was a year ago, when I was there with Griselda and—I'd be willing to be back there again to-night—If I knew Jack was coming!"

They said Theresa was the prettiest girl at the party, and her father was much gratified at the attention she received, particularly when he saw his natural enemy, their old neighbor, had apparently fallen a victim to her charms.

"It would please me very well to have her make a fool of him," he said.

Theresa smiled on, and danced, but her thoughts were away on the lonely plantation out in the country, and above the loudest bursts of the music, she heard the sound of the wind.

"May I have the honor of a dance, Miss Tracy?" said a voice beside her. She turned, and there was Jack! Not the commonplace young man of her cousin's photograph, but Jack as she remembered him as handsome and gallant under the blaze of the Christmas lights, as when seen by the flickering gleam of the burning box covers at Canebrakes, and Theresa stretched out her hands to him as impulsively, as if she had been welcoming him once more, at those gloomy portals.

"Oh, Jack, when did you come?" she cried breathlessly. "Did you go out to Canebrakes to look for us?"

"No," he said, "I couldn't visit you again till you asked me, you know. Can I have the dance? There's been such a crowd round you all the evening I thought I'd never get a chance to speak to you."

"It's promised to some one else, but you can have it," said Theresa, and then he put his arm round her and they floated away together, and it was all like a wonderful dream.

"I've been thinking about Canebrakes all the evening," she said. "If it had not been for you we should be there now, Griselda and I,

sitting alone in the dark and cold. What do you mean by saying you needed an invitation to come and see me again! I *did* invite you!"

"You invited Jack Lowden," he said gravely. "That did not mean me, Miss Tracy." Theresa was looking up at him with frightened eyes.

"I—don't—understand!" she said. The room and the lights and the dancing crowd grew suddenly indistinct, the waltz music went on but Theresa and Jack had stepped aside and as in a dream she heard his voice.

"Listen and forgive me," he was saying. "I knew all those years that you had a hard time but I couldn't help you or even make your acquaintance, your father would not allow it. I saw you many times when you did not notice me. I call you St. Theresa to myself because you looked so sweet and patient, and because of your aureole," with a tender glance at her yellow locks. "Do you remember how cold it was the day before Christmas last year?" turning his face away and dropping his voice as if he thought she might not like to be reminded of it. "I saw you out with such a thin little shawl on picking up sticks! I couldn't stand that! But you would never accept help from me and I thought of your relations in New York—what they might do—what I would do in Jack Lowden's place. We were in college together and it struck me I could borrow his name for once. Your father would have known me, but I took an evening when I knew he would be away. Can you forgive me, St. Theresa? I should never have dared to come and ask you if I had not found a friend of yours to come with me."

"A friend of mine?" said Theresa wonderingly.

"Yes," said Jack, "She's just here, waiting."

An alcove window was behind them, a curtain drawn before it. Jack lifted it as he spoke and there, sitting in a corner of the sofa that occupied the niche, was Griselda, a little more faded as to her gown, decidedly yellower as to her face, but still Griselda, and with a little shriek of delight, Theresa slipped past him and seized her doll in her arms and kissed her. Then holding her fast, she turned to Jack blushing redder than the rose in her hair, half shame-faced, and half defiant, a look that changed suddenly to one of gratitude, as she met his eyes.

"Where did you find her?" she cried. "Why are you so good to me since you are not Jack?"

Jack laughed. "I found her in the possession of a small colored child who failed to establish her claims when cross-examined," he said. "But, as for your other question, though I am not Jack Lowden, I have as good a right as he to be of use to you when I can, because I am your neighbor."

"Our neighbor!" she said. "You don't mean—"

"Yes," he answered, "the Ku-klux."

Theresa's defrauded partners were searching for her up and down, but when she emerged from her alcove window it was only for an-

other dance with Jack. And Dr. Tracy looked on not wholly with disapproval, for after all, an eligible son-in-law was only one more proof of the wisdom of his southern investment.

Theresa had left Griselda hidden behind a flower pot, and she sat there tranquilly smiling, all the more perhaps because the sound of the wind reminded her also of Canebrakes. For doubtless she felt she had been instrumental in bringing affairs to their happy conclusion, and had no thought that she was being neglected, though she sat alone, while Theresa danced with her neighbor on Christmas Eve.

## VOLUNTARY CO-OPERATION.

---

BY JAMES MIDDLETON.

---

Socialists, anarchists and single-taxers, all are looking forward to and working for an ideal state of society, where the welfare of each shall be the concern of all, and where the welfare of all collectively shall be the concern of each one able to work intelligently.

That state will be reached only when the golden rule shall be the guiding principle of all intelligent workers. When that shall be, then nations also will be controlled by the same principle, and not till then. The individuals compose the nation, and the nation cannot be long above the average moral standard of the individuals that compose it.

The socialists and anarchists both make the mistake that the evils of society are due principally to unjust laws.

The one would remedy by sweeping away all law; and the other would remedy by extending the law to all departments of human production.

The one forgets that, in savagery, where law is minimized, is the lowest condition of society. The other forgets that, where law extends its domain, human selfishness may wield it with terrible injustice—has so wielded it and does so wield it to-day oftentimes. The more perfect the machinery of law and the wider its reach, the greater its power for injury in the hands of the selfish and unscrupulous.

The single-tax plan, and I use the word single-tax in a broader sense than the mere word conveys for want of a better, recognizes human weakness and selfishness more fully than the other two, and would use the machinery of government to give to each, as far as law can do, fair play, by maintaining justice, by equalizing and increasing opportunities, leaving workers more free to co-operate as they see fit.

Under present conditions, when people of moderate means, or people with only their labor, seek to form co-operative enterprises, they find themselves at a great disadvantage with corporations and other industries already organized.

The first difficulty encountered is in getting the ground on which to establish the business. A tribute must be paid to an individual for the use of land. The more desirable the location and land, whether it be for farming, mining, manufacturing or business, the larger the tribute. This tribute is not for the labor of the owner, but either for the natural fitness, the direct gift of nature, or for the fitness due to the growth and improvement of society.

The larger the tribute to be paid the more difficult for our co-operators to start. Hence, land monopoly and land speculation tend to concentrate all industries in the hands of the few and form part of the great basis upon which the present monopolistic system rests.

If the co-operators are fortunate enough to secure a location, another difficulty presents itself in the tax gatherer. The larger and more burdensome the tax, the more difficult to advance it, and the more difficult it is to recover it from the consumer. Land monopoly and unjust taxation together form the basis of our present monopolistic system. Or, to change the figure, they are the upper and nether millstones grinding out poverty, ignorance and crime.

Another legal feature of corporations seldom noticed in reform writings is the voting power of capital. In all our business corporations, so far as I know, the vote is cast by shares instead of by individuals. For illustration, a corporation is chartered by the state with a capital of \$100,000, in shares of one dollar each. The members of the corporation vote in proportion to the number of shares. One man owning fifty thousand and one shares controls the whole business, though a thousand individuals own the balance of the stock. Through this power the large stockholders have the small ones at their mercy. Its evil effects are most conspicuous in wrecking railroads. A few large stockholders will so manage affairs as to throw the road into the hands of a receiver, dividends stop, assessments may loom up, stock depreciates, the small investors are frozen out, they sell at a loss—to the large stockholders. Then the road emerges once more from the hands of the receiver, improved in condition, not only as to road-bed and equipments, but also as to value. The lambs are fleeced and the Jasons are enriched.

Unfortunately, this is not the only result. Through this voting power of capital the few rule industry, and through that control reach the halls of legislature and make a mockery of our so-called free institutions.

To give voluntary co-operation anything like a fair show, these conditions—monopoly of lands by the few, unjust taxation and the voting power of capital in a state-made corporation—must be abolished. By removing all taxes from persons, and from products of labor as products, or as much as may be necessary, and concen-

trating them upon the annual rental values of lands and franchises, independent of their improvements, treating unused lands or partly used on the same basis as others, the holding of lands and franchises for speculative or monopolistic purposes will be broken up, as well as unjust taxation be remedied. And, in addition, let the voting power of capital be abolished, thus giving one vote and one vote only to each member of a corporation.

In this respect industry will thus be placed upon the same basis as most of our religious and fraternal organizations, where the principle works most admirably.

These three reforms seem to me fundamental to usher in the ideal state of voluntary co-operation. These won, the great moral forces which are working for the evolution of the race would much more rapidly hasten on the ideal state, where the welfare of each should be the concern of all, and the welfare of all collectively should be the concern of each.

---

## SHORT STUDIES IN POLITICAL ECONOMY.

---

BY WILFRED P. BORLAND.

No. 11.

It would be both a profitless and unnecessary task to enter into a long disquisition concerning the nature and cause of value in this place, as we should only be going over a well beaten path which every economist since the days of Adam Smith, has traveled without arriving at indisputable conclusions. And, really, it could not be otherwise, since the concept of value is purely within the domain of metaphysics, and is subject to as various constructions as the vagaries of the human intellect are various. This much we know: The ground, the sufficient cause, for the existence of value in the economic sense—exchange value—is not referable to any single circumstance, but presents itself to our view as a series of complex phenomena; and it is chiefly by external modifications of these phenomena, whereby their natural relations are disturbed, and the magnitude of value thereby unnaturally affected, that certain members of society are enabled to draw into their own possession vast stores of wealth at the expense of others. This, too, we know: Value is the expression of a social relation. Standing by himself, the human individual knows nothing of value; the only concept which his mind is able to form concerning external objects is one of *utility*. It is impossible for him to form any conception of value until he enters into social relations with some other individual, or body

of individuals. Value is also the expression of a particular form of social relation. The concept of value is distinctly absent from those primitive communal societies which have furnished a type for the experiments of different social reformers at various times, here and there. No matter what form the labor of such societies might take, it produced only utilities, not values; the conception of value first appeared when these societies entered into social relations with individuals, or groups of individuals, outside of their own social circle, and it had no reference to the relations existing between themselves. We may say, then, that value as it exists in our present individualistic society, is an intellectual conception by which is given expression to certain social relations existing between its different members; and it is the distribution of its magnitude which expresses the extent to which each individual is entitled to share in the collectively produced utilities. Value cannot exist apart from utility. The desire of a large number of human beings to possess an utility is the first element which enters into a determination of the magnitude of its value; the next element is its scarcity, the difficulty of procuring it, the number of sacrifices the individual will make rather than go without it. This is economically expressed as supply and demand; it wholly determines the magnitude of the value of all natural objects, all of those utilities which are the gratuitous offerings of nature—economically termed land. There is another element which enters into the determination of the value of those utilities which are furnished by the hand of man; and that is the labor time expended in producing them. These labor created objects are also affected by supply and demand; going up or down in value in proportion to their scarcity and the extent of the sacrifices men will make to secure them, but, unlike natural objects, the labor time expended upon them always constitutes an element of, and becomes proportional, to the magnitude of their value. Hence, it is through alterations in the amount of labor time necessary to produce an object, and alterations in the adjustments of supply to demand, and vice versa, that all variations in the magnitude of value are effected. Here, for instance, is a coat; it is the only one in existence and its possession is desired by a vast number of people. It will bear an immense value for a time, but eventually it must fall to a value proportionate to the amount of labor time necessary to produce a coat. On the other hand, here is a natural object; say a water power, a coal mine, a plot of land. The value of such things will be determined solely by the demand for them, the amount of sacrifice persons will consent to make in order to possess them, as no amount of labor is adequate to the production of any of these things. As society advances and population increases, the movement of value takes two opposite directions; the amount of labor time necessary for the creation of labor produced utilities becomes less and less, and their value constantly diminishes, while the demand for the naturally produced utilities becomes greater and greater, and, not being capable of extension, their value constantly increases.

It is these opposite movements in the magnitude of value that give us the clew to all the social evils which afflict civilized society. The possession of natural utilities is an absolutely necessary condition of human existence, and, as the magnitude of their value constantly increases, it can easily be seen that a community of free individuals which admits private and exclusive property in natural utilities carries within itself the germs of its own dissolution. For, these objects being necessary to support life, and the magnitude of their value constantly increasing, the sacrifices which people will make in order to possess them constantly increase, and, finally, from a community of free individuals is produced a community of individuals who have sacrificed freedom, honor, patriotism, everything which men hold dear, in order to eke out a miserable existence in the midst of abundance of wealth of their own creation, but which the opposite movements in the magnitude of value has placed beyond their reach. These natural movements are taken advantage of, and intensified, by certain members of society who are unnaturally eager to increase the magnitude of value within their possession; this desire creates that movement which is vaguely termed speculation. Men acquire possession of natural utilities at times when there is little demand for them and their value naturally low, thus profiting by all the increase in value which accrues to them through increased demand. This practice of creating an artificial scarcity, or "cornering," natural utilities is a great evil, the unjust source of wealth to a vast number of persons. The magnitude of value of labor created products is also artificially increased by "cornering," or creating an artificial scarcity. Men buy these products and hold them out of use until demand has increased their value to such an extent that they can sell again and realize a handsome profit; they also obtain the monopoly of production of certain labor created articles, and are thus enabled, by producing short of the demand, to enhance their value and realize great profits. But, speculation in labor created products is rather risky business, unless the value of natural utilities is forced to such a figure as to prevent the majority of men from using them, for it is necessary to use natural utilities in order to create labor products and the point at which men may secure the use of natural utilities, so as to increase the supply, is the point beyond which the "cornering" of labor created products cannot be safely carried. In their eagerness to increase the magnitude of the values in their possession, men often go beyond this point and involve themselves in ruin. It may be laid down as a general rule, that all those values which have a natural tendency to increase their magnitude with the progress of society should be regarded as public property, and that the best interests of a civilized society demand that private property should only be allowed in those utilities whose magnitude of value naturally decreases with the progress of society. This might be brought about by compelling the users of natural utilities to render up to society all the increase in the magnitude of their values for the public benefit, thus placing all holders

of labor created products on a plane of equality with regard to the magnitude of the values in their possession. Another way in which men influence the natural relations of supply and demand so as to increase the magnitude of the values in their own possession is by manipulating the money medium by which the magnitude of all values is expressed. It is the function of money to facilitate the exchange of products, and for this purpose men express the value of the products they wish to exchange in terms of money, thus arriving at an easy and convenient mode of comparing the magnitude of the values of different products with each other and determining the proportions in which they shall exchange. Thus, in exchanging wheat for hats, when we say wheat is worth \$1 per bushel, and hats \$2 a piece, we simply express the fact that one hat is of the same value as two bushels of wheat, and thereby determine the ratio of exchange between wheat and hats. It is utterly impossible to affect this ratio through any alterations in the money medium itself; the only way it can be affected is by alterations in the relative values of wheat and hats, which will be brought about permanently by variations in the labor time necessary for their production, or, temporarily, by variations in the supply of and demand for wheat or hats. These conditions remaining the same, if we say that wheat is worth \$2 a bushel instead of \$1, then hats will be worth \$4 a piece instead of \$2, and the ratio of exchange between hats and wheat remains unaltered. This being as true of all products as it is of the two mentioned, it will be seen that it is impossible for men to manipulate the money medium so as to increase their own values at the expense of the values of others, as long as money is restricted to its natural and legitimate function; that of differentiating and comparing the value of commodities for exchange purposes. It is a mistake to suppose that a commodity has value because it can be exchanged for money? On the contrary, a commodity can be exchanged for money simply because it has value, and the expression of its money equivalent places it in a value relation with all other commodities for exchange purposes. How to convert the money medium into an instrument of spoliation is a problem that has been easily solved by placing it in the list of commodities and subordinating its money function to the value relations of the material of which it is composed. The wise financiers tell us that money is a commodity, subject to the same laws as other commodities, but it is an entire fallacy and it is because men have believed this fallacy for so long that they have permitted themselves to be robbed for the benefit of others. Money is not a commodity; it is impossible for it to be a commodity, for if it were a commodity it could not be money. Commodities step into circulation, express their value in terms of money, exchange with other commodities, and drop out of the sphere of circulation to be replaced by other commodities. Money, on the contrary, does not drop out of the sphere of circulation at all; it keeps continually within that sphere and moves about in it. Whenever it does drop out of the sphere of circulation it is

no longer money, but becomes either a mere commodity, like gold or silver bullion, or a hoard, or store, of value, a function which is entirely separate and distinct from the legitimate functions of a money medium. The idea that the exchange of a commodity for money is an exchange of commodities having equal commodity value is one of the strangest fallacies that ever afflicted the human mind. When men exchange commodities they need to have a very definite idea of what they are doing, as, for instance, if ten cabbages are to be exchanged for a bushel of wheat the respective owners of these commodities will need to know that the owner of the wheat will get, not nine cabbages, or five cabbages, *but ten cabbages*; and that the owner of the cabbages will get, not less or more than a bushel of wheat, *but a bushel of wheat*, and it is only by having a definite knowledge of such facts as this that equitable exchange of commodities may be effected. Does any commodity possessor have any such knowledge as this when he exchanges his commodity for the so-called commodity money? Not at all. We are told that men exchange, say, a bushel of wheat for a dollar because the dollar, *i. e.*, with us 23 22 grains of gold, has the same commodity value as the wheat,—and this, too, is supposing that they don't want the commodity gold and have no use for it whatever—but, even supposing men get paid for their wheat in actual gold dollars, is there one man out of ten thousand who knows whether these dollars contain 23 22 grains of gold or not? Is there one man out of a million who cares a continental how much gold they contain, or whether they contain any gold or not, so long as they perform for him their legitimate function as dollars? But, supposing men desire to exchange wheat for commodity gold, *i. e.*, with us, money, in the ratio of one bushel of wheat for 23.22 grains of gold. This exchange of commodity for commodity being agreed upon, is there a man in existence who would not take the utmost pains to know that he did, *actually*, get 23.22 grains of gold for each bushel of wheat? Does any one suppose that, under these circumstances, the wheat possessor would be satisfied with any hocus pocus nonsense about gold representatives, redemptive bases, etc.? Not at all. He would only be satisfied with the knowledge that he actually did get, not 15 or 20 or some other uncertain number of grains of gold nor any vague and indefinite promise to pay gold some time in the misty future, but 23 22 grains of gold for each and every bushel of wheat exchanged on these terms. He would want to know, and he would know, that it was *real* gold he was getting for his wheat, and that he was *really* getting 23.22 grains for each bushel, and the possession of this knowledge would still be essential to the exchange, *even supposing gold to be used as money*. The fact is, that the commodity value of the money material is of not the slightest importance to its usefulness as money. The only idea which money presents to the mind of the user is the abstract idea of 1 (dollar), 1 (dime), 1 (cent); he knows perfectly well what these abstract units are worth, *in commodities*, but what the material which carries these units may be

worth is a matter of perfect indifference to him because it is of no consequence whatever. He does not know because he does not need to know; the money units perform for him their function of equating, quantitatively, his values to the values of all other commodities within the sphere of circulation, and that is all he requires of them, and, moreover, *it is all they possibly can do as money*. If such demonstration as this is not sufficient, let those who are afflicted with the commodity lunacy try and see what headway they can make in expressing the value of a commodity in terms of itself. Let them try and discover the value of a quantity of wheat by comparing it with wheat and see what result will be attained. Such comparison will tell them absolutely nothing; they will find that it is an utter impossibility to find out anything about the value of a commodity by comparing it with itself. And yet this utter impossibility, if we are to believe our wise financiers, is performed every day in the year, with respect to the commodity money. For, gold is money and money is gold, and when we want to express the value of a dollar we say it is worth 23.22 grains of gold and when we want to express the value of 23.22 grains of gold we say it is worth a dollar, thus performing an impossible feat by expressing the value of a commodity in terms of itself. There does not seem to be any incongruity about this expression; it seems perfectly natural, yet, if money is a commodity, the expression is identical with saying that a bushel of wheat is worth a bushel of wheat, and the person who should attempt to express the value of wheat in that way would be looked upon as a fit candidate for a lunatic asylum. We are here forced upon the horns of a dilemma. We must either admit that, with respect to this money commodity, we are all the time performing admitted impossibilities, or we must accept the more rational conclusion that money is not a commodity. We have used a commodity for the purpose of giving the money units a tangible bodily expression, and that fact has given rise to the commodity fallacy concerning money. Now, let us analyze this commodity idea a little further. We will suppose that the commodity gold is declared by law to be no longer money, and that the government shall declare that henceforth the dollar unit of money shall be embodied in the commodity copper in the ratio of 23.22 grains of copper, by weight, for each dollar. What follows? Putting on one side the little eccentricities of the copper trust, we may say that the commodity value of copper is now its natural value; determined by the labor time necessary to produce it and the variations in supply and demand. But, immediately government confers on it the money function, every 23.22 grains of copper in existence becomes equal in value to one dollar; simply because that amount of copper is sufficient to pay debts, taxes, import duties, and all other legal obligations to the amount of one dollar, and will exchange (be taken in exchange) for all commodities as one dollar. But, although we are quite what the value of 23.22 grains of copper would be, we cannot tell what would be the value of its equivalent expression, one dol-

lar; that is a circumstance which would be determined wholly apart from any considerations of the natural commodity value of copper: The value of the dollar would be determined by the volume of dollars which could be constructed out of the whole body of the commodity copper, as compared with the volume of all other commodities, the sole money function of the commodity copper being to serve as a natural limit beyond which the series of dollars could not be extended. Dollars would fall in value. That is, a dollar would not purchase the same amount of commodities as now. If we say now that wheat is worth one dollar a bushel, we might then say it was worth five dollars a bushel. But, mark this, the dollar, as long as it remained a *full legal tender*, would have precisely the same *money value* that it has to-day. That is, its money function of comparing and differentiating the value of commodities would be in no wise affected. The hat that is worth two bushels of wheat would still be worth two bushels of wheat. Where we now say that the wheat is worth \$1 and the hat \$2, we would then say that the wheat is worth \$5 and the hat \$10; the relative value of wheat and hats for exchange purposes would remain unaltered, and so of all other commodities. While such a measure as this would not affect the relative values of all other commodities, it would very sensibly affect the value of the commodity copper; the great demand for copper as a money material would enhance its value out of all proportion with the labor time necessary to produce it and the legitimate demand for it for commercial purposes, and increase by many fold the magnitude of value in the possession of copper owners. The present owners of copper would also be placed in a position where it would be to their interest to restrict the production of copper as far as possible, since any restriction in the number of monetary units which could be manufactured from the commodity copper, within the legitimate demand for them for exchange purposes, would increase the purchasing power of each unit—that is, the units would equate values on a lower plane and each unit would stand for a larger share of commodities—and the copper owners would have a steadily increasing magnitude of value, while the possessors of all other forms of value would have a steadily decreasing magnitude. Gold would then sink to its natural commodity value; if we then said that 23.22 grains of gold was worth one dollar it would be a fact, and not a commodity fiction of the imagination. We should then probably discover that, for commercial purposes, commodity gold was, weight for weight, no more valuable than commodity copper. What would happen with respect to the copper owners is precisely what has happened, and does happen, with respect to the gold owners; but the plentifulness of the commodity copper would naturally extend the series of money units to such a length that all legitimate demands for money would be met, and it would be almost impossible to restrict the issue so as to convert money into an instrument of spoliation. Gold is so naturally scarce that it furnishes a naturally ideal money for those who seek, not to produce values, but to absorb the

values produced by others, as it limits the series of legal tender units of money to a length far short of the legitimate demand for them for exchange purposes. That gold owners know this is shown by the stubborn, and so far successful fight they have made against the extension of the monetary series by conferring legal tender functions on silver. These considerations make it apparent that the issuance of money is a governmental function, since government alone—i. e., the people collectively—can establish the one essential function of a money medium, the legal tender function. Also, it must be apparent that, so long as we continue to use a metallic basis to limit our monetary series, the ownership of the money metal should remain absolutely with the people collectively, or in the hands of government. Private ownership in gold and silver, as long as they continue in use as money, should not be allowed, except as they are withdrawn, for commercial purposes, from the legitimate channels of trade in exchange for commodities. By such means money could not become an instrument of spoliation, since there would be no incentive to restrict its issue, and, the material of money being the property of government, even if its volume did mount above or fall below the legitimate demands of trade, no person would be injured, since relative value would not be affected. But, the ideally perfect money is a full legal tender governmental paper, wholly disconnected from any metallic basis whatever. Such a money would perform its legitimate money functions without being influenced by the selfish considerations of private parties. It is easy to condemn fiat money, but it is not so easy to justify such condemnation by any other consideration than that of ignorance of the money function. The advocates of the gold dollar will have a hard task to show that it possesses one cent's worth of *money value* which is not fiat value pure and simple. Remove all taxation from labor products and absorb by taxation the value of all natural utilities, those whose magnitude of value naturally increases, and issue to the people a full legal tender fiat money for the purpose of conducting their exchanges, and we shall get about as near justice as it is possible to get on this mundane sphere. Although the volume of a fiat money, in its variations, could only affect absolute values, leaving relative values unaffected, and therefore, it would be impossible to bring about spoliation through insufficient volume, the stability of prices, for the protection of long time contracts would render it necessary that the volume of money should remain in as nearly a uniform relation with the volume of commodities as possible. This desideratum might be secured by the people, in annual elections, deciding on a certain fixed relation between the volume of money and the annual increase in values for each year, as decided from the tax rolls of the nation. The general alterations in prices would furnish an intelligent guide to follow in such cases. In conclusion, it may be well to call the attention of the paper money advocates to a circumstance which they seem to have overlooked. There is not a line nor a word in the Constitution of the United

States which, in express terms, gives Congress the right or power to confer full legal tender attributes upon anything but *coined money*. There is no provision in that instrument under which the right is even implied, unless it be from the power "to raise and support armies." Under this war power, the right to issue legal tender paper money has been asserted and once exercised by the government, and the right so excised has been sustained by the Supreme Court under the plea of "necessity." That the Supreme Court would entertain this plea of "necessity" under any circumstances short of war is much to be doubted, and the first step towards a true money system is to secure an amendment to our Constitution.

---

## TRADES UNIONS AND STATE SOCIALISM.

---

BY GEORGE C. WARD.

---

Organized labor has issued an appeal to "all citizens of all religions and political faiths" in the interest of unemployed and starving labor. After summing up the grand progress made by the nation and the seeming wealth and prosperity of the people, the appeal states that:

A hundred thousand men, women and children are nearing the verge of starvation in this rich metropolis of these free United States. Hundreds of thousands of others are within but a short distance from want and its attendant suffering, misery and crime. From all the manufacturing and commercial centers there comes the anxious demand for work, soon we fear to be followed by the desperate, despairing cry for bread.

Then the striking contrast which exists between the classes and the masses, the exploiters and the exploited, is presented as follows:

A few thousand men and women enjoy the opulence of eastern potentates, while abject millions grovel in the dust begging for work and bread. This is the industrial and social exhibit of our Columbian year.

The appellants then proceed to say:

The authors of the declaration of independence before severing the colonies from the mother country, wisely set forth certain fundamental truths and upon the basis of these eternal verities erected the temple of political freedom.

So, we, mindful of the power of error, and prejudice against any seeming departure from the beaten paths of human experience as in duty bound, make this declaration of the reasons that prompt our action and justify the methods and measures proposed.

We do not believe that the industrial and social system so firmly entrenched, can be changed for the better by declaration or demand, by edict of rulers, by laws of legislative assemblies, by individual or corporate experiments, by riot, or by the deadly anger of class hate.

We believe that so radical a change as we contemplate must be obtained by the slow processes of revolutionary development.

That the methods and measures by which the world of workers to-day enjoy better conditions than those of other times and the greater purchasing power of a day's work in the United States over that enjoyed by the laborers of other countries, are the methods by and through which labor will receive its full measure of justice and equity.

We believe that the organization of wage-workers in trade unions is the surest guarantee of a peaceful solution of the world-wide problem, "How to abolish poverty."

That the wage system of labor can be succeeded by a better only through the increase of the purchasing power of a day's work.

That increased wages (or increased purchasing power) reduces profit upon labor.

That a constant increase in wages and in reduction of profits will make a capitalistic or employing class unprofitable and unnecessary, thus eliminating classes and establishing equity.

That the reduction of the hours of labor increases wages without increasing the cost of production, and is the measure upon which the full power of the labor movement should be directed.

Having thus formulated an argument, or a thesis as a justification for the attitude of organized labor and its policy of constantly agitating for shorter hours and better wages, the appellants boldly make the following demand :

That as a city is a co-operative corporation in which all citizens are shareholders, and all other residents guests or sojourners, no one citizen has the right to live in extravagant luxury while the other wants for the needs of life. We, therefore, call upon the Mayor and the Board of Aldermen of the city of New York to convene in special session and there devise ways and means in the same manner, and to the same extent, as they would in the case of flood, fire or pestilence.

That as food obtained by work is more enjoyable than food obtained, even as a right, without work, we ask the city authorities to provide ways and means for the commencement and continuance of public works, and the employment of the now unemployed directly and not by contract.

That the same reasons that prompt us to call upon the officers of our city for appropriations for immediate relief and public employment, also prompt us to call upon the Governor of the State, and the President of the United States, to call attention by public proclamation and legislative action to the same end, and in such a manner as the fundamental law will permit.

Growing eloquent with a knowledge of the justice of their cause, they assert in no uncertain terms that the ultimate of labor's aspirations is the overthrow of the present system of wage slavery. They say :

In that immortal document that sounded the death-knell of kingship, the signers thereto set forth a challenge and defiance to that social and industrial system that rests upon the same foundation and upholds the theory of the divine rights of kings.

In the declaration "That all men are born possessed with certain unalienable rights, among which are the right to life, liberty and the pursuit of happiness," will be found the keynote to a new and yet grander declaration of labor's independence from the manarchial control of the industrial system.

The right to life carries with it the right to the means of life.

The right to liberty carries with it the right to that economic independence without which political liberty is void.

The right to the pursuit of happiness carries with it the right to all the opportunities and privileges that are necessary to the securing of happiness.

After quoting numerous precedents to show that all the functions

and paternal protection and assistance of government have heretofore been freely used to increase the profits of capital, the appeal closes as follows:

As humane men and women we entreat you to listen to the cry of labor for work and bread. As patriotic citizens we proclaim that those who control the industries and the finance of the United States are responsible for the employment and non-employment of labor, and we demand of them immediate relief for the victims of a system inherited from the ages of wrong with which the poor have been oppressed.

SAMUEL GOMPERS,  
THOS. C. WALSH,  
HENRY WHITE.

CHRIS. EVANS,            ANDREW J. SMITH,  
HENRY WEISMANN,    JOS. BARONDESS,

I have quoted thus freely from this memorable and important document, because in it is made, from authoritative and authentic sources, what is at once a confession and declaration that never, before, to my knowledge, has been made in the United States by what is vaguely and broadly denominated "organized labor."

In the language contained in this appeal, is an explicit assertion that the ultimate end and aim of organized labor is *State Socialism*.

Please note how carefully the premiss is laid and the argument built thereon. First there is the assertion that the gradual increase in the (aggregate) wages of (aggregated) labor, is the only means whereby "the wage system of labor can be succeeded by a *better*." Next; that such increase in labor's wages, must necessarily reduce the profits of labor's exploiters. Next; a constant and continual increase in the (aggregate) wages of (aggregated) labor, must gradually freeze out, or eliminate the capitalistic exploiters of labor, leaving labor in possession of the entire value of the total product of its toil, and leaving machinery and the tools of production with nothing but a sinking fund for repairs, and final replacement. This is exactly the full measure of the demands of *State Socialism*. Then the assertion is made that the gradual shortening of the hours of labor, without any decrease in the individual laborer's wages, increases the wages of (aggregated) labor, but does not increase the cost of production; because what is gained by labor is not added to cost, but is simply taken from capital. Finally; that upon this measure and in this direction should the "full power of the labor movement be directed!"

In the beginning, however, is an assertion that the "organization of wage-workers in trade unions is the surest guarantee of a peaceful solution of the world-wide problem, 'How to abolish poverty!'" To this assertion I must here, and now enter a respectful and firm, though qualified denial. My denial is limited by the qualification that as palliatives and makeshifts, trade unions, and the compact federation of such unions, are the best expedients yet formulated, but that they never have and never will afford a *peaceful* or final solution of the labor problem. All victories won by organized labor, have been won through warfare, in fiercely fought out battles and at a terrible cost to labor. Trade unions may hold the outlying trenches, the battlefield and the forts behind and may, as

in the past, win a fair proportion of the battles in which they may engage; but never until each union becomes a school of political economy, in which the members are taught the proper use of the God given gift, the American ballot, will organized labor win a "peaceful" and lasting victory over organized capital. *Organized labor's salvation lies in the direction of united action at the ballot-box.*

I should substitute for the language of Mr. Gompers and his associates, the following sentence: "The surest guarantee of victories to labor's forces, in the relentless warfare ever being waged between labor and its capitalistic exploiters, is the organization of all wage-workers into trade unions and the amalgamation of all such unions into a compact federation, having as its watchword, 'An injury to one is the concern of all!'" But *this is war, not peace.*

Note also the remedy proposed: That the nation, states and municipalities, "provide ways and means for the commencement and continuance of public works, and the employment of the now unemployed directly and not by contract." If that is not State Socialism, what is it? But be it socialism, or be it not, it is no more, or less than the party of the people, the People's party, directly demands in its state platforms.

Take for instance, the Massachusetts state platform of the People's party, adopted September 6, 1893. I quote:

We protest against the contract system practiced by municipalities in employing labor. Municipal employment should be direct and responsible. We demand that all public employes, national, state and municipal, be brought under a classified civil service with admissions and promotions for merit only, and dismissals for cause after hearing.

We condemn the present management of industry because it fails to provide work for multitudes of willing hands, while at the same time overworking those who are employed. We therefore favor the reduction of the time of labor to an eight hour day, which will tend both to lighten the burdens of the workers and to increase the number of those finding employment.

We call attention to the condition of the unemployed, which, under pressure of business depression, is assuming the proportion of a great national tragedy. We declare it to be the proper and pressing duty of the state and municipalities to come to their aid, not by charity, nor by untimely and wasteful public works, but by organizing their labor according to their several trades and abilities, so that they may be able on a co-operative plan to supply one another's need. As the first practical step to this end we urge an immediate census and registration of the unemployed. We are in favor of adding to our bureau of labor statistics, employment agencies and bureaus of information, affiliated with similar institutions in other states and centralized in the department of labor at Washington. In the selection of officers and engagements of employes, women should be given full proportion of positions.

We demand that convicts be employed exclusively upon such articles as can be used in our penal and charitable institutions, any surplus thereof to be distributed so as not to compete with free labor.

Now note the difference in the two processes. The one is part law and part war, the legal part the result of petition to unfriendly law givers. The other would be all law, enacted by friendly law makers, elected from the ranks of interested labor. In the one case, labor humbly petitions the legal authorities to remove the obstacle of unemployed labor, so that employed labor may *fight it out* with its ex-

plotters. In the other case, it is proposed that labor shall elect its own law makers and remove the obstacle of unemployed labor, by making the demand of organized labor *the Law*, giving work to unemployed labor and *leaving no fighting to do*.

Query: Will Mr. Gompers and his associates *vote*, or do they prefer to *fight*? We shall see.

But this is a digression, and of such length as to almost preclude my saying all I had to say.

The standing, visible menace to organized labor and the chief obstacle in the way of its onward march to ultimate victory is the vast army of the unemployed and the rapid and steady increase in the ratio of its numbers to labor's total force. But unemployed labor is an effect and not a cause and the same underlying causes which *recruit* the ranks of the unemployed, *deplete* the ranks of labor's exploiters and is responsible for the evolution of the manufacturing trust. The underlying causes are machinery and competition, or more strictly speaking, the cheapening of the cost of production, by reason of improvement in machinery, under a competitive system of industry, or exploitation of labor. It is a commonly accepted idea that the benefits accruing from the cheapening of the cost of production, by reason of improved machinery, inures to the benefit of the owners of the machinery or manufacturing plants. This I apprehend is a mistake, the truth being that the benefit accrues to the consumer. This would appear to be proven by the fact that a day's wages has steadily increased and is steadily increasing in purchasing power, showing that *price* as well as *cost* of manufactured goods is decreasing.

The mill of competition has two hoppers, into one of which is fed labor and into the other of which goes the small and insignificant exploiters of labor. They both come out ground "exceeding fine." The constantly cheapening process which production is undergoing, throws labor out of employment, on the one hand while, on the other, it squeezes, or freezes out of the game, all but those having the requisite capital to acquire the improved machinery. Then, as a penniless man cannot buy goods and an unemployed man is, as a rule, penniless, underconsumption brings about a lack of demand and the competitive effort to sell reduces prices and also causes what is called overproduct on, but which is really underconsumption, for lack of work to obtain money with which to buy. The financially strong withstand the pressure, but the financially weak are crowded to the wall and the ex-manufacturer becomes a wage-worker competing for work. The final result must be colossal manufacturing trusts, composed of a few wealthy firms in each line of manufactures and a handful of employed laborers, hemmed in by the trusts on one hand and a vast army of unemployed on the other, receiving a "bare subsistence" only as the result of constant, incessant warfare. There is no remedy, except the ownership by labor of all tools and machinery of production. And thus, again, we arrive at state socialism and Mr. Gompers and his associate petitioners are

abundantly justified. But state socialism will never be gained by industrial war. It can only be reached by law, and law is the result of the use of the ballot.

If the toilers of the nation, who if they are not, at least should be "*The People*," would discharge from public service the lawyers, bankers and other parasites who now make our laws, and elect from their own ranks, men to the legislatures and to Congress, they could appropriate their own money (labor pays all taxes) and buy machinery and tools and erect manufacturing plants. They could then inaugurate a legal eight, seven, six, five, or four hours day of labor, the limitation being the time required for the aggregated number of toilers in any line of industry to produce sufficient wares to fill the demand. Then they could proceed to inaugurate a system of "free coinage" of labor's products, by affixing a uniform price upon such commodities, such price being equal to "fair wages" to the laborers employed and a sinking fund for repairs, replacement, etc. This would be "*peaceful*" and legal state socialism.

If, on the other hand, in spite of the millions of unemployed and desperate men, who are willing to work any number of hours, for any kind of wages, Mr. Gompers and his associates should succeed in rendering it impossible for capitalistic employers to longer exploit labor, except at a loss, such employers would simply close down their factories and throw Mr. Gompers and his followers out of employment. Out of work and without money, they must then, in defiance of law and peace, appropriate by force the manufacturing plants, machinery and tools and proceed to use them for their own benefit. Thus would the goal of state socialism be reached by revolutionary confiscation. Mr. Gompers' plan *will never win*.

### CHAPTER IX.—A PAGE.

The window blinds of the right wing of the Chateau de Verchere were all closed. From the outside, that portion of the chateau seemed gloomy and tenantless. Inside the building a most oppressive silence reigned. To obviate the creaking of hinges the doors were all thrown open and remained so. Servants went noiselessly to and fro in the discharge of their duties, only whispering a few words to each other as they passed by.

In the spacious hall on the top of the first stair, a page wearing a

blue uniform of home-made serge ornamented with two rows of large, glittering brass buttons, sat lonesomely on a solid mahogany bench.

To an observer there was something striking in the expression of that boy's face. Submission and impudence, courtesy and vulgarity, gentleness and brutalism, were written on his brow in one and a single line. Ready to bow before authority, prestige or wealth; just as ready, if not more so, to strike a blow or thrust an insult at poverty and weakness, the boy in the anti-chamber was a born servant, a mixture of a dog's submissiveness, a monkey's malice, and a tiger's cruelty.

Now and then, one servant or another came out of the rooms and spoke a few minutes with him in an undertone. His face struggled to appear sorrowful, but a monkeyish grin speedily drove the apparent look of sorrow to one side of his face and placed itself on the other.

A young and bright chambermaid approached the page on tip-toe and whispered, "Rolland, Madame la Comtesse is very low. I think she is dying."

"Is she?" replied the boy attempting to look sad, "may our Savior have pity on her soul! But Jane, what makes you weep?"

"Ah!" answered the girl, "when I think of losing her my heart breaks—she has been so kind to me."

"Has she?" retorted the page, sneeringly; "how much a year did she pay you?"

"Oh, Rolland! is kindness to be measured with money? She has been a mother to me. I did not work for money."

"She has been, yes; but what is the good of what she *has* been? She is done for now; let her die in peace."

"Rolland," said the girl, raising her voice, "you have no soul!"

"No," retorted the page, with a sneer, "I have no soul for these who are useless to me. I am not such a simpleton as you, Mademoiselle Jane!"

At that moment footsteps were heard on the stairs, the girl disappeared within the dining room, and the page, assuming an air of dutiful solemnity, rose to receive the new comer.

"Bon jour, Rolland," said the priest as he reached the top of the stair.

"Bon jour, Monsieur le Curé," replied the boy. "Oh, *mon père!* the Comtesse is dying! My God! Can nothing be done to save her precious life?"

"Nothing but the will of God can prevail, my child. Let us submit to His decrees."

"Father," continued the page, joining his hands, as if to pray, and lifting his eyes to heaven, "would I could die to serve her."

"Angels are waiting to receive her, child; do not weep. She will soon be by the side of our Saviour."

"Oh, father! it is so sad to lose her!"

"It is only for a time, my boy; we shall soon see her again."

"Amen," said the page, kneeling down to pray, and crossing himself. "My God, thy will be done."

"Amen," echoed the priest. "Amen. Pray for the repose of her soul, my child. I go to her side to soothe her last moments."

---

## CHAPTER X.—THE COMTESSE DE VERCHERES.

Madame la Comtesse de Vercheres lay in her bed in a state of semi-consciousness. Her eyes uplifted, seemed to seek in vacancy for some object on which to rest. She was in that state of transition from life to death in which religiously inclined persons fancy they hear angels sing, and see the gates of heaven swinging open to receive them. Who can define the sensations of a dying person! None have gone through it and returned to tell us of it in an intelligible manner. When death lays its cold hand on man it freezes his limbs before reaching his brains. Whilst the body seems almost deprived of life, the eyes retain vitality and wander about in search of some object. The brain, in its last sparkle of animation, reflects the images engraved upon it during life, and, to the vision of the dying, they unfold like a moving panorama. The last words of the dying demonstrate the retrospective action taking place in their minds.

The Comtesse de Vercheres had been a gentle and amiable woman. She had been a zealous devotee of the Roman Catholic Church, and had blindly believed all the dogmas of that religion. Indeed, it had never occurred to her that any of these dogmas might be questioned by the laity. She displayed the humility and timidity so much recommended by St. Paul to woman. Her first thought on rising from her bed, and her last before retiring for the night was to kneel down before the statue of the Blessed Virgin and the Infant Jesus. Beads and other devotional trinkets were to be found in every recess of her apartments. Her library, which had not increased since her childhood, consisted of a "Mass Book," an "Imitation of the Life of Jesus," a "Life of the Saints," and a hymn book. They were orderly placed on a velvet covered table close to the statue of the Virgin.

The Comtesse had reared two children, a daughter and a son, and had insisted on being their teacher under the guidance of the parish priest. The Comte de Vercheres, seeing the indomitable religious zeal of his wife, had wisely stood aside and had not interfered with her fanaticism and her maternal pretensions.

The daughter of the Comtesse, Viscomtesse Clara de Vercheres, had grown and developed under the tuition of her pious mother, and early in life showed symptoms of asceticism. Her earnest desire was to be cloistered in a convent, to be in constant touch with "Jesus and His blessed Mother." She had imbibed all her mother's bigotry but none of her lovable, gentle traits. She was void of sympathy, loved nothing but the Church, and hated with fury all persons and things adverse to the interests of her religion.

The son of the Comtesse, Viscomte Gustave de Vercheres, developed tastes for a fast and inconsiderate life. He was fond of sports, delighted in hunting and in the chase after women. He attended mass regularly, confessed and received the holy communion often enough to keep him in good Christian condition. To all appearances he was the opposite of his sister; but, in fact, he was her counterpart. The difference of sex and conditions attending on the difference of sex were alone responsible for the apparent dissimilarity.

The Viscomte de Vercheres and his sister sat by the bedside of their dying mother. The young woman had passed her twenty-fifth and the young man his twenty-second birthday. Both were tall, with a handsome physique (as is the case with the majority of men and women on the Jura mountains), but their features lacked refinement and their face, expression. The only light flickering in their eyes was one of cunning. In living organism, *cunning* increases in inverse ratio to intelligence.

The Viscomte de Vercheres sat grief-stricken. In his every day needs he sadly felt the absence of his mother's tender care. The Viscomtesse Clara sat on the other side of the bed. Calm and rigid, like a marble statue, she mumbled the prayers for the dying.

At the arrival of the priest the Viscomte and his sister rose and bowed reverently. Slowly advancing toward the sick bed, the Abbé sat by the pillow in order to speak close to the dying woman's ear.

"How do you feel to-day, my child?" he asked the Comtesse.

"Is it you, father?" she answered in a faint voice. "Oh, why did you not come sooner to give me the absolution and communion? The angels are all waiting for you to absolve me of my sins in order to drape me in my white gown and carry me into heaven to the side of the blessed Virgin."

"I have already absolved you of your sins, my child; but to-day I will give you the extreme unction and prepare you to appear before our good God."

"Father," said the dying woman, "give me my white gown; this I have on is black—*black!* Oh, take it off, *take it off!* or Satan will carry me away."

"Emilie," gently whispered the priest in her ear.

The Comtesse turned her face in the direction of the voice that had so emphatically pronounced her name, and said in a clear articulation, "Who are you?"

"I am your friend, the Abbé Bertrand. Speak to me, Emilie; speak about your family. You are not going to die yet. Rally your thoughts and realize that you are in the Chateau de Vercheres."

"Yes," replied the Comtesse, "I am in my castle and near you, Abbé Bertrand. I have been dreaming. Now I am awake. Where are my children?"

"Your children are by your side, and your husband will soon arrive."

"Oh! do not let him approach, father; keep him away. He is an infidel, a heretic. His presence would contaminate my soul and God

would cast me away. I have lived with the Comte because you told me it was my duty, as a good Catholic, to be submissive to my wedded husband, but while I submitted in silence hate for him slowly crept into my soul. I detest him for his unbelief. How could I love one whom God has cursed? Unbelievers go straight to hell—purgatory, even, is denied to them.”

“No, Emilie; you are mistaken. Your husband is not an unbeliever. Shall I call him to your side?”

“No, father; no!” cried the woman raising her hands as if to repel a dreaded object. “Let him stay away. Yourself and my children are all I need. I have, in the past, entrusted you with all my thoughts and all my sins. I need you as long as I live, but I do not need *him*. You are my confessor. A woman’s confessor is dearer to her than all else in the world, her children included, for he represents God on earth.”

“Emilie,” said the Abbé, taking a consecrated wafer out of a small silver box he carried in his hand, “receive the holy communion, the body of Christ, and through his blood you shall be purified from all your sins.”

The Comtesse opened her mouth. The priest gently placed the wafer on her tongue and said, “Do not let your teeth touch the holy host, swallow it at once, if you can.”

The sick woman did as she was bid, as long years of practice had enabled her to do easily, and the host slipped down her throat without coming in contact with her teeth.

Taking a small bottle of oil out of his pocket, the priest uncorked it, poured a drop of the oil on his thumb and gently anointed the sick woman’s eyes in the form of the cross, saying: “By this holy unction and His most tender mercy may the Lord pardon thee whatever sins thou has committed by thy sight. Amen.” Then he anointed her ears, nose, mouth, hands and feet, using the same prayer, adapting the form to the several senses.

Under the gentle touch of the Abbé Bertrand, the Comtesse lay motionless. Her breathing became more regular and lighter, fainter and fainter, until it became inaudible.

The solemn religious rite over, the Viscomte and his sister, who were kneeling by the side of the bed in absorbed devotion, rose to give their mother the farewell kiss. The daughter, being the eldest, had the precedence. Still muttering her endless prayers, she mechanically, and without interrupting her dismal recitation, kissed her mother’s forehead, and resumed her seat by the side of the bed.

The son then approached his mother, stooped and touched her pale brow with his lips. But suddenly drawing back a few steps and pressing his temples with his hands, he cried with a stifled voice, “Oh! my God, she is cold—she is dead! My mother is dead!” and with a groan he fell senseless to the floor.

## CHAPTER XI.—A CONFERENCE.

On the day following the death of the Comtesse de Vercheres, our old acquaintance, Pierre Chauvin, mayor of the village, sat in his improvised magisterial office. On a desk by his side lay an open registration book, two pens and a small ink bottle. The tri-color sash of mayoralty was thrown on a table handy by ready for use in case of need. On the wall, just above the desk hung a large sized crucifix, the legal emblem of France, upon which the French in all judicial matters, are required to swear. Pierre Chauvin's mood appeared to be thoughtful. Three weeks had hardly elapsed since he was in his official capacity called upon to register the birth of an infant girl. Now he sat again to record another registration, this time a death, the death of the first titled lady of the parish.

In a small village, two such occurrences in so short a time were more than sufficient to excite all the gossiping verbosity of the villagers. These, accordingly, had all gathered in front of Mayor Chauvin's cottage to catch a glimpse of the Comte de Vercheres, or of his son, as they entered the municipal room.

The official doctor, whose duty it is to ascertain the death of a person and certify that nothing suspicious was connected with it, "the doctor of the dead,"—*le medecin des morts*, the French call him—was among the crowd outside waiting for official orders to go to the Castle of Vercheres.

"Monsieur le docteur," said a woman, "to-day you have a high and honorable duty to perform. To examine a woman of the nobility is an enviable task, is it not?"

"It would be if she were alive," the doctor replied, with a roguish smile; "but she is dead. A corpse has no attraction for me."

"Corpse though she be," remarked another woman, "to do her homage, the church will be draped and decorated, a high mass will be said; deacons and sub-deacons will officiate, and all the pomp of the church will be displayed. Were I to die my funeral would be without much ceremony and no display."

"Never mind the ceremony," said another, "in the grave we are all equal."

"In the grave, you say, Suzette?" interposed a man, "we are all equal even in life. Since the time of the great Revolution of 1789 the rights and privileges of the nobility are destroyed. We do not pay tithes any longer."

"Oh, do not mention that horrible revolution, Bastien," cried the woman Suzette. "Don't you know how the churches were then desecrated by furious infidels, and our good priests massacred by blood-thirsty heretics? God has cursed us ever since. The Curé of Cernan said the other Sunday that the wrath of God will never be appeased until our Christian and rightful king, Henry the Fifth, is sitting on the throne of France. From the time of that dreadful revolution, wars, pestilence, famine, disease on vine trees, on potatoes and on nearly all vegetables; caterpillars and grasshoppers have, year after

year, devastated our land. The Holy Virgin does not appear to us any more as she used to do under our Christian kings the Bourbons, and she does not intercede for us with her Son, our Saviour, as she did previous to that frightful Revolution of 1789. The Curé of Cernan told us that the end of the world is not far off, and I believe him."

"What are you talking about, Suzette?" said an old man in the crowd. "The Blessed Virgin appeared to us in 1815, when the Austrians were invading these borders. She changed every vine tree into a French soldier, and the Austrians, seeing such an immense army waiting for them, ran away as fast as they could and France was delivered from the Austrian invasion. You are too young, Suzette, to have seen that miracle as I saw it with my own eyes, and can swear to it."

"Yes, this is true," echoed several of the assembled men and women, "my father saw the miracle, and my mother, too."

"Well," retorted Suzette, "it does not prevent what I said about the revolution from being true. God is angry with us for permitting such men as Robespierre and Marat to murder our Christian king, queen and royal family. The Curé de Cernan said that the ground on which these savage revolutionists trod ought to be blasé out of this earth. I wish it were, for it is a frightful thing to see our crops of potatoes, grapes, cabbages, currants, wheat and corn eaten by insects sent by God to punish us for the sins of those rascals."

"Suzette," said a decrepit old woman sitting on the stone bench of Mayor Chauvin's cottage and leaning on a crutch, "you speak like a man. Where did you learn all these things? 'Pon my word, I never heard so much of politics in all my life as I have just heard from you. You ought to be ashamed of yourself to degrade your sex in that manner. I would bet anything that your room is not swept, your stockings are not darned, and that your husband's shirt has no buttons on it. What are women coming to, when they pretend to discuss politics?"

"That's true, that's true!" echoed the assemblage.

"What does a woman know about such affairs?" continued a young lad. "The Curé of Cernan ought to keep these remarks to himself, or wait till no women are near to speak of such things. Our own Curé, the Abbé Bertrand, never preaches about that or any other revolution. He knows full well that women have not brain enough to understand things which God intended should be understood by men only."

Suzette blushed and said: "I know much of these things by hearing my husband and Jean Morin speak together in our house. They make me tremble."

"I tell you what, Suzette," put in the municipal doctor, "when they talk together put your hands to your ears. Also put some water in your mouth and keep it there for two hours after the two men have parted."

"Bravo!" shouted the crowd. "Doctor you have a remedy for all diseases."

"Here is the Comte de Vercheres coming with his son," said several voices.

"The Viscomte is very pale," said a girl of about twelve. "He appears to be suffering. Poor young fellow, how I pity him! His face is so gentle and sweet."

"Hello! Tilly," said a woman by her side. "You seem to admire the Viscomte very much. A young girl should have more modesty and not stare at men's faces as you do. You begin rather young, Mademoiselle Tilly. It is a bad omen, I can tell you."

"Oh!" whispered in her ear, a woman close by. "What can you expect of a daughter of Madame Ferrier? The mother can give her no good example, for she has not much modesty herself. Don't you hear her talk to men as if she was one of them, about such queer things, too. I believe that men are afraid of her, for they look at her so strangely."

"We are in a bad time," replied her companion. "I don't know what is becoming of women. As for men, they all seem to be going distracted. Something wrong is going on. They read the papers every day at the blacksmith's, and they act as if they were excited. They talk about war—civil war, they say; about Paris being ready to fight."

"*A la garde de Dieu!*" (let us trust in God) said a third female. "Let us go home and pray the Blessed Virgin to intercede for us."

The group began to break up. The woman Suzette was weeping pitifully. A man who just happened to pass by, approached her, saying: "What makes you cry so, Suzette Ledoux?"

"Oh! Pierre Barbeau," she sobbed, "the end of the world is coming, and the Curé of Cernan told me that God intends to destroy us because of men who read the papers to others and talk about a revolution, as Gaspard does."

"How did the Curé of Cernan happen to know what your husband says and does?"

"When I go to confession he asks me, and threatens to refuse me the 'absolution' if I do not report to him all I see and hear. I must leave Gaspard, or his sins will damn me as well as himself."

"Dry your tears, Suzette," said the man. "Gaspard is a good man, and the Curé Gaillard is deceiving you. What makes you go to Cernan for confession? Have we not in Thesy, a good priest, the Abbé Bertrand?"

"I was born in Cernan, you know, Pierre, and the Curé Gaillard has always been my confessor."

"Suzette," replied the man, pressing her hand sympathetically, "distrust any one who dare speak ill of your good husband."

## CHAPTER XII.—THE FUNERAL.

Madame la Comtesse de Vercheres lay in a coffin in the large hall leading to her own apartments. Four lighted tapers and a large bowl filled with holy water with a sprig of boxwood in it, stood on a table

in the hall. Branches of evergreen had, by loving hands and mourning hearts, been strewn here and there over the coffin. At the head sat two Catholic nuns engaged in silent prayer. A large silver crucifix on their bosoms shone saliently over the black alpaca of their costumes. These two nuns were as motionless as statues. But for the regular muttering of their lips and the sign of the cross which they made at frequent intervals, no one would have thought them to be living beings. The fervor of piety or the iron monastic discipline, or both, had enabled these women to remain hours at a time in a state of perfect immobility.

The Viscomte and his sister sat at the foot of the coffin facing the nuns. Mademoiselle de Vercheres, although not clad in monastic costume, was the faithful image of the two nuns facing her. Since the sickness and death of her mother, her physical energy seemed to have become paralyzed, nothing but her spirituality was active. She no longer lived on earth, but dwelt in a dream-land beyond the clouds. To her bereaved father she had no word of sympathy to offer. The recital of the prayer for the dead absorbed her whole being. Her condition was absolutely morbid, piety had made her insane.

Relatives and friends, on entering the hall, took up the sprig of boxwood and sprinkled holy water on the coffin, knelt down by the dead, muttered a prayer, made the sign of the cross and went to sit among the assembled mourners.

At two o'clock the two nuns rose and, passing down the hall on opposite sides, stopped before every person and gave their silver crucifix to kiss. The coffin was then lifted by four men, carried down stairs, placed on a litter, hoisted on the men's shoulders and the funeral cortege marched toward the village church. Mourners formed into a procession of two abreast, the Comte de Vercheres, his daughter and his son walking behind the coffin.

While the procession marched on, Madame Ferrier entered the ranks and walked alone, the cynosure of all eyes, but she seemed to notice no one. She looked sad, and tears silently coursed down her cheeks.

The church reached, the coffin was placed in front of the grand altar and a high mass was sung. All the paraphernalia of the Roman Catholic funeral service were brought into requisition. The organ played a dead march in *A* minor, replete with staccatos, long notes and slurs. The musical strain, a true onomatopoeia of human grief, now expressed a sharp spasmodic pain, anon, a deep, enduring pang of anguish.

The funeral service ended, the bearers again lifted the coffin and carried it to the burying ground outside of the church, where the Abbé Bertrand pronounced last farewell, to the mortal remains of the Comtesse de Vercheres: "Dust thou art and unto dust shalt thou return," he said as he threw a shovelful of earth on the coffin within the grave. He handed the shovel to the Comte, who also threw earth on the coffin, and every one present repeated the performance. The

Abbé Bertrand then raising his hands, gave the assemblage his apostolic benediction, and re-entered the church. The mourners slowly departed from the burying ground, leaving behind the Comte de Vercheres, his daughter and his son.

"Come, children," said the father, "let us go home. Clara, you need rest, your brain is weakened. Have fortitude, my child; God is good and all-wise, is He not?"

"Yes, father," she replied, "God is all in all for the believer, but He is full of wrath for the unbeliever."

The Comte glanced at his daughter. She looked him full in the face with eyes so frigid, so devoid of feeling, that a shiver ran through his frame. With a suppressed sigh he said to his son:

"Gustave, give your arm to your sister, she is not strong."

"I will, father," replied the young man, passing his sister's hand under his arm. "Have courage, Clara," he added, "mother is happy now."

The shades of night, made sombre by a cloudy sky overhead, were approaching. A whizzing March wind slashed rain and sleet in the faces of the mourning group.

"This is fitting weather for a funeral," thought the Comte. "To-day I not only buried the Comtesse, but also the Comte de Vercheres, My life of forbearance and silence is ended. What did I gain by submitting to the whims of public opinion and stifling my feelings and my convictions during twenty years? My wife scorned me at her death-bed and my daughter, a few moments ago, revealed her hate for the "unbeliever" who happens to be her father. This is a just reward for my pusillanimity. I deserve it all. But to-morrow morning I will rise a new man, a *free being*. Not only do I remove the yoke of servitude, but I will break it into pieces. The moans of my heart are but a response to the moans of thousands of men's hearts. I will batter on all the corners of oppression, spiritual and material. To-morrow morning will greet Arnold Vercheres, the Monseigneur is dead.

THE END.

---

#### WHAT WE WANT.

We are the hewers and delvers who toil for another's gain,  
The common clod, and the rabble, stunted of brow and brain.  
What do we want, the gleaners, of the harvest we have reaped?  
What do we want, the neuters, of the honey we have heaped?

We want the drones to be driven away from our golden hoard;  
We want to share in the harvest, we want to sit at the board;  
We want what sword or suffrage has never yet won for man—  
The fruits of his toil God promised when the curse of toll began.

—James Jeffrey Roche.

## THE DEADLY ANGLE COCK.

---

BY WILFRED P. BORLAND.

---

As nearly perfect as is the automatic air brake, there is one little detail of its construction which, if not improved upon, renders it not to be relied upon as a safety appliance in the running of trains, and that is the present crude system of maintaining connection between engine and train when brake is in service, by means of the old fashioned angle cock. These cocks are not under the control of the engineer; they are liable to be turned at any time without his knowledge, thus shutting off the air from a part or the whole of his train and causing failure of brakes at the very times they are most needed, placing many precious lives in jeopardy. A contributor to a recent issue of *Locomotive Engineering* calls attention to the extreme danger of running fast passenger or freight trains without some better appliance than the angle cock for maintaining unbroken connection throughout the train while brake is in service, and, as if to echo his warning, came the terrible rear end collision at Jackson, Mich., on October 12th, wherein thirteen persons were killed and a score of others more or less injured, caused by the angle cock between engine and train being turned, thus placing the train beyond the control of the engineer at the critical moment. How the angle cock became turned so as to shut off the air from the train is a mystery, but that it was so turned is a fact that was fully developed at the proceedings of the coroner's inquest over the bodies of the victims of the accident. Two of the witnesses before the coroner's jury claim to have seen a man riding on the platform of the blind baggage car behind the engine where the cock was found turned, just before the collision occurred, but neither the engineer nor fireman were aware of a man being there, and the most thorough search failed to discover any one answering to the description of the man who it was claimed was there, nor did any others besides the two witnesses mentioned notice such a man, although there were many who had ample opportunity to do so. It is scarcely possible that any one would deliberately commit so despicable an act as that, and the more probable theory is that the cock was turned inadvertently by some person stepping on it while climbing about the engine when train was standing at a station. But, however it came about, the fact remains that the cock was turned, and that was the immediate cause of the accident which resulted in such terrible loss of life. It is surely within the inventive power of man to do away with this source of danger, and the

automatic air brake will not be a perfect safety appliance until it is done away with. What is wanted is some sort of a device which will give the engineer instant warning whenever one of these cocks are turned, or, better still, some sort of a hose coupling which will maintain positive connection between the cars whenever it is coupled up, thus doing away with the necessity for a shut off cock in train pipe altogether. Some inventive genius can earn dollars for himself by inventing some simple and practical device that will insure absolute and unbroken connection of air throughout the train while brake is in use, and relegate the deadly angle cock to the scrap heap.

---

When the accidents to World's Fair passengers are footed up it will be found that our great exhibition has been responsible for a terrible loss of life, and there will be a feeling in some minds that the fair cost a great deal more than it came to. This has probably been the most destructive year, as regards loss of life, in the history of American railroads; and the great majority of such loss may be directly traced to the immense World's Fair travel. Perhaps, when the returns for the year are all in, it may appear that the percentage of deaths to total number of passengers carried is no greater than that of other years, but the loss itself is none the less deplorable, and one of the saddest features of a great many of these accidents, from the railway employees' point of view, is that they were the result of gross carelessness, and might have been avoided entirely by the exercise of even ordinary caution on the part of certain employees. In one instance, a block signal operator gives a wrong signal, causing one crowded train to dash into another standing at a station, whereby sixteen persons are killed and seventeen injured; in another, a dispatcher fails to send a meeting order and brings two crowded trains together at full speed between stations, causing twelve deaths and adding twelve others to the list of injured; in another, a brakeman throws a switch right in the face of a swiftly approaching train, hurrying to the World's Fair with its load of precious human freight, and turns it full on to a freight train standing on a siding; result: twelve killed and twenty injured. Again an engineer receives positive and explicit orders to meet a train at a certain point, and pulls right by his meeting point, without ever having taken the trouble to read the orders in his possession, on the supposition that the train he has orders to meet is passed, and meets head on, causing the most horrible death, principally by cremation from burning coaches, of twenty-eight persons and the serious injury of thirty others. Here is a record of sixty-eight human lives sacrificed, not because railroad companies failed to adopt ordinary precautions to avert disaster, not because employees were overworked so as to render them incompetent to perform their duties, not from a failure of any of the appliances provided for the safe running of trains, but solely because employees failed to properly appreciate the responsi-

bilities resting upon them and lost their wits just at the time when they had need of them the most. How far this list might be extended, I do not know, but, as it is, it is surely heavy enough to illustrate the fearful responsibilities which men assume in entering the train service of railways, and which demand a class of men who cannot afford to *forget* even the very slightest matter of detail, nor take *anything*, however unimportant it may seem, for granted.

---

## COMPOUND ENGINES—ENGINEERS AND FIREMEN.

---

BY THOMAS PRAY, JR.

---

If any man who was sane, had an idea that he could get at the truth as to anything connected with the management or mismanagement of the railroads in the United States, he may read some of the so called railroad journals, and then read precisely the opposite of what they say, and he will arrive far nearer the truth, than he ever could or would, by relying at all on what is printed. This may be considered as a stricture by some of the faithful, but if a man has had any experience with the facts, he will at once recognize the force of the statement, and make sure of his premises and hence of his results.

*The National Car and Locomotive Builder* has discovered that the engineers of the United States are not capable of recognizing the beauties of cutting off short on an open throttle, and hence that they are "wasting fifteen per cent." The editor does not use just that language, but that is what he means, his statement is that "but a small proportion of the engineers are disposed to give heed to the great economy which may be attained by this method of running" referring by this method to "the immense advantage of running with wide open throttle and short cut off." He then goes on to say that the company's net earnings might be increased by a respectable figure, if engineers were only impressed with the necessity of following economical methods, running with wide open throttle being the "chief factor" in the problem.

The matter is then backed up by a clipping from the report of the "Committee on Compound Locomotives," to the Master Mechanics' Convention, from long time tests on the C., M. & St. P. R. R. which I copy carefully. "It is shown that the average fuel economy of the Compound (run by two different engineers) over the simple locomotive for the eleven months of the test was ten and seven-tenths per cent.; and that while in charge of one engineer for five months the economy over the simple engine reached seventeen and five-tenths per cent. and while in charge of the other engineer, for six months, the economy over the simple engine was lowered to four and three-

tenths per cent., which the conditions strongly indicated was due to inferior management, by the second engineer. We have known of a normal economy of fifteen per cent. due a compound locomotive over a simple engine being reduced to two per cent. by superior management of the simple engine. If there is a possible economy of fifteen per cent. to be gained, by simply having engineers perform their duties properly, why is there not a general and determined movement made to bring about an improvement? The fact is that a larger fuel economy than fifteen per cent. is possible on most railroads by perfecting the methods of running and firing locomotives. Long and short cut offs constitute but a factor in the problem, although the chief. There are other factors of almost equal importance, such as regulating the feed water and firing. There is a general apathy in regard to the matter and it is hard to understand, but that, nevertheless, is responsible for waste that continuously and industriously eats into the net earnings of railroads."

Let us examine this series of statements, as to its motive, its reliability, remembering all the time that the journal in question is not a paper that has any great interest in the men whom it so deliberately slanders by intimation, but is defending the managers, and in an apologetic way to the stockholders, who are usually the ones who get nothing, and the engineers and firemen get next to the stockholders.

In the first place, who on earth can tell the percentage that any of the compound locomotives do save? have the builders in any one single instance tried the same train and no other, at the same speed, over the same track, in the same direction, with different engineers, with the same locomotive? Not much! Then they say that a saving was made, and as stated, it is a curious fact. Three years ago a locomotive builder had a test not over five or six hundred miles from Philadelphia, and the "expert" reported that a saving was made of 14.00008 per cent., or some other infinitesimal decimal, and it was heralded over this country that such was the fact, orders were solicited, etc. The men who were to run the machine sent for another man who had some knowledge of the business, and he went over the machine, tried it with the same loaded cars, and no such approximate bosh, and had different engineers as well as firemen, and different engines, and ran repeatedly over the same mileage, and made a final report that one of the Pennsylvania machines, made at Altoona, was doing more work with a ton of the same coal that was used in both tests, than the "Compound" did or could do.

And upon the comparison of the diagrams it was discovered that in the results of the reported test, "the springs used in the first test had constant errors of over four per cent. in them" and "in two a seven per cent error," so that if the result was assured, it was without qualification wrong. These newspaper reports of performances of engines are in too many cases garbled, the bad is marked out and the good is magnified, especially if some interest is existing in the matter, but the dear public is not in the confidence of the reporter. Now when it comes to the knowledge of the railroad man that he has only

to order his engineer to throw the throttle wide open and keep it so, and then run the lever into the short cut off notch, to save "fifteen per cent. of all the coal used on the road," what a cracking of old bones there will be? and how soon the stockholders will get rich? Isn't it curious that this wonderful compound engine was so efficient with one engineer and then as soon as the inferior engineer got her in tow, that the economy ran down so low? "Normal economy," what is it? Do railroad men ask for normal or actual? and is this economy like the rest of the argument, based on a set of engineers and firemen who are used to "inferior management," did the purchasing agent turn over to the second engineer that same coal that the picked engineer had, and had the man who got such great economy any inducement to get an extra ton or two of coal at the coal stand? or was it the usual "hit or miss" at the coaling stand, was the coal weighed, or dumped in a rush and called at such or such a mark? There isn't an engineer on any of the roads of importance who is such a fool as not to know that at some coaling stations, he or they, can easily get at times two tons for one and a half, and vice versa, there is no mistake on this, and this alone in the case referred to, which was not on the Pennsylvania railroad, although one of their make of machines was used, turned out to account for the "economy" for the second man insisted on a pair of scales and used them, but newspaper (?) men don't go into details, they haven't the time, but it is easy to slur the engineer or fireman (poor cuss) they can't strike back, but the same newspaper fellow will toady to the engineer of a new machine to tell some wonderful story, but in a game of decent treatment the boys who run the machine are peers of the other fellow. "The fact is that a larger fuel economy than fifteen per cent. is possible on most railroads, by perfecting the methods of running and firing locomotives." And he follows by the statement that "long and short cut offs are the chief ones."

There is no doubt that the compound locomotive has its place in the economy of railroad business, but it has come to a sudden and painful standstill in the last few months, from a variety of causes, and it is a pleasure that we can say for a fact that the incapacity of the engineer and fireman, are not at all the reasons why. That is sure, and it is truth.

The writer has had something to do with locomotives and with railroad men for some of the years that have gone by, and his experience is that while there is not the slightest regard for business management in some quarters, but where men who are in league with the largest stockholders allow any sort of a prostitution of the real rights of the minority so long as the league is taken care of, and he could point to a case in which the president of a railroad put his own son into an eight thousand dollar position, and took an old officer to do the routine work, so the son could hold the place. His own and his wife's relatives are numerous and invariably in office, all drawing salaries. Two lengths of rails in the city of Chicago, owned by an officer of a company and his friends, are made a source

of income of over one hundred thousand dollars a year, taken from a company, so said by business men. And in another case a bridge diverts traffic 130 miles to get it less than ten miles, but the bridge gets three hundred thousand dollars a year from two railroad companies, and the stockholders are powerless. Where does the "inferior engineer" come in. Can he steal from the men who hire and pay him? Why don't some of the managers who are into this sort of business take a hand in saving?—not fifteen, but ninety per cent. Oh, dear no. The plunder belongs to them and their friends, but they can reduce the pay of their men quicker than you can say "Jack Robinson," and cry hard times, and take their best men off when the men have seen some of the deviltry that is going on, and these men have to get out or go for a few months on a side track or some branch, and a new set of tramp engineers are put on, and then a smash, or ! ? ! ? and the engineer is killed, and the company hasten to frighten the friends of the people who are killed into settling for a hundred or two dollars, and than they flatter themselves as to their smartness, and go and have a champagne supper at the expense of the company! This is railroading! But what becomes of the engineer? Go out on the track and find him, get acquainted with him, hear him patiently, and then get at his side of the story, and you will find a patient fellow; not at all the inferior or careless one, so easily supposed to be by this journalist, the case, but he will tell you that whatever he does in the way of improvement or adjustment, or in perfecting the operation of the machine, for the time he calls his, is not of the slightest importance to the manager of his division, and that when they lay off or take on men his record for the easiest adjustment, or the lowest coal or repair record is not worth one red cent, and a tramp, or greaser, lunkhead, or anything else that has a standing on the line, as engineer, will be put on the machine he has put in so many extra hours on in putting her easy, and to work better, and he will be put on anything that has wheels and a smoke box, to do it over again. But so far as any commendation goes, for his vain attempt to serve the best interest of the company he is trying to work for, it is as lacking as is common sense. In the innuendos of the paragraph I have quoted above, this is not a fancy sketch.

The difference as between the expecting the engineer or the fireman to attend to the interest of the railroad company, when as a simple matter of fact they are not in the least recognized when the attempt is made to do the most that can be done, is only a statement that is due to the thousands of men who comprise both classes, and the sneering of a newspaper artist who, like one of our political economists, who "knows so darned much that ain't so," is of the least account to those who do know the facts, as they exist.

If the man exists who has the ability to save three per cent of the fuel bill of any of the great railroads, he can make a thousand dollars a week easier than he can tell that he is sure that he can do it, or that the chance exists to do it, for there is not one manager in the

land who has six hundred miles of road that wont pay him a better salary than the president of the United States gets, on the "fifteen per cent. racket." But it has not been done as yet, and with all the smoke consumers, patent snorters, and other devilments, traps, improvements, and contractions, not excluding the big heads, the roads jog along, doing business at the old stand, and on the same brains, and engineers or real good firemen who do know their business are not so numerous as to glut the market, and the newspaper editors who never ran anything beyond an engine with two handles and one wheel, unless when they had a jag on, are so numerous as to make railroad men tired, and frequently so.

It is easy for a coward to deal a blow and run, and it is true that while there are so many thousand men, some few who are a disgrace to the great body of respectable and respected engineers, as well as firemen, it is not true that as a class they are of an inferior order, or inferior capacity, nor are they lacking in the common honesty of such men as are entrusted with the splendid machines, and the priceless lives or merchandise, which is a part of the every day work they are doing and required to do. But in some cases each month they do deeds, in a modest way, that are worthy of the highest commendation, yet such are so quietly done that only in a routine report is the mention made, and it is equally true that very many of the most radical improvements made of late years in the running machinery of the railroads have been the invention of the engineers and firemen, as well as trainmen in their respective departments. And it is equally true that in many cases such inventions have been deliberately pirated by the patent shark or the railroad association, not for the benefit or advantage of the man who suggested it or, perhaps, put it into operation, and in other cases, the inventor has quietly put it into work, and slyly patented it, and when it was proved to be of advantage to all, then some bully would undertake to drive the man into licensing the company, and but rarest knowledge is by any one, to my knowledge, in which the inventor has been treated honorably, or in such a way as would have been to the benefit of all concerned, by the railroad company's officials, unless they had the lion's share of the benefits.

But, the day is soon to come when brains, and honest ones, are to lead in the race. Such men as Tom Scott and others of his kind "from the ranks," dont grow on bushes, or in the lolling chair of the club, and the public are becoming tired of running water in the proportion of three waters to one reality in the railroads of the United States, and the London market has of late shown their spirit in sending back much of the stuff called American railroad bonds for the American capitalists to keep on the American side of the water as an investment! And American bankers and capitalists are also getting very tired of the gang, as a game. After a while it will work out, and then ornamental railroad men will be as useless as some other ornaments in the line of practical engineers, and such are now so plenty.

---

The great gains by the compound has caused some work to be done of late in new lines, but it has been done by the men who have to pay for the machines, and to pay for coal to run them and to make a dividend from what is left after paying expenses, and these various items of data are now in such a shape as to lead to some pretty careful looking up the record on at least three of the trunk roads, and the work is to be done quietly but for a period of at least six months to come and every sort of data that is of the least account in the operation of a road is to be put into the account, and it will be faithfully and thoroughly done, as well as with no sort of prejudice.

---

One of the roads that has been trying compounds has lately made the discovery that in a compound engine, if the low pressure cylinder cuts off at less than three quarters, it is of no use in reversing, unless she is thrown over clear by and then caught on the fly, and so reversed again. Perhaps some of the steamship men will make the same startling discovery in time, yet the talk is of the proportion of cylinders and the enormous saving in coal.

There is really something yet to be learned as to the compound, if only the advocates will begin at the bottom and not jump clear to the top at the first start. What can be done on a screw with a steam reverser is not easy to do on a locomotive, on the run, but where the gain is when the proportions are not possibly observed, is a point on which some of their owners are now cogitating, but experience is a good school, if sometimes slightly expensive.

The next thing on the boards is the grand superseding by electricity of all the steam roads in this country, and the dude engineers are at it with a vim worthy of a better cause, and one road is now said to be in process of building. Time is the slow but sure healer of many of the ills of life, and the certain demonstrator of the lack of adaptability of some of the tremenjous steps in the march of improvement, but the engineer and fireman are not likely all to starve to death by the patent gang, and that is about after the real style of the great electrical fizzles, so numerous in the list of failures in the year 1893.

The following is interesting, for it is from an authentic source, and from a paper printed in the town named: "The Edison phonograph works, at Orange, N. J., are entirely closed: More than three hundred men were discharged, and it is doubtful if any more machines will be manufactured for a long time. It is an open secret that Mr. Edison is much disappointed by the mechanical as well as the financial failure of the phonograph."

And yet it is only a few months ago that the world was duly notified that all the shorthand writers and amanuenses were to get their living by some other means. The phonograph was to do away with all the reporters and the rest of the working men and women. But, somehow, the business is still done at the old stand, and the phonograph has busted, as well as some of the many companies who

were to make millions out of its patent monopoly. Suthin is wrong, and so it will be with the men with brains and muscle. The great discoveries is really little more than a patent pirating of interests, to the detriment of the public, and like all dishonest schemes, it will sooner or later come to grief, and we boys who have had a little schooling in the school of practice and decency, will do better on the whole to stick to our bread and butter on the old lines for another year, or die in the attempt.

NOTE.—The January number will contain the history of some of the attempts to supplant the steam, and a little history of some of the failures in the same line.—T. PRAY, JR.

---

## PRACTICAL TALKS TO YOUNG ENGINEERS.

BY L. B. MOORE.

No. 7.

[Concluded.]

From the first trip that a fireman makes until, after years of faithful service he passes over to the right hand side, and from then, as a full fledged engineer, until, full of years and rheumatism—if he don't get discharged before that time—he retires to private life, uppermost in his mind, taking precedence of everything else, is an incentive to individual advancement. Whether it is for his financial benefit or he is actuated by other motives, it matters not, he is continually looking to better conditions of service. Some, more conscientious than others, expect to gain promotion by meritorious work; others—and we hope they are in the minority—care nothing for the means of their advancement so long as the end is attained. It is this latter class who are the greatest enemies of seniority, because they are at all times required to give an equivalent for their preferment. Their motives are recognized in the mechanical journals and periodicals of the day, which contain strictures against the rule, reflecting only too clearly their own selfish propensities, claiming always that seniority is an obstacle in the way to progress and intellectual advancement; that, instead of enginemen leading or keeping abreast of the spirit of the present in theory and practice in applied mechanics, they are lagging in the rear from the fact that they are not obliged to excel, their future being assured under the operation of the seniority rule. In considering such arguments we must either question the honesty of their propounders or condemn their ignorance. This is the gist of the rule in effect on nearly all American railroads: "That, in the matter of promotion, merit and ability being equal, seniority shall govern." It will be observed that promotion is conditional on the merit and efficiency of those whom it affects, therefore providing

against any contingency that might arise to prevent advancement, and only those who labor in accord with its spirit can expect to merit its full fruition. The rule is fair in every respect; no conscientious man can question its equity. Between the lines we may read the language of a promissory note: "for value received" and "promise to pay." Those who are oldest in the service, if they are up to the standard, are manifestly greater factors in promoting the welfare and prosperity of the company than those who are not, and should be rewarded with the best positions on runs. The rank and file of railroad men have always recognized its fairness; it has been practiced from a time long before the rule was formulated, the reasons for its adoption being: 1st, to prevent favoritism; 2d, to check the traffic in desirable positions; and, lastly, to save men from themselves, men who would supplant those whose long and faithful service entitles them to better positions. To some who read this it may seem to be rather a serious charge that these conditions do exist, but it has been demonstrated many times that there are enginemen who, to further their individual interests, losing sight of the greatest good to the greatest number, have been guilty of questionable acts. There are also those in authority who are enemies of the rule because it prevents the parceling out of favors to a few sycophants who have, by their peculiar methods, ingratiated themselves into favor. But, who is to be the judge of the merit and ability required? Your record as an engineer or fireman, not the master mechanic, who by virtue of his prerogative, decides the question, but the character of your previous work. For there is a record of errors and omissions that you may have been guilty of, with which you are debited, day and date, the credit being a well defined impression of previous good conduct. There may be a chance for criticism of this peculiar method of bookkeeping, but there is little danger of its being misused. If, under the operation of seniority, the locomotive service has not improved in the past, and engineers have not made advancement commensurate with improved conditions and appliances, it is certainly no fault of the rule, but from a lack of its enforcement. For it is a well known fact that men, in the abstract, will not create a standard for their own government, but will comply with the requirements of one adopted for their guidance. If, therefore, there is deterioration in the service, railroad companies are solely to blame. And you young men who labor under the impression that all you have to do is to grow old to reap the benefits of seniority, had better dispel the idea and begin to hustle. In my talks with you in the year that is nearly passed I have endeavored to impress upon you the importance of mental culture and self reliance. By self reliance I do not mean independence, but the necessity of following your judgment, in accordance with the conditions with which you are surrounded, without depending altogether on the experience and advice of others. By doing your own thinking you enlarge the scope of your mental faculties and make it possible to adapt yourselves to adverse circumstances which vary with nearly every trip. With this

number of the **MAGAZINE** the old year will be nearly gone, and my talks with you under this caption will end. If, in the coming year, I can speak in any way for your benefit I shall gladly do so, and I earnestly hope that the year 1894 will find you all better equipped, through hard study, to honor one of the noblest vocations in existence—that of locomotive engineer.

---

### TORPEDOES VS. FUSEES.

---

MR. EDITOR:—In view of the many disastrous rear end collisions, which have become altogether too frequent within the past few months, a method of protecting the rear end of trains from damage seems an urgent necessity and worthy of the most careful consideration, particularly on roads not provided with a good block system, and even on these systems some additional safety seems to be needed. The rear brakeman is required to go back and flag whenever his train comes to a stop, but this sometimes fails on account of the rush of business on some roads, hardly giving time enough between the trains to permit the flagman to get back far enough to protect his train. If the flagman gets back far enough to protect the train and is called in, most roads require him to fasten a torpedo on the track, and then another one when half way to the train. This is done to protect the train while the flagman may be on his way toward his train. Accordingly, the rules, to be safe, require the train striking torpedoes to come to a full stop, and then to proceed with the utmost care until the cause of danger is known or the obstruction is reached and passed. Now, let us see how this rule works, or rather, fails to work. As an actual fact, seventeen torpedoes have been found and exploded by a train in about seven and one-half miles, and no sign of the train found which placed them. According to rules, seventeen full stops; seventeen placing of torpedoes for the next train behind; seventeen slow runs to the next torpedo, or to the end of the road; for not having found the cause or passed the obstruction the injunction to run slow must remain in force to the end of the trip. To stop, place torpedoes at proper distance, call in flag and start seventeen times would take about two hours, and in that time you have traveled seven and one-half miles and fixed the road so that the train following must take just as much time in passing over the same piece of track, and so on *ad finitum*. With such a system, how would it do to obey the rules for one week, and probably have all the trains out on the road at once, with no likelihood of their coming in pretty soon? Torpedoes flag too much, for they pay no attention to the time which has lapsed since they were placed, or to the distance which has been covered by the train for

which they were placed, and we know that they have been exploded under our wheels over ten hours after they were placed by trains which we met on our double track road early on Sunday morning. Doing too much, they do not do enough, for as "familiarity breeds contempt," the sowing of the track with torpedoes, as practiced on many roads, has led to a disregard of the orders, for no one could obey them without placing their own train in jeopardy from other trains behind, which would be sure to overtake you.

We have before called attention to the greater value of a time fusee, the color of which would inform you that a train had passed the spot within five or ten minutes, and would at once put the rear train on guard, knowing full well that they were getting so close to the head train as would need extra care to avoid accident. The fusee has another advantage also in the fact that at the first intimation that the train is coming to a stop, a fusee could be lighted and thrown along the track, and it has been suggested that, as the engineer often knows when or where he wishes to stop before any one else, a supply of fusees be placed in his care, and that whenever he makes a stop, of which he is aware before hand, he drop a lighted fusee a mile or so from the point he wishes to stop at. A supply of fusees at both ends of the train, and used whenever there is occasion, would surely prove a safeguard, because they would do away with useless alarm, and when they were seen they would be accepted as conclusive proof that the preceding train was not far ahead, and might be found very near. This forewarning, followed by even the feeblest attempt to flag, would be sure to prevent the repetition of the horrors which have so often shocked us, and would assure us a greater immunity from accident, if it did not prevent them altogether, and it is, therefore, in line with the duty we owe ourselves and the public to agitate this matter, and if possible to secure the use of the fusee instead of the too muchly "played" torpedo.

---

W. J. Edwards has kindly answered my question as to the circumstances of the case when he arrived at a water station with an inch of water on the crownsheet and no water in the engine tank, but it does seem to me as if the question: Was there any good reason why they should "kill" her? is still unanswered. Let us look at the facts as stated by Bro Edwards, and see what they were. He says that they got to the water station with thirty pounds of steam and an inch of water on the crownsheet. Of course, this is rather low, but if the crownsheet was covered with even this thin layer of water the plates could not be heated, and that such was the case seems to be proven by the attempt that was made to use the injector as soon as the water commenced to run into the engine's tank. Feeling safe to do this, when they got to the plug, it would have been a question of a few minutes only to fill the tank, and with the pressure so low as not to work the "pop," and using no steam, she would keep her water level for awhile until the injector had enough water to permit it to work freely, as it seems it did when the

tank was filled up. The crownsheet must have been covered, for it would have shown the effects of it when the boiler was at once filled up with cold water, as was done in the case under consideration, and starting with this assumption, and the idea of getting to work and over the road as soon as possible, it would seem to me that the best way to manage in a case of this kind would be, to put in a small amount of water, say one solid gauge, and then increase the pressure by the use of the blower. On most locomotives, in raising steam from thirty up to one hundred pounds, the water would also seem to increase, for the one gauge will often seem to be two solid ones, but if it should not raise in this way, after having raised the pressure, more water could be added from time to time, until the level would be at its normal point. While it is true that steam is not absolutely necessary to kindle up a fire, it is also true that thirty pounds of pressure, while it would be of but little use for effective work, would form a good starter to get more steam from, and in a much shorter time than it could be had from a boiler full of cold water. Instances will, no doubt, rise to the memory of most every engineman, of having come to a tank or a passing or meeting point with steam and water both far below the maximum, and in some cases, near the minimum points, but no one would despair, for in thirty minutes, or even less time, steam and water have been (and can be again) raised from the lowest to the highest marks, by using what is left of the steam to get more with.

Bro. Edwards' engine, having a boiler full of cold water and no fire or steam, was certainly "dead," and even under the most favorable circumstances (that is, with wood for kindlings in sufficient quantities handy by) could not be ready to resume work in much less than one and one-half hours, thus showing a difference of an hour in favor of the other plan.

Bro. Edwards says he does not like the idea of firing up an engine with less than three gauges of water in her boiler, but does not give his reason for it. Good reasons can, however, be given against the introduction of a large quantity of water, thus reducing the heat of the boiler, causing great contraction of the plates, and their expansion again with the re-heating of the boiler, as these sudden and great fluctuations of temperature are not conducive to the safety or life of the boiler and flues, and ought to be avoided as much as possible at all times. It would thus appear as if it would have been a better policy to increase the amount of steam and of water gradually, instead of filling up with water only and having no steam to help you fire with. Other local reasons (not to be discerned at a distance) may, however, have entered into consideration and governed the actions of our friend Edwards, and he may have done the best thing possible under the circumstances.

The water question, or rather, proper water level to be maintained in the boiler, has almost as many answers as there are hands at the throttle; some say one gauge is enough, for you cannot hurt a boiler while you have a gauge of water; others say they never felt

safe without water in the top gauge; others, again, say that the top gauge was meant for steam, and shut off the supply when they find water in the top gauge; others continue to force water into the boiler until they can try it by the whistle or the cylinder cocks, and each one, of course, will claim that their plan is the best, or at least, that they are doing the best that they can for themselves and their employers. With so much conflicting theory and experience laid before him, the young engineer is left to take his choice of methods, and happy the man who chooses wisely. In this matter (as well as in most all human affairs) it may be well to strike a happy medium; neither too high, nor too low, but rather "betwixt and between," as the common expression is. In the first place, we need lots of steam to do the work laid out for us, and to make steam, we need water, and the aim should be to put the water into the boiler at such times and in such quantity as would keep up the level without affecting the steam pressure any more than we can help. If there is a good quantity of water in the boiler, it will be less affected by the introduction of cold water than a smaller quantity would be; hence, one good reason for having a boiler full, but from this they are apt to run the water level too high, and to forget that dry steam is the most effective in doing work, and also the easiest on the machinery.

Even with the best chosen plan and the most earnest desire to preserve some constant water level, the exigencies of the service will require deviations at times from your standard in order to make your points and prevent "lay outs."

---

### OILING.

---

MR. EDITOR:—Mr. L. B. Moore, in the October number of the *MAGAZINE*, advances some ideas in regard to oiling that I do not think would stand the test of actual practice. He advocates a light oiling in starting out, contrary to the practice of most engineers; and says that driving-boxes, if properly packed, should run a hundred miles on one oiling,

If driving-box cellars were packed every trip it might be safe to run them that distance, but I think it very doubtful. I would prefer to let some one else try the experiment. In my experience I have found that driving-boxes need more care, more oil, and are much more apt to give trouble than engine trucks. In my opinion driving-boxes should be oiled every thirty or forty miles. I always oil wedges and boxes at the same time. I think that better and more economical results can be obtained by giving a comparatively light oiling at more frequent intervals than by attempting to make a very long run. I believe it best to give an engine a heavy oiling before starting also.

As a rule, an engine before reaching a terminal, has run so far after the last oiling that the oil applied has nearly, if not quite all, been used up. What little oil feeds down to bearings or cellars while the engine is standing in the house would not be sufficient to supply the required amount of lubrication.

In oiling, as in everything else, as high a degree of economy as possible should be practiced, but there is no economy in running any risk of allowing journals or other bearings to run hot or get to cutting from lack of oil. "A *pint* of prevention is worth a *gallon* of cure."

I wonder if Mr. Moore has tried his ideas in actual service or is simply advancing untried theories.

If any of the brothers have tried his plan I would like to hear from them.

#### ANSWERING MR. NORTON'S QUESTIONS.

---

MR. EDITOR:—In answer to Mr. Norton's questions in November MAGAZINE, will say that the triple valve receives its name because it is a valve of three distinct parts, or, in other words, three valves in one. The word "triple" is synonymous with "treble," that is, three-fold, or three units. Second. The main piston in the triple valve has a vertical movement, and, in making application of brakes, follows the reduction in train pipe, while the piston in brake valve has a perpendicular travel and travels ahead of the pressure in train pipe. The former is a piston and slide valve combined, while the latter is simply a piston-valve. The piston in triple valve is operated by pressure from the auxiliary reservoir, while the piston in brake valve is operated by pressure from the train pipe. Third. It will be observed by comparing the old style triple valve with the quick action, that the latter preserves about all the features of the former; the emergency valve, with its attachments, being the improvement. It often happens that the graduating spring to the main piston in triple valve becomes impaired to such an extent that it will allow this piston to travel far enough, under a reduction of eight pounds, to put the port in slide valve in communication with the emergency valve. The pressure which trips emergency valve must come from the auxiliary, and must come on top of emergency valve in order to force it downward, and, as the emergency valve is forced downward, it trips a check valve, allowing the local pressure in train pipe to combine with auxiliary pressure. There is no way whereby pressure from auxiliary could reach emergency valve, except through the port made in the slide valve which is attached to the piston on triple valve, and this

port is opened by the triple valve traveling all, or nearly all, the length of its cylinder; thus it will be seen that if the graduating spring, even under a slight reduction, permitted the main piston to travel far enough, it would put the emergency valve in communication with auxiliary and cause valve to act, while the triple on another car might be acting as in a service application. In answer to the fourth question, I do not see how there could be any blow out of the pressure retaining valve unless there was a leak in the valve. I wish to ask: Is there any quicker action with the quick action triple, in service application, than with the old style? If so, why? Also, how would you detect a leak in the piston packing of the triple valve? both main piston and piston of emergency valve?

AMORY, MISS.

*James Carey.*

---

#### DOESN'T AGREE WITH CAREY.

---

MR. EDITOR:—I infer from Mr. Carey's answer to Mr. Garaghty's question, that, with the new triple, he would first release and re-charge train pipe before making an emergency application, when partial service application is on. I do not agree with him there. I think that if he is on the right side of an engine, and makes a practice of handling the brake that way, there will come a time when he will wish he had done differently. As I understand it, an emergency means stop. We will take a train at forty miles per hour; the engineer gets a slow signal and makes a service application of from six to ten pounds. His train is slowed down to, say thirty miles per hour, when he gets a signal that calls for an emergency application. Suppose he first puts handle to release position and re-charges train pipe before making the emergency application. His train is running thirty miles per hour and every second means 44 feet. If he does not wait for brakes to release he cannot get an emergency, and before he could get the benefit of his extra braking power he could have had the train stopped. He can figure his own time for brakes to release. Now, if he puts the handle to emergency at once no time is lost, and as twenty pounds reduction sets the brake hard, what more does he want? The other way he loses time, and time in an emergency means everything. Of course when he releases and then puts handle to emergency, he wakes the passengers up, if he has any, and lets the trainmen know that the brakes are set. I agree with J. R. Norton, and when an engineer makes a statement—as it is reported that one did after a recent wreck—that it takes a certain number of seconds to re-charge train pipe from twenty pounds to seventy—a reduction of fifty pounds—I would like to ask what he made such a reduction for?

HUDSON, MICH.

*J. E. Chase.*

## AIR BRAKE QUESTIONS.

MR. EDITOR:—In my November article I spoke of the action of the triple valve. This time I will try to show how the air acts in auxiliary reservoirs and brake cylinders. With a travel of eight inches to the piston, the auxiliary reservoir pressure will equalize in brake cylinder at about fifty pounds to the square inch, with seventy pounds pressure in auxiliary and the Westinghouse standard freight cylinder. Were we to place a gauge on auxiliary reservoir and on brake cylinder, we should find that we must draw about ten pounds from auxiliary reservoir before gauge on brake cylinder began to register at all, and when about fifteen pounds pressure had been drawn from auxiliary the gauge on brake cylinder would register about fifteen pounds. Now, if we draw off five pounds more from the auxiliary reservoir, we reduce the pressure to fifty pounds, and, with this last reduction of five pounds, we placed 35 pounds in the brake cylinder, making the two pressures equal. From the above, it should be clear to any practical man that we do not begin to do any braking of consequence until after we have drawn about fifteen pounds from auxiliary, and from that point, for every pound drawn from auxiliary we place about seven pounds in brake cylinder; power increases very rapidly after all slack is taken up and the brake cylinder is already full of air. Now, if piston had a travel of only four and one-half inches, pressure would equalize at about sixty pounds instead of at fifty, with a standard pressure of seventy pounds; and the gauge on brake cylinder would begin to register a great deal earlier than with the eight-inch travel. Thus, it will be seen that the travel of the piston has a great deal to do with the braking power; the more the travel of the piston is reduced, the more the braking power is increased.

In answer to my November questions, will say that a triple valve is so called, mechanically, because it is constructed with parts doing the work of three distinct valves; namely, the main piston acts as a graduating valve, opening and closing the service application port; and the main slide valve, which governs three ports in the old triple and four in the quick action. And it is termed "triple" from a practical standpoint, because the air passes through it three times to do its work; namely, from train pipe through triple to auxiliary; from auxiliary through triple to brake cylinder to apply the brake; and from brake cylinder through triple to atmosphere to release the brake. The main piston in triple and the equalizing piston in brake valve work simultaneously with each other. The valve will act in emergency with a reduction of 6 or 8 pounds, and work all right in service application with a reduction of from 3 to 5 pounds, if the graduating spring is broken or weak.

What is the cause of the entire train working in emergency, when handle is moved to release position from service application? Brake would go on in emergency, but would release all right shortly after.

# WOMAN'S DEPARTMENT.

EDITED BY IDA A. HARPER, STANFORD UNIVERSITY, CALIFORNIA.

## CHRISTMAS, 1893.

So soon! What has become of the past twelve months? They have slipped like beads from a string, and rolled away where we can never find them more. We can remember a time, all of us, when it seemed as if the holidays would never come, when a week appeared a long stretch if measured by Saturdays, a month was an age, and a year was an eternity. Now we say earnestly, "Good by; I will meet you a year from now, in San Francisco, or New York, or London." The months fly, and before we have accomplished the half of what we set out to do the time has come to prepare for our journey. We are approaching the age when only electricity can furnish the motive power necessary for our requirements. The time is at hand when we must be able to get what we want by "pressing the button" and having it immediately supplied. We cannot wait. He who hesitates is lost in the rush. There is a dash, an excitement in this race against time that we enjoy. Sometimes, when the pressure becomes too strong and we are overcome, for the moment, by a great weariness of mind and body, there comes upon us an intense longing for rest, for a quiet spot away from the madding crowd, for seclusion from the haste, the noise, the struggle that mark the going out of the century.

But this desire is purely imaginary. If it be gratified, if we withdraw from the world and its exacting occupations, from that competition which stimulates and brings out our strongest qualities, from the association with the men and the things which have made the greater part of our daily life, it is but a short time until we are possessed with the craving to get in the midst of it all again. The rest that we hoped so to enjoy is replaced by an unrest and a desire for the old life. It is sweet to be awakened by the song of the meadow lark and to look out upon forest and field while we are making our toilet, and then—we want our morning paper—and we want to get down street to see what is going on. Almost every man has dreams of a time when he will retire from business and have a suburban home and enjoy an unbroken leisure; but when that time comes he begins to stagnate, to lose his influence among men and his interest in life. He gets old fast and soon drops out of sight.

Complain as we may of the never-ending push and hurry of the present age, they are really what give a zest to existence. We would no more return to the quiet and leisure of our ancestors than we would to their wagon roads and tallow candles and cold bedrooms.

"Many of our cares are but a morbid way of looking at our privileges," said Henry Ward Beecher. It is, indeed, a great privilege to live in this advanced age. It will be a still greater one to live a century hence. Wrongs exist now, they always have existed, they always will exist, but the world is infinitely better than ever before. We are getting away from the savagery and the superstition of the past. It is true we still have outcroppings of these, individual cases, but very few in comparison with the number of people, and there is no public sentiment to support them as there was in the olden times. Men and women are better educated, broader in their views, more charitable and humane, much more just and tolerant. They are learning how to live. If we pick out special cases of depravity we may well believe that we have made no progress, but when we take a wide and general view we find a great encouragement. The establishment of libraries, of universities, of public schools, of kindergartens for the youngest children, promises a time when there need be no ignorance. The founding of hospitals, asylums, missions, homes, shows the care that is given to the unfortunates. The forming of societies for every possible purpose, for scientific research, for literary culture, for charitable work, for the study of social problems, indicate the progressive tendencies of the age toward what is needed for the improvement of mankind.

The World's Fair, which marks this as one of the great years in our history, illustrates the wonderful advance that has been made in material things, an exhibition that the most vivid imagination could not have conceived of a century ago. In connection with this was the series of congresses, which called together the finest intellects of the age in the various kinds of special work, closing with the great Parliament of Religions. In this one saw the representatives of all the leading religions of the world, speaking from the same platform in a spirit of perfect harmony and peace. This would never have been possible in any preceding age, and it affords a magnificent object lesson in the tolerant spirit and broad outlook of the present generation. The opening of these congresses with the great Woman's Parliament presented a spectacle never before seen. Four hundred talented women speakers gathered from all the civilized nations of the globe, addressing audiences of ten thousand women, is an occurrence which should inspire every woman with the highest courage and faith in the future.

And so we have but to look about us on every hand, to see the indisputable evidences of the world's progress. As a matter of course we must have our croakers and prophets of evil. No age has ever been free from them. Perhaps there may be some reason why they should exist. Possibly they may act as a brake upon the wheels. They form an important factor in that curious element known as politics, working upon the passions and prejudices of the ignorant and unstable. One class of them insists that, in our race for wealth and honor and advancement, we are wearing ourselves out and shortening our lives; but statistics show that longevity is increasing

and people live longer than they used to. Even if this were not true, it is better to have lived to some purpose than merely to have existed for a long period of years. We have made remarkable advancement in our knowledge of the cause and prevention of diseases, of the laws of sanitation and hygiene, of the proper methods of dress, of the care of children. The pessimists insist that in this rapid march of civilization we are losing our grasp on religious things and are failing to make the necessary preparation for a future life. Surely there could be no better preparation for the next world than a good and useful life in this. It is with the work which is given us to do here that we need most to be concerned. It is by serving our fellow men faithfully and conscientiously that we best can serve our Creator.

It is true that in many homes there will be no celebration of Christmas this year, that many children will receive no remembrance of the day; but it is also probable that more children will be remembered on this day than ever before, because each year the Christmas festival is more generally observed. Formerly it was a mere private, family enjoyment. Now there is an effort to render it a pleasant day for all children; the Sunday schools makes it a joyous occasion; all of the penal and charitable institutions celebrate it; dinners are given to the newsboys and bootblacks and multitudes of the waifs of large cities; and countless thousands of private benefactions are made on this day of which the world knows nothing. Many men and women of wealth contribute money and time to make this a day of pleasure for those less fortunate than themselves. We need to remember these things when we are tempted to take a skeptical or pessimistic view of life. Human nature always will be imperfect, the world always will contain inequalities, there always will be crime and want and sorrow, but the truth to which we must hold fast is that there is a steady evolution toward a higher type of humanity. The world will deal more kindly with our children than it has with us; it will hold greater possibilities for them, it will give them a larger, higher, finer life than we have been able to attain. These are some of the reflections that should give us renewed courage and hopefulness as we enter upon another New Year.

---

## THE DEATH OF A NOBLE WOMAN.

---

The sweetest face among all the beautiful ones at the great Woman's Congress at Chicago last May, was that of Lucy Stone. I wish I could describe it as it looks to me from a picture on my writing desk. Lucy Stone was one of that little pioneer band of woman suffragists who for more than forty years have been made the subject of ridicule and slander. They have been described as big, gaunt, short-haired, loud-voiced and masculine, and the vast majority of people, who never have seen and heard these women, are apt to be prejudiced by these cruel misrepresentations. Not in the case of

any of them is this description correct—least of all in regard to Lucy Stone. She was short and plump, her face as fresh as a young girl's and dimpling when she spoke; her soft, white hair parted smoothly over her forehead and drawn back under a fine square of white lace, whose ends were brought around and crossed upon her bosom. When she spoke in her low, sweet voice, with her little white hands folded together, she was an ideal type of a gentle, lovable, motherly woman. "Where is Lucy Stone?" was the first question of every one at the congress, and people followed her from hall to hall and hung upon her every word. She was enthusiastically cheered, the newspapers gave her columns of space, and women gathered about her, eager to touch the hem of her garment. And yet, within the memory of the present generation, she has been assailed upon the platform with eggs, a stream of cold water poured upon her from the hose and books thrown at her head for advocating the same principles that were received with loud acclamations in the World's Congress of 1893. She stood firm and the public sentiment came up to her standard.

She was born in 1818 and had just completed seventy-five beautiful years when she resigned her work into other hands. She was born on a New England farm, the eighth of nine children, and endured all the hardships incident to farm life in those early days. She was a bright scholar, but when she wanted to go to college, as her brothers did, her father called her crazy. She displayed then the same fearlessness and determination which characterized all her life. She picked and sold berries and nuts to buy books, studied and taught, receiving only a small fraction of the wages paid to men teachers, until at length, with her small pittance, she went to Oberlin, Ohio, College, the only one that admitted women. Here she taught in the preparatory department, worked in the young ladies' boarding hall at three cents an hour, and boarded herself at a cost of fifty cents a week. Thus she completed her college course. She was not allowed to read her graduating essay because it was considered a disgrace for a woman to appear upon the platform, but she was told that one of the professors would read it for her. Whereupon she declined to write it.

From childhood her heart was profoundly stirred by the wrong and injustice of the world. While in college she taught the fugitive slaves who crossed the Ohio river, and, immediately after her graduation, she was regularly engaged to lecture for the National Anti-Slavery Society, and was one of their strongest and most effective speakers. The wrongs of women, however, stirred her heart more deeply even than the wrongs of the slaves, and she began to incorporate so much of women's rights in her lectures that the leaders of the anti-slavery movement were frightened, and she finally agreed to divide her time between the two subjects. She was entirely alone in her work for women. This was in 1847, and the subject had never been agitated. Her posters were torn down, her meetings broken up and every insult and indignity were heaped upon her. In 1855 she was married to Henry B. Blackwell, a young hardware merchant of

Cincinnati, Ohio, a strong abolitionist and woman suffragist, who gained her consent only by pleading that two together could do better work than one alone. At the time of their marriage they made a joint protest against the inequalities of the law which gave to the husband the full control of his wife's person, property and children. She was not willing to lose the individuality of her own name and accordingly she has retained the use of it all these years.

The marriage proved one of great happiness and congeniality. One daughter was born, Alice Stone Blackwell, who is a striking illustration of the effects of heredity and environment. She is a keen and brilliant writer, a forcible speaker and a powerful factor in the reform work which has occupied the lifetime of her father and mother. The slavery question was settled over a quarter of a century ago with the loss of more than three hundred thousand men. The cause of woman's rights is still an issue. In 1866 Lucy Stone helped to organize the American Equal Rights Association, to work for both negroes and women, and was chairman of its executive committee. In 1869, with Wm. Lloyd Garrison, George William Curtis, Julia Ward Howe, Mary A. Livermore and others, she organized the American Woman Suffrage Association, and was chairman of its executive committee for nearly twenty years. The *Woman's Journal* was founded in Boston in 1870, mostly with money raised through her efforts, and she has been its editor-in-chief since 1872, assisted by her husband and daughter. It is a strong, clean, reliable paper and has been a powerful factor in bringing about the great change in public opinion in regard to equal rights for women. The death of Lucy Stone ends a remarkable career, a brave life devoted to a noble purpose. Fifty years of persistent effort—for what? Simply an equal right with man in the privileges of a republican government. There is a feeling of great sadness and regret that she could not live to win the victory, but she beheld the dawn, and even more. She saw women enjoying every advantage of education, every opportunity of work, every privilege of free speech and action, a great advancement in the equality of the laws, and with a limited but increasing use of the supreme right of the ballot. It will not be forgotten in the future generations how much this one courageous woman contributed to secure all this. When all who made the battle hardest shall have passed from memory Lucy Stone will still be held in blessed recollection.

---

## CURRENT NOTES.

---

When a girl of fourteen years was taken from a house of ill-repute in San Francisco, a few days ago, and carried to the police court, the eminent women lawyer, Mrs. Clara Foltz, stated that she would see that the girl was cared for by the Magdalen asylum. She then declared that the penal code does not go far enough when it provides

a punishment for those parents only who fail to furnish food, clothing, shelter and medicine for their children. It should hold them responsible for permitting the children to have vicious associations or for setting a wicked example before them in their own conduct, by getting drunk or doing any licentious act in their presence. She announced that she should introduce a bill in the next legislature providing a punishment for fathers and mothers who commit a crime against their children in this respect. She was assured by the judge and prosecuting attorney of their hearty support of such a bill. Now what is needed is a legislature composed partly of mothers, representing a constituency of women. Until we have this, the best interests of women and children never will be properly protected.

The New York *Sun* says:

That women are wresting from men the means of subsistence and crowding them out of places that are legitimately theirs, is, at present, the popular cry of indigent and indolent masculines. As if any woman would plunge into the icy waters of self-support if there stood a man on the brink ready to hold out a helping hand to her. The latest feminine ventures, however, in this direction have been strictly within the limits of woman's work. Ladies, both in England and this country, who have been educated for a different sphere, have invested their little all in millinery.

There are two points worth noticing in this paragraph: 1st, That women are not rushing into the hard work necessary for self-support altogether from choice, but because of the inability or the disinclination of the men of their family to support them. This is, in a large measure, true. 2d, That those whom the writer mentions "are strictly within the limits of woman's work," viz: millinery. Who laid down the law that millinery is strictly work? In every city in the country there are millinery establishments owned and managed by men, who make fortunes out of them. But perhaps the limit of the woman's share in the millinery business is to sit in a little back room and trim bonnets?

Apropos of this, a young woman of Springfield, Ohio, has just received the degree of electrical engineer, leading her class all through the course in the Ohio State University. She has taken a position with the Westinghouse Electrical Company at Pittsburg. In the paper which contained an account of this young woman, is an article on the seamstresses of the country whose average earnings are about 50 cents a day, at the most wearisome occupation in the world. Some one should go to this misguided young woman and convince her that she is out of her sphere, and that she should drop electricity and take up the needle.

The last legislature in Connecticut gave school suffrage to women, and the papers tell us they are registering in large numbers, in some instances walking several miles in the rain for this purpose. The same is true in New York state. The women must go through with all the legal formalities required of men and yet have only school suffrage as a reward. How many men would go to the trouble of registering, paying poll tax, showing tax receipts, etc., merely for the privilege of voting for school commissioner? And yet when women

do not turn out *en masse* for this purpose the cry is raised, "O, women do not exercise the suffrage when they have it."

At a recent meeting of Sorosis in New York one of the speakers said that what the children of the abject poor need above all else is affection. There is much truth in this. The mothers are overworked, unhappy, very often demoralized by drink or drugs, the fathers are brutalized by the wretched lives they lead, the children are regarded as a nuisance and they know nothing of the love and tenderness that are lavished upon those who are born into more fortunate surroundings. We may well believe that their little hearts hunger and thirst for that affection which ought to be every child's birthright, and that, if they could come under its influence many a one might be saved from a life of shame and crime.

Among the late inventions is an electric door opener and closer. The person does not have even to press the button, but when he steps upon the door mat he starts an electric circuit, the door swings open, he enters, and it closes behind him. This invention has its advantages and its disadvantages. Winter will be robbed of half its terrors when we no longer wear out our lungs and our patience on that individual who never shuts a door. On the other hand, it will be a great boon to the man who spends the evening with a few friends and cannot find the keyhole upon his return home. But then, how is a wife to exercise any discipline if she cannot take her husband's night-key away from him when he has abused its privileges? And how, oh, how, is an explosion to be prevented if the husband can not rush out and slam the door behind him when his wife gets the best of an argument?

The supreme court of Michigan has declared unconstitutional the act of the last legislature which gave municipal suffrage to the women of that state. And so there will be all the hard work again of getting another bill through both houses; while the opponents of the measure with their usual logic will probably quote this court decision as a proof that women do not want suffrage.

---

## OUR CONTRIBUTORS.

---

A correspondent writes from West Oakland, Cal., that a Ladies' Auxiliary has been organized there.—Mrs. W. F. W., Columbia, Tenn.: Our orders are imperative not to print obituary poetry in the Woman's Department, and consequently we cannot use yours.—Mrs. Jessie Harmon, of Centralia, Ill., writes that she had no intention of committing plagiarism in sending to the July MAGAZINE the article entitled "Adrift on the World." She saw it in the *Trainmen's Journal* and, thinking it would be a good article for the Woman's Department of the FIREMEN'S MAGAZINE, copied and sent it, not intending it as original. The editor is not a mind reader, and

as the article was signed with Mrs. Harmon's name, with nothing to indicate that it had been copied, it naturally went in as original. The apology is accepted, but we will ask our correspondents hereafter to use some distinguishing marks.—Inquiries still continue to be sent to the editor of this department as to the methods of organizing Ladies' Auxiliaries to the B. of L. F. In the November number of the MAGAZINE will be found a list of the national officers of these auxiliaries, and they are the proper persons to apply to for information.—For several months the MAGAZINE has been so crowded that it has been impossible to publish the communications that were sent in for this department. A number of readable articles have been forwarded to the publisher each month and we are assured that they will eventually appear. We have no space for communications that are dashed off in a hurry, with the promise of something better next time. Our correspondents must prepare their articles carefully and do the best work they are capable of, and we will try to find room for them.—The *Doll's Dressmaker*, the *People's Magazine*, and other periodicals to which our gifted writer, Miss Ida Orrell, was a contributor, contain notices expressing regret at her early death. The *Nonpareil*, of Cincinnati, says:

It is with sadness that we chronicle the death of one whom though we never had seen, it seems as if we knew,—one known also to the children of "The Corner," and one of the earliest and most enthusiastic members (indeed the first lady applicant) of the temporary organization of what is now known as the American Agent's Association. It is to be greatly regretted that she has been cut off in her youth—in the days of her usefulness,—for we believe, had she lived, she would have become famous both as an author and an agent.

---

### CHRISTMAS.

---

Yes, it is time to prepare for Christmas giving. It is such a little while since we penned our last year's Christmas greeting. Only twelve short months. But they seem like twelve long, dark, unending years, stretching out into an unexplored territory into which all mankind are surely journeying. Another Christmas, with its festivities and its disappointments, brings us a year nearer the vast unexplored country to which so many of the human family in the past year have gone, and from which none ever return. No telegram comes to tell us of their safe arrival. We do not go to the postoffice expecting to get a letter from them telling us that they are well and happy. We expect no Christmas present from them. Neither do we expect to send a long-coveted volume of poems, or a delicate, perfumed bit of fancy work to them. Our beloved have gone from us, and all visible communication has been closed. We stand in our great loneliness, alone. We have been told that this unexplored land is a beautiful city. Much has been written about its wealth and beauty, its peace and happiness, but it does not comfort us, because no Stanley has penetrated this silent, mysterious land and returned, a living witness to testify to the truth of the things written thereof. So we take a last lingering look, wipe the tears from our eyes, and turn to earth's suffering children. We will put aside our sorrow that we may make less dreary some one else's Christmas day. For Christmas in 1893 will dawn upon nearly or quite 3,000,000 of unemployed laborers. Will they have a merry Christmas? Some of them may, but there will be thousands of homes into which the wolf of hunger and cold will enter.

He will devour men, women and children. The cry has already gone up over the land for bread, bread, and the tramp, tramp of many feet tell us that "Peace on earth and good will to men" is a farce. Why are these men tramping, homeless, on Christmas day, while others sit in elegant pews in churches that cost thousands, listening to a grand sermon delivered by a high salaried preacher? If these same tramps were to tramp into one of these refined churches, what a disturbance it would create.

Sometimes, in my visions and dreams, I fancy I see them tramping into heaven, for there will be no lockout there, for "the first shall be last, and the last first." Let us "do unto others as we would have others do unto us." Deny ourselves, and even those we love best, of unnecessary things, that we may have the more to give to the poor. Let us give Christmas gifts to those who have no gifts to give, forgetting, for at least this one day, self interest; put our own sorrows aside that some one else's may be lightened. For, in a little while, we shall all go into that unknown land naked and poor, carrying no relics of wealth or position with us. Then may no one be able to say to us: "In 1893, December 25, I was an hungered and ye gave me no meat; thirsty, and ye gave me no drink; naked, and ye clothed me not; sick and in prison, and ye visited me not."

You are your brother's keeper; this is the only religion that will survive. You, my brother, you, my sister, will have to measure up to it, no matter of what creed or faith you may be. Do a generous deed on Christmas day; go out among the poor, even if you miss the Christmas sermon. Think how many of these poor unfortunates never see inside a church; they are your neighbor, your brothers and sisters. Visit them.

MURPHYSBORO, ILL.

Mrs. M. Orrell.

SIoux CITY, IA., Oct. 6, 1893.

Mrs. A. Harper, Indianapolis, Ind.

DEAR MRS. HARPER:—Having received the FIREMAN'S MAGAZINE for the month of Oct. and on looking through the Woman's Dept. I failed to see two peices of poetry I had written to be published in this month's MAGAZINE. Now if you do not want to put them in you will kindly return the peices, as if I know anything about poetry the peices I have written are certainly as good as some of the peices that have been put in the MAGAZINE. I have already sent you 8 peices and not one of them have appeared in the MAGAZINE. If you will please explain why they were not printed I will be somewhat relieved. I do not like the idea of sending in peices and never seeing any of them in the MAGAZINE. I am entitled to some space in the MAGAZINE as well as the other women. So you will either put the peice entitled Fireman in for the month of November or return it and also about the peice of the Cow Boy's address to his sweetheart. Mrs. Harper, you will greatly relieve me if you did either of these two propositions I have stipulated. Hoping to receive some explanation of this matter, I am

Very respectfully,

K. T. M.

P. S.—If you find these propositions repulsive please return the 3 peices I have sent to be published in the MAGAZINE and rest assured I will not contribute any more poetry or prose to the MAGAZINE. I have waited long enough and decided that an explanation on your part must be required before I finally make up my mind about sending any more matter to you.

[Our very great regard for Miss M's reputation prevented our publishing her rhymes. We considered that we were doing her a kindness. We do not return any rejected manuscript unless stamps are enclosed for this purpose, and as Miss M. sent none, her articles were not preserved.—ED.]

## CHRISTMAS COMES BUT ONCE A YEAR.

"Christmas is coming, Christmas is coming; hoorah!"

The very children in the street have taken up the cry. Christmas is essentially, or should be, the glad time of all the year; the time at least when all children should be made happy. Yet how many little, desolate children will spend this day just as all other days of the year have been spent. There will be no merry-making for them, no giving of gifts and hanging up of stockings, no wondering glances cast at mysterious packages; no Christmas tree; no childish prattle of "what do you want?" and "what is Santa Claus going to bring you?" Christmas is robbed of half its sweetness when we think of the children in the large cities who have never known a merry Christmas. Can there be anything sadder than this? When it takes so little to make a child happy, every child in this world ought to be made happy. You may be very poor and say that you can give nothing. This may be true, but there are none of us so poor but that we can give a kind word and a pleasant smile, and they may make sunshine for some life more desolate than ours. When we look over our scant store and wonder what we can give, we smile—it is so little—yet we would like to give something.

We would all, I am sure, like to make the world the better for our having lived in it. Suppose it is only a picture card, a paper or a sack of candy; it will be appreciated very much by some little one, and it is the spirit which prompts the giving which makes the heart glad more than the gift itself. Let us each and every one try to make some child happy on this day.

Christmas comes but once a year, and it brings with it so many opportunities of doing good that we should avail ourselves of them. Though your gift may be small and you feel it is scarcely worth the giving, "give what you have; to some it may be better than you dare think."

MURPHYSBORO, ILL.

*Wilda Chesterfield.*

[The above is the last article written by Miss Ida Orrell for the Woman's Department. It was sent this month by her mother. Like all of her writings it breathes a spirit of love and helpfulness for her fellow creatures.—Ed.]

## ALWAYS REMEMBER YOUR MOTHER.

The above words are significant in themselves, but I ask permission to express a few thoughts on this subject.

My remarks will apply to all in general, but most particularly to the railroad boys. Boys, do you ever, after returning from a dangerous trip, think of taking a few moments to write to your mother (that is if you are removed from her) telling her of your safety? Does your mother ever have to think those beautiful though sad words "Where is my boy to-night?" and find no answering voice in her heart? Examine yourselves and see which answer, yes or no, you can give to the above questions.

Some do not think it necessary to write to that dear parent when removed from her influence, but it is. If you only say a few words it will be enough for her to know that you remember her still.

Even though in taking time to write to her you have to deprive yourself of some pleasure, consider the time well spent in thus adding some joy to her life.

I sincerely hope my words may stir some delinquent heart and be the means of throwing a ray of light in someone's pathway.

## THE LEHIGH VALLEY STRIKE.

As we go to press the strike on the Lehigh Valley Railway is in full blast. What the outcome will be is at this time a matter of conjecture, but what it should be is a matter about which there is not a shadow of doubt in the mind of any honest man. The strike is a direct result of broken faith on the part of the officials in dealing with their employees. Agreements made in good faith, and conscientiously lived up to by the employees, were flagrantly disregarded and when redress was sought in a spirit of honesty and fairness, no consideration was given the complaint; and when finally, as a last resort the chief executives of the several brotherhoods were called in, they were given to understand by the officials that their intervention would not be tolerated—in other words, they were flatly refused a hearing.

The strike had its origin in a series of abuses which are fully set forth in the following official circular issued by Grand Master Sargent under date of November 18th:

*To all Subordinate Lodges:*

DEAR SIRS AND BROTHERS:—Pursuant to the requirements of Section 211 of the Constitution, you are hereby officially notified that a strike of the Engineers, Conductors, Brakemen, Telegraphers and Firemen on the Lehigh Valley Railroad has been inaugurated under the direction of the Chief Executives, and in accordance with the laws governing the Brotherhood of Locomotive Engineers, Brotherhood of Locomotive Firemen, Order of Railway Conductors, Brotherhood of Railroad Trainmen and Order of Railway Telegraphers, and by the authority vested in me

as Grand Master, the said strike is hereby declared as having the sanction and approval of the Brotherhood of Locomotive Firemen.

The various Joint Committees of the above named organizations on the Lehigh Valley system were duly organized and proceeded in the matter of adjusting the grievances submitted to them in all things as the law directs. They acted conjointly with each other, together with the Grand Officers of the orders herein named, in an attempt to effect an amicable adjustment. All reasonable and honest methods have been exhausted in endeavoring to accomplish the desired results, and having failed, a strike has been resorted to as the only alternative to obtain justice and fair play. The strike took effect at 10 o'clock P. M., Saturday, November 18th, and all members of the Brotherhood of Locomotive Firemen are notified that under no circumstances should they accept a position on the Lehigh Valley Railway during the continuance of the strike and while the participants are struggling for their rights. The strike was inaugurated after due and careful consideration had been given to the questions involved; the principal grievances consisting of the injustice of officials to in any manner recognize or treat with the Grand Officers or committees representing any of the organizations referred to in this circular, in the matter of grievances of their members, said conduct of the officials being a gross violation of an agreement recently entered into by the company and its employees.

The matter is more clearly explained and can be better understood by a careful reading of the following correspondence:

PHILADELPHIA, Nov. 6th, 1893.

*Mr. Theodore Voorhees, Acting General Manager L. V. R. Co., Philadelphia, Pa.:*

DEAR SIR:—A committee representing the engineers, firemen, conductors, trainmen and telegraphers of the Lehigh Valley System having petitioned General Superintendent Wilbur to hear certain complaints, and being refused an audience as a representative committee by him, and further appearing before you with substantially the same result, in accordance with the rules of the different organizations representing your employees in train service, viz.: the Brotherhood of Locomotive Engineers, Brotherhood of Locomotive Firemen, Order of Railway Conductors, Brotherhood of Railroad Trainmen, and Order of Railway Telegraphers, of which we are the representatives, the matter has been placed in our hands. With a view to adjust whatever differences that may exist amicably and continue harmonious relations as between the Lehigh Valley Railroad Co. and its employees before named, we would respectfully request a conference with you, in conjunction with the committee, to discuss the apparent differences. Please ad-

dress answer to the undersigned at the Bing-ham House, City.

Yours truly,  
SIGNED BY GRAND OFFICERS.

REPLY TO THE ABOVE COMMUNICATION.

PHILADELPHIA, Nov. 8, 1893.

*Mr. A. B. Youngson, et al.:*

GENTLEMEN:—I am in receipt of your favor of the 6th and note contents. I must respectfully decline to receive you in reference to any matters as between the Lehigh Valley employees and the Company. If any of our employees has a grievance, or desire to meet with our Superintendents, he can always do so accompanied with a friend or so if he wishes.

The Company declines to receive any committee because it cannot know that such committee fairly represents its employees.

The officers of the company feel amply competent to meet all differences that may arise between the company and its employees.

Yours truly,  
THEODORE VOORHEES.  
Acting Gen'l Manager.

Upon receipt of answer of General Manager Voorhees, the following communication was addressed to the members of the various organizations:

COMMUNICATION SENT TO THE MEN WHILE  
THE ROAD WAS BEING POLLED.

PHILADELPHIA, November 7th, 1893.

*To the Members of the B. of L. E., B. of L. F., O. E. C., B. R. T., O. R. T., Employees of the Lehigh Valley Ry. Co.:*

BROTHERS:—Your general grievance committees have been in session for several days in an effort to get an audience with the officials of the company in order to have the terms of the agreement—made by Mr. Voorhees with the committees last August, and which have not been complied with—complied with. An audience was sought with Mr. Wilbur and were refused, he (Mr. Wilbur) positively refusing to meet any committee. After this the committee repaired to Philadelphia and sought an audience with Mr. Voorhees, General Manager, and received the same reply, and, further, that when they claimed the right to meet him as per agreement, he told them that the agreement did not amount to the paper it was written on as it was a Philadelphia & Reading agreement, and that now the Lehigh Valley was a distinct line. The matter was then placed in the hands of the grand officers, all of the organizations being represented by an officer. An interview was sought on part of the grand officers and committee with General Manager Voorhees and he positively refused to meet either the committee of employees or the grand officers of the organizations, saying that this was the position of the company

in regard to this matter now. Having exhausted the efforts of the grand officers in so far as our effort to meet the management is concerned, we are, in accord with the laws of the organization, compelled to put the matter again in the hands of the men, and you are each and all expected to vote on the question of accepting the conditions which surround you or leaving the service of the company at a given time, of which you will receive due notice. If you vote "No Strike" you will vote to accept the conditions. If you vote "Strike" you vote to strike as the only alternative to force compliance with a written agreement and to insure yourself that fair treatment to which you are entitled.

Brotherhood of Locomotive Engineers,  
A. B. YOUNGSON, A. G. C. E.  
J. H. RICE, Chairman.

Brotherhood of Locomotive Firemen,  
J. J. HANNAHAN, V. G. M.  
W. E. PRESTON, Chairman.

Brotherhood of Railroad Trainmen,  
P. H. MORRISSEY, 1st V. G. M.  
J. E. DEMPSEY, Chairman.

Order of Railway Conductors,  
C. H. WILKINS, A. G. C. C.  
E. DAVID, Chairman.

Order of Railroad Telegraphers,  
A. D. THURSTON, D. G. C. T.  
J. L. HUGHES, Chairman.

After receiving the vote of the members on the system, which was in favor of the strike, the following was addressed to Mr. E. P. Wilbur, President of the Company:

COMMUNICATION SENT TO THE PRESIDENT.

PHILADELPHIA, Nov. 14, 1893.

*Mr. E. P. Wilbur, President L. V. R. R., So. Bethlehem, Pa.:*

DEAR SIR:—During the month of June and July a committee of your employees, representing the Locomotive Engineers, Locomotive Firemen, Conductors, Brakemen and Telegraph Operators, met Mr. Voorhees, General Manager, and laid before him what was by them termed grievances and which they asked to have redressed. They first sought an interview as representatives of the various organizations of which they are members, but on the request of the General Manager they waived that feature and met him as a Committee of Employees, and at the final interview an understanding was reached and Mr. Voorhees agreed to post on Bulletin Board what he had agreed to give them. While this was done in part, the Bulletin was posted, it did not contain all that was agreed to and that which was posted has not been carried out and consequently the men feel that they have a just cause for complaint. This being the general feeling the Committee were instructed to endeavor to see if the Bulletin could not be lived up to.

The Committee repaired to Bethlehem and sought an interview with Gen. Supt. Wilbur and it need not be added that the position taken by him in refusing to meet any Committee of Employees was surprising to the men; there was no other course to pursue except to go to Philadelphia and see if Mr. Voorhees would adjust the matter. They accordingly went to Philadelphia and sought an interview with Gen'l Manager Voorhees and were still further surprised to find that he took the same position as that by Mr. Wilbur, Gen'l Supt. The surprise was much greater in the latter case than in the former because of the fact that at the time the Committee met him in July he particularly invited them to come to him at any time when they felt they were not being treated as they should be. This change of front on the part of Mr. Voorhees is unaccountable and the men, feeling that they have acted honorably all through this matter and having exerted all their efforts to have the matter adjusted, called upon the Grand Officers of their organizations to come to their aid. The Grand Officers answered their call and endeavored to obtain an interview with the General Manager and were refused. The matter in its entirety was reported back to the men and in accord with the law of the organizations of which they are members and in order to get the correct feeling of the men they are required to vote on accepting the conditions which prevail or leaving the service of the Company. We are in possession of the feelings of the men by their own expression over their signatures and in order to show that all reasonable steps have been taken to amicably adjust the differences which exist and to continue the friendly relations which have heretofore existed, we make a final appeal to you, as the President of the Lehigh Valley Ry. Co., to grant us an interview, at your convenience, for the purpose, if possible, of taking up their differences for adjustment.

Trusting that you will see the justice of and grant our request, we remain,

Yours respectfully,

SIGNED BY THE GRAND OFFICERS.

Address reply to Bingham House, Philadelphia, Pa.

Mr. Wilbur, in his reply to the foregoing, sustained the position taken by General Manager Voorhees, and refused to treat with the Grand Officers as representatives of the men, and there was no alternative but to approve of the withdrawal of the men from the service of the company, they having by their votes protested against a further continuance in the employ of the Lehigh Company under the conditions confronting them.

On account of the numerous calls from different parts of the country at the time we were called to Bethlehem, we were compelled to call upon Vice Grand Master Hannahan to take up the Lehigh Valley trouble, and

with his usual promptness he responded and immediately repaired to the scene of the trouble. Bro. Hannahan has been given exclusive jurisdiction, so far as our order is concerned, in all matters pertaining to the strike, and he will continue to have full charge of the same. Whatever is done by him will meet with my approval.

The following is a copy of a letter received from Bro. Hannahan which is of interest to our members in explaining the situation:

*F. P. Sargent:*

DEAR SIR AND BROTHER:—In compliance with your request of several days ago I met with the Protective Board of the Lehigh Valley Ry., and met in general meeting with the Protective Boards of the various organizations.

From the enclosed correspondence you will readily see that all has been done that we could possibly do to secure an interview.

I had hoped that ere this I could have notified you that all trouble had been satisfactorily adjusted. The general officers of the Lehigh Ry. have shown no disposition to bring the matter to a close by replying promptly, and have kept us waiting and in suspense. We are now awaiting an answer from Mr. Wilbur, the President, and expect to hear from him to-day.

The road has been polled, and of the 457 members of our organization, 425 have voted to go out. Wilkinson has secured almost a unanimous vote of the members of the trainmen, and two-thirds of the conductors and telegraphers have voted to strike. Youngson has not received a majority vote of his men, and at this time is waiting to hear reply to messages sent. If he can secure a majority vote he will sanction a strike, and if such is the case, in twenty-four hours from now, unless the railway officials recede from the positions taken, the men will be called out. In the meantime I shall keep you informed as to what transpires.

Yours fraternally,

J. J. HANNAHAN.

The strike is now on and it is without a doubt the most important conflict in which our order as well as the others interested has ever been engaged. Everything depends upon the result. The issue has been squarely made. We cannot afford to be beaten. Surely no one can fail to understand the attitude of the corporation. The annihilation of organized labor is their aim. The battle is one in which every man in the ranks of labor is vitally interested. The reputation of the various orders as well as the individual interests of many hundreds of their loyal members is at stake. We must be victorious. The conflict is against oppression and in the interest of right and justice, and the unstinted support (moral and otherwise) of every member of our order should be freely given to the participants. We there-

fore appeal to every member of the Brotherhood of Locomotive Firemen to assist to the fullest extent of his ability, in every honorable manner, the men now engaged in the battle which, if lost, will not only have a demoralizing influence throughout the country, but may perhaps, in view of existing conditions, endanger the life of organized labor. Let our motto be to triumph and in every conceivable manner prove our loyalty to our brothers who are now struggling to maintain the cause of right and justice.

Yours fraternally,

F. P. SARGENT,  
Grand Master.

F. W. ARNOLD, G. S. AND T.

The foregoing statement was supplemented by another circular issued by the Grand Master, under date of November 25th, as follows:

*To all Subordinate Lodges:*

DEAR SIRS AND BROTHERS:—For the purpose of advising you as to the present situation on the Lehigh Valley Railroad, I cause this circular to be issued and hope that you will find that you are justified in pronouncing a verdict of approval upon the action taken by the employees of the Lehigh Valley Railway in resenting the insults heaped upon them by the refusal of the officials of that corporation to receive and treat with such representatives of the employees as had been selected by them as committees to present their grievances for consideration, the same as has been practiced during the many years that these organizations have been in existence.

While we all deplore the necessity of a conflict with our employers and especially at times like these when there is a general depression of business throughout the country, and a large number of men forced into idleness on this account, yet, at the same time, there is in this instance a principle which we, as representatives of organized labor, and those who are members thereof, are in duty bound to respect, and when a railway corporation in this day and generation defies their employees who are members of organizations by refusing to meet and treat with men whose reputation for fair dealing is beyond question, especially when these gentlemen request an interview after the corporation has positively and emphatically refused to meet its employees in any manner, then it becomes time for every member of organized labor who is true to his obligation and who believes in justice, to assert his manhood, regardless of what may be the outcome.

We know from the editorials in many of the leading papers that this strike is looked upon as a very foolish act on the part of the organizations. We have yet failed to observe any criticism passed upon the corporation, which is evidence that corporations

have the sympathy at all times of the majority of the press, no matter what the circumstances which lead up to these conflicts may be. At the same time we believe that every member of these brotherhoods who are engaged in this conflict will heartily endorse the action that has been taken by the Lehigh Valley employees, as well as the executive officers who are in direct touch with the members engaged in this conflict, and that they will put forth every effort that is honorable and upright to assist them in convincing the railroad corporation that their position is unfair and unwarranted, and that they will be compelled to acknowledge their mistake and listen to the requests of their employees when presented through committees or otherwise.

From the information which we have received up to the present time the situation is very encouraging, and while the company is obtaining some men who are willing to accept the places of those who have quit rather than submit to the gross injustice put upon them by the company, we learn from reliable sources that these men are not successfully handling the company's business, and that, notwithstanding the newspaper reports, there is nothing to discourage the men who are fighting for their rights, or the Grand Officers who are directing the conflict. We hope to have more encouraging news to send you within a few hours than at the time of the issuing of this circular. Our worthy Vice Grand Master is on the ground watching carefully each point, and will leave nothing undone to achieve a victory. There has gone to his assistance our worthy Grand Secretary and Treasurer, who will be in a position to aid our Bro. Hannahan in any way that he can, while it will be my purpose, as soon as I can be released from present engagements, to render all the assistance in my power, subject to such instructions and suggestions as I may receive from Bro. Hannahan.

In the beginning of this trouble I placed the matter in the hands of our Vice Grand Master, having the utmost confidence in him as an associate, knowing that he would faithfully discharge his duties in every respect, and he will remain in charge of the matter until the end. At the same time, he understands that I am ready and anxious to give him all the assistance possible, and we hope through the united efforts of the executive officers of the several organizations and the loyalty of the men who have seen fit to sacrifice their situations at this critical period, with the encouragement and financial support which will be accorded us from every member of our order, no matter where he may be located, to soon be able to record a victory for organized labor in the section of the country where in years past there has been as little consideration shown for labor-

ing men on the part of corporations as in any section of the universe. While we have organized many thriving lodges and have faithful members throughout the entire section of the country where this struggle is now going on, there has always been manifest on the part of the corporations a desire to ignore any movement which might look like the work of organization and to dodge any responsibility which might represent them as treating with and respecting the organizations of which their employees were members. While this does not apply to all the corporations in the eastern section of the country, it does to the majority; therefore, we believe that this struggle is one of the most important that organized labor has ever engaged in, and with the united efforts that are being put forth on the part of the Brotherhood of Locomotive Engineers, Brotherhood of Locomotive Firemen, Order of Railway Conductors, Brotherhood of Railway Trainmen, Order of Railway Telegraphers, and the encouragement that is being received on every hand from members of other organizations not directly implicated in this fight, we feel safe in asserting that good results will certainly follow the action taken by our membership at this time who are employed by the Lehigh Valley R. R. We hope our membership will take that interest in this trouble to cause communications to be addressed to the several lodges located along the line of the Lehigh Valley containing words of encouragement, and that our members in their investigations into the causes which have led up to this controversy will be satisfied with the action that has been taken, and that it will have their unanimous approval and endorsement.

Since Special Circular No. 1 was issued, we have been favored with a further communication from our Vice Grand Master, Bro. Hannahan, and it but verifies the statement made in our first circular, that the cause of this conflict was the positive refusal on the part of the officers of the Lehigh Valley Railway to recognize their employees as entitled to a hearing through a committee which they might select, as well as to refuse to recognize or give a hearing to the representatives of the several organizations called in the interests of the employees and in accordance with the laws of our organization. This is evidence of two points at issue; one, the refusal on the part of the Lehigh Valley corporation to meet a committee representing its employees; second, a positive refusal on their part to accord a hearing to the grand officers of these organizations in behalf of their employees.

That our membership may more fully realize the true situation, I introduce into this circular extracts from reports published by the general committee, which are approved by the grand officers. This report was

given out after the strike was inaugurated by the grand officers and fully sets forth the causes which have led up to this unpleasant situation:

"A great deal has been said through the press in regard to matters of difference between the Lehigh Valley Railway Company and its employees, and it seems prudent that a fair statement of the employees' side should be made to the public.

During the months of June and July a committee of the Philadelphia and Reading Railway employees, embracing the Lehigh Valley as a leased line, desired to present to the management a list of the grievances and ask that they be adjusted.

An audience was sought with General Manager Voorhees, and as they were seeking to meet him as the representatives of the various organizations to which the employees belong, he refused to meet them at that time.

The officers of the organizations were sent for and came to Philadelphia and met the committee and learned of the objection raised by the management and advised the men to meet him as employees. The question was then raised by Mr. Voorhees that he would not meet the Philadelphia and Reading employees, but that they must go to Mr. Sweigard, General Superintendent, and that he (Mr. Voorhees) would meet the Lehigh Valley employees. This was done, and during the conference in July an agreement was reached and Mr. Voorhees agreed to post the same on the bulletin board. A bulletin order over his signature was posted but it did not embrace all that was agreed upon at the conference.

Nothing was done other than to take the matter up by letter with Mr. Voorhees, and he replied to these letters. This occurred after the abrogation of the lease, and his reply was of that nature that showed, beyond doubt, that the agreement was recognized by the Lehigh Valley management.

The men did nothing further until it was demonstrated that what had been posted was not being carried out, when they sought to take the matter up and ascertain if it was of any value to the men. They were not prepared to meet with a refusal on the part of General Superintendent Wilbur, and were much surprised to learn that he would not meet any committee, and when the same position was maintained by Mr. Voorhees and President Wilbur, they realized that a gulf lay between the company and its employees.

Mr. Voorhees is quoted as saying 'that he had not been waited upon by the employees of the Company, but was ready to hear what they had to say at any time.' And we believe that Mr. Voorhees personally would be glad to meet and treat with a committee of employees, but that those higher in authority will not permit him to do so.

However this may be, one thing is certain a committee of employees have sought an audience with him and he has refused to meet them saying that he could not know that they represented the men; or, using his own language: "The Company declines to receive any committee because it cannot know that such committee fairly represents its employees." Why may the Company not get that information now as well as in July last? If it did not have the information then why raise the question now more than then?

The facts are that all conferences sought by the men themselves were sought as employees and the question of organization did not enter into the matter until they (the employees) had been refused an audience. This was only in furtherance of the expression of the company through Mr. Voorhees, in a letter under date of June 7, 1893, from which the following is an extract:

'I regret to say that I do not feel at liberty to meet with your committee as representatives of the B. L. E., B. L. F., O. R. C., B. R. T. and O. R. T., in any matters as between the employees of this company and the management. If you come as a committee from our employees and present any schedule or paper in reference to any matter concerning which our employees are interested, so far as regards the Lehigh Valley lines, I shall be pleased to see you in

person.' Only when a committee of employes failed to get an audience with Mr. Voorhees did the organizations come into the matter.

The question has also been raised by the President that the agreement made by the General Manager was made on the part of the Philadelphia and Reading E. R. and all conferences were held with officials of the Philadelphia and Reading Company. And while this is true it is also true that from the extract from the letter of June 7, printed above, the men had every right to believe that it was made with Lehigh Valley employes and that the abrogation of the lease between the Reading and Lehigh Valley would in no way effect the agreement.

It has been stated in the papers that in an interview with the officials of the Company about the time of the abrogation of the lease that the agreement would not be affected thereby. Of course, we have no means of knowing how much of truth the statement contains. We do know, however, that a letter was addressed to Mr. Voorhees, acting General Manager, Lehigh Valley Railroad Company, under date of August 26, 1893, emanating from the committee, and the reply of Mr. Voorhees thereto removed all doubt in the minds of the men as to the agreement being recognized by the officials of the Lehigh Valley Company.

There has been nothing left undone to get an opportunity to place this matter properly before the Lehigh Valley management on part of the men, and they feel that the justice of their cause will be recognized by all fair minded persons. That they have not acted hastily is true, as evidenced by the time consumed in trying to meet the officials.

The position of the company is one which the men do not believe the facts will bear out and make tenable. It is one which is original, to say the least, and is very peculiar in view of the facts that when the committee met Mr. Voorhees and settled the differences in July, the best of feeling seemed to prevail, and so far as the men were concerned, while not being perfectly satisfied, they were at least content with what they received at that time; and especially so when assured by Mr. Voorhees that he would beglad to meet the committee at any time and invited them to come to him whenever they felt that they were aggrieved.

The complete change of front on the part of Mr. Voorhees is not, in the minds of the men, accounted for in any other way and by the fact that higher authority has decreed that it should not be, and when the company presume to charge the men with standing on their dignity they would better look at it from the point of view of the men and see if they cannot discover an opportunity for a counter-charge of like character."

We also introduce at this time the reply to the letter sent to President Wilbur on the morning of the 18th inst., which was signed by the grand officers and in which they appeal to him for justice.

*Messrs A. B. Youngson and Others, Bingham House, Philadelphia, Pa.;*

GENTLEMEN: I am in receipt of your favor of the 14th inst. which was handed me by messenger as I was leaving Philadelphia for New York by the 12 o'clock train on Wednesday.

The interviews referred to as having been had during June and July last, were with officers of the Philadelphia & Reading Railway company, which, at that time was lessee of our road.

The policy of the management of the Lehigh Valley Railroad company has always been to deal directly and only with its employes. I am familiar with the replies made by the General Superintendent and Acting General Manager to applications for interviews; they meet my approval and are hereby confirmed.

Yours truly,  
E. P. WILBUR, President.

We herewith introduce a copy of the letter written on the 19th inst. by our worthy Vice Grand Master, which is further evi-

dence of the attitude taken by the Lehigh Valley Railway corporation:

BINGHAM HOUSE,  
PHILADELPHIA, November 19th, 1893.

DEAR BROTHER SARGENT: Enclosed you will find the reply to the letter sent President Wilbur, which needs no explanation on my part.

The officials positively refused to meet the men as a committee representing even the employes, but would meet their men as individuals and in no other way.

Mr. Voorhees told the committee that the agreement or schedule given them last spring was not worth the paper it was written on.

Our men requested that he hear them as a committee representing his employes and not as a committee representing organizations. He replied that he would meet no committee of any kind and if they had grievances they must be presented by the individuals aggrieved.

I mailed you yesterday what transpired until the present; will send you a clipping containing the letter sent out for publication.

The action taken has been on account of the company's failure to keep its agreement with the men and a refusal to listen or receive them. If you desire any further statement on my part please wire me and I will send you all information I can.

I have just received information from all points on the system and the tie up is complete. Each day I will wire you information. I cannot tell at present what the outlook is as all telegraphic communication is completely shut off, only from Buffalo. If you have any advice to offer will be glad to hear from you. Trusting that I can send you good news soon,

I am hastily yours,  
J. J. HANNAHAN.

I have just received the following telegram from Vice Grand Master Hannahan, which contains news of an encouraging nature:

"JERSEY CITY, N. J., November 24th, 1893.

Conditions more encouraging this morning than at any time. May be able to wire good news this evening. Wilbur has interview with the Associated and United Press reporters, expressed willingness to meet committees separately, but not jointly.

J. J. HANNAHAN."

In conclusion we desire to say that our membership can rest assured that nothing will be left undone to achieve a victory for organized labor and for employes, members of our organization, who have faithfully discharged their duties toward their employers, the Lehigh Valley Railway corporation, for years, and commending the entire matter to your careful consideration and trusting that in every possible way you will lend encouragement and aid to our brothers, we remain

Yours fraternally,  
F. P. SARGENT,  
Grand Master.

F. W. ARNOLD, G. S. AND T.

Since the above circular was issued Vice Grand Master Hannahan, who had charge of the strike, on the part of firemen, from the beginning, has been called home by the serious illness of his little daughter, and Grand Master Sargent, assisted by Grand Secretary Arnold, have gone to the front and are now in command of the forces and giving their personal attention to the prosecution of the contest. It is proper to say that so far as wise leadership, prudent counsels and unabating watchfulness are concerned, the in-

terests of the firemen will be sacredly guarded. It is universally conceded that Vice Grand Master Hannahan, while in charge, displayed rare skill and diplomacy in the negotiations between the committees and the officials, and that he worked and watched with unceasing vigil until by the misfortune of illness in his family he was called from the scene of action. Nor will there be any abatement of care or fidelity in the management of affairs with Grand Master Sargent and Grand Secretary Arnold as the commanding officers. Both are leaders of wide and varied experience, and will be on the alert for every opportunity to prosecute the strike to a successful issue.

We regret that the lateness in the month and the lack of space remaining prevent us from going more fully into the details of the strike which must be regarded as a conflict in which principles of vital and far reaching consequence are involved. The strike was not precipitately inaugurated, there was no undue haste; on the contrary, the grand officers and committees of the five great organizations involved proceeded with caution and deliberation, they carefully examined the ground step by step, and made sure of every position before it was taken, and only when they found that a deaf ear was turned to every appeal for redress, that their organizations were ignored and treated with disdain and contempt, and that to submit to such outrages meant degradation and enslavement of the employees and the practical annihilation of their organizations, it was only then, as a last resort, that they marshaled their forces and resolved to resist by the power of the strike, such infamous encroachments upon their rights. To have done otherwise would have been a confession of craven cowardice which would have brought odium upon all organizations and subjected the employees to still further penalties, the effect of which would have reduced them to the condition of chattel slavery.

There are five organizations, viz.: the engineers, firemen, conductors, trainmen and telegraphers, embracing in all about 2,000 employees, involved in the strike. The reports from the scene of action warrant the statement that a braver body of men never made battle against the oppression of corporate capital. They deserve and should receive the hearty support of all organized labor. They are contending for a principle, the surrender of which means submission to conditions the contemplation of which should bring the blush of shame to every sovereign American citizen.

The officials of the Lehigh Valley Railway, by their autocratic policy, a policy of slavish subjugation which put out all the lodge fires on the Reading system, merit the scorn and contempt of all decent men. If they had the

conscience of a cobra, the contemplation of their devilish designs, black as starless night, would drive them to insanity. But they have none of the "milk of human kindness" in their heartless breasts. Their employees are by them regarded as their chattels, a part of the rolling stock of the corporation, and with such conceptions of their relations to their employees, they do not scruple to employ any method that their craven instincts may suggest, to sink them to unfathomable depths of degradation.

In the presence of such a conflict, what is the duty of organized labor? There can be but one answer to the interrogatory, Stand by the strikers on the Lehigh Valley until the contest is fought and won. There must be no wavering in this supreme hour. All differences between individuals and organizations must be buried deep out of sight. The valiant brethren on the Lehigh Valley are defending a principle sacred to all organizations of workmen and all of them, without reference to class or occupation, should hasten to the rescue and aid them by all the means at their command in achieving a victory over a corporation that is seeking to Russinize the workmen of Free America.

#### TRAINMEN'S CONVENTION.

The first biennial convention of the Brotherhood of Railroad Trainmen was held at Boston, Mass., beginning October 15th, the delegation representing 535 lodges. Addresses were delivered by Governor Russell, Acting Mayor Lee, Edward Moseley, Secretary of the Inter-State Commerce Commission, L. S. Coffin, ex-Railroad Commissioner of Iowa, and other gentlemen of wide reputation. In calling the convention to order Vice Grand Master Morrissey, in the course of his address, said:

When two years ago, in a far western city, the Brotherhood of Railroad Trainmen decided to hold its next meeting in the city of Boston, it was deemed a particularly fitting place for such a gathering, for we felt that had we any complaints to make of unfair practices or encroachments upon our personal liberties, that nowhere could we expect more sympathetic listeners or substantial assistance than from the people of the Old Bay State, the first to draw the sword to resist oppression, or from those who dwell on the green hills of New England, where the first battles for constitutional liberty were fought. From every state and territory in the American Union, and from every province and territory in the Dominion of Canada where the sound of the locomotive whistle is heard, from lands of snow and lands of sun, there have journeyed to your beautiful and historic city at this time the representatives of an intelligent and powerful organization of railroad workmen, the Brotherhood of Railroad Trainmen. It is no idle purpose that attracts them thus, but on the contrary a stern mission of duty. They have come to mingle their minds, to counsel together and adopt such rules and methods as will tend to strengthen their organization and widen its sphere of usefulness, and to discuss plans whereby they can more practically assist each other.

In his address to the convention, Grand

Master Wilkinson, among other things, said:

In the year 1883, in the city of Albany, N. Y., a few switchmen came together for the purpose of establishing a mutual organization, to pay a small sum of money weekly in case of sickness or disability, to care for each other. When they had formed this association they wanted company, and they wandered over to Oneonta, N. Y., and invited the men of that city to become partners in the work. The men at Oneonta, after considering the matter, concluded that they could improve on the Albany plan, and that this was a good time to form a national organization. Seven men on the Delaware & Hudson railroad laid the foundation for what is to-day the strongest and most powerful of all the railway organizations of this country. After the organization at Oneonta, about six months later, the men at Phillipsburg, N. J., organized Lodge No. 2, and the organization was named the Brotherhood of Railroad Brakemen. A short time after, they went to the men at Albany, where the idea had originated, and kindly allowed those men to establish Lodge No. 8. The first year there were 87 lodges organized, with a membership of 901. The second year 118 lodges were organized with a membership of 4,776. The third year 82 lodges, with a membership of 7,983. The fourth year, 87 lodges were organized, and we had 8,522 members. The fifth year, 89 lodges were organized and our membership had increased to 11,438. In the sixth year, 85 lodges were established, and our membership increased to 18,563. In the seventh year, 63 lodges were instituted; membership, 14,067. In the eighth year, 70 lodges were organized, and our membership was 20,409. In the ninth year, 85 lodges were established, and our membership increased to 24,431. In the tenth year, the year just closed, there were organized 84 lodges, and we number at this time 28,540 members. Of our record we claim that we may be justly proud. Our history is one of rapid progress, of grand success, and our work has but begun. What does our work mean? It means that thousands of men who a few years ago were in actual bondage have been released, and are now free. In the brief ten years the condition of these men has been bettered to an extent that cannot be told in words.

The address of the occasion, which was replete with wise sayings and evinced profound study of the labor question, was delivered by Edward Moseley, Secretary of the Inter-State Commerce Commission. We regret that lack of space forbids the publication of the address in its entirety. It is worthy of the perusal and study of every student of the vexed problems relating to labor. The address appears in full in the November issue of the *Trainmen's Journal*, and we quote briefly as follows:

Year by year the number of employers is decreasing. The whole tendency—the drift of the times—is towards combination and concentration on the part of the employers. There are only two forces in the bargain between employer and employee. Justice must be the desire on both sides, or one side must be as powerful as the other. Unless selfish interests are put aside, power must be matched against power. As has been said, "If the employees act individually, they divide their forces against themselves, and forfeit all hope of a successful issue of the contest." With equality of power and force, on the one side and the other, there will follow the essential requisites of friendly relationship—respect, consideration and forbearance. The employer and the employee can sit down together, and each in a spirit of a fully enlightened self interest, consider their rights and their duties as reasonable, Christian men. We can all imagine the picture that will be then presented when this true relationship between employer and employee shall prevail. Till then, the organizations must deal with the cor-

porations somewhat "at arm's length." But in what manner shall these great opposing forces treat each other in the struggle? Public rights must be respected, for both corporations and their employees are engaged in the public service. While it has been broadly asserted that the power of the wage-earner to strike or desert, is the germ of all improvement in his condition, this principle, however applicable in a general sense, cannot be fully applied in the case of the railroad and the railroad employee. Here certain obligations are due to the public which are not required in other industrial pursuits; and as these obligations are due to the public, so the public should, in justice, provide some means by which the disputes which arise between the employee and the railroad company may be fairly and honorably settled. . . . other method seems so feasible as that of arbitration. There is now a law of congress providing for the incorporation of trades unions, or organizations; and, as I have remarked, a law providing for arbitration between railroad companies and their employees. But it seems that the latter law should be amended and perfected in the light of the experience of the last four years. This amendment can hardly be hoped for, unless it commends itself largely to the judgment of both employer and employee, because it would be futile to attempt to change a plan for settling disputes by beginning a dispute in the outset. But the power of the railroad brotherhoods acting more and more in friendly co-operation with the best and most liberal and progressive railroad managers will surely in the end bring about a perfect scheme of arbitration that will be an honor to both parties and a true conquest of peace.

Is there a common ground, between the two sides? There is, when they shall adopt for their motto the phrase of the old Roman jurists, "*Do ut des*,"—"I give, that you may give," instead of "you give all, while I give none."

Men strive and struggle for wealth; but after a man's wants are supplied the only satisfaction it affords is the consciousness of power of what he can do with his money. You, sir, and other executive officers of the labor organizations of our country, possess that same consciousness of power; but I believe you all recognize that you are purely the servants of those who have placed you in your several positions; that it is your duty to obey their call; that it is your duty to do all you can to serve your brothers in every possible legitimate way; and that you are the servants of the humblest member of the organization, for you serve him also. You all have the conscious power which the general of an army has; or the admiral of a fleet; or the capitalist with his millions of money, and a vast deal more of responsibility, for in your hand is confided the welfare of thousands of the toilers of the earth and those who are dependent upon them.

L. S. Coffin, known among the boys as Father Coffin, was received with every evidence of enthusiastic admiration and delivered a forceful plea for safety equipments and for total abstinence among the members. He said:

\* \* \* And to the pride and to the honor of the Brotherhood of Railroad Trainmen, as I have said the youngest organization, made up of the young men in the railroad work, the ones that the public have considered the toughest and the hardest, for they have tried all they could to make them that way—here is the first labor convention of a labor organization, the largest of its kind—I am correct in saying it is the largest labor organization in America—here they are every man of them, and the city of Boston can be proud to have entertained them. Let it go down the years that in this grand old "Orade of Liberty," and I am glad that you came here for your first biennial convention, let it go down the years and be told in the pages of history, that in this grand old "Orade of Liberty," securing every right that man holds dear, that here met the first convention at which every man was a total abstinence man. (Cheers.) I am happy; I am proud of the boys. It is a privilege, as I have said

fore, seldom vouchsafed to a human being, to be able to work for and be loved by such a class of men.

Telegrams and letters of congratulation were received from General Master Workman Powderly, Grand Chief Arthur, President Gompers, Grand Master Sargent, and Grand Chief Clark.

Officers were elected as follows:

Grand Master—S. E. Wilkinson.  
First Vice Grand Master—P. H. Morrissey.  
Second Vice Grand Master—Al. E. Brown, of Manhattan Lodge, No. 160, Philadelphia.  
Third Vice Grand Master—Geo. A. Newman.  
Grand Secretary and Treasurer—W. A. Sheahan.  
Grand Trustees—R. S. Bodman, C. S. Young, O. L. Iffe.  
Grand Executive Board—C. N. Terrell, Northern Lodge No. 424, Chicago, Ill.; T. R. Dodge, Lumbian Lodge No. 479, Chicago, Ill.; W. E. Bowman, Morgan Lodge No. 317, Lafayette, La.

The second biennial convention of the order will be held at Galesburg, Ill., in May, 1905.

## TWENTIETH ANNIVERSARY OF THE FOUNDING OF THE BROTHERHOOD OF LOCOMOTIVE FIREMEN.

Anniversaries of great events, designed to promote the well-being of society, are of special interest, not only to those who have participated in the labors which such events propose, but to the public at large.

Locomotive firemen, remembering that on December 1st, 1873, twenty years ago, the foundation of the great order of Locomotive Firemen was laid, in the town of Port Jervis, in the state of New York, will recall with ever increasing satisfaction the manifold blessings the work of the founders of the order has showered upon those who, having been initiated, have, through good and evil reports, in storm and shine, with unwavering fidelity and courage, stood by its flag. December first of each rolling year, since 1873, has been the anniversary of the founding of the brotherhood. As we write, Dec. 1st, 1893, the twentieth anniversary of the brotherhood, what more natural than that feelings of gloom and gladness should struggle for the mastery?—with natural feelings, akin to veneration, we regard the great-souled, the large-hearted, the courageous men, who met and deliberated, and then resolved to launch a new order upon the troubled sea of labor. The men who did this were poor and obscure; they were unlearned in book lore. The horizon at bounded their influence was contracted to narrow limits. Wage workers of limited pay, they could not command the press to their bidding, and yet, without money or prestige, without influential friends, a few pioneers, facing a wilderness of doubt, took counsel of their courage and their faith in their fellow-firemen, unfurled their brotherhood flag and flung it to the breeze, started it, not to discover a new world, but to

better their condition in this world, and, like the men who "rounded Peter's dome, they builded better than they knew." And now, in the quiet of seclusion, while the god of the winds is blowing his trumpet; while the ice-king is waving his scepter; while the laughing lips of the brooks no longer kiss their mossy banks, and the melodies of the birds are hushed into silence; and while the earth denuded of its emerald robes, tells that the "melancholy days have come," alone with our meditations we invite an hour's communion with the past to celebrate the twentieth anniversary of the founding of the Brotherhood of Locomotive Firemen. No, we are not alone with our meditations—nay, verily. "For auld lang syne," a multitude of friends have come, in fancy at least, and the anniversary toast goes round to the men who laid the corner stone of the brotherhood, and each response bears eloquent testimony of love and esteem. We realize that the "inaudible and noiseless foot of time" is bearing our old time friends away, widening the gulf between us, but the distance is not so great, nor the gulf so deep, that fancy, in its wide domain, cannot find a place to hold its anniversary meetings and have them all present. Aye, not only the living but the dead also. Is it well to summon them around us on the occasion of the twentieth anniversary? Should we "let the dead past bury its dead?" Be it so. But may not comrades weave garlands of thought, typifying hope that in some brighter clime we may meet again? We think so. Thus, with the dead and living, our twentieth anniversary meeting becomes an occasion of subdued rapture.

But may we not add to the interest of the occasion, by reference to some things in which the great public should feel a lively interest? The Brotherhood of Locomotive Firemen is philanthropic. It is animated by humane purposes. Someone may say its philanthropy is restricted to members of the order, and does not embrace all mankind. The averment, if admitted, would in no wise do discredit to the brotherhood, since it has the high authority of St. Paul for its policy, who laid down the law in such matters when he said "Let us not be weary in well doing, for in due season we shall reap if we faint not. As we have opportunity let us do good unto all men, especially unto them who are of the household of faith." Such has been the policy of the brotherhood. By its example of fealty to principle it does good unto all men, but its chief concern has been to do good unto them of the brotherhood. And here on this twentieth anniversary of the organization of the order, what ineffable glory baptizes the record of the brotherhood. In the beginning, twenty years ago to-day, there was one lone lodge of a dozen firemen. To-day there are 510 lodges

with nearly 29,000 members. Deer Park Lodge No. 1, prolific to an extent that challenges admiration, leads a splendid retinue of sister lodges. They are on the mountains, on the plains, in the valleys, in cities and in towns, a triumphant army with conquering banners. If that were all our anniversary meeting would be bereft of much of its inspiring grandeur. But it is not all, nor the best of the record. We contemplate the growth of the order in lodges and membership. We see it grow and expand. We see its lodge fires and beacon lights, and yet there is something better still. The Brotherhood of Locomotive Firemen has conferred untold blessings upon thousands of wives bereft of husbands, and orphans bereft of fathers. Since our name has had a place on the rolls of the order the contributions for relief have exceeded \$2,750,000. The testimony is sublime. But what besides the money has been contributed? Throbs of noble hearts, words and tones that sent sunshine to aching and sorrowing hearts; helping hands that guided the footsteps of the weak along rugged pathways, and in a thousand ways verifying every claim that was ever put forth for the redeeming power of fraternity.

Our reflections have been altogether satisfying. The facts have blended harmoniously with our fancies, and we take occasion to send anniversary greetings to all the lodges throughout the grand jurisdiction. Other anniversary days of the founding of the order will come, and we suggest that it should be set apart as a memorial day of the great brotherhood.

---

GEORGE R. STACY, a veteran member of Anchor Lodge, No. 54, of Moberly, Mo., returned recently from a visit to London, England. While there he visited the club-rooms of the Associated Society of Locomotive Engineers and Firemen, being a guest of the King's Cross and Kentish Town branches, by whom he was royally entertained. The engineers and firemen, members of this splendid organization, were delighted to meet Bro. Stacy, and extended to him every courtesy that could be desired, making a visit one long to be remembered. Bro. Stacy, who is something of an observer as well as traveler, says he was impressed with the cordial and harmonious relations that prevailed between the drivers (engineers) and firemen. They make mutual cause of all things that relate to their interests, and "pull together" in the same direction for their common good. The Associated Society is one of the foremost industrial organizations in England, and is doing grand work in elevating and improving the condition of its membership.

We have received from the *Railway Age and Northwestern Railroader* two valuable books entitled, respectively, "World's Railway Commerce Congress" and "Compound Locomotives," the latter being a copy of the revised edition. The volume first mentioned comprises all the addresses delivered before the World's Railway Commerce Congress, held in Chicago, from June 19th to 23d, 1893, and is divided into four parts, as follows: "Railway Law and Legislation," "Railway Management and Operation," "Railway Employes" and "Railway History and Development." Such eminent men as John F. Dillon, of the Union Pacific Railway, W. G. Veazey, of the Interstate Commerce Commission, Edward P. Ripley, vice president of the C. M. & St. P. Ry., Horace Porter, vice president of the Pullman Palace Car Co., and numerous others equally distinguished constitute the corps of contributors to this notable meeting, and their papers and addresses are given in full, swelling the volume to 265 pages, embracing a variety of live topics which now, more than at any time in the past, are up for discussion. The book has rare value for purposes of reference and should be in the library of every student of the railway problem.

The work on "Compound Locomotives," by the late Prof. A. T. Woods, has undergone a thorough revision at the hands of David Leonard Barnes, A. M. C. E., and is presented in enlarged form and vastly improved in many other regards. The new edition consists of 330 pages and contains full and complete statements of all improvements and developments that have been made in the compound locomotive to date. The books may be obtained by addressing the *Railway Age*, Monadnock building, Chicago.

---

RECENTLY we had the pleasure of meeting Mr. J. Kansas Morgan, editor and publisher of the *Railroad Register*, of Topeka, Kas., a live, progressive weekly published in the interest of railway employes. Mr. Morgan is a journalist of exceptional ability, which he is freely devoting to the advancement of railroad employes, in whose welfare he has an earnest and unselfish interest. He is their friend in the best sense of the term, is keenly alive to their interests and ever ready to defend them when their rights are assailed, and, this being true, his paper should have their cordial support. Railway employes are in need of just such literature as Mr. Morgan is capable of supplying, and with proper encouragement the *Register* can be made a power, which, as long as Mr. Morgan is at the helm, will be used in the interest of justice and fair play. A sample copy may be obtained by addressing the *Railroad Register*, Topeka, Kas.

THE *Switchmen's Journal*, for July, referring to the pardon of the anarchists confined in the Joliet penitentiary, remarks:

No official act by the representative of any government within recent years has attracted such wide-spread attention and caused so much comment. Everybody was surprised, many were alarmed; a majority, however, be it said to the credit of humanity, felt gratified. There has been, ever since that ever-memorable trial, so-called, a sentiment among the people at large that the men were not justly convicted. Many were not in a position to prove this conviction by arguments, not being familiar with all the details of the case and allowing the flimsy sophistry of legal hair-splitting to confuse the strength of sound common sense. But there was a general sentiment that it was a class judgment passed by the representatives of the owners of wealth upon those who had the courage to protest against the methods by which that wealth was acquired.

The Governor of Illinois, in pardoning the anarchists, based his action upon propositions that are absolutely impregnable and invulnerable, and those who assail the action of the Governor fight shy of the facts which he submits.

The *Railway Conductor*, for July, refers to the action of Governor Altgeld in extending pardon to the imprisoned men, and comments upon the Governor's pardon with intended severity.

Boiled down, the men who were hanged, the man who took his own life rather than submit to public execution, and the men who were imprisoned, were convicted, not for murder, not for throwing a bomb, but for violent language uttered, spoken and printed. This is the position taken by the trial judge. It was the arresting, indicting, trying, convicting, hanging and imprisoning men for the indiscretion, the violence of *free speech*. Some one threw a bomb and killed men, but it was never known who threw the bomb, nor was it ever asserted that any one of the condemned men threw the bomb.

That is the case in a nut-shell, and it is a little singular that the *Railway Conductor* in its arraignment of Gov. Altgeld does not give him the benefit of the facts.

As for Gov. Altgeld's assault upon the courts, prosecuting attorney, bailiff and jury, it is sufficient to say that the Governor fortifies himself against attack, and the fact that those who are barking at his heels take good care to avoid the arraignments of the court and its officials, is proof positive that they would like to condemn the Governor by methods such as prevailed in condemning the anarchists, that they themselves, by denying a fair trial, are anarchists, and would strike down law to gratify malice or revenge.

Nothing is more righteous than to attack a prejudiced, malicious, debauched court—atrial organized to convict, and decisions "handed down" which, as in the case of Jeffreys, shame the devil and amaze the world. And the *Conductor* gives itself away—swallows itself, as it were—by saying that "judges are but men, and certain to err,"

and being but men, they may be stupid as asses, venomous as asps and as easily bribed as any other human. "If Mr. Altgeld," says the *Conductor*, "had based his pardon on the grounds that the prime purpose of punishment had been met and society was safe from further encroachments at the hands of these men, or that humanity demanded their liberation, some might have doubted the wisdom of his course, but few would have been found to criticize." But if the facts warranted the declaration that the men did not have a fair trial, and were condemned in defiance of right and justice, as Gov. Altgeld clearly demonstrates, then, in that case, if he had not promptly pardoned them, he would have shown himself to be a miscreant, a disgrace, not only to the high office of Governor of Illinois, but to human nature as well.

OWING to some changes made recently on the Northern Pacific in consequence of a policy of retrenchment inaugurated on that system, Mr. J. E. Phelan, formerly superintendent of the Missouri division, has been transferred to Fargo, N. Dak., where he now has charge, as master mechanic, of the Dakota division and branches. To those who know Mr. Phelan it will not be necessary to say that the change places him in line again with his fondest aspirations, it having been in the machinery department where he advanced by rapid, steady strides from the lowest round to the position of master mechanic. Mr. Phelan thus "returns to his first love," and we do not doubt the transfer is in the highest degree agreeable to him and that in due course of time he will reach the most commanding position in that department of the service.

The departure of Mr. and Mrs. Phelan from Dickinson was made the occasion of a reception and ball by their numerous friends and as a mark of the esteem in which they were held they were made the recipients of a solid silver tea service and tray, a dozen solid silver forks and a dozen silver knives with pearl handles. Farewell addresses were made, dancing was indulged in, words of esteem and regret were spoken and from first to last the occasion bore testimony of the high regard entertained for the Phelans by the people of Dickinson.

A HANDSOME compliment was recently paid Bro. A. Dillon, the retiring chairman of the Joint Protective Board of the Missouri Pacific system, a position Bro. Dillon had long held and the duties of which he had discharged in a manner to win the confidence and respect of both officials and employees. It was, therefore, eminently fitting that upon his retirement his associates should bear testimony of their appreciation of his invaluable services, and this was done in present-

ing him with a handsome badge, the address being delivered in behalf of the committee, by Bro. D. V. Ault, as follows:

*"Worthy Chairman and Brothers:—*It has been the custom for ages, by all nations, and all classes, to bestow on their leader some token of respect, something that he can show in his gray and silvery days, to his relatives and friends, that the by gone days of his life were devoted to the elevation of his fellow-men.

It has been necessary to meet annually in the most convenient place for all concerned, which was found in this city. We are now assembled, not for the purpose of celebrating a gala day, not for the purpose of obtaining public notoriety, but for the elevation, protection and relief of our oppressed brothers, knights of the scoop. For six long years we have met at the call of one, and the only one—to us a Napoleon. Soldier after soldier has stepped aside for others, yet he has gone steadily on and kept up the march, through thick and thin, through tangled forests and rugged mire.

When asked, he has answered, when called he has come; when needed he has gone; when necessary he has acted, and when tried he has proven honorable and true. Some have found fault, but not all. Nor can we see the ills he has borne until the day of rest grants him relief.

We have the consolation of knowing that there are among the many, those that appreciate his ability and aid. No matter what the trouble, he mastered the occasion, he rose to the emergency, and placed us where we stand to-day.

In token of respect, in honor of his name, in thanks for his aid, and reward for his deeds, to keep fresh in mind, our appreciation for all this, the members of the Brotherhood of Locomotive Firemen of the Gould Southwest System of Railways tender him, our retiring chairman, a lasting vote of thanks, and with it this emblem, with which we wish him unbounded happiness and joy."

Bro. Dillon responded in fitting terms and the assemblage dispersed with a feeling of regard and esteem for their late leader that will follow him into the shades of private life.

We are glad to learn that "Grimshaw's Locomotive Catechism" is meeting with a large sale. It certainly deserves to, as it is the best work ever published on the subject. Every fireman and engineer should have a copy of it.

The book is right up to the times, and is fully illustrated. Its 1300 questions and answers cover every part of the locomotive, from boiler to the smallest part of the machinery, including compound locomotives, which are fully treated, with many illustrations of the same.

The price, \$2.00, puts it within the reach of all. The publishers, Norman W. Henley & Co., No. 150 Nassau street, New York, send it on receipt of \$2.00 postpaid.

The advertisement of the book will be found in our advertising columns.

#### ADDRESSES WANTED.

LEE FORSHIER.—Formerly in the employ of the Missouri Pacific railway company in the capacity of firemen and yard engineer at Kansas City. Any information concerning him will be thankfully received by his sister, Mrs. Ed. Carson, Hoopeston, Illinois.

J. P. MARTIN.—A member of Lodge No. 153, left Denison, Texas in the latter part of August and has not been heard from since. His family are extremely anxious to hear from him and any information regarding his whereabouts will be thankfully received. Address C. J. Turner, Master of Lodge No. 8, 423 Main street, Denison Texas.

#### SLEEP.

I dearly love to drop my nose  
On downy pillows for repose;  
'Tis one of nature's grandest treats,  
To dive between two well aired sheets,  
And let the world go whirling by,  
As there obliviously you lie  
To toil and care, coiled in a heap,  
With eyelids closed in balmy sleep.  
In sleep a chap forgets his ills,  
And every pang of care that kills,  
I've often in the land of dreams  
Went floating over placid streams,  
And thought I was a royal king,  
With wealth to do most anything,  
Piled up in many a shining heap,  
But—God be praised—'twas in my sleep.

Some early rising poets say  
To jump from bed ere dawn of day,  
And witness all the changing dyes  
The sun throws up the eastern skies;  
I'd much prefer to take my ease,  
With head bent over toward my knees,  
While others such delights could view,  
And, reader, darling, so would you.  
There's great enjoyment 'neath the clothes;  
We get a respite from our woes;  
And dream, perhaps, we're railway lords,  
With slaves surrounding us in hordes,  
The way some cringing knaves are seen,  
That sneak around with fawning mien;  
Ah! that's the time I love to snore,  
And kick the suckers out the door!  
Well, here's to sleep, that blissful kind.  
Which in our beds at home we find;  
An eight hours stretch, yes nine or ten,  
A yawn, and then drop off again;  
Without a dread of caller's boots,  
To kick the door—the blamed galoots!  
Until we think we've had galore,  
Without a wish for any more.

*Shandy Maguire.*

#### PUBLIC SYMPATHY.

MR. EDITOR:—We cannot help noticing that our daily papers are always one sided in regard to the wage question; when times are good and railroads and factories are paying dividends and workingmen strike for an increase of wages the newspapers invariably say that the men are making unreasonable demands and must not expect public sympathy. At the present time railroads and other industries all over the country are reducing workingmen's wages from 10 to 30 per cent. and the newspapers have a thousand excuses to offer for their so doing. If public sympathy is not with the workingmen now I would like to know when and under what circumstances they should expect it.

It is very evident that so called public sympathy and daily newspapers are one and consequently controlled by a few monopolists who seek to grind the workingmen down to starvation and rags and then tell the world that their action was loudly voiced by public sympathy.

*Charles McPeake.*

SALT LAKE CITY, UTAH.

#### SPECIAL NOTICE.

The book of new schedules between the Brotherhoods of Locomotive Engineers and Firemen and the railway officials is now out of press and ready for distribution. Lodges and Protective Boards desiring copies can secure them of the Grand Secretary and Treasurer on the payment of seventy-five cents each.

F. W. ARNOLD, Grand Sec'y and Treas. F. P. SARGENT, Grand Master.

## A VOICE FOR FAIR TRIALS.

MR. EDITOR:—In looking over the pages of the MAGAZINE, I noticed what was intended to be a severe reprimand of our worthy editor, charging him with not only upholding anarchists, but in addition, scattering anarchism broadcast in the basest manner through the columns of our MAGAZINE. This is done by one W. H. Gray.

Now, then, Mr. Gray, do you think the stand you have taken is the proper thing to do? If you do, I for one, say you are mistaken, and badly mistaken, too. In the course of your baseless criticisms, you ask, "Were they (the hanged and pardoned men) not anarchists?" Suppose they were, as was probably the case, is that any reason why they should not have had a fair trial, or that simple justice should not have been accorded to them?

Would you, Mr. W. H. Gray, stand idly by and see a man, rich or poor, have a trial for an alleged crime, that was unfair or unjust, without saying a word in his behalf? If you would be guilty of such conduct you cannot be classed among the just and loyal brothers of our order, nor any other order composed of men who demand fair trials.

You say their (the anarchists') hands were steeped in gore. If this assertion were true, would it be just to hurry them off to the scaffold or to prison, without having had a fair trial? How many unfortunate men have perished on the scaffold and died in dungeons innocent of the crime with which they were charged, because a fair trial was denied them?

I believe Mr. W. H. Gray belongs to the B. of L. F. Suppose some of the boys should be charged with the commission of a crime? Then, according to Mr. Gray's theory, he, Mr. Gray, should be executed, simply because he is a brotherhood man. That is the way Mr. Gray argues out the anarchist question. He asks, "Were they not anarchists?" In the case of the B. of L. F. man charged with crime, wouldn't Mr. Gray, by his own reasoning, be held responsible, because he is a brotherhood man? If so, why not execute him without a fair trial, which is equivalent to no trial at all, the same as he would do with the anarchists? That seems to be Mr. W. H. Gray's scheme, and being held responsible for another man's acts and denied a fair trial, Mr. Gray, of course, would hang.

But I do not think there is a brother in the order who would see Mr. Gray executed without having a fair trial, if such a thing were possible, and if unjustly hung the brotherhood would forever hold the court responsible; or, if unjustly sent to prison, the brotherhood would do all things in its power to have him pardoned and set at liberty. But we could not expect any assistance from Mr. W. H. Gray, according to his own writing.

I write in behalf of fair trials and of justice to men charged with crime, and of the

editor of our MAGAZINE, whom I know to be in the right. So far, I do not think any of the brothers (except W. H. Gray, even if he is a brother) have found any fault with the editor. I know, for one, he has done some noble work for the order, and I do not intend to stand by and see him chastised for a thing he was justifiable in writing.

E. W. Whitmore.

DIAMOND LAKE, ILL.

## A BUSINESS COME TO STAY.

MR. EDITOR:—Almost every issue of the daily papers contain accounts of train robberies, and these have increased to such an extent lately that it seems as though train robbing, as a business, has come to stay, unless some more effective means for destroying it can be discovered than at present exist. Some time ago a train was robbed in Arkansas, and the conductor murdered; at the same time, an attempt to rob one was made in Tennessee, when one of the robbers was mortally, and an officer slightly, wounded. During the extra session, a bill was presented to congress calculated to put a stop to this business by putting it under the jurisdiction of the United States. This bill was vehemently opposed—and fittingly enough—by some gentlemen who represent states where the business has flourished most, on the ground that the corporations wanted to make the government do what they should do themselves. As if corporations were not entitled to the protection of law as well as individuals! There is no reason to doubt the statement that the train robbers are encouraged in their crimes by the knowledge of the sympathy they will have in the communities in which they operate, and of the fact that they can terrify the local authorities; if they had national police to deal with it would be a different matter. The government may be compelled to deal with the business for the express companies have contemplated the plan of raising their rates for the shipment of money to such a figure that the shippers will be compelled to send it by mail. It is a fact that most of the train robbers are either caught or killed; but it is also a fact that those who are disposed to that crime are encouraged to engage in it by the hope that they will not be killed, and the belief that if they escape they can intimidate the local police and enjoy immunity from arrest. There are plenty of well authenticated instances of country officers refusing to run down the robbers for fear of being assassinated. Federal officers would not have to live in the haunts of the robbers, and would not be so easily intimidated. It is a stain upon our national character that this villainy should be permitted to continue straight along for a quarter of a century, all the time growing in boldness. It is bringing many of our brothers to an early grave, and it should be stopped.

# Westinghouse Air Brake Company,

PITTSBURGH, PA., U. S. A.

MANUFACTURERS OF THE

## WESTINGHOUSE AUTOMATIC BRAKE.

The WESTINGHOUSE AUTOMATIC BRAKE is now in use on 24,000 Engines and 325,000 Cars. This includes (with plain brakes) 232,000 Freight Cars, which is about 23 per cent. of the entire freight car equipment of this country, and about 80 per cent. of these are engaged in interstate traffic, affording the opportunity of controlling the speed of trains by their use on Railways over which they may pass. Orders have been received for 173,000 of the Improved Quick Action Brakes since December, 1887.

The best results are obtained in freight train braking from having all the cars in a train fitted with power brakes, but several years' experience has proven conclusively that brakes can be successfully and profitably used on freight trains where but a portion of the cars are so equipped.

E. L. ANDREON, Manager. JOHN B. GRAY, Agent. C. C. HIGHAM, Gen'l Supt.

# ROPER'S INSTRUCTIONS AND SUGGESTIONS FOR ENGINEERS AND FIREMEN.

This book is made up of a series of suggestions and instructions, the result of recent experiments and the best modern practice in the care of steam engines and boilers. It is brimful of just such information as persons of limited education having charge of steam machinery need. It is written in plain, practical language, devoid of theories or mathematical formulæ.

= = Price, \$2.00. = .

## ROPER'S YOUNG ENGINEERS' OWN BOOK.

Containing an explanation of the Principle and Theories on which the steam engine as a prime mover is based. For the instruction of those who show an inclination for steam engineering. By Stephen Roper, Engineer, author of Roper's Practical Hand-Books for Engineers and Firemen. With 106 illustrations, 363 pages. 18 mo., tuck, gilt edges.

= = Price, \$3.00. = =

## NEW CATECHISM OF THE LOCOMOTIVE

By M. N. FORNEY.

More than 700 pages and more than 500 Engravings, Greatest Book Published.

TREATS OF THE FOLLOWING SUBJECTS.

Chapter.  
**I.** Force and Motion.  
**II.** Resolution of Motion and Forces.  
**III.** The Principles of the Lever.  
**IV.** The Forces of Air and Steam.  
**V.** On Work, Energy and the Mechanical Equivalent of Heat.  
**VI.** The Steam Engine.  
**VII.** The Expansive Action of Steam.  
**VIII.** The Slide Valve.  
**IX.** The Action of the Piston, Connecting Rod and Crank.  
**X.** General Description of a Locomotive Engine.  
**XI.** Different Kinds of Locomotives.  
**XII.** Locomotive Boilers.  
**XIII.** The Boiler Attachments.  
**XIV.** The Throttle Valve and Steam Pipes.

Chapter.  
**XV.** The Cylinders, Pistons, Guide Bars, Cross Heads and Connecting Rods.  
**XVI.** The Valve Gear.  
**XVII.** Action of the Pistons, Cranks and Driving Wheels.  
**XVIII.** Adhesion and Traction.  
**XIX.** Internal Disturbing Forces in the Locomotive.  
**XX.** The Running Gear.  
**XXI.** Miscellaneous Parts of a Locomotive.  
**XXII.** Friction and Lubrication.  
**XXIII.** Screw Threads, Bolts and Nuts.  
**XXIV.** Tenders.  
**XXV.** Water Tanks and Turn-Tables.  
**XXVI.** The Westinghouse Air Brake.

Chapter.  
**XXVII.** The Care and Use of the Westinghouse Air Brake.  
**XXVIII.** The Kames Vacuum Driving Wheel Brake.  
**XXIX.** Proportions of Locomotives.  
**XXX.** Combustion.  
**XXXI.** The Resistance of Trains.  
**XXXII.** Performance and Cost of Operating Locomotives.  
**XXXIII.** The Care and Inspection of Locomotives while in the Engine House.  
**XXXIV.** Running Locomotives.  
**XXXV.** Responsibilities and Qualifications of Locomotive Engineers.  
**XXXVI.** Accidents to Locomotives.  
**XXXVII.** Accidents and Injuries to Persons.

PRICE, 3.50.

# ALEXANDER'S READY REFERENCE

FOR

## Engineers and Firemen.

---

This book contains more valuable information in fewer words, and is easier understood by railroad men than any other book now in print, because it is written in the same manner that railroad men talk to each other, and by one who has had forty-two years practical experience. Remedies for break downs and failures of every kind that are likely to occur on the road are given, in language familiar to every engineer and fireman, also the best practices for running. A careful study of the principal items has qualified very many good firemen for examination and promotion. Their letters say in substance, "I would not have been promoted without it," or "It put me on the right side." The book is very valuable to men working on repairs of engines, and is a gold mine to locomotive firemen aiming at promotion.

**PRICE, \$1.50.**

---

## Simple Lessons in Drawing for the Shop.

*By* **ORVILLE H. REYNOLDS.**

(Chief Draftsman Northern Pacific Ry.)

---

## A Splendid Book on Mechanical Drawing and Sketching.

Shows how to learn the elementary principles of drawing and sketching with a ten dollar set of instruments.

The charm of this book is in its simplicity. Every student of Locomotive Engineering and every explorer in the field of Mechanics should have it.

**PRICE, \$1.00, Prepaid.**

---

## Roper's Hand-Book of the Locomotive.

---

One of the most valuable treatises ever written on the subject, as it is so plain and practical that any engineer or fireman that can read can easily understand it. It is fully illustrated, and contains a description of the most improved types of Locomotives in use.

**PRICE, \$2.50**

## Driving the Brain

at the expense of the Body. While we drive the brain we must build up the body. Exercise, pure air—foods that make healthy flesh—refreshing sleep—such are methods. When loss of flesh, strength and nerve become apparent your physician will doubtless tell you that the quickest builder of all three is

## Scott's Emulsion

of Cod Liver Oil, which not only creates flesh of and in itself, but stimulates the appetite for other foods.

Prepared by Scott & Bowne, N. Y. All druggists.

# Pears' Soap

We perspire a pint a day without knowing it; ought to. If not, there's trouble ahead. The obstructed skin becomes sallow or breaks out in pimples. The trouble goes deeper, but this is trouble enough.

If you use Pears' Soap, no matter how often, the skin is clean and soft and open and clear.

All sorts of stores sell it, especially druggists; all sorts of people use it.

OFFICE WORLD'S FAIR

# KNOWLEDGE IS POWER!

## Books for Railroad Men.

**WE PREPAY ALL CHARGES.**

**Make your selection from the following list:**

**"PROGRESSIVE EXAMINATIONS OF LOCOMOTIVE ENGINEERS AND FIREMEN,"** by JOHN A. HILL. A capital little book for new beginners. An excellent pocket companion. Price, 50 cents.

**"SIMPLE LESSONS IN DRAWING,"** by ORVILLE H. REYNOLDS. (Chief Draftsman Northern Pacific Ry.) A splendid book. Shows how to learn the elementary principles of mechanical drawing and sketching. Every student of locomotive engineering and every explorer in the field of mechanics should have it. Price, \$1.00.

**"AIR BRAKE PRACTICE,"** by J. E. PHELAN, of the Northern Pacific R. R. An exhaustive treatise on the Air Brake; explains in simplest language how to operate it under all conditions. An engineer writes us: "The book on Air Brake Practice has been a source of invaluable information to me; it is worth ten times the price you ask for it." Price, \$1.25.

**"ALEXANDER'S READY REFERENCE,"** by S. A. ALEXANDER, for engineers and firemen. This book contains more valuable information in fewer words, and is easier understood by railroad men than any other book now in print, because it is written in the same manner that railroad men talk to each other, and by one who has had forty-two years practical experience. It is a gold mine to locomotive firemen aiming at promotion. Price, \$1.50.

**"LOCOMOTIVE RUNNING AND MANAGEMENT,"** by ANGUS SINCLAIR. A volume of more than 400 pages, by a practical man. An invaluable treatise for both engineers and firemen. Tells all about running and firing an engine in plain, every day language. Adopted by many roads as a standard for examination. Price, \$2.00.

**"COMPOUND LOCOMOTIVES,"** by ARTHUR T. WOODS. The only book on the subject. Should be in the hands of every student of the locomotive. Price, \$2.00.

**"ROPER'S INSTRUCTIONS AND SUGGESTIONS FOR ENGINEERS AND FIREMEN,"** by STEPHEN ROPER. This book is brimful of just such information as persons of limited education having charge of steam machinery need. Price, \$2.00.

**"ROPER'S HAND BOOK OF THE LOCOMOTIVE,"** by STEPHEN ROPER. One of the most valuable treatises ever written on the subject. It is fully illustrated, and contains a description of the most approved locomotives in use. Price, \$2.50.

**"ROPER'S YOUNG ENGINEER'S OWN BOOK,"** by STEPHEN ROPER. Containing an explanation of the principle and theories on which the steam engine as a prime mover is based. With 106 illustrations, 363 pages. 18 mo., tuck, gilt edges. Price, \$3.00.

**"NEW CATECHISM OF THE LOCOMOTIVE,"** by M. N. FORNEY. More than 700 pages and more than 500 engravings. Greatest book published. Price \$3.50.

**A LIBRARY on the LOCOMOTIVE  
IN ONE VOLUME.**

**FORNEY'S**

**GREAT**

**Catechism of the Locomotive**

**500 Engravings!**

**700 Pages!**

For the past sixteen years the Catechism of the Locomotive has been the best authority and almost a necessity to every Locomotive Engineer and Fireman, and on many railroads it is the standard for examination of Firemen for promotion. So many changes and improvements have been made in the construction of locomotives that the author has revised and rewritten the book, adding much new matter and making new illustrations selected from the latest practice in this country.

The new edition is about twice the size of the original book, has correct drawings of every part of the locomotive and of the different classes of locomotives in use in this country. It is written in such language as an Engineer or Fireman can easily understand, and it is believed that a study of this book will enable him to thoroughly know his business. There is no popular treatise in the English language which gives so clear, simple and complete a description of the construction and working of the locomotive engine.

# THE AGE OF LABOR

An exponent of labor thought and philosophy. Able editorials on the problems of the day from the workingman's point of view. A strictly first-class, illustrated, semi-monthly journal. A staff of able contributors. All the news of the labor world. Popular everywhere. Reached a sworn circulation of 7,400 copies in its fifth issue.

Among the special features for 1893 will be a series of articles on the "Rise of the Workingman," tracing the struggle for living wages from the time when, centuries ago, the laboring people were paid 4 cents a day and were imprisoned and branded with hot irons for trying to improve their condition. Another series of articles, running through the entire year, will be of an educational nature and attractively teach lessons of the industrial development and general history of the country. These two features alone make the AGE OF LABOR invaluable to the student of labor affairs.

The large circulation enables the managers to lower the price to \$1.50 a year. No free copies. Two months' trial for 10 cents, in coin or stamps.

**THE AGE OF LABOR,**  
38 and 40 W. Monroe Street,  
CHICAGO, ILL

tion, etc., and the third, on mishaps, breakdowns, and the engine. Practical; nearly 300 questions and answers to 'em. Seventeen colored plates showing position and color of every signal carried on engine or train. Standard code. Adopted as official examination on several roads. Invaluable to engineers and firemen, and tells every young man with an ambition to run a locomotive, just what he ought to know to start with and what he must learn before promotion. Send 50 cents (U.S. stamps are good) for this neat book, pocket form, round covers, red and gold, to

## A YARD OF CHRYSANTHEMUMS. "THE PRETTIEST YET."

This is the richest and most artistic picture ever produced. It is in twelve colors, showing every variety of chrysanthemum.

We will send this picture and give you a trial subscription to THE HOME-MAKER Magazine (edited by Mrs. Croly, "Jenny June") three months for 30 two cent stamps. This also includes a magnificent picture of Tennyson in colors, suitable for framing.

THE HOME-MAKER is the ordinary magazine size, and contains each month nearly 100 pages. Its departments are: Literary, Home, Art, Household, Fashions, Topics of the Times, Correspondence and Queries, etc. Address

**THE HOME-MAKER CO., 36 Union Square, New York.**

"He who reads (this work) must learn."

Ald. Collins, Inspector.

This work is now complete and can be furnished, in parts or strongly and handsomely bound in one volume for \$2.50. Send for descriptive catalogue.

# Maxims and Instructions

FOR THE

## BOILER ROOM.

This work, now being issued in ten monthly parts, is by the author of the "Hand-book of Calculations for Engineers." Seven parts are now issued. It is uniform with that popular work, in type, paper and size.

It relates to the care, management and construction of Steam Boilers of all kinds, Steam Heating, Steam Pumps, their use, repairs and construction, Practical Plumbing, etc.

It is largely illustrated, 32 pages in each part, in plain language, and designed for reference and instruction.

Send 25 cents for Part One and subscription blank for the whole issue.

**THEO. AUDEL & CO.,**

**PUBLISHERS,**

**91 Liberty St., NEW YORK.**

**OFFICE 3.**

**NOTE.**—The "Hand-Book of Calculations" has now attained its fifth edition and is universally approved. The "Maxims and Instructions" have already reached their second edition. Both books are fresh, bright and helpful. Send for catalogue containing many testimonials and other particulars, and also a list of other mechanical and scientific books, drawings, instruments, etc.

# For Railroad Men's Families.

## OUR LIMITED SPECIAL FREE BOOK OFFER.

WE WILL SEND TO ANY ADDRESS IN THE UNITED STATES, FREE OF CHARGE: *Charles Dickens' Complete and Unabridged Works* in 15 vols., illustrated; or *De Waker Scott's Waverley Novels*, 25 complete works in 12 vols., with illustrations; or *George Eliot's Complete Works*, latest edition, complete and unabridged, in 6 large 12mo vols., the author's portrait and autograph on each book; or *Washington Irving's Complete Works* in 10 vols.; or *50 Famous Novels* by celebrated authors, in 50 different books in pamphlet form.

Your choice of these great standard works will be sent for the next ninety days FREE OF CHARGE, to introduce THE HOME-MAKER MAGAZINE to new readers. To every person sending \$2.00 for THE HOME-MAKER MAGAZINE one year, and adding 50 cents for shipping expenses, etc., on the books, total \$2.50, by Bank Draft, P. O. or Express Money Order, we will immediately send either of the above sets, and prepay the delivery charges to your town. Remember, the cost to you for the books, delivered at your town, including the high-class HOME-MAKER MAGAZINE for one year, is, all told, \$2.50.

### EXTRA INDUCEMENT.

The first 10,000 persons answering this advertisement, and ordering the Magazine and one of the sets of books offered above, will get in addition his or her choice of any of the following:

FIRST, "THE LEATHER-STOCKING TALKS," by J. Fenimore Cooper, illustrated edition, containing the five great works: "The Deer-slayer," "The Pathfinder," "The Last of the Mohicans," "The Pioneer," "The Prairie," in one volume; or,

SECOND, THE NEW YORK WEEKLY SUN (Democrat), one year; or, THE NEW YORK SEMI-WEEKLY ADVERTISER (Republican), for one year; or,

THIRD, WEBSTER'S UNABRIDGED DICTIONARY, new reprint edition; or,

FOURTH, A copy of the splendid cloth-bound book, "OUR HUSBANDS

Lessons in Business." The regular price of the book is \$1.00, and J. J. Atwell, U. S. Dept. Agriculture, Washington, says: "As an evidence of my appreciation I send \$5.00, for which send five more copies." Or,

FIFTH, "THE LIFE AND VOYAGES OF CHRISTOPHER COLUMBUS," by Washington Irving, last and only complete edition; or,

SIXTH, The collected works of three famous poets—Longfellow, Whit-  
tier, Bryant—in three separate volumes, averaging over three hundred pages each.

Everybody says it is the biggest offer ever heard of, and can't see how we do it. You will say the same when you see the books and magazine. Remember we pay the delivery charges to your town on everything. No deductions from above price on New York City delivery. Address

## THE HOME-MAKER CO., 36 Union Square, New York.

THE HOME-MAKER MAGAZINE, Mrs. Croly (Jenny June), Editor, cheap in price only.

THE HOME-MAKER MAGAZINE is the only high-class magazine in the regular form at \$2.00 a year; 30 cents a number. Good for the whole family. "It is," Gail Hamilton says, "the best union of the practical with the intellectual of all magazines." THE HOME-MAKER MAGAZINE is the ordinary magazine size, and contains each month nearly one hundred pages. Its departments are Literary, Home, Art, Household, Fashion, Topics of the Time, Correspondence and Queries.

THE HOME-MAKER MAGAZINE would make a delightful holiday present. One year to one friend or six months each to two friends.

Hundreds of people will pay out many times the above amount for frivolous, worthless articles during the next few weeks. Will you?

# Railroad Patent Square Ventilated Dinner Pail

## BEST PAIL MADE.

We have many testimonials like the following:  
3023 HANOVER STREET,  
CHICAGO, ILL., Feb. 16, 1891.  
Messrs. Reardon & Ennis,

Gentlemen:  
I promised to let you know how I liked your Dinner Pail and would say I have been using lunch pails more or less for the past 7 or 8 years and I like yours the best of all. Lunch keeps fresh and sweet and the coffee can is just the thing. Take it all through it is the boss pail.

M. J. McGuire.  
CHAMBERLIN LODGE,  
No. 186, B. of L. F.

Size of No. 2 pail is 9 1/4 inches long by 5 1/4 inches wide by 9 1/4 inches high when locked up.

TO INTRODUCE THESE PAILS, UNTIL FURTHER NOTICE we will deliver ONE NO. 2 VENTILATED PAIL, boxed and expressage paid, at any express point in the United States, on receipt of P. O. Order for one dollar and fifty cents, and for every fifteenth pail order received we will refund the money and send the pail free of expense. Try one.

# S. N. Clarkson & Co.,

The Railroad Jewelers, 182 State St., Chicago, Ill.

The Clarkson Special Watches are the **Finest in the World**. They have been sold in Chicago for Railroad use for *Eight Years*, and have stood the strictest inspection and **Never Has One Been Condemned**. We refer to men carrying our Watches on the following roads running to Chicago, viz.:

C. & G. W., C. & E., C. & G. T., B. & O., I. C., and others. We make all kinds of Society Jewels to order; also a full line of Ladies' Watches and Diamonds. Write for prices. Mail orders promptly attended to.

## =: IT COSTS NOTHING =:

Our Price, \$14.50.  
Regular Price, \$38.00.

WE SEND THESE GOLD WATCHES FREE by Express. You pay nothing until after examination. It is our intention to introduce these watches in every State. In order to accomplish this we offer you this *Ladies' or Gents' Gold Watch* for \$14.50—regular retail price \$38.00. These cases are made of two plates of solid gold, so thick that they will last for years; between these plates is a very thin, stiff sheet of composition metal, the purpose of which is to protect the works from damage when pressed or struck (a feature that saves many a bill of repairs), and is accompanied by a special guarantee certificate from the Elgin Co. that they will wear **TWENTY YEARS**. The movement is a genuine Waltham, Hampden, Engle, or Springfield, as you may select, are elegantly jeweled with fine genuine rubies, have the celebrated compensation balance, safety pinion, hardened hair spring, stem wind and set; warranted perfect time-keepers. Watches of this make are never advertised outside the show windows of fashionable jewelry stores. If you order in good faith cut this out and forward to us, and we will send you the watch by express without payment of a single cent, so you can examine it thoroughly, and if not as represented you refuse to take it, otherwise you will pay the express company \$14.50 and the watch is yours—OR, if you will send us 50 cents with your order to pay express charges, we will present you **FREE** with each watch—no charge—a **SOLID GOLD**, filled chain (not plated), with a special certificate from the manufacturers guaranteeing them. These chains must not be classed with the cheap plated—they are solid gold filled and could not be duplicated for less than \$3.50 each at any retail store on earth. This is our method of selling goods. Instead of paying high-priced salesman we give you the benefit of the expense, by selling you the best watches so cheap that you can not afford to pass the chance of obtaining one. We are sure that the same will so please you that the mere showing of the watch to others will create a demand for our goods. These watches are genuine American and there are no better made, and must not be confounded with the cheap imported advertised so extensively. In ordering be sure to state whether ladies' or gents' is desired.

Send 10 cents in stamps for our new and illustrated catalogue. Address

THE RAYMOND, BUNN or 17 Jeweled adjusted Hampden cased in same case for \$24.00, including chain, on terms as above.

**Bernhard Meuser, 93 and 95 Fifth ave., Chicago.**

In regard to our responsibility we refer you to any Bank or Daily Paper in Chicago.

**Dr. G. F. WEBB**

Of CLEVELAND, OHIO.  
The Inventor and Manufacturer of this Electro-Medical Appliance.

**READ! DISEASES CURED!**

A Triumph of Skill Which Brings Happiness to Thousands.

**CURED OF RHEUMATISM.**

A Well-known Cleveland Gentleman Speaks a Word for Dr. Webb's Body Batteries.

CLEVELAND, OHIO, March 1, 1892.

Dr. Webb:

Your Electric Body Battery has cured me of Rheumatism and Torpid Liver, which has bothered me for thirty years, mostly in the winter season.

Yours truly,  
W. J. WATTERSON.

**CURED OF GENERAL DEBILITY.**

After Expending \$150 in Medicines Without Avail.—An Engineer's Statement.

ASHTABULA, OHIO, January 12, 1892.

I desire to say for the benefit of my brother railway engineers and all others, that I have suffered for years with weakness and constipation, and having spent hundreds of dollars without help, I finally purchased of Dr. G. S. Webb his now famous Electric Body Battery Belt with Appliances, which has entirely restored me to health. Dr. Webb is entirely competent and successful, and no one will ever regret purchasing his Electric Body Belt for the cure of nervous and chronic diseases.

To any one writing me I will gladly say more than I do here.

Most sincerely,  
S. H. FRENCH,  
Engineer, Lake Shore Railway.

Note.—Mr. French is a highly esteemed Christian gentleman and we would be glad to have any one write to him, enclosing stamp for reply.

No one who suffers with pain or nervousness, or disease of any nature as mentioned below, need fear to get prompt relief, because these appliances have cured many people suffering from Spinal Weakness, General Weakness, Neurasthenia, Brain Exhaustion, Palpitation, Paralysis, General Debility, Kidney Complaints, Vital Losses, Nervous Prostration, Impotency, Sterility, Prolapsed Uteri, Constipation, Neuralgia, Sciatica, Lumbago, Varicocele, Muscular Rheumatism, Dyspepsia, Loss of Memory, Apoplexy, Fits, Gleet, Irregularities, Leucorrhoea, Suppressed and Painful Menstruation, Ovarian Diseases, Incontinence, Nymphomania and Spermatorrhoea, Anemia or Chlorosis, Ascites, Hemorrhoids, Chronic Diarrhoea, Numbness, Hernia, Metritis, Tenesmus, Tonsillitis, Hysteria, Locomotor Ataxia, Deafness, Sick Headache and many diseases of a nervous character which have heretofore been thought incurable by the usual modes of treatment.

**Value Placed by a Lady Upon the Dr. G. F. Webb Ladies' Electric Belt.**

One thousand dollars could not buy my appliance if I could not get another one like it. I am sure it saved my life.

Yours respectfully,  
MRS. C. M. ROBINSON,  
Penn Line, Pa.

## BARRELS OF PRIZE PACKAGES

# MONEY · LAND · GOLD WATCHES · SILVERWARE FREE.

To introduce our Liver Pellets, we have decided on a novel and ingenious method which is sure to become popular. The plan adopted secures to all persons without a single exception a prize of wonderful value.

Instead of spending thousands of dollars in newspaper advertising and painting signs all over the country we propose to take that amount of money and use it in such a way that the people who are the first purchasers of our pellets will receive this money in valuable prizes.

We know we manufacture the very best remedy on the market for the cure of constipation, biliousness, sick headache, nervousness, kidney and bladder troubles, torpid liver, etc., and that when you have tried these pellets you will gladly recommend them to others, and in this way we shall have a large, well-paying demand created in a short time.

As a Special Inducement for you to try these pellets at once we will send with each box a splendid prize, which we are satisfied will please you so well that you will take special pains to help us introduce our remedy.

Send at once 25c in answer to this adv. for a box of Alexander's Liver Pellets, and we will send you free with it one of the following prizes: A gold watch, a silver watch, a casket of silverware, a cash voucher of from \$50.00 to \$5.00, a valuable town lot in a growing country, or a 10 lb. package of best Oolong tea.

With every box there is one of above prizes; there are no exceptions, and the pellets and prizes will be forwarded the same day your letter is received.

Liberal terms made with agents.

**ALEXANDER MEDICINE CO.,**  
88 Murray St., New York.

**EXTRA.**—To the first persons sending a reply who mention the name of this paper, we will give a \$25 voucher, in addition to the other prize.

We will forfeit \$1,000 if we do not faithfully carry out every agreement made in the above liberal offers.

## ARTIFICIAL LIMBS.

**Patent Adjustable Slip Socket.**

**Warranted Not to Chafe the Stump.**

**Largest firm (excepting one) in the U. S.**

The Inner Socket, seen outside the limb in cut, is made over a plaster cast of the stump, giving an exact fit, being held permanently upon the stump by elastic fastened to lacer above, and in act of walking, moves up and down in the Outer Socket, bringing all the friction between the two sockets, instead of between the stump and the socket, as is the case in all single and wooden socket limbs. With our SLIP SOCKET the most tender and sensitive stump can be fitted and limb worn with perfect ease and comfort. Endorsed and purchased by U. S. Government. Send for our New 1893 Catalogue with illustrations.

A popular Railway Banking Union, operating under an original and copyrighted plan, combining the leading features of co-operative banking for the saving of small or large sums of money. **Withdrawals allowed on demand. Homes on the installment plan.**  
An Absolute Protection in case of accident, total disability or death. Specially adapted to the needs of Railway Men. Pronounced by leading experts the most perfect plan ever offered to the American people.

**WANTED** A limited number of reliable railway men desiring employment to address or call for particulars at 1501 Masonic Temple, cor. State and Randolph Sts., Chicago.

## RAILWAY EMPLOYEES' INDUSTRIAL BANKING UNION.

M. R.—All railway men visiting Chicago are cordially invited to call on us.

### INCORPORATED

THE . . . .  
GUARANTEE

INVESTMENT  
COMPANY.

J. G. TALBOT, President and Gen'l Mgr.  
I. M. VAN SLYKE, Vice President.  
T. C. HAMBAUGH, Secretary and Treas.  
G. M. MACDONALD, Assistant Gen'l Mgr.

. . . . NEVADA, MISSOURI.

BOARD OF DIRECTORS: { J. G. TALBOT.  
I. M. VAN SLYKE.  
G. M. MACDONALD.

The object of this company is to provide a safe plan of saving money and yet shorten the time whereby the investor can realize a handsome profit on his investment. The first question is, can it be done, and how? The business is conducted on the same principle that all natural premium life insurance companies are conducted, with this exception: that the money accumulated is paid to the investor while living and not to the family after death, and with the advantage: that the liability of the Company does not increase with the age of its members, as in the case of life insurance companies. The average assessment or premium in life companies is \$15 per annum for each \$1,000 of insurance. This Company sells its bonds for \$10 each and charges an annual premium of \$15 for each \$1,000 bond that is sold, which can be paid in one payment or in monthly installments of \$1.25 each. The life insurance system is universally conceded to be unquestionably sound in principle and safe in practice. Yet the investment results daily accomplished under that system far exceed those of any other financial enterprise in existence, and it will no doubt be a surprise to most persons to learn that as an investment it returns an AVERAGE PROFIT upon outlay to every deceased policy holder of more than FIVE HUNDRED PER CENT. This Company is based upon the same principles as the life insurance companies, and its system is endorsed by the actuaries of the best life companies of America. It does not expect to accomplish impossibilities, but does expect and guarantees that, in the usual course of business and with fair dealing, all bonds will be matured quickly and promptly paid. If the average life company can mature its contracts at an average cost of \$72 per \$1,000, it is just as easy for the Guarantee Investment Company to do so.

We want good, live agents in every State in the Union to solicit business for us, to whom we will make very liberal contracts. For further information and terms to agents apply to J. G. TALBOT, President and General Manager, Chicago, Ill., rooms 209 to 212 Adams Express Building.

## American Building and Loan Association.

MINNEAPOLIS, MINN.

Largest Co-Operative Bank in America.

Assets January 1st, 1892, . . . . . \$2,647,583.47

Profits and Surplus, January 1st, 1892, . . . . . 422,663.18

Our paid-up certificates better and safer than any Savings Bank. Paying six per cent per annum, payable semi-annually, and sharing in all profits besides.

Five, six and seven per cent paid on time deposits.

## GALENA OIL WORKS, Limited. FRANKLIN PA.

### SAFETY, SPEED ECONOMY

see the results of the use of Galena Oils. Scientific and practical tests of the past twenty years have demonstrated the fact that Galena Oils are superior to any other oils in the market.

Galena Oils in winter stand a cold test of from ten to fifteen degrees below zero, and will not freeze in the coldest weather.

The superiority of Galena Oils is demonstrated by their exclusive use upon a large majority of the railways of this country. They are in use upon three continuous lines of railways from Boston and New York to the Pacific Coast and on one to the City of Mexico; thus demonstrating their adaptability to all climates and all temperatures.

We also supply our patrons with Sibley's Perfection Valve Oil, which is in exclusive use upon a large majority of the leading Railroads of the country.

**IMPORTANT TO RAILROAD MANAGERS AND MASTER MECHANICS.**

## Sibley's Perfection Valve Oil.

More perfect lubrication insured, and guarantee entire freedom from corrosion, honey-combing of cylinders and destruction of joints of steam chest by fatty acids.

In exclusive use upon eighty-two railroads.

References furnished upon application.

CELEBRATED

### Pocahontas Semi-Bituminous Coal.

1 Broadway, New York. 306 Walnut st, Philadelphia.  
70 Kibby st., Boston. 26 Main st., Norfolk, Va.  
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the outputs have increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

Balance on hand April 1, 1893 . . . . . \$39,299 75

Respectfully submitted,  
F. W. ARNOLD.

## NOTICE TO CHAIRMEN AND SECRETARIES OF JOINT PROTECTIVE BOARDS.

The Third Biennial Convention provided that the addresses of all chairmen and secretaries of Joint Protective Boards should be published in the MAGAZINE in the months of June and December of each year. In order to enable us to do this it is requested that the chairman or secretary of each Joint Protective Board at once forward to the Grand Secretary and Treasurer the names and addresses of both chairman and secretary. The addresses thus obtained will be properly classified and published, and will be of great convenience to the members of such boards, as also to their lodges and the grand lodge.

## REDUCED TO \$1.00.

We have on hand a supply of bound volumes of the MAGAZINE for the year 1891.

The volumes are artistically bound in a way to withstand wear, and we need not say are intrinsically valuable, containing as they do, a wide range of topics on subjects well calculated to interest the general reader, as well as those who are the students of labor problems.

In this connection we suggest that these bound volumes of the MAGAZINE would be a valuable present on birth day occasions, or as tokens of remembrance, to be presented at any time, and as the price has been reduced to \$1.00 we shall hope to receive sufficient orders to reduce the supply, since no fireman's library would be complete without one.

By addressing LOCOMOTIVE FIREMEN'S MAGAZINE, Terre Haute, Indiana, orders will be promptly filled. Cash must accompany each order.

**GRAND LODGE.**

- F. P. SARGENT** . . . . . Grand Master  
Terre Haute, Indiana.

## \$100 Reward, \$100.

The reader of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages, and that is Catarrh. Hall's Catarrh Cure is the only positive cure known to the medical fraternity. Catarrh being a constitutional disease, requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly on the blood and mucous surfaces of the system, thereby destroying the foundation of the disease, and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers, that they offer One Hundred Dollars for any case that it fails to cure. Send for list of testimonials.

Address, F. J. CHENEY & CO., Toledo, Ohio.  
Sole Sold by Druggists, 75c.

JOSEPH LEICESTER ATKINS,  
PATENT LAWYER  
AND

Solicitor of U. S. and Foreign Patents,  
Atlantic Building, 930 F. St.,  
WASHINGTON, D. C.

Balance on hand October 1, 1893 . . . . . \$44,597 75  
Respectfully submitted, F. W. ARNOLD.

## UTILIZING THE LIGHTNING.

The man with the ginger beard was watching his neighbor laboriously digging post holes,

"They didn't dig 'em that way out in Colorado, where I lived," said he.

The neighbor, who was a hired man, dropped his patent "digger," looked around to see if his employer was visible, found he was not, and took a seat on the ground, ready to listen. "How did you work it?" he asked. "By steam?"

"Steam?" said the man with the ginger beard. "Naw. Done it by lightning."

"Yas. You see, in the part of the state I was in there is no metals of any kind in the ground, and no trees. I've often watched the lightning cavortin' around in the heavens fer a hour at a time, just achin' fer somethin' to strike at; but not bein' able to do so 'cause they wa-n't nothin' it could take a start at—no attraction, you see. Well, one day I was a-sweatin' away, just like you would be if the boss was around now, when a old feller, that lived there before I come, come along and says he'd show me a scheme to save all that work. You can bet I was willin', so he sends me to the house fer a bag o' ten-penny nails, and he plants a nail in every place I had marked fer a hole. 'They is a storm comin', says he, 'and if I hain't mistaken she is a-goin' to do the job in one whirl.' I didn't say nothing, fer, honest, I thought he wuz crazy, an' I 'lowed I'd better humor him. After he got the nails all planted he dragged me away to a safe distance an' told me to watch her work. Pretty soon the storm come along, with more thunder an' lightning in it than you will see here in a month o' Sundays. Directly it got over them nails. Then—bliff! blam! It went to pluggin' away at them there nails stuck in the ground, the most delighted lightning you ever see to git somethin' to shoot at. And ev'ry time she hit there was the neatest posthole dug out you ever see. I did haf to trim a few of 'em up with a spade, but, as a general thing, they was as neat as a body would want to look at. Natur' is mighty useful if you know how to handle her."—Indianapolis Journal.

**GRAND LODGE.**

- F. P. SARGENT** . . . . . Grand Master  
Terre Haute, Indiana.
- J. J. HANNAHAN** . . . . . Vice Grand Master  
5949 Princeton ave., Englewood, Ill.

## DEAL GENTLY WITH THE ERRING.

We have just received a copy of the greatest home song ever published in this country. The privilege of publishing in America alone cost \$2,000 in gold. It is a song that will reach the heart of every Christian in the land. The melody is perfectly beautiful; can be played on piano or organ. We give our readers the first verse and chorus.

## FIRST VERSE.

Deal gently with the erring!  
Ye know not of the power  
With which the dark temptation came  
In some unguarded hour.  
Ye may not know how earnestly  
They struggled nor how well,  
Until the hour of weakness came,  
And sadly thus they fell.

## CHORUS.

Forget not thou hast often sinned,  
And sinful yet must be!  
Deal gently with the erring ones  
As God has dealt with thee.

Price 40 cents per copy. Can be obtained by addressing the publisher, F. W. Helmick, 265 Sixth Avenue, New York.

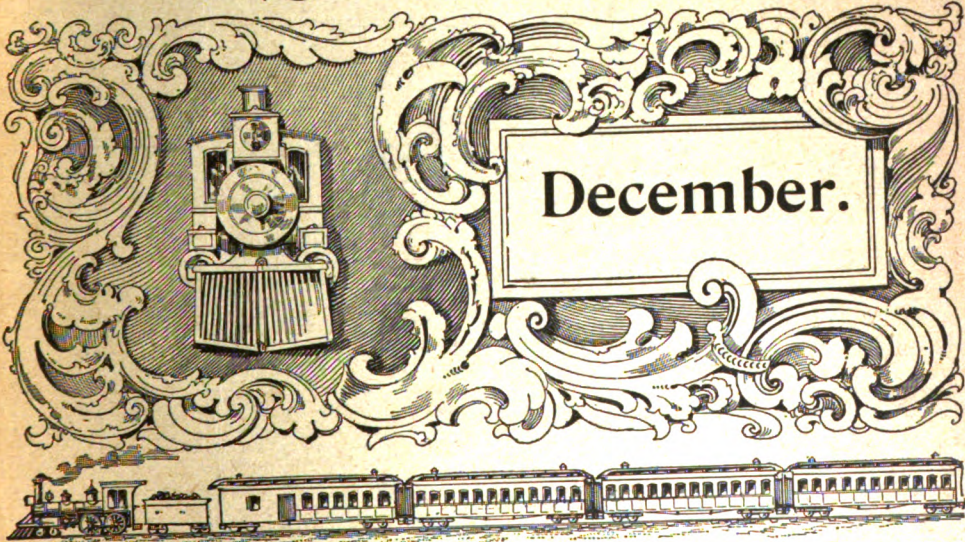

Our readers will receive a copy by sending 20 cents in postage stamps.

Vol. XVII — 1893 — No. 12

W. W. CARD, Secretary

# Westinghouse Air Brake Company,

PITTSBURGH, PA., U. S. A.

MANUFACTURERS OF THE

## WESTINGHOUSE AUTOMATIC BRAKE.

The WESTINGHOUSE AUTOMATIC BRAKE is now in use on 24,000 Engines and 325,000 Cars. This includes (with plain brakes) 232,000 Freight Cars, which is about 23 per cent. of the entire freight car equipment of this country, and about 80 per cent. of these are engaged in interstate traffic, affording the opportunity of controlling the speed of trains by their use on Railways over which they may pass. Orders have been received for 173,000 of the Improved Quick Action Brakes since December, 1887.

The best results are obtained in freight train braking from having all the cars in a train fitted with power brakes, but several years' experience has proven conclusively that brakes can be successfully and profitably used on freight trains where but a portion of the cars are so equipped.

E. L. ANDREON, Manager.

JOHN B. GRAY, Agent.

C. C. HIGHAM, Gen'l Supt.

# IVERS & POND P I A N O S

"Delighted with it. Write whatever you  
like and sign my name to it; you can't say  
anything too good about either the Piano or  
the concern."

This is what George F. Oakes says after  
having owned an Ivers & Pond Piano for  
years—a long enough time to know it thor-  
oughly. He is a B. L. E., Lodge 61, Western  
Div., B. & M. R. R.

All sorts of prices,—according to size, style, and elaboration in cabinet work,—but only one  
sort of workmanship, the best.

In places where no dealer sells them we sell direct from the factory. Easy payments if  
desired. We send on approval any distance and pay freight both ways if not entirely satis-  
factory.

Catalogue and full information,—but you must write.

## To Firemen's Wives and Daughters.

### SHEET MUSIC FOR YOU!

There are numerous offers of cheap music this season, but here is the cheapest and best of all. The small sum of ten cents will bring you our charming musical and literary magazine three months on trial. You will also receive absolutely free 163 pieces of popular sheet music, including *That Is Love*, *After the Ball*, *You Will Never Know a Mother's Love Again*, *'Twixt Love and Duty*, *Ever Faithful*, *Old Madrid*, *Sweet Heather Bells*, *Two Little Girls in Blue*, *Better Bide a Wee*, *Comrades*, *Ta-Ra-Ra boom-de-ray*, *Little Fisher Maiden*, *Pussy Cat*, *Annie Rooney*, *Bob Up Serenely*, *I Whistle and Wait* for Katie, *Bonnie Doon*, *Stop Dat Knocking*, *Kissing Over the Garden Wall*, *Five O'clock in the Morning*, *Let Me Dream Again*, *When Red Leaves Fall*, *In a Cottage by the Sea*, *Speak to Me*, *Maiden's Vow*, *Brave Old Oak*, *She Wore a Wreath of Roses*, *Take Back the Heart*, *Love Among the Roses*, *Anvil Chorus*, *Daddy Wouldn't Buy Me a Bow-wow*, *Think of Me No More*, *Lullaby*, *Old Zip Coon*, *On to the Field of Glory*, *Swiss Boy*, *Oh Day of Joy*, *Douglas*, *Tender and True*, *Annie Laurie*, *The Parting*, and many others. In addition to the 3 months' subscription and 163 songs (word and music), we will send an elegant art production in 8 colors (worth \$1.00) entitled, *"The Interruption."* All the above will cost you only 10 cents. Get the most for the least money by sending a silver dime to AMERICAN NATION COMPANY, 325 B Washington Street, Boston, Mass.

A Scalded Engineer,  
A Bruised Fireman,  
A Sore-Handed Conductor,  
A Chap-Handed Brakeman,  
A Bleeding Switchman,

Will find a comforter and healer in a cleansing and refreshing wash with

## Glenn's - - - Sulphur Soap.

It is not a fancy toilet soap, but a plain, every day remedy for the mechanic, the busy housewife, and the children. No household should be without it. Ask your druggist for it; he keeps it.

## An Efficient Health Officer ALWAYS READY FOR DUTY

### IS POND'S EXTRACT

Wherever inflammation exists POND'S EXTRACT will find and will allay it. It is invaluable for CATARRH, PILES, COLDS, SORE EYES, SORE THROAT, HOARSENESS, RHEUMATISM, WOUNDS, BRUISES, SPRAINS, all HEMORRHAGES and INFLAMMATIONS.

### REFUSE SUBSTITUTES.

**CORNISH & CO. WASHINGTON, NEW JERSEY.**  
Established 27 Years.

# CHRISTMAS BOOK

## FORNEY'S

### GREAT

## Catechism of the Locomotive

### 500 Engravings!

### 700 Pages!

For the past sixteen years the Catechism of the Locomotive has been the best authority and almost a necessity to every Locomotive Engineer and Fireman, and on many railroads it is the standard for examination of Firemen for promotion. So many changes and improvements have been made in the construction of locomotives that the author has revised and rewritten the book, adding much new matter and making new illustrations selected from the latest practice in this country.

The new edition is about twice the size of the original book, has correct drawings of every part of the locomotive and of the different classes of locomotives in use in this country. It is written in such language as an Engineer or Fireman can easily understand, and it is believed that a study of this book will enable him to thoroughly know his business. There is no popular treatise in the English language which gives so clear, simple and complete a description of the construction and working of the locomotive engine.

**PRICE \$3.50. Postage Paid.**

Address orders to

## Case Number 60,151.

This was the number of a watchcase which arrived at the store of George Metzger, Jr., of Emporium, Pa., nicely done up. It came from one of the wholesale dealers in watches with whom he did business, and for a while it lay

quietly in his show-case. Not long, however, for a gentleman admired it and bought it in connection with a movement which was recommended, and the two left the store in company with their new owner. It was in the recent railroad wreck near Chicago that the owner of this watch-case was killed and terribly mutilated, but the case did its duty, fully protecting the movement through the entire ordeal so that the watch did not stop at all. It was returned only a short time ago to the manufacturer, as a relic of the accident, by Mr. Metzger. It was

a Fahys Monarch 14 Karat Gold Filled Watch Case, and it has only borne out the reputation which has always attended this admirable case.

**Moral!** Insure your watch by casing it in a Monarch 14 Karat Gold Filled Watch Case made by

## McGRANE'S

### "LOCOMOTIVE CLOCK."

The only substantial, moderate price clock on the market. Movement has jeweled escapement. Case cast bronze; front screws on; side wind; six inch porcelain dial. Very elegant and accurate. The red hand shown at VI o'clock is on the inside of glass and is moved by a knurled nut on the outside. This is John Alexander's "Red Reminder." When it is moved out of its regular position, (six o'clock), it is put at the time of the next meeting point, order station, or what not and serves to remind you that you must make a meeting point, get orders to side track at that time. No extra charges for the "Reminder," clocks furnished with or without it.

Price \$12:00.

P. S.—Please note the change of address from 48 Maiden Lane.

# GOLD—FOR RAILROAD MEN—GOLD

## THE ORPHAN BOY EXTENSION M. & M. CO.

Incorporated under the laws of the State of Colorado.

**CAPITAL STOCK . . . . \$1,000,000 NO. of SHARES . . . . . 1,000,000**

Capital full paid in. **PAR VALUE, \$1.00 PER SHARE.** Stock non-assessable.

The richest Gold District, for its size, in the known world, is in Gilpin County, Colorado. The largest gold mines are in Arizona. We have: 12 mines in Gilpin. 2 mines in Boulder. 3 mines in Arizona. 8 mines in Clear Creek.

We own a one-half interest in the Whale Group at Yankee Hill.

We have about 8,000 shares of the November offering left and will accept subscriptions at 22 cents. Buy now. Not good after January 10th when the price will advance.

I have recently visited the Whale property at Yankee Hill, one-half of which is owned by the Orphan Boy Extension M. & M. Co. From the extensive bodies of ore exposed, and the quantity of gold shown in every test, I have no doubt of its value. **HOR. W. P. DANIELS,**  
Grand Secretary and Treasurer of the Order of Railway Conductors, Cedar Rapids, Iowa.

WRITE HIM.

The Whale property at Yankee Hill, one-half of which is owned by The Orphan Boy Extension M. & M. Co., is undoubtedly a great and valuable property. An expert examination made at the time of my visit justified every claim made by the Company.

**J. L. STUBBS,**  
Div. Supt. Wells-Fargo Express Co., Denver, Colo.

WRITE HIM.

Everywhere over the south side of the hill we picked up rich float that yielded quantities of gold in the pan in every instance. At the Whale, Barbours, Wire Gold, and other points where large ore bodies were ex-

posed, every test gave a like surprising quantity of gold.—[Rocky Mountain News, Sept. 26, 1893.]

**N. C. Merrill, Sec'y and Treas. Orphan Boy Extension M. & M. Co.:**

DEAR SIR:—I have just completed a detailed examination of your property on Yankee Hill. I find in every instance unquestionable evidence of great mineral deposits in the district. At various points on the 13 claims comprising the Whale Group, I find strong, well defined veins varying in width from 14 inches to 6 feet. The gold values are surprisingly uniform, running from \$20 to \$40 per ton. Being, as I believe, true fissure deposits, you will probably never exhaust the ore body, and with the milling facilities now about completed for the treatment of the ores of the district, I have no hesitation in saying that the Whale Group of mines will soon be one of the great gold producers of the State.

[Extract from report of] **J. P. LOFTUS, M. E.,**  
No. 69 Symes Block, Denver, Colo.

Yankee Hill will doubtless be the next great gold camp of Colorado. —[Rocky Mountain News, Oct. 3, 1893.]

**Good only until January 10.**

**ORPHAN BOY EXTENSION M. & M. CO.,**  
29 and 30 Kittredge Building, Denver, Colo.

I desire to subscribe for \_\_\_\_\_ Shares of stock in the Orphan Boy Extension M. & M. Co., at Twenty-two Cents per share, to be paid for in ten equal monthly payments, and enclose \$\_\_\_\_\_ as first payment; the full amount of stock to be at once issued to me, but retained by the Treasurer of the Company until payments are all made, sending me a receipt for each payment.

My occupation is \_\_\_\_\_

Yours truly,

### Gold Nugget.

For sale by all Druggists. 25 Cents a bottle.

## IT COSTS NOTHING.

We send these Gold Watches free by express. You pay nothing until after examination. It is our intention to introduce these watches into every state. In order to accomplish this we offer you this Ladies' or Gents' Gold Watch for \$14.50—regular retail price \$38.00. These cases are made of two plates of solid gold, so thick that they will last for years; between these plates is a very thin, stiff sheet of composition metal, the purpose of which is to protect the works from damage when pressed or struck (a feature that saves many a bill of repairs), and is accompanied by a special guarantee certificate from the manufacturers that they will wear FIFTEEN YEARS. The movement is a genuine Waltham, Columbus or Standard, as you may select, elegantly jeweled with fine genuine rubies, have the celebrated compensation balance, safety pinion, hardened hair spring, stem wind and set, warranted perfect timekeeper. Watches of this make are never advertised outside the show windows of fashionable jewelry stores. If you order in good faith cut this out and forward to us and we will send you the watch by express without the payment of a single cent so you can examine it thoroughly, and if not as represented you refuse to take it—or if you will send us 50 cents with your order we will present you FREE—with each watch—no charge—a SOLID GOLD, filled chain (not plated) with a special certificate from the manufacturers guaranteeing them. This is our method of selling goods. Instead of paying high-priced salesmen we give you the benefit of the expense by selling the best watches so cheap that you cannot afford to pass the chance of obtaining one. These watches are genuine American and there are no better made, and must not be confounded with the cheap imported advertised so extensively. In ordering be sure to state whether ladies' or gent's is desired. (Gent's open-face, one dollar less.)

Send The Raymond, the Appleton-Tracy, or the 17 Jewel adjusted Hampden, cased in same case for \$24.00, including chain, on terms as above.

Address **BERNARD MEUSER, 93 and 95 Fifth Avenue, CHICAGO.**

—In regard to our responsibility, we refer you to any bank in Chicago.

## BLOOD POISON

When Mercury, Iodide of Potassium and Hot Springs fail to cure, we will guarantee a cure or no pay. Can be no failure. Cure in 20 to 90 days. Will contract to pay railroad fare and hotel bills if we fail. We are incorporated, with large capital. Refer to Bradstreet's. Everything sent sealed, in plain envelopes. Write for references and proofs free. Can work during treatment.

**PARALYSIS** CURED without medicine. Rheumatism. Spinal Diseases and Dropsy easily cured.  
Dr. C. L. TRACHER, 6 Central Music Hall, Chicago,  
for a valuable book FREE to all.

DEAFNESS CANNOT BE CURED by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure Deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube gets inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed Deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars, free.

F. J. CHENEY & CO., Toledo, O.

Sold by Druggists, 75c.

## EPILEPSY OR FITS

Can this disease be cured? Most physicians say No—I say, Yes; all forms and the worst cases. After 30 years study and experiment I have found the remedy.—Epilepsy is cured by it; cured, not subdued by opiates—the old, treacherous, quack treatment. Do not despair. Forget past impositions on your purse, past outrages on your confidence, past failures. Look forward, not backward. My remedy is of to-day. Valuable work on the subject, and large bottle of the remedy—sent free for trial. Mention Post-Office and Express address.

JAMES M. KEACH.

## For Locomotive Engineers and Firemen.

BUFFALO, N. Y.

It has long been my desire to make a statement of my cure to the Brothers, not only for the benefit of those in my own Brotherhood of Locomotive Engineers, but for all those persons who have suffered in like manner. I had a rupture that was very large and difficult to hold in place. Trusses of all kinds were tried. They were painful and would not hold it. The rupture would come down constantly when at my engine and give me fearful pain. I was cured at Dr. Pierce's Invalids' Hotel and Surgical Institute, Buffalo, N. Y., by a treatment that is safe and certain.

My cure has been permanent, although I have worked steadily at my engine.

Your sincerely,

JAMES M. KEACH.

Abundant references, by permission of those whom we have cured, will be furnished to any one wishing to call upon or write them.

### RUPTURE.

HERNIA (Breach) or RUPTURE, even if old and large, is speedily and radically cured in every case undertaken by our specialists, without dependence upon trusses, and without danger. 385 cases of Rupture cured by us, at the Invalids' Hotel, in 1892.

There is no longer any need of wearing clumsy, awkward, chafing old trusses. There is no safety in any kind of a truss, for there is constant danger of strangulated hernia.

### VARICOCELE.

VARICOCELE, or false rupture, and HYDROCELE are permanently cured by new and painless methods.

An illustrated Treatise on Rupture, Varicocele, or Hydrocele, sent to any address on receipt of ten cents.

1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the out-puts have increased over 1,200 per cent, beyond all precedent, amounting during 1893 to 3,000,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

## GALENA OIL WORKS, LIMITED

FRANKLIN, PA.

### SAFETY, SPEED, ECONOMY

Are the results of the use of Galena Oils. Scientific and practical tests of the past twenty years have demonstrated the fact that Galena Oils are superior to any other oils in the market.

Galena Oils in winter stand a cold test of from ten to fifteen degrees below zero, and will not freeze in the coldest weather.

The superiority of Galena Oils is demonstrated by their exclusive use upon a large majority of the railways of this country. They are in use upon three continuous lines of railways from Boston and New York to the Pacific Coast and on one to the City of Mexico, thus demonstrating their adaptability to all climates and all temperatures.

We also supply our patrons with Sibley's Perfection Valve Oil, which is in exclusive use upon a large majority of the leading Railroads of the country.

Important to

Railroad Managers and

Master Mechanics.

✿ Sibley's  
✿ Perfection  
✿ Valve Oil.

More perfect lubrication insured, and guarantees entire freedom from corrosion, honey-combing of cylinders and destruction of joints of steam chest by fatty acids.

Send for Catalogue.

435 North Broad St., Philadelphia.

IF YOU RUN AN ENGINE  
You want to know about the

HANCOCK  
LOCOMOTIVE  
INSPIRATOR

Adapted to  
STANDARD FITTINGS.

It is the most reliable and efficient apparatus for feeding locomotive boilers that has ever been applied. Reliable under the most exacting conditions, and will work perfectly where others fail.

In use on fifty railroads, giving satisfaction. We shall be glad to send any man interested in locomotive engines, circulars and full information. A postal card secures it.

# William Sellers & Co. Incorp.

PHILADELPHIA, PA.

Sole Patentees and Makers of

## Self-Acting Injector of 1887.

**NOTE**—There are many injectors which will work well when the conditions are favorable. This injector is designed to work well under all conditions and is, therefore, the most reliable.

**IT WILL RE-START ITSELF.**

**IT WILL ADJUST ITSELF.**

**IT WILL LIFT HOT OR COLD WATER.**

Its range of capacity is over 60 per cent. and it can be regulated, therefore, to work continuously for light or heavy trains. It is operated by a simple lever motion which readily starts and stops its action.

## ALL STEEL SPRING SEAT.

### Rough Riding Made Smooth by Using This Seat.

In the manufacture of these seats we use only the finest tempered Steel Spiral Springs, heavy band-steel bottom frame, and tinned steel woven wire fabric surface. Our seats have been used in locomotive engines for years, and are endorsed by engineers and firemen in all parts of the country.

Made in any size or shape desired. When ordering please give your weight.

Price per seat not over 24 inches long, \$2.00. Terms, C. O. D. or cash with order.
